The builders of six thousand years ago, like the builder of today, had their problems, and his expedients anticipated the methods of modern construction. "Brick for stone and slime for mortar" describes the method of the builders of the tower of Babel. That was the prevailing fashion even earlier.

The excavators at Ur have found a small amount of stonework also, but stone was scarce in that country. It had to be imported and was rarely used in building construction. They have also found columns and arches, inventions that associate themselves with the history of architecture throughout the ages.

The problem of decoration was not solved with materials and methods familiar enough to the building trade today. In that remote era we see the beginnings of a trade that has had six millenniums of development without changing its essentials. The first lessons embodied the principles on which cities and palaces and temples are being built today.

Civilization has since built for itself better habitations and "temples more divinely beautiful," but the later buildings were not better builders than their predecessors in that remote antiquity at which the excavators have now arrived.—Kansas City Star.

TOURISTS LEAVE MILLIONS IN CASH

Michigan's Good Roads and State Parks Bring Autos Here

Estimates made by various tourists bureaus and development associations in Michigan indicate that the tourist trade this year is going to exceed by hundreds of thousands of dollars that of last year. In 1925 the amount spent by tourists in Michigan was placed at over $200,000,000. Records as kept at various state parks, hotels and various bureaus show a far greater tourist travel this summer than last. Five years ago automobile travelers avoided Michigan because of the deplorable condition of its highways and its lack of public accomodations.

The state administration under Governor Groesbeck has been one of the important factors in the development of the tourist business, declare officials of the associations having to do with the tourist business. T. F. Marston, of the North Eastern Michigan Development Bureau, and others, have frequently declared that the good roads Michigan now possesses, its state park system and its natural advantages are the attractions for the millions of visitors who are coming to the state.

Judge John Barton Payne, chairman of the National Conference on State Parks says "Michigan in its State park system affords one of the remarkable examples in the whole country in bringing enjoyment of the treasures of the woods, of the lakes and streams and shores within reach of every one."

Last year over two and a half million people registered at the various state parks. Conservation officials say the number this year may go to three million.

Mr. Meek Puts $30 on Right Side of Ledger

The meek little man counted his change and moved away from the railroad ticket window. He looked worried, counted again and edged diffidently back.

"I think," he said apologetically, "that you made a mistake in the change."

The slick-haired clerk became chill with sudden hauteur.

"Sorry, but you should have rectified that when I gave it to you. Can't do anything now."

"But," said the little man, peering piteously over his glasses, "I didn't notice it at the—"

"Rules of the comp'ny," recited the clerk pompously. "We can't risk getting gyped by people who don't count their change. Move along, please; please; others waiting."

"Are you sure you can't do anything about a serious error like this?" The agonized anxiety in the small voice would have melted a human heart.

"Yes. Absolutely! Now, will you move on or must I—"

"No, there's no need of that," sighed the lamb, melting into the passing throng. "You're just out $30, that's all."

Phenician Language Similar to Hebrew

The state of Moabia, King of Mesh, which was found at Dhiban in 1868, and is more popularly known as the Moabite stone, belonging to the Ninth century, B. C. This contains one of the earliest inscriptions in the Phenician alphabet, and its language, according to the new Standard dictionary, differs only dialectically from the Hebrew. By studying the fragments of this stone, Clermont Ganneau was able to publish the text, and the first translation; and the decipherment of the entire stone, which is now complete, was the result of researches by French, German and English scholars.

Yet another, the code of ethics of Hammurabi, king of Babylonia from 2340 to 2185 B. C., which was discovered in 1902, is in cuneiform characters. The cuneiforms are said to have been invented by the primitive Accadians of Mesopotamia about 6,000 years ago, and were impressed or engraved by the ancient Babylonians, Assyrians and others on bronze, glass, iron, stone, clay and other substances.

English as Spoken

An Englishman and an American were having the usual argument as to which country had the queerest dialect. The Englishmen was positive he was the winner of the argument.

"Why, say, old cock," he said, "you use the queerest bally expressions I ever heard, blime. The other afternoon I accosted a colored person and awoked him if he thought it would rain, and do you know what he said? He said, 'Little dogs it will, and little dogs it won't.'"

The American was puzzled and the next afternoon met the same negro with whom the Englishman had conversed. The negro scratched his woolly head and then said:

"That ain't what Ah said. Ah jest tol' the man that p'raps it would rain, and p'raps it wouldn't."

NATIONAL DAIRY SHOW AT DETROIT

Michigan to be Honored by Being Host, Detroit Oct. 6-13th

Michigan will be honored this year by being host to the National Dairy Show, which will be held at the State Fair grounds, Detroit, October 6th to 13th. The dairy interests of Michigan have for many years cherished the hope that some time the National Dairy Show would be staged in this state.

Breeders and dairymen will have an opportunity this fall to see the best animals of the five leading dairy breeds. This show for cattle is commonly called the "Court of Last Resort," because it is the one show at which prize winners of the State fairs and Sectional shows all over the United States and Canada are brought together to battle for the prize of prizes.

Plans are being made to conduct a Charlevoix County Tour to the National Show and it is to be hoped that many of our dairymen can arrange their plans to join this tour and see the greatest sight you will ever see and find out the things you will want to work for. Until the 15th you can purchase three tickets from County Agent Mellenamp for $1.00, saving 50c. Don't forget there will be educational exhibits, such as dairy machinery, forage crops and health food show. Lets have 15 or 20 carloads to go in one group. Parking space will be arranged for the tour.

COUNTY FAIR SEPT. 14-15-16.

Have you thought about your exhibits for the Fair? This fair is for you and why not show visitors that Charlevoix county is on the map. Among other features there will be the Calf Club exhibit, Cow-test exhibit, big live stock parade and fireworks. Surely you have crops, fruits, vegetables or livestock you are anxious to display. All judging will be done on the 15th. Big parade on, says you, as well as the P. B. Gustafson Co. gives away by the Peoples State Savings Bank of East Jordan at noon. Plan to exhibit and learn from the judges the types you should have.

STATE LAUDED BY HIGH OFFICIALS

Michigan Leads in Nearly all Branches of Conservation Work

Michigan leads practically every state in the union in nearly all branches of conservation work declare reports and statements made by high officials of the federal government at Washington. This exceptional praise is of more than ordinary interest to residents of Michigan in view of the fact that the state had no conservation department much over 5 years ago.

One of the first acts of Governor Alex J. Groesbeck when he assumed the governor's chair was to create a conservation department. The state had a fish and game warden and a fire warden and that was about all there was to it. The work of its conservation department in a little more than five years has raised the state to the first rank in this greatly needed work.

According to the last annual report of the United States forest service, Michigan planted on its state forests in 1924 over 6,500,000 trees on 5,691 acres, about two thirds as many trees as were planted in all National forests. Department officials say the plant this year will far exceed that of any previous year.

Colonel Allen S. Peck, associate federal Forester, recently stated that Michigan's forest fire tower system is one of the most perfect in the United States. In 1927 Michigan had but 15 forest fire towers. It now has 116 and this year every acre of forest land will be within the range of observers.

Comparative fish plantings of various states show that Michigan leads in efforts to keep its streams and lakes filled with game fish. The fish plant last year exceeded 238,000,000 more than that of any other state.

In all other branches of its work the Conservation department has won similar praise from those possessing a thorough knowledge of conditions in other states.

Power of Vibrations

A Boston violinist says he can put out a flame with the vibration of his fiddle. But that's nothing. A saxophone slightly off key can put out an entire orchestra.—Cleveland Plain Dealer.

PACEMAKERS OF KALAMAZOO

Enjoying Annual Vacation at The Inn This Week

About fifty representatives of the Kalamazoo Loose Leaf Binder Company have been at the Inn this week where they are being entertained by Manager A. I. Creamer, who is cooperating with the officials of the Charlevoix Association of Commerce in an effort to give the visitors an enjoyable outing. Judging from reports made by several of the visitors but one conclusion can be drawn and that is that each guest is satisfied with the entertainment features provided and that all are enjoying their outing to the full and that Manager Creamer has fully justified his reputation for conveniences, comforts and entertainment unexcelled.

The visitors do not represent the entire saleforce of the Kalamazoo company, the ones here being those who have made the quota assigned to them for the four summer months.

They are here at the expense of the company and are given the vacation as a reward for service performed and as an incentive for future earnest endeavor in the interest of the company.

The representatives at the Inn come from widely distributed points throughout the United States, Ohio, Indiana, Illinois, Pennsylvania, New York, Texas, Florida, Washington D.C., New Jersey and several from this state.

Executives at the home office are George P. Whittington, president and general manager; Leon L. Allen, vice president and sales manager; A. I. Loring, assistant sales manager; C. D. Procter, advertising manager; T. L. Korman, record department; R. E. Maloney, catalogue department; H. J. Broamhill, treasurer.

Raven Not Altogether Deserving of Bad Name

Two ravens, one which has taken the name of Jacob, Americus, and the other which has taken the more specific georgi, by means of the second raven, are both interesting, crooky and not altogether unbeautiful, for in certain lights their plumage is lustrous.

The American raven is smaller than its more northern cousin. It is a resident of the far western United States. It is a mountain dweller, although it doubtless not be deserted to the valleys if game is absent therefrom. The raven does not like man and the reason is not far to seek. Man, does not like the raven, holding it with the crow in certain cases or twice removed, as being a bird that is better dead.

The diet of the American raven, according to Florence Merriam Bailey, who knows the weslern bird well, consists "principally of carrion, dead fish and frogs, varied with rodents, mouseks, grasshoppers, large black crickets and worms." The collection of food is not altogether a delectable one from the human appetite standpoint, but the raven deserves well of man for making its diet what it is.

Old Scriptural Names Seem to Have Passed

A writer calls attention to the interesting names found in certain sections such as the village home of his childhood days where the names were almost entirely scriptural, as there were Matthew, Mark etc., Rhoda, Sarah, Joseph, Benjamin, etc. The three sons of our blacksmith were Shadrach, Meshach, and Abednego—the latter being shortened to Benny. These pioneer and their plans was taken by family names—Charles, William, Henry, etc. The Twentieth century brought a big ecne change in the direction of "gentility" with such borrows as Gladys, Doris, Daphne, Sydney, Herbert ("Herb" or "Erb"). He says: "I have known a girl with the beautiful name of Irene often summoned hilariously as 'Yoo-oo, Cynde-e-e,' while a child by the name of Audrey was surprised when I told her that her name was a variant of Etheldreda.—London Mail.

"New" Scientific Facts Found in Book of Job

The writer of the Book of Job, living between 2,500 and 3,500 years ago, accurately foresaw some of the discoveries of modern science, declared Lieut. Commander C. L. Tranper of the British navy in a recent lecture.

"He stretcheth out the north over the empty places, and hangeth the earth upon nothing," was quoted by the lecturer as proof that the writer knew that the earth was spherical even as turtles before anyone else.

"A recent announcement by a scientist," continued Lieutenant Commander Tranper, "is that certain birds of prey can alter the lens of the eye in shape, so that when the bird is making a swoop after its victim it can keep the object accurately focused. In Job 38:7, we read: 'Where is a path which the vulture's eye hath not seen.'"

It was not until the Seventeenth century, A. D., that Torricelli, the inventor of the barometer, proved that air had weight. But in Job 28:25-26, we are told that "God understandeth the way thereof . . . to make the weight for the winds."

W. C. T. U. District Convention Here Next Wednesday

The Lower Eleventh District W. C. T. U. convention will be held at the Baptist church in this city next Wednesday, beginning at 2:30 p.m. and closing the next day at noon.

Members of the local union are invited to attend all the sessions and the convention supper to be served at the Betty Tea Shop at 5:30 Wednesday. Tickets must be secured before Monday evening from Mesdames A.H. Reinhart, John Burns or Chas. Carey.

Miss Margaret Hill, Michigan W.C. T.U. director of Health and Hygiene will speak at each session using the following topics: Wednesday, at 2:30, "The Medicine Cabinet Up-to-Date," at 7:30, "The Second Mile." Thursday at 9:00 a.m., "Work with a Construction Gang." All are welcome to attend these meetings.

MATTISON-WAGNER

Ceremony Performed Last Tuesday Evening, 7:30 o'Clock

Surrounded by a few relatives and personal friends Mr. John J. Wagner and Mrs. Mary J. Mattison were united in the bonds of matrimony at the home of Mr. and Mrs. S. M. Rose, Tuesday evening at 7:30, with Pastor B. G. Mattson D.D. officiating at the ceremony, in which the impressive ring service formed an important and beautiful part of the program.

The usual hearty congratulations and good wishes of the assembled friends were extended to the happy couple, following which was the serving of light, delicious refreshments.

The occasion was enlivened by the appearance of the Charlevoix City Band, of which Mr. Wagner has also its organization been an enthusiastic working member, their appearance being an expression of good will and esteem for their fellow member and his bride. Several musical numbers nicely rendered was a source of pleasure to Mr. and Mrs. Wagner and the guests at the function.

Mr. and Mrs. Wagner expect to spend the winter in Florida and leave for the south in a few days. They will make the trip by motor and will spend a few days at Niagara Falls, Washington D. C. and other cities on their southbound trip to their destination Clearwater, Florida, where they will be at home to friends after November first.

Average Fleece Weight

The bureau of animal industry says that the average fleece weight for the United States is approximately seven and a half pounds. There is a great difference between the Southdown and the Rambouillet breeds, the wool production varying in Southdowns from six to seven pounds; in well-bred and well-fed Rambouillet, from twelve to fifteen pounds.

Fur From Weasel

Pahnl fur is obtained from an animal of the weasel family, found in central China. It has a lovely pelt of light yellow underfur, with top hair of grayish brown. A white line runs down the back from the neck to the tail. It is improperly known under the name of Chinese stone marten and gray marmot.

MANY CANDIDATES UP IN THE AIR

Primary Campaign has Been Conducted Quietly in County

The 1926 primary campaign is nearing the end and as the finish approaches candidates seeking nomination for some particular office of the several open in this contest, find themselves wholly in the dark concerning the final decision of electors in the county and through out the state, nervous but withall hopeful and patiently awaiting the drop of the curtain on the political scene that has been in process of enactment during the past weeks.

In so far as Charlevoix county is concerned the entire campaign has been conducted quietly and this too regardless of the large number of candidates seeking favors of the electors. In consequence of this condition there has been but little mudslinging, therefore, but a moderate amount of campaign tactics classed as vituperative or character besmirching and it is recorded that statements of this nature almost without exception emanated from individuals that were not candidates, but rather from one or two superheated, overzealous persons who gained no prestige through their position—not nothing due to the fact that they had already dropped into a position of nonentity in the public eye.

Local candidates have conducted in the main, clean campaigns and are ready to abide by the choice made by electors at the primary election next Tuesday and we believe that defeated candidates will be wholehearted in support of their party tickets during the campaign preceding the general election, will not bolt the ticket and cast their vote for candidates winning the nomination next Tuesday.

SERVICE TUESDAY

For the Late Archibald Buttars at Methodist Church

Funeral services for the late Archibald Buttars, who passed away at San Diego, California, June 15th will be held at the First M. E. church in this city, Tuesday afternoon at 2:30 o'clock, Sept. 14th.

According to present plans the body will arrive from the west on the morning train Sept. 14th accompanied by Mrs. Buttars, a daughter, Mrs. Essie Parmelee, and a grandson, Mr. Archibald Parmelee, the two last mentioned residents of San Diego.

During his lifetime Mr. Buttars was an ardent member and supporter of the local M. E. society and the pastor, C. E. Pollock will officiate at the church service. Mr. Buttars was affiliated with the Masonic fraternity in its several higher branches of the order and from early days an honored member of Charlevoix Lodge No. 287 F. and A. M. and a member of Ivanhoe Commandery Knights Templar, of Petoskey and this organization will have charge of the funeral ceremonies.

Western Beauties on Way to Atlantic City Contest

Chicago was given a brief glimpse of these seven beautiful nieces of Uncle Sam from west of the Mississippi river, as they stopped on their way to compete for national honors in the Atlantic City beauty pageant. Left to right, they are: Jennette Roland, Miss Colorado; Dolores Conrad, Miss Denver; Maxine Jenning, Miss Portland; Gloria Smith, Miss Spokane; Leona Fengler, Miss Seattle; Margarite Jordon, Miss Kansas City, and Ruby Wallace, Miss Missouri.

Navy's Team in the Schneider Cup Seaplane Races

These crack racing flyers attempt to uphold the United States navy's supremacy of the air against Italy's best in the Schneider cup races which will be held at Hampton Roads, Va., in October. Left to right: Lieut. F. H. Conant, Lieut. H. J. Norton, Lieut. Com. H. C. Wick, Lieut. G. T. Cuddihy and Lieut. W. G. Tomlinson.

Round-Up Queen Is Indian Maiden

Esther Lee Motanic, a full-blooded Cayuse Indian maiden, was chosen queen of the Pendleton roundup which begins on September 15. She won out over the charms and sogial position of many of her white sisters of the Pacific Northwest and is the first Indian girl to be so honored.

America Gets Best British Pointer

Ferndale Fay, Great Britain's best pointer, the property of the dean of Guild Tennant of Coatbridge, has been sold for a huge sum to a Pittsburgh sportsman, and hereafter will reside in America. She has won eighteen championships and more than 200 first prizes.

SHORT ITEMS OF INTEREST

Some fish make nests of sticks and weeds.

Icebergs travel only five or six miles a day.

Large eagles of the tropics eat monkeys.

Gorillas probably live to be thirty or forty years old.

Early violin makers of Cremona, Italy, used maple wood from local forests for backs of their violins.

Snowflakes are almost always some variation of a six-pointed star.

The country of Tibet is reported to have only one motor vehicle, which is a motorcycle.

The death rate from diphtheria in 1900 was 43.3 per thousand. Now it is 9.4 per thousand.

A Scotsman is usually better at blending colors than an Englishman, according to a textile expert.

HOW TO KEEP WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

HEART DISEASE AS A PUBLIC PROBLEM

EVER since 1880, when Massachusetts created the first state board of health, authorities have divided diseases into two classes; those which were caused, so far as we know, by social conditions and so were proper activities of the state and those which were caused by personal habits and so were matters of personal responsibility. To the first group belong naturally diseases caused by water, milk, sewage and drainage conditions, those which are contagious and so must be controlled by the police power, whether state or city. In most of our cities today, drinking water is supplied by the city. If the city gives its citizens polluted water, the individual cannot help himself. He must take what is given him.

But the larger group of personal diseases, such as affections of the heart, stomach, liver, etc., are due to personal habits for which each individual is responsible. These diseases have naturally been regarded as individual conditions with which health officers did not and could not have anything to do.

But the growing frequency of heart disease has aroused much discussion among health officers, as to whether our health departments and officers could not do something to check and control this increasing danger. In a recent issue of the American Journal of Public Health, Dr. A. J. Pendery, executive health officer of the Minnesota department of health and secretary of the Conference of State and Provincial Health Authorities of North America, discusses the question of what state health departments can do to protect the people from heart disease.

The belief has been steadily growing that heart disease is a degree of degree preventable. The idea of our grandfathers was that heart disease was a kind of curse or blight that came on certain people for some unknown and mysterious reason and that once acquired there was little or nothing that could be done. But we know now that most forms of heart disease are due to causes which can be prevented, especially in childhood.

About one-third of all cases of heart disease are found to be due to some kind of infection. After the patient has acquired the infection, it is impossible to prevent the heart from becoming affected. But if the heart disease can't be prevented, the infection which causes the heart disease can be prevented.

Tonsilitis, scarlet fever, rheumatism, and teeth are some of the early causes of heart disease. Clean mouths, sound teeth and the early removal of adenoids and diseased tonsils will prevent heart disease in early life.

THE VALUE OF INSULIN

WHEN the discovery of insulin was announced a little over four years ago, it was generally and quite prematurely assumed that the problem of diabetes had been solved. Many newspapers and quite a few medical journals, carried away by their enthusiasm, gave their readers the impression that there was nothing left to learn about this mysterious disease and that all that was necessary was for the diabetic patient to take insulin in order to be restored to health.

Unfortunately, time and broader experience and knowledge have not confirmed this view. The discovery of insulin by Doctor Banting was indeed a great achievement and added much to our knowledge of this disease than all the efforts of all his predecessors. Its use has entirely changed our idea of the treatment of diabetes. It has enabled thousands of sufferers from this disease to resume active work and to live comfortably and happily. But there is as yet no evidence to justify the hope that insulin has any effect as a "cure" for diabetes, if by cure is meant restoring the patient to a normal condition, as he was before he contracted the disease.

In a recent issue of the Journal of the American Medical Association, this question is discussed editorially. It is unfortunate, the editor says, that the discussion and widespread public interest about insulin at the time of its discovery gave the general impression that it was or would become a cure for the disease and that many physicians are now finding it necessary to disillusionize their patients on this point.

Dr. E. P. Joslin, one of the leading authorities on diabetes, says in a recent book on this subject, that he has found no cases in the last four years which he could regard as really "cured." The same overconfidence in regard to various forms of treatment of tuberculosis has from time to time had to be corrected, so that today the best authorities on consumption do not use the word "cured," even for apparently healthy patients but call them rather "arrested" cases, that is, patients in which the disease is making no further progress. So Doctor Joslin suggests that diabetic patients who are apparently perfectly recovered be called "arrested" rather than cured.

(©, 1924, Western Newspaper Union.)

MANAGES HUGE HERD

ORCHARD GLEANINGS

PEACH DROPS ARE CAUSE OF INJURY

Observations taken at the Federal Peach Insect laboratory at Fort Valley, Ga., emphasize the importance of prompt destruction of all peach drops, according to E. H. Hawl, associate extension horticulturist.

Practically all of the small peaches which drop to the ground within a few weeks after the "shucks" have been pushed off are badly infested with curculio worms, about 75 to 90 per cent of the drops containing one or more worms.

Growers should bear in mind that the larvae remain in these drops and that, after a process of development they emerge and enter the ground for pupation. Each larva prepares a cell within about three inches of the surface, in which it undergoes transformation and from which it later emerges as the adult beetle. This beetle gives rise to the second generation that in turn lays eggs and causes wormy peaches just before picking time.

It is quite obvious that picking up and destroying the early drops will prevent heavy infestation at picking time. The infested drops should be collected and buried at least 24 inches deep. It is usually advisable to make two or three gatherings of the drops. Special care should be taken that the very small shriveled peaches are gathered, for they are more likely to contain worms than the larger drops.

In one of the Georgia observations two and one-half baskets of dropped peaches were placed in a wire screen container and watched carefully. Within a few weeks 13,000 larvae emerged from these drops. This number would have produced sufficient second brood curculios to badly infest 100,000 peach trees. Such conditions emphasize the importance of using proper control measures in connection with the early peach drops.

In addition to picking up the drops, it is a good thing to disk or harrow the surface of the orchard frequently. The tools should loosen the ground at least three inches deep. This will break up the pupal cells and expose the inactive insects to heat and weather. The pupal stage usually averages about one month and disking at intervals of one week should continue from the time the peaches ripen until late varieties are almost ripe.

Good Bordeaux Mixture Controls Apple Blotch

There has been some tendency lately for fruit growers to reduce the strength of their bordeaux mixture below the 3-4-50 strength, and, according to Dr. H. W. Anderson of the College of Agriculture, University of Illinois, this is a mistake.

He says, "While there is reason to believe that a 1-2-50 bordeaux would control apple blotch under certain conditions, it would be unwise to use this on the entire orchard. Growers who are confident that they are applying sprays in a very thorough manner, and who have not been seriously troubled with blotch the last few years might well try this weak bordeaux on a small block of their trees one year in order to test the effect. However, the old expression that 'It is better to be safe than sorry,' applies to the use of full strength bordeaux for blotch control. Last season was unfavorable for apple blotch, and the chances are that blotch will not be very serious this season. It would be a good policy, therefore, to keep the disease in check by using methods which have proved successful for many years.

"Bordeaux spray should not be applied during cold or rainy weather. Clear, bright days should be selected if possible, and if the weather continues cool, lime-sulphur, 1-50, should be used in place of the bordeaux mixture. In fact, on those varieties especially susceptible to russetting, lime-sulphur should be used throughout the season, since it will give almost as good control as bordeaux."

Horticultural Facts

Cultivate the strawberries as soon as they are through bearing. It stimulates growth and keeps down weeds.

• • •

On a bearing apple tree the desirable amount of annual terminal growth is usually about 10 or 12 inches of plump wood.

• • •

You can save later pruning on your newly set trees, and have better-shaped tops by going over them occasionally and rubbing off buds that come where you don't want limbs.

• • •

Locate the orchard on suitable soil. Soil which will not produce profitable truck or grain crops is generally not well adapted to orcharding.

• • •

The best soil on the farm is none too good for the orchard and it, like other crops, is usually most profitable when grown upon the most suitable soil.

• • •

Every orchard operation should be performed after thorough consideration and in the light of the best information obtainable.

• • •

Thrifty strawberry plants, well cared for now, will develop into a full row of runner plants by fall, and the size of the crop next spring will be governed largely by the stand of plants secured this year.

• • •

During the past seven years common barberry has cost farmers of the state of Illinois a loss of two million bushels of wheat. In North Dakota also the woody shrub has destroyed many thousands of bushels of the best spring wheat.

Making Success of Whole Farm

Balanced Farming Is Secret of Continuous High Crop Profits.

Success with one particular phase of the farm business counts little toward the success of the whole farm if profits are lost on some other enterprise, H. C. M. Case, in charge of the farm organization and management department, college of agriculture, University of Illinois, points out. If the greatest continuous profit is to be secured from the farm, many things must be well done and a system of balanced farming based on good farm management must be followed, he added.

A well-balanced farm requires that first there be a good plan of the farm business, or in other words, that the farm be well organized. In the second place, the farm must be operated successfully from day to day. The study of individual farms convinces one that many men are so planning and operating their farms that they are uniformly more profitable than other farms in the same community. Our question then is, What principles are followed on these farms which make for profitable farming?

Success of Any System.

In the first place, the success of any system of farming depends upon the crops which the land will grow, whether the products are sold directly or fed to live stock. The object to be sought in the cropping system is first to select those crops which will maintain or improve the soil and produce good yields of profitable crops and then secure a combination of crops which will provide for the efficient use of man labor, horse labor and equipment. The value of any crop or combination of crops is determined not by the value of the total production but by the net value above the cost of production. Our investigations indicate that after a man has once selected a good cropping system little is to be gained from changing that crop rotation as prices change. The adjustment of the farming system to price conditions can best be obtained at another point.

One of the first essentials of a good farming system, then, is a field system which makes it easy to follow a definite rotation and provide about the same distribution of crop labor each year in order to use both man labor, horse labor and equipment to the best advantage. There is a wide latitude as to the cropping system which may be employed. However, usually, the cropping plan will provide for a four to six-year rotation. Some thought should be given to a selection of the rotation which will give as high a percentage of high profit crops as possible. We have, then, in planning the rotation, these points to keep in mind: a well developed field system, productive soil, a selection of high profit crops and good distribution of labor, power and use of equipment throughout the crowing season.

Live Stock Plan Important.

The planning of the live stock to be handled on the farm is equally important and should be considered, especially in planning for the use of available labor and equipment. Live stock frequently fits in with the crops to distribute the productive labor throughout the entire season. Cost investigations indicate that there is more latitude in choosing the amount of live stock to be produced from year to year. This is the point where the farmer can take advantage of price conditions. The man who has a well-diversified farm system, including a good high-profit crop combination and productive live stock, has more flexibility in his farming plan than the man who plans to sell only certain live stock products. The farmer in the corn belt has more latitude in choosing his farm plan than farmers in most sections of the country.

The man who follows a well diversified farming system may feed more or less of his crops to live stock, depending upon whether crop products or live stock products are in best demand on the market. No section of the country offers a better opportunity for studying the most profitable system of farming and of choosing those systems and adjusting production from year to year in a way which will prove profitable through a period of years.

Salt Not Poisonous

Salt is not nearly so poisonous to chickens as has been generally believed, according to recent researches at the University of Illinois. Chickens nine weeks old were fed on a ration containing four pounds of salt to each one hundred pounds of feed, and no ill effects were noticed. Even where twice that amount of salt was fed, no actual poisonous effect was noted except that the appetite of the chickens was not up to normal.

Feeding Work Stock

Work horses, mules and oxen will stand the heat and the hard work when fed good, well-cured old hay. It is best to feed it at night and not too much. Whenever the abdomen of the horse or mule, or ox gets large as a result of eating too much hay or forage that animal cannot work with comfort, ease or efficiency. New hay, new forage, grass, or green pasture is not suitable for work stock. Such feeds are too bulky and will not sustain an efficient working condition in the animals.

Live Stock Sanitation

Maintaining a high standard of cleanliness on live-stock farms is an effective and economical means of preventing losses and making the farm atmosphere wholesome. Sanitation involves good drainage, prompt disposal of manure, good light and ventilation in buildings and maintenance of the premises in a manner that prevents breeding places for diseases, parasites and other pests. A much higher standard of sanitation is needed for the best results.

THE WORLD'S GREAT EVENTS

ALBERT PAYSON TERHUNE

(© by Dodd, Mead & Company.)

Charlemagne

THERE is a gigantic, hug-hearted king, according to old French tradition, who sits asleep at a great table beneath a mountain, with his warriors about him, waiting the hour of France's direst need, to rise and restore her to power and peace. The king to whom legend credits this thousand-year slumber was Charlemagne, emperor of the Franks, who snatched France from barbarism and raised it to almost the eminence formerly held by ancient Rome.

After Rome's fall her many provinces became prey to whomsoever could take and hold them. It was a case of catch-as-catch-can, with the strongest arm ever in control of the situation. Thus, in turn, first one barbarian and then another rose to power, to be deposed by a greater or to have his territory torn asunder at his death. It was a time of endless struggle. Civilization, culture, the arts, and progress, were all in abeyance to the law of sword and flame. Finally the Franks, little by little, gained power, by war, coalition or diplomacy over groups of other principalities until, when Charlemagne came to the throne, in 772, he found himself lord of the land that now comprises France and a large part of Germany.

While much of Italy and a few other parts of Europe were moderately civilized, many of France's nearer neighbors were here savages as some of them heathens. Among the latter were the wild Saxons, a brave, lawless race inhabiting Westphalia and Holstein. These Saxons were marauders. As such they disturbed the welfare of Europe. They had rich possessions. As such they roused the cupidity of Europe.

Charlemagne discovered that the Saxons were heathen, and set out to convert them, carrying the Bible in one hand and the sword in the other. For thirty-two years off and on the war lasted. He ravaged their country, beating its defenders, in spite of their fierce resistance, and demanding that they accept Christianity. The bewildered Saxons, failing to grasp the Gospel of Peace when preached with a sword, pretended to submit. Charlemagne then marched his army over the Pyrenees and proceeded to conquer Spain. This he did without meeting any serious reverse, until, as he was on his way back, his rear guard, under command of the hero Roland, was ambushed and cut to pieces.

Meantime, the moment his back was turned, the Saxons had sprung to arms and heathenism once more. Charlemagne returned to the attack and for three decades longer kept up the war. At the end of that time the Saxon country was a desert and their best men slain. Perforce they submitted and consented to be baptized, abandoning forever their heathen gods. Charlemagne then set out to convert the Norsemen of Scandinavia and the natives of Hungary in like fashion; and, to rescue the Papal states from their foes, invaded Italy.

He welded his conquered lands into one compact and powerful nation, after the fashion of the ancient Roman conquerors. In recognition of his prowess he was formally crowned emperor of Rome on Christmas day, 800 A. D.

It was in his governing rather than in his conquest of other lands that Charlemagne rendered his chief service to progress and humanity; for wherever he conquered he carried education, music, the arts and other modernizing influences. He reformed the coinage and the code of ruling then in vogue by dividing off his empire into districts, each district under the control of a count, who was responsible for its welfare, and who had subsidiary officials to look after the interests and safety of the people. He thus introduced the new "feudal system" of paternal government in place of the old chaotic methods; a system that superseded the semi-lawlessness of the Dark Ages and advanced the world's development along all useful lines. Charlemagne and his reign formed, in fact, the link between the ancient and more modern times; between the out-worn old order and the new order of things which was slowly shaping the earth's destiny into its present mold. The emperor was wise enough to take all that was best in the old system and graft it on the new. France, the great nation of later days, came into existence during this reign, bred by a mingling of ancient civilization with the hardy and newer Teutonic energy.

In 814, at the acme of his glory, Charlemagne died. As usual in such cases, the vast "one-man" empire could not endure intact after the death of the genius that had built it up. His temporal achievements crumbled away at his death, and had he been merely a conqueror he would have left no lasting impression on history.

But the education, the religion, the culture and the model government he had instilled into his subjects were to live on forever as an eternal monument to their founder and as an unequaled power in the world's development.

Bank of England Notes

The face value of the banknotes produced each week by the Bank of England is approximately $100,000,000.

Would Have His Joke

An English convict on being told by the warden that his sentence was commuted to penal servitude for life is reported to have said, "Well, sir, they say that no noose is good news, and I'm hanged if it isn't."

Skipping for Youth

A medical reader from Glasgow advises women to skip every day, arguing that it will keep them young. The more popular method of keeping young is to skip every birthday.

AMERICAN FRENCH

"So you did pretty well with your French while in France, eh?"

"Yes, most of the Americans over there understood what I said."

What Pie Is a Necessity

"It says here that pie is almost a necessity of life," said the Old Fogy, as he looked up from his newspaper. "Do you agree with that statement?"

"No," replied the Grouch. "Pie isn't a necessity of life, but it is an absolute necessity of politics."

Almost every island of the Philippines contains coal.

AGAINST THE GRAIN

First Motorist—How'd you skin your tire like that?

Second Ditto—Aw, ran against one of these cross-grained men.

Not Letter Perfect

An actor was trying to play golf for the first time when a friend came up and remarked, "Playing golf, eh?"

"Yes, and I can see I'm going to need a lot of rehearsals."

Enough

"So you think you love John?"

"Well, he thinks so."

SHORT BUT INSURED

Anna—Why did she marry him?

She knew his life would be short.

Belle—Yes, dear, short, but insured.

ON THE SESQUI LAGOONS

Here are Americans, visitors to the Sesqui-Centennial International Exposition in Philadelphia which celebrates the 150th anniversary of the signing of the Declaration of Independence, riding about the lagoons in an Italian craft, a gondola, from which they view the buildings and displays from many lands. In the distance can be seen the mammoth Sesqui Stadium; to the right is the Pennsylvania State Coast Guard building and exhibit, and next to the left is one of the Japanese pagodas which dot the exposition grounds. The Grecian pavilion is one of the permanent structures on the site which the city government decided to build the Sesqui at the front door of the great Philadelphia Navy Yard. The Expoeition continues until December 1.

U. P. Would Sacrifice District to Secure Job of Frank Scott

Politicians and Newspapers are Urging Upper Peninsula Voters to Rally with U. P. Candidate so that Congressman will be from Across Straits. Lower Peninsula Should Not be Caught Napping.

FRANK D. SCOTT

For the first time since the 11th congressional district was organized, political forces across the Straits, especially the newspapers, are trying every possible means to divine the district in half and play the upper peninsula against the lower peninsula.

This year is probably the first in which a lower peninsula candidate and an upper peninsula candidate have been in the field alone. This year, Frank D. Scott, present congressman, is opposed by a man from Newberry and the political forces in the upper peninsula are attempting to get a solid vote for the upper peninsula candidate.

The upper peninsula claims it is entitled to have the congressman and the senator from Newberry and the political possible way to stand solidly behind the candidate from the upper peninsula. They offer no fault with Congressman Scott. They do not claim that he is not a good congressman or that he has not carried out the duties of the office in the best possible manner. The only claim is that the upper peninsula should have the congressman and in this it looks as though the upper peninsula is selfish, to say the least.

It takes years for a congressman to gain sufficient prestige in Washington so that he can do things for his district and Congressman Scott has now gained that prestige and influence. The district as a whole is receiving the benefits and it would appear that the upper peninsula in attempting to gain the congressman would be willing to sacrifice the prestige of the entire district. What matters it, whether the congressman comes from the upper or the lower peninsula so long as the whole district is taken care of in the proper way? It should not matter at all. The people of the district want a congressman in Washington who is able to do things and it is conclusively proven that Frank D. Scott can and does get things for this section of Michigan.

His ability as a congressman, however, to the political forces of the upper peninsula means nothing. The fact that he has been going upward step by step to the point where he now is one of the most influential men in Washington, means nothing to the upper peninsula politicians and newspapers. The only cry from that section is that the Upper Peninsula has a chance to get the congressman's job and they want it. Upper peninsula papers are urging the people of that section, day after day to stick with the upper peninsula candidate and get the job for the upper peninsula. It is nothing but selfishness, yet they are working every possible way to get the Newberry man across.

The lower peninsula voters therefore should not be caught asleep. They should not let the upper peninsula 'ship it over' and elect the upper peninsula candidate. If the upper part of Michigan feels that a congressman from that section would be of benefit, then the lower peninsula should take the same attitude and keep a lower peninsula man in office. What is good for one section is good for another and the lower peninsula should not sit back and let the upper peninsula slip a proposition like this over. Congressman Scott is from the lower peninsula. He has never urged a division of the district and has never attempted to play one portion against another but if his opponents attempt to do this, then the lower peninsula should not sit back and let them get away with it.

In representing the district Congressman Scott has had no sectional lines. He has represented the whole district without thought of the division of the peninsulas. On the other hand, if the upper peninsula assumes this attitude in voting for its congressman, then it is reasonable to assume that the congressman, if elected from the upper peninsula, would consider the district in the same manner and the northern end of the district would be given first consideration at Washington.

The district cannot afford to be divided. The requirements in both the upper and lower peninsulas are almost identical and should be so represented at Washington. It therefore behooves every voter in the lower peninsula to think twice before voting for a candidate from any section but the lower peninsula.

Frank D. Scott is the lower peninsula candidate. He is the present congressman and has given good account of himself, ever since his first day in Washington. The lower peninsula voters therefore are taking no chances in voting for Scott on Sept. 14.

BEAVER ISLAND

Capt. Owen C. and Frank McCauley were called to Escanaba Thursday to attend the funeral of a brother, Dominic, who died last week.

Mrs. H. Vandenburgh left for Grand Haven last Sunday, after spending month with her husband, Captain at the coast guard station.

Mrs. H. W. Bundy and sister, Mrs. Bott, of Detroit, have returned home after spending the summer at their cottage, Wago Wild.

Mr. and Mrs. Fred Floyd have moved to Muskegon, where Mr Floyd has a position at the coast guard station.

Road Commissioners Courier and Rodgers, inspected the road built by Mr. Summerville in St. James township.

Morris Duffey of Chicago, left Sunday after spending two weeks visiting his sister Mrs. W. J. Gallagher Jr.

Miss Clementia McCauley left for Detroit Monday, to take up her duties as teacher in the schools there.

Christian McCauley of Detroit, returned home after spending a week with his father, Frank C. McCauley.

Mr. and Mrs. Alphonesis Sendenburg arrived home after a trip to Chicago, Escanaba and other points.

Mrs. W. J. Scheid and family have returned to Chicago, after spending the summer at their cottage.

Mrs. John P. Maloney and family of Chicago, who spent the summer here, returned home Wednesday.

Grace Bonner left for Detroit, after a month's visit with her parents, Mr. and Mrs. T. J. Bonner.

Mr. and Mrs. Lloyd McDonough have returned from Chicago where they had been for a week.

Catherine and Lillian Green have gone to Chicago where they will remain during the winter.

Mrs. John P. Malby arrived home Tuesday, after visiting friends in Escanaba.

Mlsg Anna Gordon of Chicago, returned home after spending a week here.

James Leonard and wife of Chicago, are at their cottage, arriving Tuesday.

Shelley Really Not So Badly "Henpecked"

Miss Sotha Furnivall, daughter of Shelley's physician, is one hundred years old, according to a dispatch from London, and she remembers hearing her father talk about Shelley. Doctor Furnivall, it appears, had a "high regard" for the poet, although Shelley paid him only one guinea of seven which he owed." This was magnominous of the doctor; but it reveals Shelley as in a class with Leigh Hunt, who never paid his debts and who frequently called on Shelley for aid.

Shelley's weakness about paying bills, however, is not the most interesting thing Miss Furnivall remembers hearing her father say about him. The doctor, she says, believed Shelley was a truly henpecked husband—henpecked by his second wife, and certainly not by his poor first wife. The doctor, according to Miss Furnivall, remembered well how the second Mrs. Shelley "continuously was saying to her husband, "Shelley, fetch this, or that."

This little glimpse into the poet's domestic life is worthy of biographic note, for it reveals that in Shelley's time a man was believed to be henpecked when his wife merely requested him to fetch something. But what would Shelley think—and what would good Doctor Furnivall think—were they to return to earth and witness the home life of the modern American husband whose domestic activities embrace everything from stoking the furnace to washing the baby? Today the wife does not mildly suggest that the husband "Fetch this, or that." She would make Mrs. Shelley look like an oppressed hired girl who was afraid to lift her voice above a whisper. The wife nowadays simply doesn't suggest domestic duties to her husband, she issues commands—and maybe this is one reason why there are not more American husbands who can write poetry like the incomparable Shelley's. —Wilmington Every Evening.

Java's Jungle Ship

In the midst of a forest in the island of Java, not many miles from the chief port, Batavia, lies a big merchant ship, fully rigged. It is a long way from any navigable water, and is surrounded on all sides by jungle growth. Yet it was not built there.

Visitors who have seen this strange sight have wondered how a ship came into so strange a position, until the explanation was forthcoming.

The island and the whole of that region is highly volcanic, and in the course of one of the gigantic eruptions a tidal wave swept inland for many miles, carrying everything before it. On its crest rode a merchant ship. The wave receded and left the vessel high and dry.

PERSONALS

Zeno Schoolcraft and family of Belaire, are visitors here today.

Wm. T. Driggett made a business trip to St. James last Sunday.

Howard Porter of East Jordan, was a business visitor here yesterday.

The W. C. T. U. meets Friday at 2:30 p.m. with Mrs. Swartz, 306 Petoskey av.

Attorney J. M. Harris of Boyne City, was here on professional business Wednesday.

Mr. and Mrs. F. E. Turrell, of Detroit, former residents here are in the city today.

Miss Annabelle Comfort left for Chicago last Sunday night to resume her study of music.

Lou S. Comfort spent Sunday with his family here, returning to Wisconsin early this week.

Postmaster W. W. Hoyle of St. James, was a business visitor in Charlevoix early this week.

R. C. Squires, of Dansville, Mich., spent the week-end with relatives and friends in this city.

John B. O'Donnell, of Grand Rapids, is spending a few days here attending to business interests.

Mr. and Mrs. James Pappin and two daughters, of Cadillac, spent Sunday with friends in Charlevhix.

Attorney Clair C. Coulter, of Detroit, spent several days recently with relatives and friends in this city.

Mrs. Wm. E. Wright closed her summer home at Norwood early this week and returned to Chicago today.

The ladies of the Congregational church will serve their annual Harvest Supper Wednesday, Sept. 22nd.

Attorney E. N. Clink, Mrs. Clink and daughter, Miss Lois, of East Jordan, were Charlevoix visitors last Tuesday.

Mr. and Mrs. Locke Lamb, of Toledo, spent the week-end at the Min-Jon cottage, guests of Mr. and Mrs. John H. Koch.

Frank N. Metcalf spent the early part of the week with his family here, returning to Central Lake Monday evening.

Dave Vaughn, of Boyne City, spent the early part of the week here on business connected with the priminary campaign.

A. A. Wilbur spent a few days with his parents, Captain and Mrs. O. E. Wilbur recently, returning to Chicago Tuesday evening.

Mr. and Mrs. H. E. Vogeli closed their summer cottage at Norwood a few days ago and returned to their home, Chicago, early this week.

Miss Mary Catherine Corogan, of Marquette, has been a recent guest of Miss Elizabeth Harris at the Harris summer home at Ironton.

Mr. James W. Harris, of Oak Park, Ill., arrived here early this week and is spending a vacation with his family at their cottage near Ironton.

Mr. and Mrs. T. F. Leonard, of Chicago, made the trip to Saint James last Tuesday, to attend to business interests and enjoy a two weeks' vacation.

C. R. Bellinger has on display in his show window some special goods that he is selling at 1 off regular prices. This would be an excellent time to make your purchases for Christmas.

The Women's Missionary Society of the Congregational church will hold their regular monthly meeting, Wednesday afternoon, Sept. 15, at the home of Mrs. Conell. Topic, Japan. Leader, Mrs. Saltorstall.

Mrs. Sibyl Sims Garnsey, daughter Sibyl and son Clark, following a visit of several weeks in this city, guests of Mrs. Garnsey's father "Uncle" George H. Van Pelt, returned to their home, Port Orange, Florida, last Tuesday.

John Grill returned to his home, St. James, today, following a trip to Grand Rapids early this week with his son, John Walter Grill, who entered Saint Joseph Seminary to pursue a course of special study and advanced educational work.

Emmet county fair is in progress this week. Variable weather conditions have acted as a handicap and to some extent spoiled the opportunity for entertaining a record breaking crowd and consequently a heavy reduction in gate receipts.

Dr. and Mrs. Frank H. Wilkinson motored to Caladonia last Saturday night and made the return trip Sunday night, the trip being made for the purpose of attending the funeral service of Mrs. Wilkinson's cousin which was held Sunday.

Miss Margaret Bills, a state W. C. T. U. worker, will speak on "The Second Mile" at the Baptist church next Wednesday at 7:30 p. m. A musical program in charge of Mrs. A. J. Stelter will precede the lecture. Everyone interested in temperance work is invited.

Mrs. Frank Coutts Sr., entered the Charlevoix hospital where she underwent a major operation for an ailment of long standing, yesterday. Today she is resting comfortably and her physical condition is such as is satisfactory to the family, friends and attending surgeon.

Mr. and Mrs. Floyd Bettes and children who spent the past few weeks with Mrs. Bettes' brother, Charles Ulrich, returned to their home, Wyandotte, Mich., early this week.

A committee of ladies will conduct a free school of instruction for voters at 112 Clinton street, just east of Episcopal church, on election day, from 10 a. m. to 5 p. m. Those who are voting for the first time or others who are uncertain about the procedure may call at any time between the hours named and receive instruction.

A wedding ceremony was solemnized at the residence of Mr. and Mrs. Herman Burns last Sunday evening, in which Mr. Peter B. Boyland of this city, and Miss Viva Kitson of Allegan were the contracting parties. Herman Burns D. D. pastor of the local Baptist society officiated at the ceremony in which the beautiful ring service was used.

The Moose hall of Charlevoix was filled to capacity on Wednesday evening, Sept. 1st. The public of this city enjoyed and appreciated the lecture delivered by Martha Remer, spiritual medium, of Chicago. All messages were recognized and verified by those receiving same. We hope to have her with us again.—H. C.

Messrs. Nelson Lindley and Ivan F. Newman returned last Tuesday night from an extended motor trip through Ontario, Canada. While in Canada they visited Mr. Lindley's old home town, Burlington, spent some time at the Industrial Exposition, Toronto, and enjoyed the sights in London, Hamilton and other interesting cities in the Dominion.

Tearing out old and building of new greens on the Belvedere Club golf course is under way in order to have the grounds in readiness for players at the opening of the 1927 season. In doing this work extra help is needed and forty or more good laborers can secure a job at good wages by applying to L. L. Moore who if superintending the work.

Arthur Teil, a lad nine years of age living north of Boyne Falls, was seriously injured last Saturday by a passing automobile. The injured lad was taken to Lockwood hospital for treatment. Examination revealed the extent of his injuries which were numerous, confined to his head, arms, body and legs, both of the latter being broken between the knee and hip.

Some one has cut, defaced and destroyed shrubs, trees and other property at Norwood known as Van Pelts White Birch Grove. A reward is posted for evidence that will lead to the apprehension and conviction of the guilty party. Win the reward by helping "Uncle" George locate the wanton destroyer and as an object lesson to either thoughtless or willful destroying trespassers.

Harry M. Gross, of Denver, Colorado, for the past season chef at the Inn will leave in a few days for Syracuse, N. Y., where, according to announcements, he will be united in marriage on the 12th inst. with Miss Julia Farrell, of Syracuse, at the M. E. Church in that city. Following the ceremony the couple will go to Southern Pines where Mr. Gross will continue with Mr. A. I. Creamer in the same position as at present.

Fire at Petoskey last Tuesday night caused heavy damage and loss to several business houses ranging in amounts of from $40,000 down. Welling's department store was perhaps the heaviest loss. Beese & Porter, John Lovelace, William Germond and Mrs. Harriet Seybold also lost in various amounts on either merchandise or personal effects. The fire of undetermined origin was discovered in the Hankey block which was damaged to the extent of about $20,000. The total fire loss will reach nearly $150,000.

The several voting precincts in the county are entitled to the following number of delegates at the Republican County Convention called for Tuesday, Sept. 21st, at Boyne City: Bay 2, Boyne Valley 4, Charlevoix 1, Evangeline 1, Eveline 2, Hayes 3, Hudson 1, Marion 3, Melrose 2, Norwood 1, Posin 3, St. James 2, South Arm 3, Wilson 2, Boyne City, 1st ward 2; 2nd ward 3; 3rd ward 6; 4th ward 5; Charlevoix, 1st ward 2; 2nd ward 6; 3rd ward 5; East Jordan, 1st ward 2; 2nd ward 3; 3rd ward 6. Delegates to attend the county convention should be elected Tuesday, Sept. 14, by voters at the time of the primary election.

Unfavorable weather conditions prevailed last Monday, as a result the people did not attend the county picnic at Whiting State Park in numbers equal to previous years. Early in the day according to estimates made by several people, there were possibly six hundred persons in the park, but they dwindled away rapidly, leaving possibly 250 or 300 who spent some considerable part of the day at the park. As a result of weather conditions many of the athletic events scheduled for the day were eliminated and in fact the process of elimination was a predominant factor in the day's proceedings. Therefore the third annual picnic fell far short of what was earlier anticipated.

Conclusive

"My client is not mentally normal. The fact that he murdered his wife is partly a proof of that, but the fact that he married again is conclusive." —Dorfbaebler, Berlin.

GOOD ROADS

CITIZENS PAYING FOR GOOD ROADS

Transportation is today vital to all businesses. The enlarged field of operation most business firms have opened up during the last few years has brought about radical changes in the conduct of trade. Statewide and national distribution has taken the place of community and county trade. Adequate highway transportation is needed to facilitate widening distribution. These facts have been determined by a national survey into highway problems conducted by the American Association of State Highway officials.

Because of this changed trade aspect the association finds real need for continuation of the federal aid highway act as it exists today. The act has enabled states to build according to a national plan, rather than to a disjointed local building program.

Many interesting facts have been brought to light by this investigation of the association. The ordinary commodities of everyday trade are cited as examples of the influence of highway transportation on trade distribution. Sugar is produced in a few concentrated sections or imported. Without adequate distribution the price of this common commodity would vary greatly over the country. With railroads and improved highways, transportation has brought about a more uniform price level.

The identical situation exists in crackers, tobacco, cereal, radiators, cans, and the wares of such retailers as the five and ten cent stores. While the manufacturer and general business of the makers and sellers of these commodities may be concentrated in one locality their business is dependent solely upon their ability to get their goods to the buyer with a minimum loss of time and expense.

More and more, the association finds, these goods are being distributed by motor truck on the highways. This is especially true of the movement of goods from centralized warehouses to the consumer or retailer. This movement is growing in direct proportion to the increased miles of improved roads being built over the country.

Plan Road Along Top of Mountains in Virginia

A 75-mile highway along the summit of the Blue Ridge mountains in Virginia may be built by the federal government. The proposed highway would pass through the heart of the new Shenandoah National park and would look down upon the most famous valley in America, Shenandoah, "daughter of the stars."

The proposed Shenandoah National park area extends 75 miles along the Blue Ridge, beginning at Front Royal, a 75-mile automobile ride from Washington, and ending in Waynesboro.

Engineers of the Department of the Interior in inspecting the site have recommended the proposed highway not only as practical, but as furnishing an opportunity for one of the most beautiful scenic routes in America.

The highway would have an average altitude of more than 3,500 feet and it would wind around 20 mountain peaks on the top of the Blue Ridge, which is almost level.

Engineers found thousands of tons of rock available for the highway which would greatly reduce the cost.

The highway would run by a number of waterfalls, several of them more than 100 feet in height. It would pass through much virgin forest and along the edges of precipices from which the traveler can gaze for miles across the Shenandoah valley. On a clear day, it is said, the Washington monument, 75 miles distant, is easily discernible from the peak. From the mountains can be seen thousands of acres of apple orchards and land in farms in the "granary of the Confederacy."

No More Rejection Slips

At last I have discovered the secret! After all these years of heart-breaking, back-breaking, almost fruitless toil to land my manuscripts in print I see ahead the road to success. I have discovered a method of eliminating the rejection slip.

I do not assume all the credit myself. I cannot truthfully say that I am entirely a self-made man. Many are the contributors—editors whose wise words have pointed out the way. Yet it has been my ready comprehension of basic truths, my ability to read between lines, that has brought it all about, and I modestly take myself for all I am worth.

Yes, at last I have discovered the secret, the true method of eliminating the rejection slip. I am going to stop writing.—Kansas City Times.

To Republican Electors for the County of Charlevoix

A convention of Republicans for Charlevoix county will be held at the Wolverine Hotel in the City of Boyne City on Tuesday, September 21st, 1926, at ten o'clock in the forenoon, central standard time, for the purpose of electing five delegates to attend the Republican State Convention called to meet in the city of Detroit, on Tuesday, Sept. 28th, 1926, at ten o'clock, central standard time, for the purpose of nominating candidates for State officer, electing State Central Committee and a chairman thereof and for the transaction of such other business as may properly come before the Convention.

Republican County Committee.
By Howard P. Porter, Chairman.
L. H. White, Secretary.
Dated Sept. 8, 1926.

Belief That Vikings Gave Name to London

The origin of the name of London has puzzled many historians.

Londinium is first mentioned by Tacitus, a Roman author, in A. D. 61. He says it is "a place greatly celebrated for the number of its merchants and the abundance of its supplies."

There are many proofs in English and Swedish museums of the intimate intercourse between England and Scandinavia in early times, an intercourse that has probably gone on uninterruptedly for about 6,000 years. It may, be conjectured that early Vikings from the south of Sweden ventured across the water and sailed up the mouth of the Thames and found a grove, which in Swedish is "lund," on the banks of the river, where later on the Roman Londinium arose.

The invaders called the place "Lund," from the Scandinavian "offerlund," or sacred grove, says a writer in Notes and Queries. The name has later corrupted into "Lond."

Gossamer Gowns

The weaving of gowns from gossamer, which is now so much in evidence, was suggested in the Eighteenth century, Le Bon of Languedoc presented a "silk" from spiders, which was afterwards woven into gloves and stockings. Louis XIV of France, possessed a cuff made of cobweb, and in 1837 the Empress of Brazil presented Queen Victoria with a dress composed entirely of cobwebs which, for fineness of texture and beauty of fabric, surpassed the most valuable silk. Nevertheless, cobweb cloth is not likely to become a commercial proposition, for the voracious spider eats every day 25 times its own weight of insect food which is, of course, expensive, and produces in return only half a grain of cloth.

CHURCHES

Baptist Church
Rev. Herman Burns, D. D., —) Pastor (—

Mr. B. G. Lessman, pastor of the Gaylord church, was ordained to the Christian Ministry last Thursday. Several delegates went from here and Dr. Burns preached the ordination sermon.

The pastor will conduct preaching services Sunday morning and evening. Bible School will meet at noon. The mid-week service will meet on Wednesday evening. The Ladies Mission Circle met Wednesday p. m. with Mrs. Burns.

We urge all voters to attend the primaries on Tuesday and help to nominate worthy candidates for the November election. It is the duty of everyone to thus serve the county, state and nation.

Congregational Church
Rev. B. G. Mattson, D.D., Minister

The morning service is at 10:30 preceded by the Sunday School session at 9:30. The pastor will preach a sermon appropriate to the opening of the public schools on the theme "The Educational Rights of Youth."

The evening services will be omitted during September, to be resumed with Rally Day, October 3rd.

The mid-week meeting for prayer and Bible study is held every Thursday at 7:30.

The Sunday School will change the hour to 12 o'clock beginning with Sunday, September 19th.

Christian Science Society

Sunday service, 10:45 a. m., Subject, "Substance."
Sunday School 12 o'clock.
Wednesday evening service 7:45
Reading room, Tuesdays and Saturdays, 3 to 5 p. m.
The public is cordially invited to attend our services and use our reading room.

St. Mary's Catholic Church

Low Mass 8:45 a. m.
High Mass 9:00 a. m.
Saturday and Monday 7:30 a. m.
Rev. Knute Lowenski, Pastor.

Episcopal Church

The Rev. John K. Coolidge, of Glencoe, Ill., will hold services at 10:30 a. m. at the Episcopal church during the summer months.

CHAPTER XI—Continued

Caleb was still bitter enough himself to feel scant sympathy with Baxter's condition, serious as Fields considered it to be. Baxter hadn't been drunk when he went to Hermanos valley to talk with Betty and her father.

Hinckley was waiting for him at the Ferry building. The engineer had managed to satisfy but completely disguise himself. In old, baggy breeds, with a shabby hat and a battered bag, he looked like an unsuccessful farmer. The keenness of his eyes was dimmed by yellow-lensed spectacles with habitation tortoise shell rims. He smiled approvingly at Caleb's rough visitors.

"That's the idea. No sense in us looking like cowpunchers or in any way prosperous or otherwise outstanding. I'm fairly well known over here, too, and, if it got out I was snuffling around the hill, the price of real estate would be apt to soar immediately. There's always the chance of Oakville learning something and suspecting more.

"There's a big lot of watershed we'll have to accumulate to insure purity. And you've got to be canny. Your role is that of a foolish young Easterner with money on whom laid north comparatively little may be unloaded at a fair price. A price they will think big until the project is complete."

"It's fair enough all round," he went on. "We'll pay no more than market value because at present there is no actual market for their land, hasn't been for years, and likely to be. The boat's it."

Through the waiting room windows they could see the trans-bay passengers filing past to the exits. Caleb released from attention to Hinckley's talk—they had stood apart from the crowd—suddenly caught his breath. Less than ten feet from him, in front, were Betty Clinton and her father. They were going back to El Nido. That was evident and it suited Caleb. Efforts he proposed to Golden he could carry out his intention of seeing them. Baxter could wait. So he dallied until Clinton's spare figure found a way through the thinning crowd that tailed on the Ferry egress and, with Betty following, climbed the stairs to the upper deck. Hinckley went forward to the open end with Caleb. They were among the first off the ferry, first through the gates to their trails.

Hinckley and Caleb took rooms at the same hotel that Caleb had patronized. Part of their trip was to be made in a car shabby enough to preclude any idea of wealth for its occupants, part in a buggy, on horseback, and afoot.

Caleb took the lead and conducted Hinckley up Hermanos canyon, into the Deer-Horn valley, to the source of Gabilan and around about the Sink Itself. The third day was given up to an inspection of the foothills that bound the Sink and a checking-up of Caleb's demonstrations in proof of the clay that underlay the gravel and lined its sides.

"I am entirely satisfied, so far," said Hinckley when they returned to their hotel after this last trip. "This is Saturday. I'd like to call a halt until Monday. I always aim at spending the week-end in the bosom of my family, if I can compass it. We have done famously. I can confirm your findings with enthusiasm, my son."

Hinckley nodded at the young man with a smile that radiated health and good nature. They had got along wonderfully in their common interest in a project that promised full success.

"Goin' to leave us?" The landlord of the hotel came out upon the verandah where Caleb and Hinckley were chatting. Rain had fallen heavily and held them indoors to check over the notes and maps they had made. Now it was clearing up.

"I'm going to Golden on the four-ten," said Hinckley. "The last Monday. Mr. Warner—are you coming with me, Warner?"

"I think not. I'll do a little fishing. Maybe take a shot at those quail we saw on Gabilan. You'll find me here waiting for you."

"Cloudburst up country," said the boniface, sniffing. "This here local rain was the tag of it. Crick's risin' fast. Black as sin over Gabilan. She's a weather-breeder, is that old mountain. Power of current comin' down stream after this little spell of weather."

"Let's go out and have a look," suggested Hinckley.

Coyote creek had risen, was rising, in a volume that testified to the truth of the landlord's assertion that there had been a cloudburst. He accompanied them to the bridge, scorning any waterproof for the now swiftly falling rainfall and the three leaned over the rail and watched the stilling torrent of brown water. Caleb marked the waterline on the cement of the bridge abutments, noting it by certain stains in the cement. It was covered within five minutes by as many inches.

"Rising fast," he commented.

"She'll rise for an hour or so after that burst," said the landlord. "She comes a kiyoottin' on a bootin' in the winter when Gabby gets to makin' rain in earnest."

Caleb saw Hinckley off. Then he ordered a lunch just up. The landlord made little comment to be handed on to the cook.

"If you aim to be out late you better take a slicker along," he said. "Try the feel of the air an' my rheumatic knee, old Gabby she'll through yet. Likely to be another cloudburst after sundown. Black as the inside of yore hat over that."

Caleb thanked him and took his advice. He was bound for Hermanos valley and he crossed the bridge and started up Hermanos creek with his shoulders squared and his face set. Nothing was going to prevent him getting an audience with Clinton. He had certain things to set forth and, stormy though that interview would probably be in the beginning, he would let himself hold no doubt as to its favorable conclusion.

CHAPTER XII

On the Bridge

It was a five mile walk to the canyon head, another mile to the ranch. In twilight, hastened by the still overcast sky. He trudged on at the best pace he could muster over the slippery red soil but, when he came to the final bend, the neck of the bottle, it was so dark that he could only make out the suspension bridge by its silhouette where it crossed the gut of surging torrent, close to the footboards. Soon it would be over it.

Caleb doubted whether the bridge would stand any great resistance to water pressure. He remembered fissures in the rocky buttresses where the cables were anchored, fissures ever widened and deepened by successive winter assaults of storm waters. He was hungry and he decided to eat his supper and wait for moonlight before he crossed the gut and struck the ridge trail down to El Nido.

By the time he had finished eating, a "reminisce light above the western ridge proclaimed imminent moonrise, and the efforts of the luminary to conquer the already receding masses of cloud in their disorderly flight.

Caleb stepped onto the bridge cautiously, either hand on the guide-rops of steel wire, held up by iron stanchions that were bolted through the floor planks. The structure shuddered under his tread as he felt his way along. Suddenly the rhythm of its trembling changed and became so irregular as to force him to a standstill. The jolting increased. Some one else was on the bridge, coming from the valley side. Was it Padilla?

He held his ground. The boards were not wide enough to permit of two passing abreast to breast. They would have to slide about each other. If it was Padilla and the Mexican wanted to dispute the crossing, there would be trouble. Caleb was not going to turn back. He hesitated whether to call out as the other came on, his trend sounding distinctly.

Then the moon suddenly broke through its veil and sent a transient ray into the mouth of the gorge. Out of the dark, as if a spotlight had been projected against a black curtain, staring at Caleb while he stared back, leaped the face of Ted Baxter; the features incredulous at first, swiftly changing, before the light failed, to a sneering, taunting mask. His voice sounded out of the dark as the light vanished.

"What the devil are you doing up here?"

The query held a scornful emphasis that aroused in Caleb such a retty, consuming hatred in answer to the challenge, as he had never known himself capable of. This man, within reach, once his friend, had done him treacherous injury. Now was the time to strike a balance.

"I've been looking for you, Baxter," he said, "though I didn't exactly expect to meet you here. I know everything you've done. It's opened my eyes. I had an idea that you were fairly decent, that you possessed at least some remnants of honor, some rags of friendship. You haven't got any more principles than a yellow cur. You . . . ."

"I haven't, eh?" broke in Baxter. The moon came glimmering through again. "Because I've bested you in a business deal where you thought you were so almighty smart, you get sore! You went sneaking around yourself, trading on friendship and pretending to make love to a girl, so that you could find out what you wanted about Hermanos valley and then have it condemned for a reservoir. You talking about honor! You tried to hoodwink Clinton and I found it out and saved him. Rags of friendship? You pretended to be my best friend and, when it came to a showdown, you lied to me and said you didn't have any money. Why? Because you lacked the backbone to come out and say so, because you were so d—d Yankee, afraid you might lose a penny."

A lurch of the bridge, a sudden wrench. A chilly wave slopped over the boards. It flowed about the ankles of both of them. Caleb stood with one hand free, the other on the handrope, balancing. Himself, whipped to fury by each word of Baxter. But he did not interrupt him. He was waiting for the light to get stronger. He could see the other but dimly, his face thrust forward, shouting out his words, trying to make them sting deeper.

"That was business and I got the best of you. To h—l with all that! That isn't what you're sore about. It's because I've cut you out with the girl. Why don't you own up to it?" Baxter laughed mockingly.

"You don't suppose, you poor boob, that she would ever look twice at a little tyke as a lover. You've got diluted muple strup in your veins. She's got blood, red, hot! I kissed her less than half an hour ago. I—"

Fury overmastered Caleb. Baxter had touched the sensitive core of the whole matter—Betty Clinton! He leaped for his man and felt the wellaimed, smashing impact of Baxter's fists to neck and jaw as he himself swore hard for the body. But the straight punch that nearly found the final "point" jolted him badly and spoiled his mass. He grappled to a cliinch as the moon sailed out, wading through a shallow sea of splintrift clouds.

(TO BE CONTINUED.)

Mr. Meek Puts $30 on Right Side of Ledger

The meek little man counted his change and moved away from the railroad ticket window. He looked worried, counted again and edged indifferently back.

"I think," he said apologetically, "that you made a mistake in the change."

The clerk-haired clerk became cold with sudden hauteur.

"Sorry, but you should have rectified that when I gave it to you. Can't do anything now."

"Huh," said the little man, peering piteously over his glasses, "I didn't notice it at the—"

"Rules of the company," recited the clerk pompously. "We can't risk getting gypped by people who don't count their change. Move along, please; others waiting."

"But you sure you can't do anything about a serious error like this?"

The agonized anxiety in the small voice would have melted a human heart.

"Yes. Absolutely! Now, will you move on or must I—"

"No, there's no need of that," sighed the limb, noting late the passing throng. "You're just out $30, that's all."

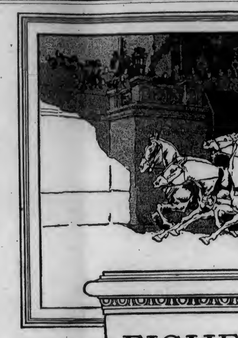
Retrospect

In looking backward over life it sometimes see many fit sadness, and feel life to be a rather sorrowful thing; but for, far oftener it is the laughter that I hear, and it is sailing faress thin look litto mine. Even men who were hateful, even the minorities of merciless drivers, are softened for the moment, that time effaces their evil, bringing out more and more glimpses of pleasantness they had in them. There were very few indeed who meant the evil. At any rate, time shall give them the benefit of the doubt.

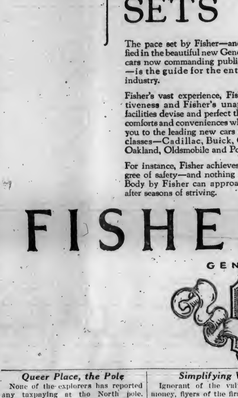
Judgment is a poor thing as from man toward man, isn't it? Though I have known human devils, for whom in my heart I can find no respect or pity, perhaps the Almighty can. I do not doubt that such is the case, and to Him I will leave the judgments.—Hill Adams in Adventure Magazine.

Originated Turkey Trot

Going back to the early Elizabeth century to show that every innovation in dancing has met with violent opposition, a writer in Liberty Magazine says that it was in 1912 that Miss Ted Hite, an actress, and Mike Bratina, a ball player, turned vaudevillians who was Mabel's husband, brought to Broadway the first turkey trot New York had ever seen. Right! Lord decently ordered terpsichore aspired



He Filled His Pipe and Lit It.



FISHER DESIGN SETS THE PACE

The pace set by Fisher—and exemplified in the beautiful new General Motors cars now commanding public attention—is the guide for the entire motor industry.

Fisher's vast experience, Fisher inventiveness and Fisher's unapproached facilities devise and perfect the beauties, comforts and conveniences which attract you to the leading new cars in all price classes—Cadillac, Buick, Chevrolet, Oakland, Oldsmobile and Pontiac.

For instance, Fisher achieves a new degree of safety—and nothing less than a Body by Fisher can approach it even after seasons of striving.

Fisher leads the way in luxurious fitments and decorations—and all the industry follows.

Fisher creates new standards of beauty in line and finish—and those standards are the measure of value for all of the world's cars.

It is easy to see, therefore, why the foremost of the new cars in all price classes carry the emblem—Body by Fisher.

And easy to understand why buyers the world over proclaim as the hallmark of quality that same magic symbol—Body by Fisher.

The New Presbyterian hospital of New York, now nearing completion on Washington Heights, is the tallest hospital building in the world.

Simplifying Values

Ignorant of the values of foreign money, flyers of the first American detachment gambled with it by matching bills of the same color, according to a young aviator whose war diary has been published in Liberty. "We shoot craps in our stateroooms," he wrote, "and I am gradually collecting all kinds of money—Italian, French, English, and best of all, a little American. We don't know what all this money is worth, so we have to shoot it by the color—green against green, and yellow against yellow. The coins rank by size. I guess it's all even in the end."

Many a poor man might acquire wealth by utilizing the time he wastes in bemoaning his poverty.

The end of government is the happiness of the people.—McCaulay.

HOW MANY WOMEN GET UP SINGING

Two Women Find Health Essential to Happiness

MRS. BELLE THOMPSON
ROUTE 2, ROSSVILLE, GEORGIA

Springtime streamed in through the open windows. The green fields of Georgia were basking in the sunshine. Somewhere a bird was trilling. It was a day to be happy.

But the pale woman at the table sighed and pushed away her plate. Nothing tasted right. She couldn't eat much. She couldn't sleep well, either. She was so weak. It was hard to do her work. When the baby cried, she wanted to cry, too.

She had not been well for four years. Her husband watched her with a man's helpless emotion. But his mother knew a remedy.

"My mother-in-law," says Mrs. Belle Thompson, Route 2, Rossville, Ga., "told me of Lydia E. Pinkham's Vegetable Compound and Lydia E. Pinkham's Sanative Wash. I took six bottles of the Vegetable Compound. I could sleep and would get up in the morning singing and feeling fine. I am the mother of three children, and always after the babies come I had to take treatments, but I can truly say that this last time I have only used the Sanative Wash. It does more good than the treatments. It keeps me on my feet to care for my children and I do most of my work. I feel it my duty to let you know how both of the medicines have helped me."

Another Happy Woman

Decatur, Illinois.—"I took your medicine for weakness. I would sometimes have to hold myself up with my hands. I was this way for five years, off and on. I read in the newspapers where Lydia E. Pinkham's Vegetable Compound has helped a lot of women, and I thought I would take it. I am now getting better so fast that every mouth I can feel a difference. My work now is cooking. If you like, you may use these facts as a testimonial. I am willing to help you boost your medicine."—Miss Irene Ray, 635 Greenwood Ave., Decatur, Ill.

This dependable medicine has been in use for over fifty years.

To avoid imitations, always look for the signature of Chas. H. Fletcher. Proven directions on each package. Physicians everywhere recommend it.

OSTRICH BOA HAS COME BACK; YOUTHFUL DESIGNS IN PAJAMAS

AN OLD friend has returned. Yes. 'Tis true, the ostrich boa in the full measure of its former glory is with us again. Paris decrees it as the outstanding idea among accessory fashions. So in comes the ostrich boa, very long or very short, not only in dressy versions but in street types as well.

Some of the smartest ostrich boas or ruffs assume a flat collar shape attached beneath to a grosgrain ribbon. Then there is the Pierrot collarette which extends just around the neck, is as saucy and perky a manner as one could wish.

A fascinating play of color adds beauty upon beauty to the new ostrich ring of fashion. Which all goes to show that ostrich accessories are a force, et thought of the present hour.

Ask any of the bobbed hair sorority, and their name is legion, to express their opinion on the subject and invariably in a burst of enthusiasm they will expatiate in a veritable torrent of words upon the comfort and practicability of the fashion. Even so in regard to the vogue of wearing pajamas. Womankind has been converted to the idea from a commonsense standpoint. More and more are pajamas establishing themselves as essential in the realm of sensible as well as esthetic lingerie modes.

For the smoking of practical, easy-to-launder pajamas, there is no fabric comparable to the humble, yet adorably colored, crinkly seersucker. However, if one's fancy turns to silk, what more charming than crepe de chine or wash satin made after the manner of the model portrayed? Perhaps it is the frivolous lace ribbon bows, or possibly the cunning pockets, but at any rate this particular model expresses

With Ostrich Accessories.

Latest in Pajama Modes.

neckpieces. Tones and tints are combined, blended and contrasted with consummate artistry, which, of course, add a new charm and interest to the vogue. Imagine, if you please, a navy blue ruff sprinkled with clanet red ostrich. The ostrich neckpiece in this picture is of just that wondrous coloring, although you would never guess it to look at this newspaper print. Brown and yellow present themselves in sober effect, greens turning to lighter shades, cinderilla mottlings, exquisite pastel tints for evening wear—these but suggest the multitudinous delectable colorings which mark the coming season's ostrich fantasies.

Not-only color, but novelty of design holds attention throughout the ostrich crescendo. One type of flat boa has a small plume down the back in pointed effect, many of the longer sort are of willowed plumage, others show willowed ostrich with marabou united. Some elaborate models have long ostrich tassels, and so on and so on in the theme being exploited.

Nor is the vogue limited to neckpieces, for ostrich trimming is furthermore making its appearance on our frocks and on our wraps. Then there is the ostrich fan. Together with the boa it makes its entrance on the

ostrich, and many of the ostrich feathers are of the curling variety.

Evening Coats

Slim straight little coats to wear over filmy dance frocks are made of glittering metal brocade in pastel colorings. Their particular claim to smartness lies in their slender lines and lack of ornamentation.

For the Tailleur

Some of the smartest new tailored blouses have pointed bosoms and tiny bow ties of black ribbon, such as a man wears with his dinner coat.

New Handkerchiefs

Charming little handkerchiefs of white crepe de chine have scenes painted in each corner. These are quaint reproductions of "The Woman in the Swing" and others of similar character.

Irregular Hemline

The scalloped hemline is not only smart for evening in pastel colors, but for day in black or navy blue frocks that have simple lines.

THE KITCHEN CABINET

(© 1918, Western Newspaper Union.)

How can anyone start the day properly if he wakes in a room where the paint and wallpaper are constantly making faces at the furniture?

HELPFUL HINTS

Sliced cold roast beef makes a most tasty dish when combined with potatoes, onions and tomato. Put a layer of thinly sliced, uncooked potato into the bottom of a baking dish, cover with a thin layer of thinly sliced onion; then add a layer of thinly sliced beef, cover with tomato and bake until the potatoes are well done. If gravy is an asset it adds to the flavor, covering the meat with the gravy. Serve with a spoonful or two of cooked peas over the top of the dish.

It is hard to teach the average housewife to buy the younger cuts of meat. They have more flavor and as much nourishment as the steaks and tender portions. Meat that has been used for soup has food value but the food value is still there and by adding various seasonings a most palatable dish will result. The meat which has the most flavor is found in the parts of body most active, like the legs and neck. These are the cheaper cuts.

For the second meat cut the meat into bits. Fry onion in a little butter, remove the onion when light brown and add the meat. Add stock or water and cook five minutes, season with two teaspoonfuls of curry powder, thicken the gravy with flour and add a tablespoonful of vinegar. Serve with a border of rice.

Milk at fifteen cents a quart is cheaper than meat and can be used while in small towns where milk is nine and ten cents a quart it is cheap food.

Most housewives have a certain amount to spend for food. If the amount is small, all the more need that it be spent wisely, so that her family gets to the limit every cent invested for the most satisfying and nourishing food. The haphazard buying which is common in many households, the last minute order, means either food of a familiar, Marketing in person when possible is the best way; it teaches self-control, by being able to pass by the food too expensive for the purse and often one finds real bargains in foods that the family enjoys.

A thrifty housewife may have two good meals from a three-pound knuckle of veal. Cover the meat with cold water and cook at a low temperature until the meat is tender, but not tasteless. Remove the meat and add broth, add two tablespoonfuls of rice and let it boil cooked, a grating of onion rind, or a bit of nutmeg or mace, a pint of milk and serve at once.

What to Eat.

There are few people who feel that a meal is satisfying which is not finished with some kind of dessert.

Junket is a most delicious dessert for a hot day; it may be varied by the use of fruit pulp and whipped cream as a garnish. Add a tablet of junket to a quart of lukewarm milk, add sugar to sweeten and stir until the tablet is well dissolved. Crush the tablet and let stand in a tablespoonful of water to dissolve before adding to the milk. Let the mixture stand in a sherbet cups in a warm room until the junket is set. Made bananas and cover each sherbet glass with the pulp and top with whipped cream and serve ready to serve. Peaches or other fruit may be used.

Peach Sherbet.—Put a pound of sugar and a quart of water on to boil for twenty minutes. Let cool, then add one and one-half cupfuls of peach pulp, the strained juice of an orange and the juice of half a lemon. Freeze.

Mint Sherbet.—Soak half a cupful of chopped mint leaves in the juice of two lemons and half an orange. Add cupfuls of sugar and a cupful of water for five minutes, then pour over the other ingredients. When cold strain into a freezer, add the grated rind of the fruit, and a well-beaten egg white, with a cupful of stiffly beaten cream. Serve with lamb roast or as a dessert.

Date Crackers.—Put a pound of washed and pitted dates with a cupful of sugar and one-half cupful of water into a saucepan and cook until smooth. Cool. Cream a cupful of shortening, add a cupful of brown sugar, two and one-half cupfuls of rolled oats which have been parched in a tight brown, and two cupfuls of flour; stir until well-blended, add a teaspoonful of soda in half a cupful of hot water and salt into the mixture. Roll out, cut and place a spoonful of fruit on a cooky, cover with another, then bake.

Larded Beef Tenderloin.—Cut the suet pork for larding from the fine fat portion nearest the hind. Cut into lardoon bits strips one-fourth inch wide and as long as the slices will permit. Chill the lardoons in iced water before threading and thread them one-fourth inch below the surface, draw through, tying in a loose knot.

Nellie Maxwell

Cities' Names Changed

New York was formerly called New Amsterdam, Chicago has also changed name of that city, which the Indians gave it. Los Angeles was formerly known as Pueblo de Nuestra Senora la Reina de los Angeles.

Greek Irrigation Tried

Irrigationists in Australia are experimenting with a system used by the ancient Greeks in Theodosia, by which water for irrigation purposes was carried through sandstone pipes.

Real Son of 1776

The "true son" of the Revolutionary war is not an extinct species. One has just been found down in Columbia county, Georgia, and he is a very hale and very wash-active old gentleman—Basil Llewellin Neal. He is eighty-nine.

The fact that a "real" son of the Revolution still exists was brought to light following the claim that the death of Dr. Crosby Perry in Vermont marked the passing of the last son of a Revolutionary soldier.

Neal now lives on a plantation allotted his father, Basil Neal, for his services in the war for American independence.—Cleveland Plain Dealer.

Alaskan Reindeer

There are now approximately 200,000 reindeer in Alaska and it is estimated that there is pasturage there for 4,000,000 on land worthless for agriculture.

Choose your new car from the General Motors Line

In the past twelve months the public has purchased 1,080,000 General Motors cars, an unprecedented record.

This great volume of business has made possible still further economies and these have been put into the quality of the 1927 series now on display by General Motors dealers.

The new General Motors line is first of all a *quality line*. It embodies every advantage of research. It has been proved at the General Motors Proving Ground. Every car is finished in Duco; the closed cars have Fisher Bodies.

It is a *complete line*. It includes 59 models of open and closed types, ranging in price-at-the-factory from $510 to $4,350. Within it you will find the car you want at the price you want to pay.

We invite you to visit the show rooms of our dealers and select your new car from the General Motors line.

Copper 5,000 Years Old

Copper vanity cases, a copper hand mirror, copper razors, tools, fishhooks and hairpins have just been found in Mesopotamia by scientists excavating the five thousand-year-old palace of the kings of Kush. Copper is truly the everlasting metal.

Office of Uncle George Has Been Removed From in the Saddle and on the Jump to Hotel Lobbies and Porches.

Charlevoix, Michigan,
September 5th, 1925.

Mr. Editor:—

You know and I know that all those who have been ahead of the times in which he lived, has been harassed and persecuted and made little of because of their increasing devotion to any pet hobby that they may have accumulated. So it has been with me. In my case I have come off the victor. It was not because I had discovered or invented anything new, but for having examined and gone thoroughly into the merits of Good Concrete Roads, and saw the needs of the people for transportation purposes, and the absolute durability of this road, I saw plainly that it was the only permanent road that could be built.

God Almighty made everything that was made and He called it good, and He gave to some men more intelligence that He did to others. It fell to the lot of men who had the greatest amount of brains (intelligence) to select the different materials, which when combined would make the best roads, and they called it cement. Then a few more of God's great men got together and selected other materials which had good wearing qualities, made a mixture of them with cement and so they had it. Nothing has been discovered since, that has or is its equal for buildings, docks, bridges, dams, or roads. It will outlast any and all other materials that have as yet been discovered, for any of the above purposes. It will not wear out, it will neither corrode nor waste away, and it will last for all time.

While I am writing this, I raise my eyes and look out on a perfect piece of concrete road laid eighteen years ago, and yet with this and other strips in our three cities and two strips of six or seven miles each in our county, we go on spending thousands and thousands of dollars every year building soft stuff roads without a single bit of wearing qualities in their mixture, and these fellows "have to have" a concrete foundation on which to put their soft black top stuff in order to hold it up. If they put it on the ground as the cement fellows do, heavy trucks would sink into it on a warm day, as our old waggons did in a muddy road

Now I am getting down to earth again. By this I mean gravel. Gravel is alright if a wagon loaded with that stuff could go behind every car that goes over the road to repair the damage.

Then another discovery was made by some wise guy. He said to his pals: "We'll put a lot of black oil or tar on the gravel, that will do away with the dust." Among this crowd of wise men I think there must have been an automobile man, for he said, "that's fine."

That surely will raise h—l with all the new cars. Put it on thick for the more miles of roads we put it on, and the thicker it is, the greater number of cars it will injure and spoil. And yet we have a lot of people who insist, that these are the kind of roads to build, and the taxpayers and the automobile owners stand for it, which is something that no good business man would do.

Yours truly,
"UNCLE" GEORGE

Treating the Thermometer

In a certain village the squire sent a thermometer to every cottager, and carefully explained its use.

Soon after their arrival a district visitor entered one house, where a new thermometer hung in the middle of the room. The visitor complimented the owner, and inquired if she remembered the instructions.

"Ay, that I do," was the reply, "I hangs 'un there, and I watches 'un until he gets above 60."

"Quite right, Mrs. Brown," said the visitor. "And what do you do when it grow above 60?"

"Why, I takes 'un down and puts 'un out in the garden and cools 'un down a bit!"—Weekly Scotsman.

Feet Shod With Hobnails

The skin on the foot of a native Bingbi in Australia is the thickest found on any human being, according to "Jim Crow," writing to the Sydney Bulletin.

"One day an old Bingbi came to me complaining he had sore feet, and I saw that their soles were badly cracked. As a poor joke I handed him a bar containing a dozen hobnails, and told him how they were used. He sat down, stuck them into his feet and marched off. Three weeks later I asked him how his feet were. He promptly exhibited them—the hobnails were still in the flesh."

Dresses on Exhibition

The dresses worn by wives of Presidents at inaugurals from Martha Washington to and including both Mrs. Wilsons, are preserved on exhibit at Smithsonian Institution, Washington. The women say the gown of Dolly Madison is the prettiest, the most artistic made of beautiful brocaded white silk, embroidered in bouquets of flowers in natural colors, sweeping floor length, they would puffed sleeves, richly simple, it surpasses all the others. Anyway that is what a Kansas woman tells Ewing Herbert, says Capper's Weekly.

Order Issued by Authority of Act 230 of the Public Acts of 1925, extending the Closed Season on Racoon for a Period of Five years.

STATE OF MICHIGAN—County of Ingham—ss.

The Director of Conservation having made a thorough investigation of conditions as they affect the taking of certain fur bearing animals recommends the extention of the closed season on racoon.

Therefore, the Conservation Commission by authority of Act 230 of the Public Acts of 1925 hereby orders that the closed season on racoon as provided by Act 89 of the Public Acts of 1925 be hereby extended to October twenty fourth inclusive making it unlawful for a period of five years to take, trap, hunt, shoot, kill or molest or attempt to take, trap, hunt, shoot, kill or molest any racoon from January first to October twenty fourth inclusive of each year, under penalties provided by Section 5 of Act 230 of the Public Acts of 1925.

Signed, sealed and ordered published this 4th day of August, 1926.

ROAD BUILDING

GAINS ARE MADE IN ROAD BUILDING

Forty-eight states, in conjunction with the bureau of public roads, Department of Agriculture, are rounding out their first decade of modern road building with gratifying results, according to a statement issued by the American Association of State Highway Officials.

The interstate system, however, on which state and federal governments have been working jointly, is not more than half complete, and suggestions of curtailment of the general program for the purpose of economy have served to arouse public interest in pushing on toward completion of the remaining half.

In some quarters the question of constitutionality of the present federal-aid road program has again been raised, which highway officials hold is irrelevant in view of the extensive studies that were made before the program was put into effect.

In response to points raised, highway officials in their statement call public attention to the fact that "there were those in the beginning of our national life who had visions of interstate highways as nation developers, for as early as 1808, the Cumberland pike was planned by congress. Jefferson, Hamilton, Madison, Clay, Calhoun and Webster all maintained a constitutional authority, as well as the national need, for federal activities in highway improvements.

"But a short time after the construction of the Cumberland road it was turned over to the states, which likewise became weary and in turn passed it on to toll companies. And then for half a century the much vexed question was before a most excellent tryout. The result of all of which was that the only free public highways for years were those which were impassable during the unseasonable weather.

"It was not until 1891 that the states began a real program of road construction, and New Jersey has the honor of being the first state to create a state highway department. Two years afterward the federal government appropriated $10,000 to establish the office of road inquiry, and for eight years it kept on inquiring. At the end of that time the name of this office was changed to the office of public roads. The constant growth of state highway departments naturally gave a larger vision of the highway departments and in 1912 the congress created a commission to investigate the problem as to whether the federal government had a real duty in the matter.

"For three years this committee investigated and reported, and finally gave a favorable report. In 1916 the congress made its first real appropriation for highways. Recent discussions on the floor of congress as well as certain public addresses and published articles would lead some to believe that the congress had not made a thorough investigation of this subject. The personnel of the congress has changed greatly since the passing of the 1915 committee. There are now but four of this committee—two senators and two members of the house—in government service, who were members of that committee at that time. And so, it is necessary to recall some things which it was supposed had been thoroughly established in the public mind."

Trees Along Highways Will Not Injure Paving

The planting of trees by state highway departments and by local governmental subdivisions is attracting much favorable attention. Experts declare that if the trees are set back far enough their roots will not injure the pavements.

Trees contended at one time that the roots of the shade caused by the branches were detrimental to modern paving, but experience in many states now where highways have been built along beautiful tree-lined roads has completely exploded that idea.

According to the A. A. A., however, judgment should be used in the planting of trees so that they will not act as wind breakers, particularly in the northern states in the snow belt.

Build Roads for Trucks

According to Western representatives the motor truck has awakened the necessity of improving roads in the vicinity of Shasta, which is considered one of the richest mining centers in the land of the Aztecs. Some time ago a road was completed between Elsina and Shasta. The construction of this road created unlimited enthusiasm and the outlook for the truck as a real factor in road building is very evident.

Good Roads Facts

It needs small effort to persuade the salesman who travels the rural districts in an automobile that an improvement in the highways he traverses would result in greater earnings for himself. More calls per day, lessened repair bills, greater demand due to easier trips by the farmer to the store, all these would swell his sales.

CAL CAMPBELL WON

Senatorial Nominee—Three Cornered Fight—Close

In the Senatorial fight, which was a three-cornered affair, Mr. Cal Campbell of Indian River, won the nomination and will represent the 25th Senatorial district in the 1926-7 session of the state legislature. The senatorial contest was most interesting throughout and was closely followed by electors in the district perhaps to a point unequalled in a senatorial campaign in this district, as the three candidates each had a strong following through wide acquaintance and as each candidate was known as a representative business man of high type the support given to each was largely from personal friends. In this the support was clean cut, devoid of disagreeable personalities, wholly democratic and typical of the character of the three contestants.

Not only this the candidates demonstrated their capacity as campaigners; characters as gentlemen and at the close of the contest retain a friendly feeling and wholesome respect each for the other.

RARE OPERATION SAVES GIRL'S LIFE

Food Enters Her Stomach Through a Tube.

Indianapolis, Ind.—A long fight for the life of thirteen-year-old Beatrice McCrary of Rushville, Ind., has been won and the girl will live and thrive, as the result of a daring and unusual operation.

Food is taken into the girl's stomach through a tube through the chest connected with the stomach. The child, ten years ago, swallowed a quantity of lye and the scars in the passageway from her mouth had become so constricted that it was impossible for solid foods to pass.

To keep her from starving, a severe operation dilating the passageway from the mouth was performed forty-three times, records show.

This operation was so painful that a general anesthesia was necessary each time. Following the operations the girl would be able to take food for a time until the burn scars again would close the passage. The child had suffered the pangs of hunger many times and she had learned to know the horror of a painful siege on the operating table.

It remained for the surgeon to whom the operation was intrusted was not made public. The operation was carried out by making an incision through the chest wall and stitching an opening in the stomach wall to the borders of this incision, leaving an opening to the stomach from the exterior.

For several days after the operation the life of the little patient hung in the balance, but with the healing of the wound, and the introduction of food through the new route, recovery was rapid. During the last few days before leaving the hospital, Beatrice added weight at the rate of a pound a day.

LOST—One large tent by between Charlevoix and Boyne City. Reward. A. C. Belding.

CAPT. A. J. HEPBURN

Capt. Arthur J. Hepburn has been appointed director of naval intelligence by Secretary Wilbur. He has been in command of the U. S. S. West Virginia.

WOMENS CHRISTIAN TEMPERANCE UNION

Met Last Friday Afternoon at Home of Mrs. D. Swartz

The Woman's Christian Temperance Union met last Friday afternoon with Mrs. Dan Swartz. There were twenty five members and several visitors present. In addition to the usual reports and routine business, the plans for the district convention were completed and delegates chosen as follows: Mesdames H. D. Dean, Walter Rogers, Harker Kirby, John Burns and Pat Holland.

It was voted to begin now to increase the membership of the union for 1927. Also to sponsor and offer prizes in an essay contest according to the national plans. The topic "Some National Issues" was presented by Mrs. F. F. McMillan and in connection with this Dr. McMillan gave a very interesting and instructive talk on "Debt Cancellation" and other problems in the public mind today.

The hostess served delicious refreshments and the union adjourned informally to meet with Mrs. Frank Partridge in October.

M. E. APPOINTMENTS

At the M. E. Conference recently concluded at Traverse City the following appointment of pastors for M. E. churches in this region: Bellaire, Earl Munby; Boyne City, J. B. Pealling; Boyne Falls, same as Boyne City; Central Lake, C. H. Green; Charlevoix, C. E. Pollock; Ellsworth, Charles M. Conklin; Pelston, Ralph Dean; Petoskey, Charles J. Kruse. The foregoing are in the Grand Traverse district of which J. O. Randall is superintendent.

Miss Belle Elsworthy D. C. of Bellaire, was a business visitor here last Tuesday.

TOP O'MICHIGAN

Potato and Apple Show at Gaylord on November 3, 4, 5

The Fourth annual Top o'Michigan Potato and Apple Show will be held at Gaylord, Nov. 3, 4, 5 according to A. C. Little, secretary. A larger and more attractive premium list is being prepared and an especially strong educational program is planned for the occasion.

Any grower from Cheboygan, Otsego, Crawford, Alpena, Presque Isle, Emmet or Antrim counties are eligible to compete for the $1200 in cash prizes offered. The show is also receiving financial support from the Michigan Central Railroad, the Northeastern Michigan Development Bureau, and the State of Michigan.

Mr. Fred Brudy, president of the show and a prominent potato grower at Wolverine, says "The Top o'Michigan Potato Show has become an institution in Northern Michigan which we are unable to let go along without. Not only has it advertised and demonstrated the fact that this is the home of real quality potatoes but it has been a powerful agency in making them still better. It also has become a social event which we are looking forward to more and more as a place to meet our neighbors and exchange ideas. We believe the show will be better than ever and we hope that all the farmers in northern Michigan may avail themselves of this opportunity. We especially want the growers of apples and potatoes to select some of their very best and bring them out to the show. One grower received over $50.00 last year in prize money and there is no reason why everyone should not get some of the $1200 offered"

It is of interest to know that the Top o'Michigan Potato Show was the first show of its kind held in this part of the United States. Such shows have been in vogue for many years, but the show held at Gaylord four years ago was the first "district show." The idea has now become very popular and is being copied extensively in Michigan, New York, and Ohio.

Mayan Civilization Mystery of History

The great mystery of the Mayan civilization is that of its extender. As early as 300 A. D. and possibly much earlier, the Maya had developed a method of reckoning time which is quite as accurate as our own. The problem of adjusting the length of the year to the unequal number of days which it contains had been solved. The complete Maya calendar is capable of being given date exactly and uniquely in a period of over 5,000,000 years, says E. E. Free in the Forum.

"This calendar and the issue of astronomical knowledge which must lie back of it, appeared in Central America suddenly. No history has been traced for its origins. One century it is not there; the next century it is there. Some experts believe that the Maya culture was imported, possibly from India or from Egypt. Others believe that it originated in America, at sites not yet discovered, or that its relics, being perishable, have disappeared.

Walking

Walking is an art that most men and women are able to acquire or recover, and without serious trespass upon the exactions of life, if only they do not yield to the softness of modern comforts and convenience of wheels. The women who in certain parts of the world still carry their burdens for miles on their heads have kept a carriage which queens must envy. The men who walked or ran in the primitive chase had a physical development which 10,000 years of civilization have not improved upon. Walking is the one universal art to save the race from physical degeneracy. Millions are daily yielding to temptation of wheels when they would be better off physically, not to say financially, if they accepted the transportation of their own feet.—New York Sun.

Claims to Have Found Life in Meteorites

A startling discovery by two French scientists, Messieurs Galippe and Soufflond, may have even more startling results if their investigations are pursued. They submitted a number of meteorites to microscopic research, and assert that in some of the specimens they found life germs which showed definite signs of vitality and development when placed in culture tubes.

The late Lord Kelvin once put forward the theory that the origin of life on the earth was due to germs brought here from other planets by meteorites. Few scientists agreed with this daring surmise, the chief objection being that no form of life could survive the intense cold in space or the devitalizing effect of the "ultra-violet" rays projected by the stars.

Since then it has been proved that seeds and certain germs will survive temperatures as low as 200 degrees below the Centigrade zero. The "ultra-violet" ray objection is now being investigated. Some experts declare that germs embedded in meteors are effectively protected from the rays.

WESTERN MICHIGAN FAIR--SEPT. 20

The Northwestern Michigan Fair opens on the grounds in Grand Traverse County, Monday, September 20th and continues to and including Friday the 24th inst. Reports from officials of the organization is to the effect that entries in all departments will be the best in the history of the association, and that purses offered for racing events exceed in amount all former purses in racing events for a single season. Due to the attractiveness of the purses for the several races more horses have been entered than in past years which bids fair for better and more interesting racing events

---

FRED W. GREEN

GREEN WINNER BY 100,000

nomifated for Governor by State Electors last Tuesday by a vote of more than 100,000 over Governor Alex J. Groesbeck after putting up one of the most strenuous campaigns ever conducted in the state.

Voters from all walks of life rallied to his support endorsed his candidacy and cast their vote for the man from Ionia, a city that he has been mayor of for thirteen successive years and still on the job and the vote in his home county shows that electors almost to the last one were his supporters during the campaign, nor were they alone in this for returns throughout the state rallied to his support, cast their vote for him all making a majority wholly unexpected and exceeding by far all claims made by his most staunch workers and supporters—all of which is a matter of gratification to his political followers.

ANNOUNCE NATIONAL STUDENT ESSAY CONTEST

Local high school and graded school students will be interested in the announcement that the National Republic, of Washington, is offering prizes aggregating more than $1,000 for the best short essays on the federal Constitution written by students. For the best essay submitted by a high school student the chief prize is $500, and a similar prize is offered for the best essay written by a student in the graded schools up to and including the eighth grade; in the latter competition age of the student will be taken into account in making the award. The board of awards will be composed of a group of men and women of national reputation.

Contestants are not required to be subscribers or readers of the periodical announcing these prizes, nor is there any other condition involved in entering the contest. The undertaking is a patriotic one, launched in the belief that it will encourage study of the federal Constitution by young people.

Full particulars may be obtained by addressing National Essay Contest, National Republic, 425 Tenth street, N.W., Washington, D. C.

"UNCLE" GEORGE AND PARTY EAST ON TRIP BY MOTOR.

Vacation season in Charlevoix ended for "Uncle" George H. VanPelt last Saturday, when accompanied by his daughter, Mrs. Mary Vucasovich, he started out on a motoring trip with Boston, Mass., as his destination. The trip is scheduled to be made in short runs with stops at important points with frequent visits of a day or two with relatives and old time friends that are numerous along the route traveled by Mr. VanPelt on his eastward journey

PRIMARY ELECTION

Result of the Vote Cast in the Several Wards in the City

With the closing of the polls Tuesday night and counting of votes came the finish of the primary election campaign and with the final tabulation announcement of the results came disappointment to all candidates failing to secure the coveted nomination and the legal right to have their name placed on the ballot to be used at the November general election.

The several local candidates each had their followers and these naturally like the unsuccessful candidates, are more or less disappointed in the general results of the primary election. In the main electors will abide by the returns and support the regular nominees and this is the right spirit regardless of the fact that when three or more candidates contested for first place the winner failed to receive a majority of the votes cast for a particular office.

The fact that a candidate has been regularly nominated entitles the candidate to the support of his party members during the campaign and at the general election. Bolting a regular nominee is, in our opinion, an unworthy act, at any rate it is an act such as we do not condone, much less encourage. With a fair contest in the primary campaign the electors should support the regular nominees at the regular general election.

Rumors to the effect that an effort will be made to defeat one or two of the local nominees by getting some one to run on slips have been circulated to some extent, but whether or not this part of the program will be carried is at this time indefinite. Two years ago this policy was put into the campaign, successfully carried out and resulted in the defeat of the regular nominee. In doing this a new precedent was established for Charlevoix county, therefore the same tactics may be adopted this year. As to that the action will be determined by parties interested at some future date.

The vote for the several candidates by wards was as follows:

	1st	2nd	3rd
Governor—			
Fred W. Green	81	257	192
Alexander J. Groesbeck	35	54	44
Lieut. Governor—

Statesman's View

Poetry at its best is easily intelligible, touching the finest chords of taste and feeling, but never striving at effect. This is the highest merit in every department of literature, and in poetry it is well called inspiration. Surprise, conceit, strange combinations of imagery and expression, may be successfully managed, but it is merit of an inferior kind. The beautiful, patriotic and sublime are always simple and natural, and marked by a certain serene unconsciousness of effort.—Edward Everett.

Stars in the Flag

President Taft, by executive order, provided on October 20, 1912, for the arrangement of our flag's stars and lay the basins were proclaimed. for a means to their identification by the states they represent. The stars are arranged in six horizontal rows of eight stars each. Beginning with the upper left corner, said following each row from left to right, the stars represent the states in the order in which they ratified the Constitution or were admitted to statehood.

Old "Sour Dough" George Campbell Carson won his final contest against one of the largest smelting companies in the West for $20,000,000 in royalties on patent rights to an improved ore reduction process. Carson has no idea what he is going to do with the money which he won through the decision of the Circuit Court of Appeals. "Court decisions are one thing and cash is another," said old "Sour Dough."

GEORGE C. CARSON

STATE FERRIES INCREASE BUSINESS

All Previous Records Topped in Month of August

The two state owned ferries—Mackinaw City and St. Ignace—during the month of August did a thriving business, the statistical report for the month showing an increasing amount of traffic with a corresponding increase in gross receipts, with the Mackinaw City leading the St. Ignace in the amount of cash receipts.

In this the former reports $35,447, and the latter $35,115 a total of $70,900. During the month the ferries transported 20,350 passenger automobiles, 126 trailers, 191 trucks, 25 motor cycles and 3710 passengers, and a small amount of miscellaneous freight, all making for the best showing since the state ferries were first placed in commission.

Statesman's View

Poetry at its best is easily intelligible, touching the finest chords of taste and feeling, but never striving at effect. This is the highest merit in every department of literature, and in poetry it is well called inspiration. Surprise, conceit, strange combinations of imagery and expression, may be successfully managed, but it is merit of an inferior kind. The beautiful, patriotic and sublime are always simple and natural, and marked by a certain serene unconsciousness of effort.—Edward Everett.

President Taft, by executive order, provided on October 20, 1912, for the arrangement of our flag's stars and lay the basins were proclaimed. for a means to their identification by the states they represent. The stars are arranged in six horizontal rows of eight stars each. Beginning with the upper left corner, said following each row from left to right, the stars represent the states in the order in which they ratified the Constitution or were admitted to statehood.

DR. BOHN WINNER

Nominated for Congressman from the Eleventh District

Dr. Frank P. Bohn of Newberry, won out in this district and secured the nomination for congressman at the primary election last Tuesday, defeating Frank D. Scott of Alpena, who was seeking renomination and now serving his sixth term as national representative from the Eleventh district.

With several precincts unreported Dr. Bohn is leading by about 2000 votes. It is thought that there will be but little change from the present majority when reports are received from the missing precincts.

Both Dr. Bohn and Congressman Scott put up a vigorous campaign, cleanly contesting every inch of the way, and it is said there are no sore spots to be healed therefore the republicans of the district are wholeheartedly support Dr. Bohn through the coming campaign.

OF INTEREST TO SUNDAY SCHOOL WORKERS

The Charlevoix County Sunday School Convention is to meet Sept. 28, probably at Bay Shore, for an afternoon and evening session. Further particulars next week.

The state Sunday School organization is now known as the Michigan Council of Religious Education and is sponsoring four great regional conferences this fall.

Charlevoix county is included in the group meeting at Alpena, Oct. 4-5, but if more convenient for our delegates they may register for Cadillac Oct. 13-15. The registration fee is $1.00. Lodging and breakfast is furnished free to registered delegates. The best available speakers have been secured and the basns were proclaimed. for a means to their identification by the states they represent. The stars are arranged in six horizontal rows of eight stars each. Beginning with the upper left corner, said following each row from left to right, the stars represent the states in the order in which they ratified the Constitution or were admitted to statehood.

Love Kindles Again, Reunites Pair, 61-60

New York.—A lad and a lass, sixty-one and sixty years old, who had been sweethearts together in Scotland, were reunited by the arrival here of the liner Tuscania. The bride-to-be, Mrs. Buchnan Biten, who arrived from Ayrshire, Scotland, is a widow. The bridegroom-to-be, James Winning, also had been married.

Twenty-four years ago Mrs. Biten lost her first husband. Mr. Winning's wife died 12 years ago. Two years ago he returned to Scotland and discovered that his boyhood sweetheart no longer was married. He took the first train to Wishaw to resume courting. After some delay the banns were proclaimed. Mrs. Biten refused, however, to agree to an early marriage. Also there was the matter of the Scotch quota with which to contend. So it was two years before Jimmie saw his bride-to-be walking down the gangplank.

The Oldest Bank in Charlevoix County
42nd Year in Business

1884 1926

Pay It With a Check

When you pay a bill here at home "by check" or by mail anywhere, the man who gets the check has to sign his name across the back before he can get the money. After a few days have elapsed the cancelled check comes back and the bank returns it to you as a valid receipt. Many disputes have been avoided by making payments BY CHECK.

If you have not already done so, we cordially invite you to open Your Checking Account Here Today.

CHARLEVOIX COUNTY BANK
BUTTARS, BRIDGE & CO.
"The Bank on the Corner."

1905 1926

For a Special Purpose

About every so often you receive notices of your taxes, your insurance premiums or something of that kind at a most inconvenient time. Most of us have that experience, but how few of us think of using a special account for this purpose and depositing each month a definite part of the sum required. Think this over, come in and talk to us about it and start saving, so that there will not be any inconvenient notices to handle.

North and South on Maps

In geographical drawing, the north is always drawn as being up and the south down. It is a practice established merely by long custom. No scientific principle or orientation makes this arrangement essential. The majority of early geographers adopted this scheme and it was found convenient for those who came later to follow it. A few old maps have the east at the top of the page and west at the bottom, but such cases are rare.

Where She Ranked

"Am I the only woman you ever loved?"

"Oh, no," he answered promptly; "you're the sixth."

The sixth! she exclaimed, suddenly relieving his shoulder of the weight of her head.

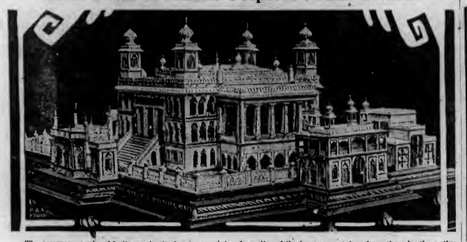
"Yes," he said, coldly, "there were five before you—my mother, an aunt, and three sisters."

And thereafter she endeavored to be more specific when she asked questions.

Phone Pests in Mexico

Parrots and monkeys are causing the telephone company in parts of Mexico great trouble and expense. After dark large numbers of these t

Silver Model of Nizam's Proposed Palace at Delhi



The common people of India are beginning to complain, formally, of the huge sums taken from them by the native princes and wasted in various ways. Nevertheless the nizam of Hyderabad is now planning to build a white marble palace at Delhi, at a cost of £350,000. Above is a photograph of the silver filigree model of the palace which he has had made.

Our Delegates to Road Conference in Italy

This is the delegation appointed by President Coolidge to attend the international good roads conference in Milan, Italy, photographed as it was about to sail from New York. Left to right, the members are: John N. Mackall, Paul D. Sargent, Thomas H. McDonald, H. H. Rice, and Pike Johnson.

Highland Spatees the Latest

Miss Lala and Minnie Smith, daughters of the British high commissioner for South Africa, are seen above wearing the "Highland spatee," a new fashion for women, introduced at a reception held at the Savoy hotel, London. The spatee is made of showerproof material (wool) to be worn over the silk hosiery during wet weather, to take the place of Russian boots.

GOLDA A. FOSSETT

Women have ventured into many fields in the business world, but Miss Golda A. Fossett is said to have the distinction of being the only one of her sex at the helm of a national live stock exposition. As secretary of the National Swine show, celebrating its eleventh anniversary at Peoria, Ill., September 13 to 18, Miss Fossett shoulders most of the responsibility incident to making this blue ribbon event of American hogdom a success. Hog men throughout the country agree that she is "hoss of the show."

Cupid Takes No Account of Years

James L. Shroyer, eighty-nine, and Mary A. Couch, seventy-two, being married in Los Angeles by Judge Holizer. Shroyer, who previously had been married four times, took Mrs. Couch as his fifth wife, and Mrs. Couch accepted Shroyer as her second husband. Shroyer has only one child of his own, but is stepfather to nine children by previous wives. Mrs. Shroyer has four children, seven grandchildren and one great-grandchild by her former marriage.

EATS MOST CLAMS

Mrs. Rose Rooney as she appeared winning the clam-eating contest which was held at the Antiquarian clam bake at Rehoboth, Mass. Mrs. Rooney ate two pecks of clams, beating the record and the two men who opposed her.

OF INTEREST TO EVERYBODY

Wild geese are the most wary of birds.

A man's body contains chemicals valued at 98 cents.

Water flowing from deep artesian wells is warm because of the internal heat of the earth.

The United States is the second largest consumer of nitrogen in the world, but it ranks only tenth in production of fixed nitrogen.

The mean density of the earth is 5.5 times that of water.

Diamonds in their natural state are usually of a dull lead color.

Malaria mosquitoes cause 3,000,000 cases of chills and fever in this country annually.

Experiments have shown that seeds may sprout after being frozen for three days at a temperature of 427 degrees below zero, Fahrenheit.

Moving Mountain

A mountain approximately 2,000 feet high moved slowly across the Rio Blanco valley, Colorado, in March a year ago. Traffic on the highway was blocked by the shifting of the mountainside. A similar movement was reported in 1900.

Rapid Pipe Smoking

An ordinary pipe can be smoked in eighteen minutes, although British pipe smokers who have crammed the bowl of the pipe full of a peculiar grade of tobacco have been known to smoke it in eleven minutes.

Gland Transplanting

The transplanting of glands into the human system is no new discovery, the first record of such an operation being recorded in John Hunter in 1672, says the Chicago Journal.

Young Orators in the Glacier National Park

High school boys and girls, winners of oratorical prizes, accompanying the Columbia River Historical expedition, touring Glacier National park, are seen resting at the Triple divide, the waters from which flow into the Pacific, Atlantic and Hudson bay.

Fire Island Is Due for a Change

Primitive Life of the Sand Spit Menaced by Motor Causeway.

New York.—To returning ocean travelers Fire Island's long stretch of sandy beach is the first land sighted once Europe has been left behind. Its tall lighthouse has served ships that pass in the night for three-quarters of a century. Although its aspect is familiar to hundreds of thousands on transatlantic voyages, and although its western extremity is only 40 miles from Manhattan, it houses in summer only a few hundred families and during the winter barely half a dozen.

The life that is lived there is primitive. The place is almost devoid of modern improvements. It is one of the few places close to New York where existence is necessarily simple. The reason for its elemental condition is its isolation.

Fire Island has about 50 miles of sea beach as fine as that of New Jersey. It is little more than a sandbar five miles off Long Island. It fronts the ocean on one side, and Great South bay on the other. It is completely cut off from Long Island and contains no roads, automobiles, horses or railroads. Its Main street is the ocean front; its market places are the piers, where boats arrive daily with provisions.

Marketing With Handcarts.

There are three clusters of cottages on Fire island, the villages of Saltaire, and Ocean Beach, and the community of Point o' Woods. Ocean Beach has 375 houses, Saltaire and Point o' Woods about 100. The only modern improvements in these three places are water mains and sewers. Sidewalks of wood and cement are laid between the shore and the houses. Electric lighting, except for a few private plants in residences, is unknown. There is no gas. Telephones have not yet been installed on this sandy stretch.

In Saltaire there is one store where groceries and a few drugs may be bought. Meat must be ordered a day ahead and sent by boat from Bay shore. A daily vegetable boat arrives from Patchogue every noon. A fish boat supplies a local market with blue fish, sea bass and lobsters whenever fishing is good. No deliveries are made except for ice.

Cottagers go to market with handcarts. Bicycles are the fastest conveyances on the island. Life is leisurely. There are no great distances to travel. There is no hurry.

People Carry Lanterns.

Travel is difficult at night except when the moon is bright. There are no street lights. The sidewalks, which are not more than three feet above the sandy earth, are not easy to follow after dark. Nocturnal strollers usually carry flashlights and kerosene lanterns. Baggage is conveyed in handcarts.

Fire Island dwellers are divided between devotees of the ocean and those who prefer the bay. Surf bathing is about the only activity on the Atlantic side of the island. But Great South bay offers yachting, fishing, clam digging. There is no golf course; the soil is too loose and sandy. A very few tennis courts suffice for the needs of summer residents.

In recent seasons there has been a tendency to wear fashionable clothes. Old settlers look askance at the flannel trousers which are replacing khaki, and at the sports suits which the women wear in the afternoon. But the bathing suit is still the most popular daylight attire. Many persons wear no other out of doors.

Overrun With Children.

Finding is not what it used to be in the vicinity of Fire Island. This is due to the use of nets by professional fishermen near the inlet. Still, many small boats may be seen any day in the bay waiting for the fish to bite.

There are no theaters. Except at Ocean beach there are no motion picture performances. In spite of the isolation radio sets are unbelievably scarce. Music is forgotten. Dancing is rare. The things that are looked upon as necessities in the city are not wanted by the summer colony. The ocean is enough. The sun and the surf have no rivals.

Fire Island is overrun with children. It is a great playground. Saltaire, Ocean Beach and Point o' Woods receive no tourists nor picnickers. These villages exist for residents, not for transients. But close to the lighthouse there is a state park where, on Sundays, a few straggling parties of city people come ashore from motor boats. There is a bathing pavilion for them; slides and swings for the children.

Tranquility Threatened.

Back in 1911 when there was a cholera scare and every steamer from Europe was considered a menace to public health, a state quarantine station was located on this spot. A ship from Italy containing several cholera suspects was not permitted to land in New York. The governor, with the permission of the legislature, purchased an old Fire Island hotel, the Surf house, famous in the '80s for its sea food, and there the passengers and crew were interned for a month.

Within a few years the primitive aspects of Fire Island threaten to disappear. A project has been started to build an automobile road from the mainland. It is to be called Sunrise trail. It will leave Long Island near Freeport and will cross Long beach, Jones beach and Oak island before it reaches Fire Island. It will return to Long Island somewhere near the Hamptons.

While the tranquillity of the island will be disturbed by the entrance of automobiles, many miles of white sand beach will be made accessible to the general public. In time Fire Island may be as populous as the coast of New Jersey.

Kaiser's Mustache Secret Is Revealed

Omaha, Neb.—The secret of Kaiser Wilhelm's spiked-effect mustache is explained by Carl Schropp of Omaha, who, as personal barber to the former emperor, originated the famous tonsorial characteristic.

Schropp, who served many of Europe's royalty until "discovered" by the kaiser, said:

"First, I would wet the mustache thoroughly. Then, with my fingers, I would push the hairs up at either end until they stood as you have seen them in pictures. Next I took a schnurbrinde (a mustache strap), made of fine silk, with hooks on end, and put it over the mustache and attached the hooks to the kaiser's ears. I used my fingers and a fine comb to put the hairs just so; then with the mustache strap on it, I would wait for it to dry. After that the kaiser's mustache would stay the way he wanted it for 24 hours."

Two hours was the usual time spent by the kaiser in the royal tonsorial room, Schropp said.

Cat Burned at Stake

Tiffin, Ohio.—Boys who burned a cat at a stake while playing Indian, were sought by county humane agents here.

Police found the cat writhing at the stake and shot it.

Four boys have been cited to appear in court here.

Malay Royal Wedding Lasted Long

This photograph shows the eldest son of the sultan of Pahang, Tunku Abu Bakar, with his sixteen-year-old bride, Raja Fatimah, daughter of the sultan of Perak. The wedding has just drawn to a close after nuptial ceremonies which lasted forty days and forty nights. The festivities culminated in the "bersanding" ceremony, when the royal couple appeared for the first time in public and sat enthroned, receiving the gifts and homage of the Malay chiefs.

ALTAR STONE RECENTLY FOUND SOLVES A PUZZLE OF THE BIBLE

Explains Why Paul and Barnabas Were Dubbed "Hermes" and "Zeus" When They Visited Lystra.

London.—An event in the life of the Apostle Paul which has long puzzled scientists and biblical students alike has at last been explained, according to an announcement made by two experts on Greek inscriptions, Prof. W. M. Calder of the Manchester university and W. H. Buckler of Baltimore.

The puzzle question is, Why were Paul and Barnabas saluted respectively as "Hermes" and "Zeus" when they appeared in the town of Lystra, in Asia Minor? For answer, the two Greek scholars point to inscriptions and carvings they have found near the town, which indicate these were the two gods regularly worshiped by the natives of the valley of Lystra.

The general reason why the mystified bibliblists thought the two strangers were gods is traced to the statement that Paul healed a man who had been crippled from birth.

Professor Calder states that "archeologists have long searched for the answer among the monuments of the valley of Lystra, but these monuments revealed nothing about the ancient religion of the valley."

Recently, however, he and Mr. Buckler were journeying in this region, under the auspices of the American Society for Archeological Research in Asia Minor, when an accidental detour brought them to Kavak, seven miles from Lystra. While there they found a limestone altar in the courtyard of a house. The stone bore a Greek inscription, defaced and worn. The inscription ended, Prof. Calder says, in the words "to the god who hearkens to prayer and to the god . . . and to Hermes a vow." The name of the second god is lost, but the Greek letters for Zeus would exactly fit in the gap, he states.

At the same place the two scientists were also shown a small bronze figure of Hermes, with an eagle, the bird of Zeus, beside him.

Further evidence of the prominence of those two deities in the region had been found in 1909 by Prof. Calder at another place, a day's journey from Lystra. This discovery was an inscription telling of the dedication of a figure of Hermes, together with the dedication of a sun disk to Zeus. The dedicators, Prof. Calder points out, were of the same racial stock as the people of Lystra.

Ovid's story, that Zeus and Hermes appeared in a Phrygian valley to found a temple for their joint worship, has been used to discredit the story in the book of Acts, on the theory that the two narratives were confused versions of the same truth. Professor Calder believes his finds prove that the Bible story has a solid and logical background, as the event would have been a natural happening in this region.

BAD CONDITION OF FEET

Editor—You should take this poem to a chiropodist, not bring it to me.

Poet—Why—what do you mean?

Editor—It's feet are in bad condition.

Left to His Fate

"Does my practicing make you nervous?" asked the man who was learning to play a saxophone.

"It did when I first heard the neighbors discussing it," replied the man next door, "but I'm getting so now that I don't care what happens to you."

A Manufacturing Center

Boss—Nothing seems to be made in America any more. Nearly everything you buy has a tag reading, "Made in France" or "Made in Japan."

Pierce—Yes, and even marriages are "made in heaven."

Town Hall Tonight

"What's up?" asked a drummer. "The debating club of Plunk Center will discuss this question: 'Which Is the Sexiest, the Scintilla or the Iota?'"

THE ROOM FOR HER

He—If I could do so, I'd keep you in one room until you were a very different girl from what you are now.

Flipper—You would, eh? What room?

He—The room for improvement.

Frenzied Finance

Young Mrs. Green (at bank teller's window)—I wish to open an account here.

Teller—Very well, madam. How much do you want to deposit?

Mrs. Green—Why, nothing. I want to draw out forty dollars.

Just Her Method

Black—My wife looks after me well. Why, she takes off my shoes for me in the evening.

Green—Ah! When you come home from the club?

Black—No; when I want to go there.

Information Wanted

Sweet Young Thing—That horse looks very strong and powerful.

Farmer—Yes, ma'am. He is.

Sweet Young Thing—How many horse power is he?

TWO WOMEN PRAISE SAME MEDICINE

Both Helped by Taking Lydia E. Pinkham's Vegetable Compound

"After the birth of my little daughter was very badly run down. I could not think of going to a hospital, but grew steadily worse, being compelled to stay in bed two or three days each week. A friend of my sister's told of the good Lydia E. Pinkham's Vegetable Compound that had done her, and my sister bought me two bottles of it. I had not taken all of one bottle when I was up and able to do some work. I am truly a booster for Lydia E. Pinkham's Vegetable Compound and you may use my testimonial."—Mrs. Mayme Lyvon, 1119 Island Ave., Ext., Mckee's Rocks, Pa.

Mrs. Hope L. Smith, a farmer's wife of Route 3, Floyd, Va., says she was ill for ten years with a good deal of pain in her side and so weak she could hardly work. Lydia E. Pinkham's Vegetable Compound has helped her so much she is telling her friends about it.

Lydia E. Pinkham's Vegetable Compound is a dependable medicine.

Answer—Outside reading.

A Needed Invention

"He's a great inventor?"

"What's he working on now?"

"A noiseless firecracker."

What Is a Diuretic?

People Are Learning the Value of Occasional Use.

EVERYONE knows that a laxative stimulates the bowels. A diuretic performs similar function to the kidneys. Under the strain of our modern life, our organs are apt to become sluggish and require assistance. More and more people are learning to use *Doan's Pills*, occasionally, to insure good elimination which is so essential to good health. More than 50,000 grateful users have given *Doan's* signed recommendations. Scarcely a community but has its representation. *Ask your neighbor!*

A TOUCH OF OLD SPAIN

These entertainers have been brought to the Sesqui-Centennial International Exposition in Philadelphia where 150 years of American Independence is being celebrated, by the Los Angeles County, California, Chamber of Commerce. The westerners have built a fine old Spanish mission in the Palace of Foreign Arts. Fashion and architecture, industry and agriculture, resources and advantages of their native heath. The musicians and dancers entertain all visitors who pass to rest a bit after "doing the exposition." The Exposition continues until December 1.

TAKING AN INVENTORY

Every city likes to grow, and every town likes to develop into a city. It is human nature to desire progress, and it is the progress we make which marks us from the lower animals. Of course every city cannot develop into a metropolis, and all towns cannot develop into great manufacturing cities. But in nearly every city and town it is possible to get better year by year.

There are different ways of developing. The commonest one is of course to bring new industries into the community. Before this is undertaken the community might well take a survey of its industries and its natural advantages. This ought to be done every year or two so that any work performed by the commercial club or civic organization will not be done blindly, but with some definite plan in view. Every enterprising merchant take an inventory of his business once or twice a year. Why should not the city and town take stock of what it has and what it expects to do in the succeeding twelve months.

Some cities and towns are ideally situated for certain kinds of industries, and other communities would naturally attract different industries. The thing for the enterprising community to do, of course, is so find out the kind of business it can get and then go after it.

If this be done there is little doubt that the average community can do some developing. There are many industries anxious to leave the congested centers of population for various reasons. As a general thing small factories which are apt to grow into big institutions do a town more good than the larger kind which are apt to make its industrial life one sided. And as like attracts like one or two industries of a certain kind are likely to bring similar or correlating industries into the city. Why not take an inventory of our town and see what can be done?

Historic Toys

The 2,000-year-old armlet found on Solsey beach and used by children as a collar for the cat before the discovery of its real nature gained it a place in the British museum, recalls another valuable plaything. It was in 1897 that a Dutch farmer obtained possession of a bright stone with which some Boer children were amusing themselves. This "toy," which eventually sold for £60, after exhibition in Paris, brought the discovery of the diamond fields, round which so much of the recent history of South Africa has centered.—London Times.

Making Her Say It

The prettiest girl sighed. All through the foxtrot her partner had been relating "various facts" to her about everything under the sun, from plays to parliament, till she was bored almost to tears. Now he was on the subject of heredity.

"It's a curious fact," he remarked, "but my brother, who was born on the same day of the year as I was, but who's three years older, is my exact opposite in every respect. Do you know my brother?"

"No," murmured the girl, "but I should like to."

Anyone Can Lay Certain-teed

Certain-teed Roofing saved you money because anyone can lay it properly by following the directions enclosed in every roll. No skilled labor is required.

In addition, Certain-teed costs less to buy than other good roofing. And it requires almost no upkeep.

ROAD BUILDING

GOOD ROADS MUCH HELP TO DAIRIES

E. L. Browne, agricultural economist of the Department of Agriculture, has prepared a report to the government publication "Public Roads," on the growth of milk transportation by motor truck to Chicago. In discussing the average rates from various dairy localities Browne says:

"Good roads are a prerequisite to successful motor truck operation. The unfortunate operator who tries to maintain his service over highways which are virtually impassable for a part of the year finds that his daily operating costs far exceed the average normal expenses, and eventually he realizes that his profits are seriously affected. Very few operators appreciate the increased expense which results in this way from bad roads.

"As an instance of the value of hard roads, a large Chicago dairy believed for a time it would have to abandon its plant. As the section in which the plant was located is a highly productive dairy district, the company made every effort to find another means of transportation. About this time the Rand road was completed, furnishing forty-six miles of hard-surfaced road to the city. An installation of two tank trucks and two trailers is now operated daily between this station and the Chicago plant, with the result that the highway has saved the closing down of the plant and the community retains a profitable place to market its milk."

The rates charged for country haulage are directly proportional to the distance and condition of the roads on the various routes, and Browne says that dairymen living along unimproved highways pay from 25 to 50 per cent more than those in sections where improved roads have been completed. The value of an improved road to a community, he points out, can easily be measured in the light of these facts.

The rates range from eight cents per hundred pounds, for relatively short distances over improved roads to twenty-five cents for a twelve-mile haul. Where the rates seemed high it was found that the trucks operated over the roads which had not been improved. For example, milk delivered to the station at Dundee is transported over gravel and paved roads for distances of three to fifteen miles at a rate of from twelve to eighteen cents per hundred pounds, while twenty-five miles west of Dundee at Herbert the haulage over dirt roads for distances of from three to twelve miles is twenty to twenty-five cents.

In 1924 Browne reports that approximately 44,000 dairy cows of milk were delivered daily to Chicago by twenty-six railroads, which carried 88 per cent of the supply, and 141 motor trucks which transported 32 per cent. Milk delivered in any other way was negligible in amount.

Illinois Completed 900 Miles of Road in 1925

By laying 900 miles of pavement in 1925, Illinois completed more mileage than in any previous year except 1923 and 1924, the division of highways declared in a statement. "This additional mileage," the statement said, "is not only of great value to traffic in the local communities, but adds much to the value of the mileage already existing by making it possible to reach points heretofore isolated by early roads.

"Perhaps the greatest measure of local relief was given to the west central portion of the state between the Illinois and Mississippi rivers, where much heavy grading had been done during previous years, but where pavement could not be completed prior to this year because of the necessity of waiting for heavy fills to settle. Every effort will be made to continue the highway work of Illinois in 1926 at the same record-breaking rate."

Education of Children and Building of Roads

Two of the big items in public expense are the education of the children and the building of good roads. Does anybody seriously propose to stop in any degree financing school privileges and, opportunities or halting the good roads program? The cost of chewing gum, cigarettes and cosmetics is greater than the combined cost of the public and private schools, colleges and universities, and lifting the highways of the nation out of the mud. Good roads are big dividend payers, and the education of the children much more necessary and profitable. There are plenty of places to economize without throwing the monkey wrench of disaster into the schoolhouses or the road machinery.—St. Cloud Journal-Press.

No Chance for Change

Officials of the Lincoln Highway association have advised the county commissioners of Hancock county that there is no possibility of a change in the route in Wyandot, Hancock, and Allen counties, Ohio. The commissioners had urged a more northerly location. The association states that the present route constitutes an almost perfect tangent through the three counties named—the longest between the two coasts. The route was moved to its present location some years ago.

STUDYING PERILS FACED BY HERRING

Scientists Conduct Investigation in Orkneys.

Kirkwall, Orkney Islands.—An expedition of naturalists is investigating from here the greatest of natural mysteries—why a herring ever gets to the dinner table.

Millions of herring are caught, eaten and relished every year. But scientists know that many more millions rarely ever pass the spawn age, and equal millions never get to adolescence, yet they travel in such numbers that they have been known to stop a steamship.

They are the prey of all other fish and human beings from the cradle to the stomach, and yet they are the pests of their own world.

The expedition has devoted two years investigating the baits and trials of the herring in their "mina water," the Orkney Islands and adjacent waters spaces. The scientists have learned there are enough father and mother herrings to lay billions of spawn each year. This spawn is awaited by millions of fish, mostly cod and codfish, who fatten and bloat themselves on the choice water thus provided.

The codfish, jellyfish, and many other varieties get their substance for weeks by sucking the herring spawn from the rocks and other places in which they nestle.

Despite these marauders, the adhesive eggs survive the incubation period and produce teeming masses of tiny thread-like fishes.

All things work against the herring. It becomes the prey of the trawler more easily than any other fish, for the trawler is led directly to the herring shoals by the other and larger fish.

KICKS CAUSE A SUIT

Kicks on $300,000 legs are the basis of a suit started in the Supreme court, New York city by Thula La Po, dancer, who charges she was ejected from a New York hotel and that private detectives injured the legs she is showing in this photograph. The legs are insured for $200,000, and Thula is suing for $500,000.

Keep Off Styles

Washington. — Congressmen have plenty of warning not to interfere with the matter of styles. Opposing a bill for copyrights on dress designs, Ida M. Tarbell and others said women would dress the way they liked and they had a divine right to express their beauty in their own way.

THE THEATRE

One of the most colorful scenes in "The Far Cry," which will be shown at the Palace theatre next Saturday and Sunday, is screened in colors. The episode is a banquet scene in a Continental hall. The technicolor process of film coloration, as used by First National in this picture, differs from the processes generally used.

"The Far Cry" is an adaptation of the Arthur Richman stage hit, which enjoyed immensely successful runs on Broadway and in various other cities in the United States and Europe.

Conway Tearle and Dorothy Mackaill have the leading roles in Robert Kane's "The Dancer of Paris," the Michael Arlen story, which will be the feature attraction on the screen of the Palace theatre next Wednesday and Thursday. It is the first time that these two popular stars have appeared in the same picture.

"The Dancer of Paris" is the first of the works of the popular Michael Arlen to reach the screen. His plays and novels, however have gained tremendous vogue. As the title implies, the greater part of the action takes place in Paris.

Florida boosters, who have vaunted that motion picture concerns might find any sort of location they desired on the Peni sula provided they gave Florida scouts sufficient time to hunt for it, lived up to their boast as far as First National is concerned.

Earl Hudson, First National producer ordered a jungle island for "The Savager" which is to be at the Palace theatre on Friday, with Ben Lyon and May McAvoy in the featured roles.

When Hudson arrived at Miami to make the picture, the Floridians escorted the producer and his movie troupe to the island. Strange to say it was up to expectations." In fact it was so perfect that it seemed almost as if it had been especially manufactured for the occasion.

Narrow roads are stupid and they are also dangerous.

One topic on which opposing sides in any dispute can all agree is that of roads. The country needs more goods roads. Everybody says so. Nobody denies it.

Ten years from now, according to the law now in effect, the United States may have 200,150 miles of completed, well-paved highways. At present there are only about 27,000 miles of such roads. The federal aid system calls for this work in co-operation with the states.

There is not sufficient increase in first-class road area to park adequately the new machines turned out each year! And the reason is the lack—or the limited lack—of money.

More than $17,000,000 will be spent on Washington state's pay-as-you-go road-building program during the coming biennium. Of this sum it is estimated $14,500,000 will be available from licenses for motor vehicles, and a tax of 2 cents a gallon on gasoline, $2,250,000 from federal aid, and nearly $700,000 from forest funds.

WANT COLUMN

FOR SALE—Household furniture, also fruit jars. Enquire of Mrs. O. D. Hammond, 208 Antrim-st. 11-tf

FOR SALE—80 acres timbered land on Beaver Island. On account of owner living out of the state, will sell for $150 assessed valuation $300. David W. Ivller, Buckner, Mo. 15-6t

REWARD—$25.00 reward will be paid for evidence upon conviction of party or parties who have been cutting timber and committing acts of trespass on property known as Van Pelt's White Birch Creek.

Attractions for Coming Week

At the Palace

Saturday-Sunday, Sept. 18-19

"The Far Cry" with Blanch Sweet, Jack Mulhall, Myrtle Stedman and Hobart Bosworth. See! The glamorous Venetian pageant turn to flames and the mad escape of lover and beloved in the gondola that had been their trysting place. Blanche Sweet is marvelous. Also a comedy, "Your Husband's Past."

Monday-Tuesday, Sept. 20-21

Pola Negri in "Good and Naughty." Society comedy. Don't fail to see Pola Negri at her very best. Added attraction—An Educational comedy, "Hitchin' Up" and Felix the Cat.

Wednesday-Thursday, Sept. 22-23

Robert Kane presents Arlin's "The Dancer of Paris." Greatest story, comes to screen at peak of author's popularity. Conway Tearle and Dorothy Mackaill are wenderful. You may see a million shows but you'll never forget "The Dancer of Paris." Extra, Fox News

Friday Sept. 24th

"The Savage" with Ben Lyon and May McAvoy. The year's great comedy novelty. Girls, you'll go wild about "The Savage." He's wild, but oh my. He, the savage; she, the tamer. He never wore a dinner coat, never had his nails polished, but—Girls—behold what he can do will make him your hero boy or life. Novelty, thrills. Say, baby, this IS a slow! Extra—Comedy, "Wife Tamer's."

PIGMY EXPEDITION OFF FOR INTERIOR

Smithsonian Party Seeks New Guinea Mountains.

Washington.—An airplane expedition backed by the Smithsonian institution has started to explore what the Smithsonian describes as "the world's greatest unknown land and its pigmy inhabitants." According to word received by the Smithsonian from Dr. Matthew W. Stirling, who heads it, the expedition, with its airplane backed by between 300 and 400 men, has started up the Membermo river for the snowy mountains of Dutch New Guinea in the Dutch East Indies, said to be the largest island in the world.

"For the 400 years since what is now Dutch New Guinea was first seen by Europeans, the mountainous backbone of the country has resisted the attempts of civilized man to penetrate its secrets," says a statement issued by the Smithsonian. "The coastal jungle has intervened, its mud and thickets, its fevers and poisons and among who have tried have died or have come away baffled."

The expedition is sponsored, in addition to the Smithsonian, by the Dutch East Indian government.

Most of those in the party are native carriers, soldiers and convicts. Their main function is to transport and protect food supplies. Except for a few wild pig, wallaby, cassowary and some game birds, the jungle of New Guinea offers practically no animal food.

Supply Bases Established.

The mouth of the Membermo river is on the north coast of Cape d'Orville. The expedition is working south up the river to the junction of the Rouffaer, by which it hopes to gain access to the mountains. It is establishing various bases, from one of which the transport plane will operate.

The airplane will reconnoiter the jungle to determine the best approach to the mountains, attempt to find the hidden villages of the pigmy peoples known to dwell in the mountains, carry equipment to make maps of the virgin lands by, and, if possible, make landings in selected spots for natural history collections.

Doctor Stirling has 70 Dyak carriers from central Borneo and more than 200 native Javanese and Ambonese soldiers and Malay convicts. A Dutch captain and two lieutenants command the military detachment. A medical officer and two medical assistants are with the expedition.

Home of Primitive Races.

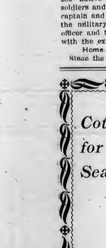
Since the party plans to explore an area of many thousand square miles on which no white man has ever been, it includes specialists in several fields so that as little as possible may be missed.

Doctor Stirling will take care of the collection of data on the mountain pigmies he hopes to find, and the Papuans who inhabit the coastal plains. Both pigmies and Papuans are among the most primitive races of mankind. The former, a distinct people living in the mountainous interior, seem less developed mentally. From the very few that an English expedition saw in 1911, the pigmies appear to be about four feet nine inches in height. They are yellowish black in color, with short, woolly black hair. They go naked, except for a loin covering.

Doctor Van Rouwen, director of the Botanical gardens at Buitenzorg, accompanies the expedition to make collections of the New Guinea plants.

New Guinea is 1,400 miles long by 400 miles across, with an area of 306,000 square miles. The mountainous backbone of Dutch New Guinea has been the goal of many expeditions, the results of which were limited to sickness and disappointment.

GIVES UP K. P. JOB



George Rocking, a student of Reed college, Portland, Ore., who has been earning his education by washing dishes in a restaurant, has won first prize of $1,000 in a national essay contest conducted by the Chemistry Foundation, Inc., of New York. So he has resigned his dishwashing job and will use the $1,000 to complete his college course.

PERSONALS

Richard Saltonstall left Tuesday for his senior year at Olivet college.

Mr. George A. Burke of Grayling, visited friends here early this week.

Mr. and Mrs. A. H. Buttars of Pellston; were Charlevoix visitors Sunday.

The Congregational Sunday school hour changes next Sunday to 12 o'clock

H. W. Garrett, of Grand Rapids, was a business visitor in this city Tuesday.

W. J. Gallagher, of St. James, is spending some time here this week on business.

Mrs. W. A. Hawker of Grand Rapids, has been visiting Charlevoix friends for a few days.

Dr. and Mrs. H. W. Dicken of East Jordan, spent some time here on business early this week.

Attorney E. N. Clink and daughter, Miss Lelia, of East Jordan, were Charlevoix visitors last Monday.

Andy McCall left for Detroit last Sunday, where he will spend a vacation of two weeks with friends.

Ray Lee Jackson, who spent some weeks in this city, returned to Columbus, Ohio, Wednesday morning.

Sheriff Charles Novak and his deputy, Charles H. Marshall, were business visitors at St. James last Saturday.

Mr. and Mrs. Leonard Thompson of Jordan township, Antrim county, were Charlevoix visitors last Monday.

Frank A. Kenyon, of Mackinac Island and son Harold Kenyon of Spring Lake, were business visitors here yesterday.

Ray N. Faulkner returned to Ann Arbor Wednesday where he will reenter the university and continue his student work.

The A. D. Goldman family who spent the season at Lewiston cottage, returned to their home, St. Louis, Mo., last Monday evening.

Orrin J. Orcutt, garage owner and sales agent for Chevrolet cars in Antrim county, was a Charlevoix visitor early this week.

Mr. and Mrs. Scheville, who occupied the O'Neill cottage on Dixon avenue for the summer, return to their home, St. Louis, Mo., today.

Attorney R. L. Lewis made a short business visit at St. James last Saturday, making the round trip on the S. S. James E. Sanford.

Mr. and Mrs. O. Gatti, son and daughter, after spending the summer in Charlevoix, return to Miami Beach, Florida, Friday.

The public is invited to attend the annual Harvest Supper at the Congregational church next Wednesday from 5:30 on. Tickets 50c.

Logan G. Thompson and family returned to their home, Cincinnati, Ohio, Tuesday, after spending the season at their summer home here.

Mr. and Mrs. George Rassieur spent a few days at the Rassieur cottage, 501 Mercer Boulevard, returning to St. Louis, Mo., early this week.

Mr. and Mrs. M. L. Hartman have closed their summer home, 307 Michigan avenue, for the season and returned to Chicago a few days ago.

Mr. and Mrs. D. O. Boudeman and son D. O. Jr., for some weeks at their cottage on the grounds of the Belvedere Club, returned to Kalamazoo today.

Mr. and Mrs. F.E Turrell of Detroit, who have been at their summer place in Antrim county for several months, were visitors here early this week.

Mrs. Thomas Lalonde of Detroit, arrived here early this week to be with her mother, Mrs. Sarah Emrey, who for some days past has been seriously ill.

Mr. and Mrs. Theodore Rassieur closed their summer home, 501 Mercer Boulevard early this week and returned to their home, St. Louis, Mo., Wednesday

Mrs. J. J. Knight returned to her home, Kalamazoo early this week, following a vacation of several weeks spent on the grounds of the Belvedere Club.

This is Charlevoix Day at the Charlevoix County Fair. Stores are closed for the afternoon and a large number of local citizens will visit the Fair during the day and tonight.

Barron Callen closed his studio early this week and accompanied by Mrs. Callen, son Bill and Mrs. Barnes, started on their return trip via the motor route yesterday to Columbus, Ohio.

Galo Hines of San Bernardino, California, was a passenger on the S. S. Manitou last Saturday and is spending a week here with his parents, Mr. and Mrs. F. G. Hines, and other relatives and friends.

Mr. and Mrs. Sam T. Gilbert have closed their cottage, 210 Park avenue, for the season and accompanied by their son Julius and Mrs. Gilbert's mother, Mrs. Goodman, returned to their Detroit home early this week.

Mr. Edwin Judy of Columbus, Ohio, has been a guest of Ray L. Jackson for the past week. Mr. Judy will continue his visit until such time as Mr. Jackson closes his place of business, after which the two gentlemen will make the trip to Columbus by motor.

Cottage Rentals for the 1927 Season

This is a good time for summer visitors to arrange for Cottages for the Next Season: and by the same token it is the time for Owners who want tenants to list their cottages for next year

LAWRENCE R. CHASE
REAL ESTATE
230 Bridge Street. Telephone 113

FLORINE M. STELTER, B. M.

Teacher of Piano and Pipe Organ

Specializing in Advanced Pupils.

Registration for Fall Term of Study at her home, 210 Lewis street, on Saturday Afternoon Sept. 18, 2 to 6

TELEPHONE 25 M.

A new plate glass, set today replaces the one recently broken in the north display window at 225 Bridge street, until recently occupied by the J. C. Garn delicatessen store.

The many friends of Mrs. George W. Priest will be pleased to learn that she has practically recovered from her recent illness that was serious and continuous for several weeks.

Mr. Max Washbobe, a prominent business man of Cincinnati and member of the Cincinnati Club, who according to a custom of many years spent the summer months in Charlevoix, returned to his home early this week.

A house party consisting of Mr. and Mrs. J. P. Wilson, of Beardstown, Ill., and Mrs. W. B. Miller, of Carbondale, Ill., and Mr. and Mrs. Wesley Lee are spending the week at the Hawker cottage, the "Billiken."

Mr. and Mrs. Arthur C. Dake returned to their home, Detroit, last Thursday the former after making a short visit here, the latter after spending several weeks with her parents, Mr. and Mrs. James B. Parsons, 206 Belvedere avenue.

The front of S. M. Rose's barber shop takes on an improved appearance today. New plate glass having been placed in position to repair the damage caused a few days ago by wind that shattered the former big plate glass in the display window and door.

Mr. and Mrs. C. F. Messenger have closed their cottage—the Nevermind—at Ironton and the family members with the exception of Mr. Messenger, returned to Chicago Sunday evening. Mr. Messenger remaining for a few days to attend to business affairs.

Mr. J. J. Fagan is saying goodbye to local friends today, and expresses the hope that he will visit them in Charlevoix during the season of 1927. Mr. Fagan leaves for Los Angeles, California, tomorrow accompanied by Ivan Newton, manager of the Ivan Newton auto coast, where both will spend the winter months.

Mr. and Mrs. Frank G. Hines, accompanied by their son Galo, leave for California Friday of this week. They will according to present plans make the trip to the west coast via the motor route, following closely the historic Santa Fe trail after leaving Kansas City and expect to arrive at their destination—Santa Monica—in about one month after leaving Charlevoix. Miss Isabelle Hines will also be a member of the party.

Mrs. Sarah Emrey for some time past in a serious physical condition went to Battle Creek for special treatment last Sunday night. She was accompanied on the trip by her daughter, Mrs. Thomas Lalonde, of Detroit, and Mrs. Louise Elston of this city. Mrs. Emrey has been afflicted with some serious throat trouble for several months, hence the trip to Battle Creek to consult specialists and receive treatment for this ailment.

Mr. W. E. Scheville who recently spent about two weeks with his parents Mr. and Mrs. W. V. Scheville at their summer home on Dixon avenue, left for Harvard last Monday morning to resume his school work. The return trip will take several days as the young man will cover the distance depending upon his foot gear and will stop at such points as may get by passing automobilists who are looking for company and extend an invitation to the hiker to join them.

Information came Wednesday morning by way of a telegram to Mr. A. C. Clement that Mr. Jerome P. Stevens, 72-years of age, passed away at his home, Joliet, Ill., Tuesday night. Mr. Stevens for a long term of years spent his vacation in this city at the cottage now owned by George D. Webb, on the grounds of the Belvedere Club. Mr. Stevens spent part of the 1925 season here, that being his last visit to Charlevoix where he was well known. He was very popular with our local citizens who will regret his passing.

Rev. and Mrs. C. E. Pollock, and family, entertained three former pastors of the Charlevoix Methodist church during the past week. Rev. A. F. Nagler spent the week end with them, preaching Sunday morning. He was in charge of this parish for six years, beginning his pastorate here twenty-eight years ago. Rev. and Mrs. Quinton Walker spent Monday evening and Tuesday with them. Rev. Mr. Walker was pastor of this charge for six years, beginning his pastorate fourteen years ago. Rev. and Mrs. H. R. E. Quant were dinner guests at the Pollock home Wednesday. Rev. and Mrs. Quant held a four year pastorate here which closed one year ago. These men are now located in Plainwell, Battle Creek and Grand Rapids respectively. They are all kindly remembered in Charlevoix and are particular friends of Rev. and Mrs. C. E. Pollock.

PANSY PLANTS

Some wonderful hardy plants for next season's blooming. Large flowers, long stems.

The Gardens of Mohoton.

The Charlevoix County Fair is on this week and is showing a line of exhibits, attractions and entertainment features that are fully up to past standards and in some particulars superior. Several special racing events were scheduled for Wednesday and today, but weather conditions for these events have not been ideal, notwithstanding this attendance has been good and the public has taken unusual interest in the various exhibits as well as in the entertainment features.

Tuesday was a record breaking day for accidents in Petoskey, with persons from Petoskey, East Jordan and Mt. Pleasant figuring in the accidents. A machine in which Lowell Barker, of East Jordan and a friend Miss U. E. Dowd were riding was ran down by a Pennsylvania line freight train, and the automobile demolished. Miss Dowd was somewhat bruised and received a bad scalp wound. Barker's injuries were not serious, both were taken to the hospital for treatment. In another accident a four year old child jumped in front of a passing automobile Tuesday morning, receiving injuries that caused his death a short time afterwards.

Friday evening at 6:30 there will be a banquet held in Charlevoix, at which business men from several townsin Antrim, Charlevoix and Emmet counties will gather to hear John F. Emery, of Porter, Emery & Healey, Grand Rapids and J. J. Fagan of Muskegon, relief of the possibilities for resort and real estate development in this region. Both of those men are well known throughout the state for their real estate activities; both have demonstrated their ability and good judgment in real estate and resort development. It will be interesting to hear what they have to say about our country and its future. Undoubtedly Charlevoix is about to be shown once more that the outside world has greater faith in its beauties and many natural advantages than do Charlevoix people themselves.

Spaniards Put Olive Tree to Many Uses

Centuries of experimentation have taught Spaniards how to utilize to the full that wonderful plant, the olive tree. Its cultivation is among the most remunerative branches of agriculture in the peninsula. It would be a mistake to think that only oil comes from the olive tree. Indeed nothing is wasted. A small percentage of the fruit is picked in brine; the greater part is crushed for oil. The crushed oil serves for soap making and as cake-food for cattle. Pulverized olive stones make the best fuel for the braziers in every Spanish household. The tough branches, cut when the trees are pruned, are eaten green by sheep and goats. The limbs and roots furnish firewood. Most "grandfather chairs" in country housesteads are made from olive wood, which has a rich yellow color, a beautiful dark grain and takes a high polish. It is calculated that the use of hydraulic presses increased the yield of oil by 1 per cent, which, on the total value of the Spanish crop, means many millions pesetas. But in some districts olive crushing is still done by the primitive method of suspending by a leather belt attached to a staple in the wall a "press," whose feet, slipping on the greasy surface of a great granite ball, make it revolve and crush evil-smelling oil out of evil-looking, brown, half rotten fruit.

U. S. Auto Production 4,157,830 Cars in 1925

Washington.—Production of motor vehicles of all classes last year totaled 4,157,830, with a wholesale factory value of $2,604,488,630. This was an increase, the Commerce department reported, of 0.9 per cent in number and 12.4 per cent in value when compared with 1925, when the last census was taken.

Total production by establishments engaged primarily in the manufacture of motor vehicles, exclusive of body, parts and accessory makers, reached 3,971,585 in 1925, including 3,953,018 passenger vehicles valued at $2,607,900,848—3,567 public conveyances worth $39,454,025, 1,350 government and municipal vehicles worth $10,181,227, 487,570 business vehicles worth $337,485,230, 8,530 trailers worth $3,440,917, and other products worth $483,018,140.

Girl's Essay on Men

From a schoolgirl's composition: "There are three kinds of men—bachelors, bachelors and widowers. An eligible bachelor is a mass of obstinacy surrounded by suspicions. Husbands are of three varieties—prizes, surprises and consolation prizes. A widower is a man someone has rescued as he goes down for the third time. Marking a husband or a bachelor is one of the highest plastic arts known to civilization. It requires science, sculpture, common sense and faith, hope and charity, especially charity."—Exchange.

To Republican Electors for the County of Charlevoix

A convention of Republicans for Charlevoix county will be held at the Wolverine Hotel in the City of Boyne City on Tuesday, September 21st, 1926, at ten o'clock in the forenoon, central standard time, for the purpose of electing five delegates to attend the Republican State Convention called to meet in the city of Detroit, on Tuesday, Sept. 28th, 1926, at ten o'clock, central standard time, for the purpose of nominating candidates for State offices, electing State Central Committee and a chairman thereof and for the transaction of such other business as may properly come before the Convention.

Republican County Committee
By Howard P. Porter, Chairman.
L. H. White, Secretary.
Dated Sept. 8, 1926.

Republican Nominees

Congressional—Frank P. Hohn
State—
Governor, Fred W. Green
Lieut. Governor, Luren D. Dickenson
Senator, Cal Campbell
Representative, John M. Harris
County—Sheriff, David Vaughan
Clerk, George A. Bricker
Register of Deeds, Frank F. Bird
Prosecuting Attorney, Arthur L. Fitch
Drain Commissioner, James Simmons
Surveyor, E. A. Robinson
Road Commissioner, William E. Byers

New Schedule for The S. S. Manitou

Hereafter the Steamship Manitou will make her trip northbound leaving this port at 6:00 p. m. Fridays, arriving at Mackinac Island at 5:30 a. m. Saturdays southbound, leaving Charlevoix at 8:00 a. m. Wednesday, arriving in Chicago at 7:30 a m and leaving time Sundays at 5:00 p. m., arriving in Chicago at 6:00 a. m. Mondays.

The Sewing Circle will reorganize Thursday afternoon at 2 p. m. at Mrs. Etta Stephens.

We hope that this good phase of good work will move onward successfully.

Our Missionary Volunteer Service system has taken a better stride. From two cents to five cent per day for adults and one cent for children is our weekly and yearly purpose. Are you with us on these special efforts? If so join the "Voluntary Movement."

Methodist Church.

C. E. Pollock, Pastor.

Sunday School at 12 noon, beginning next Sunday.

Preaching at 11 a. m. sermon subject 10:30 a. m. next Sunday.

Holy Communion next Sunday morning—all welcome.

Epworth League 6:30 p. m. next Sunday.

Worship, with sermon and song 7:30 p. m. Welcome.

Christian Science Society

Sunday service, 10:45 a.m., Subject, "Matter."

Sunday School 12 o'clock.

Wednesday evening service 7:45. Reading room, Tuesday and Saturdays, 3 to 5 p. m.

The public is cordially invited to attend our services and use our reading room.

St. Mary's Catholic Church

Low Mass 8:45 a. m.
High Mass 9:00 a. m.
Saturday and Monday 7:00 a. m.
Rev. Knute Lowenski, Pastor.

CHURCHES

Congregational Church

Rev. B.G. Matson, D.D., Minister

Sunday services will begin with the morning church service at 10:30 at which the pastor will preach a sermon on "The Statesmanship of the Kingdom of God." The sermon will present some of the great achievements, the great personalities and interesting facts in the missionary undertakings of the Christian Church.

The Sunday School will resume the noon hour for regular sessions, following the morning service.

The evening service is omitted until October.

Mid-week prayer and bible service Thursday at 7:30.

The Womans Missionary Society will meet on Friday afternoon at the home of Mrs. Dawson, 1223 State St. Mrs. Saltonstall will have charge of the program and will present the topic "The Teaching Church."

The Ironton church service and Sunday School begin at 2:30 Sunday afternoons.

Church of God

Rev. Paul L. June, Pastor

Services held at the Chapel regularly. Sunday School at 10 a. m.

Preaching at 11 a. m.

Young Peoples' class meeting 6 p. m.

Preaching at 7:30 p. m.

Wednesday evening prayer meeting at 7:30 p. m.

Friday evening Christ's Ambassadors meet at 8:00 o'clock.

CHAPTER XII—Continued

—12—

The bridge rocked and swayed to their struggle, backing under them as the flood lifted it, only to let it sag again, and swirled about their feet, tugging viciously at the structure, tearing at the cables, thrusting at the cliffs. Their feet slipped on the wet planks, they fell against the handrope and the standing suspension stays, clutching frantically with one hand, striking with the other, giving blows that left each sick with pain, desperate, ignoring the peril, clinging and sliding while they fought, silent save for their heavy breathing and the grunts with which a blow was delivered or received.

Baxter fought foul as his strength sapped from him. Caleb was harder, deeper-lunged, better muscled for this rough and tumble game. He hammered Baxter over the kidneys and Baxter gasped with the pain, his face contorting while he hung like a dead weight to his opponent, faint with anguish. When it passed he flung up his knee and caught Caleb in the groin, temporarily evening things. He broke free and lashed out, right and left, flailing at Caleb's head and jaw as the latter crouched against an angle of the hand rope and a stay covering up. Then, with an energy summoned from his reserves, Caleb rushed, landing hard above the heart. Baxter staggered, groped forward and flung an arm about Caleb's neck, dragging with all his weight while Baxter strove for balance. His fingers found Caleb's throat, and worked desperately in shutting off breath, torturing as they pressed upon the jugular.

As they clung, athwart the planks now, Baxter's weight almost unbearable in the crook of Caleb's arm, his body stretched out down stream with the force of the water, the eastern buttress shuddered, tottered, slid; plunging into the gut. It toppled sideways, shaking the bridge as a terrier shakes a rat, dragging it until the cables sang above the noise of the torrent and then, anchored by sunken ledge and crevice, jammed hard. It held firm, the cables still secure. The sudden jar, the lowered pitch, was too much for Baxter. The blow over the heart had finished his endurance. His fingers lost their grip on Caleb's throat, the furious vaiger calmed him. His despairing clutch on Caleb's smooth slicker failed. He gave a cry, his face ghastly in the white light of the moon and slid into the current like a hog.

Caleb snatched him by the collar of his coat and shifted his armhold for a grip on a swaying stanchion as they both straightened out in the tremendous sweep of the maddened creek. He thought his arm would be torn from its socket with the strain and he managed to wrap his legs about the planks, shouting at Baxter, yelling his loudest. Unless Baxter helped to save himself, or Caleb let loose of him, another moment would see them both whirled down the gut, over and over, their lungs filled with water, battered, drowned!

"Get hold of yourself," Caleb yelled. "Baxter! Get a grip on something, hang on to me. Haul yourself up. Quick!"

The insistent words and the will behind them worked in Baxter's numb brain and caused him to do a last flurrying fight for life. With a frantic effort he clawed at Caleb, twining his fingers in the slicker and slowly dragged himself up from the suction of the flood. Caleb got both hands to the stanchion, praying that it might hold. Baxter found the opposite one, then the handrope, and so crawled to safety, releasing Caleb from his dead weight. He began to haul himself up the incline while Caleb lay for the moment sluck, utterly exhausted, his breath coming in great gasps, the fibers of his muscles seeming to be torn apart, his sinews racked. He got to his knees at last and then to his feet. The bridge still rocked collapse at any second, there was no time to lose. Baxter collapsed again from weakness, face down on the planks where they still showed above the ever-rising, furious water.

Caleb got an arm about him. With the help of the hand-rope he hauled Baxter along until they reached the solid cliff of the western side of the gut. The blood was pounding in his brain with his efforts and it seemed as if someone was calling to him. He stood, leaning against a tree—Baxter sprawled on a ledge, his face in his hands, elbows on knees—and faced the creek and the broken bridge, breathing in great gulps of cool air. The call came plainly now, no fiction of his dizzy brain.

Reined upon the verge where the cliff buttress had broken loose, was Betty Clinton on her pinto pony, the forelegs of the snorting horse braced against danger. The moon was free of cloud and the girl's face was clearly visible. She had on hat and her chestnut hair was in disorder.

"How long had she been there?" Caleb wondered while he strove to catch what she was saying above the tumult of the creek. He heard his name. She recognized him, with his slicker torn, his face bloody. And she had hailed him in preference to Baxter! Baxter had come from the ranch. Yet, she had called to the man she had snubbed—in her trouble, for there was trouble, he gathered, as she repeated her words in a high voice that came clearly now and then when wind and water lessened.

"Mr. Warner! My father—is—ill! I have—sent—word—by Padilla—by the road. A doctor!—Lats—may—not—get—one. Will—you? The bridge?"

"I'll get one," Caleb shouted back. She heard him and nodded to tell him so. He turned to Baxter.

"Hear what she said? I've got to get one. Are you all right to leave?" Baxter lifted his face. It was sullen with hate.

"D—n you, yes," he answered. "Leave me alone."

Caleb looked across the gut before he took to the trail. He saw Betty Clinton deftly wheeling her pony. It was dark as soon as he got well into the canyon where the growth was thick. But he forged ahead in the darkness, puzzling a little as to why she had not called Baxter. Had she ridden to overtake him, knowing he had gone that way. Had she seen the fight, seen Caleb rescue his opponent, perhaps thought Baxter too weak for her purpose—or did she take sides with Caleb, in some flash of intuition?

Whatever the real reason, his hopes spurred him down the uncertain path on his errand, charged with new energy by the appeal of Betty Clinton. He came out upon the plain panting but with his second wind gained, crunching through gravel, plowing through the alkali soil at a steady jog until at last he pounded over the Coyote creek bridge and gained the hotel, asking the astonished landlord where the nearest doctor lived, and so on again down the road for half a mile to find the physician in and commandeer his services.

"Clinton? Clinton of El Nido? Have you come from there? What's the trouble?"

"I can't tell you. Not an accident, I'm sure, or Miss Clinton would have said so. Some illness, or the old man's head was down. We had to shout across. Sent a man by the road but she was afraid he might not be able to get a doctor. She just said he was ill."

"Ah! I see. He'll have gone to Pahoma. There's Conklin there. And he's got a lot of influenza. Bond's pretty bad after the storm, but we'll get there. Going back with me?"

Caleb wanted to go back. He might be of use. He had done what she asked, he was entitled to her thanks at least.

"I'll go," he said.

"Come on." The doctor had picked up his bag and led the way to his little garage.

The sky had cleared completely and the night was fair as they chugged out to the road and shot down toward the highway that would take them to Pahoma and so, by a sidetrack, to the valley. Caleb fancied that Baxter would come out of the canyon all right. Not that he greatly cared, but some of the enmity had gone out of him.

The air was cool, bright stars glittered all about the soaring moon. Only the rutted road showed that there had been a storm. At last they struck the well-drained highway and sped along the secluded road at top speed, past the sentering light of Pahoma to labor valiantly up the hill that led to Hermanos valley and drop down to the ranch.

There was a car standing by the house.

"Looks as if they'd got Conklin," said the doctor as he honked his horn and braked to a standstill. "Don't look like his car, though."

It was Baxter's roadster. Why he should have left it there and started for the canyon in the storm, again perplexed Caleb. A sudden thought struck him with the possibility that he might have quarreled with Betty Clinton. That would account for her not asking his aid. He had lied when he said he blessed her. Baxter would do that. Or the kiss might have been forced, and he disclosed.

A door opened. Betty Clinton appeared, her voice anxious.

"You've come at last. What is it?"

They were getting out of the car, the doctor reaching back for his bag.

"It is Warner, Miss Clinton. I've brought Doctor . . ."

"Doctor Kennedy, Miss Clinton," said the doctor. "There was relief in her tone. "I'm so glad you've come. He's in a high fever. I'm afraid . . ."

Caleb followed them as they walked swiftly toward the open door. She had thanked him only by a glance that held its reward and conveyed something that encouraged him to wait in the big living-room. There might be something else that he could do. He still seemed to point to a quarrel. Mary Morgan's suggestion that Betty Clinton had not believed him as bad as he was painted grew more likely, this service that he had rendered her might help to repair the load between them.

He was still in the dark as to the nature of Clinton's illness, or its seriousness, and no one came to enlighten him until the honk of a horn sounded outside.

Betty Clinton did not answer the arrival. Instead Maria entered from the patio pergola, ushering in a brisk, short man with a bag.

"I'm Doctor Coghlin," said the man to Caleb who had risen. "You are a friend of the family? I don't think I've met you before."

"I brought Doctor Kennedy up from Coyote," said Caleb. "Miss Clinton feared Padilla might not be able to secure you. It is too bad that there is not a telephone here or we might have saved you the trip. I understand you have plenty to do in Paloma."

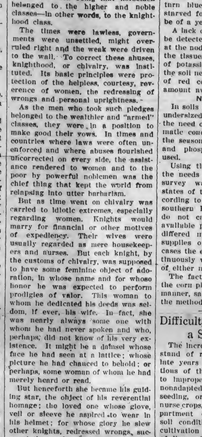
The doctor did not appear aggrieved that he had come to play second fiddle to Kennedy. He was in that part of Africa, and, despite the hurry of it, there were no infections or other ill effects.—Detroit Free Press.

That Kind of a Mind

Mark Twain hated to have his work edited. On one occasion he sat down to write to a man who had criticized his work. He was first inclined to think, "the idiot! This long-eared animal, this literary kangaroo, this illiterate hostler, with his skull full of axle grease," etc., but restrained himself and pointed out to the man his errors in "in gentleness and in the unwounding language of persuasion." "It is discouraging to try to penetrate a mind like yours," he finally wrote. "You ought to get it out and dance on it. That would take some of the rigidity out of it. And you ought to use it sometimes. That would help. If you had done this every now and then through life it wouldn't have petrified."—Pathfinder.

Historic Cave

The story relating to the Judges' cave in New Haven, Conn., is that in 1661, Goffe and Whalley, two of the members of the high court in England which had condemned Charles I to death, used this location as a temporary refuge from the officers of Charles II. It seems that the howitzer was split in such a way as to form a small cave. Although certain of the townspeople were aware of their presence in the locality, they were afraid to give them any practical assistance



Only the Rutted Road Showed There Had Been a Storm.

Fighting Smallpox in Central Africa

Smallpox is a terrible plague when it breaks out, as it does, among the native in Central Africa. There is one small woman over there, Miss Tessie Williams (who recently visited the United Christian Missionary society's headquarters here, being employed by this board), who is doing her best to make Africa smallpox proof. She vaccinated 680 natives in one day, considering it a very good missionary stunt. Her method of describing it was like the assembling of fabulous numbers of natives at witnessed in a well known factory. They stood in a line an eighth of a mile long! One native administered the treatments, scrubbing the arm clean; another scratched the skin, ready for the inoculation; a third kept the young missionary supplied with aspirants. Nothing but sleeveless

Craw in a Tattie Field

There was recently appointed to a country parish church a young minister who, although a clever chap, is very much attracted to his "paper" during his sermon.

This failing of his does not find favor with a few of his congregation, and the other Sunday, as a few of them were going home from church, one of them, the village schoolmaster, remarked: "That was a very scholarly address we got today from the minister. Don't you think so, Mr. Blunt?"

"Humph!" replied Mr. Blunt, a plain old farmer. "He just minded me o' a craw in a tattie field; two dabs an' a look up!"—Toronto Globe.

THE WORLD'S GREAT EVENTS

ALBERT PAYSON TERHUNE

(© by Dodd, Mead & Company.)

The Age of Chivalry

A GROUP of armed men rode into the French city of Tours. Three of them had patches over their left eyes; two had not spoken in a year; another's right arm was bound to his side. Each wore in his helmet a glove, a veil or a jeweled sleeve.

Now, none of these men were injured in the eye or arm, and none were dumb. They were simply "under vow." Knights all, they were products of the Age of Chivalry—an age that began in common sense and decency, culminated to a form of eccentric insanity, and left world-wide influences for good.

Chivalry had its earliest rise before the days of Charlemagne and was at its height a century or so after his death. It took its name from "cheval" (a horse), and meant originally "cavalry"—the idea being that horsemen belonged to the higher and noble classes—in other words, to the knighthood class.

The times were lawless, governments were unsettled, might overruled right and the weak were driven to the wall. To correct these abuses, knighthood, or chivalry, was instituted. Its basic principles were protection of the helpless, courtesy, reverence of women, the redressing of wrongs and personal uprightness.

As the men who took such pledges belonged to the wealthier and "armed" classes, they were in a position to make good their vows. In times and countries where laws were often unenforced and where abuses flourished unCorrected on every side, the assistance rendered to women and to the poor by powerful noblemen was the chief thing that kept the world from relapsing into utter barbarism.

But as time went on chivalry was carried to idiotic extremes, especially regarding women. Knights would marry for financial or other motives of expediency. Their wives were usually regarded as mere housekeepers and nurses. But each knight, by the custom of chivalry, was supposed to have some feminine object of adoration, to whose name and for whose honor he was expected to perform prodigies of valor. This woman to whom he dedicated his deeds was seldom, if ever, his wife. In fact, she was rarely always some one with whom he had never spoken and who, perhaps, did not know of his very existence. It might be a diffident whose face he had seen at a tiltlee; whose picture he had chanced to behold; or perhaps, some woman of whom he had merely heard or read.

But henceforth she became his guiding star, the object of his reverential homage; the loved one whose glove, veil or sleeve he appeared to wear in his helmet; for whose glory he slew other knights, redressed wrongs, succored the needy. If he won glory he was supposed to lay it all at her feet. And usually that was as far as his acquaintance with her went. Meantime his neglected wife at home took care of his estate, reared his children and submitted tamely to second place in his affections.

The folly of the custom went still further. Men took to wearing patches over their eyes or maintaining endless silences and to other petty discomforts in the name of the adored lady of their dreams. These notches, bits of dumbness, etc., were to endure until the victim had performed some deed he considered worthy his lady's praise.

At the age of twelve a boy of good family would be sent to the castle of some famous knight or other noble. There he became a page. Besides learning horsemanship and the use of arms he was supposed to fetch and carry for the women of his master's family, learn hair-dressing, lute-playing, reading, singing and other supposedly gentlemanly arts, including heraldry, the rules of etiquette and the flowery, high-flown speech of the day. When a little older he was promoted to the rank of squire and was permitted to carry his lord's shield and spare weapons and to accompany him everywhere as a sort of upper servant. Later, through some deed of prowess or by courage in the field, he qualified for the golden spurs of knighthood, taking the solemn vows and preparing for the accolade (or ceremony of investiture) by fasting and prayer.

In time, of course, knighthood, like other good things, became corrupt. Many knights forgot their vows, wrung money from the poor and maltreated the helpless. But the true spirit of chivalry never wholly died. To it we owe the best of medieval culture and progress, the upholding of order, religion and the small, sweet courtesies of life. Without it women would have been set back for centuries and women relegated to the rank of mere slaves.

Romance, fair play, etiquette, modern regard for women and the golden rule are simply chivalry—all these had their rise in chivalry.

While chivalry was perhaps an era rather than an "event," yet a knowledge of its history and customs is necessary to a full understanding of the motives prompting the Crusades and other great adventures which history records.

From the Tenth to the Fifteenth century chivalry was in its prime. Its follies and absurd regulations then began to decline, but its inestimable benefits will always endure.

Stiffening Silks

Silks are redressed with gum arabic. If in powdered form, one or two teaspoonfuls of gum arabic should be allowed to stand in a quart of warm water until dissolved, and then this solution strained for use. If the gum is in lump form, boiling water should be used and the mixture kept hot until the gum dissolves. A double boiler may conveniently be used for the purpose. A quarter of a cupful of this solution to a quart of water gives an average stiffness.

Scientists Now Read Corn Plant

Secret Code Solved in Which Food Wants Are Very Plainly Written.

(Prepared by the United States Department of Agriculture.)

The corn plant writes an order for food when there is a shortage in the soil, and it writes in colors. G. N. Hoffer, pathologist of the United States Department of Agriculture, cooperating with the Purdue agricultural experiment station, has solved the secret code in which the food wants are written. His method can be used in the field and requires but a few minutes.

Test Late in Season.

The test is made during the latter part of the growing season, after the ears are well developed. A stalk is cut and split open lengthwise. A solution of sulphuric acid containing a few drops of what the chemists call "diphenylamine" is applied to the cut surface of the stalk. If the plant has had sufficient nitrogen the tissues will turn blue. If the plant has been starved for this food the tissues will be of a yellow-green color.

A lack of potassium in the soil may be detected by examining the tissues at the nodes or joints of the stalk. If the tissues turn red when a solution of potassium thiocyanate is applied, the soil needs potassium. The amount of red color indicates the relative amount available.

Need of Phosphates.

In soils found to be acid in reaction, undersized or stunted plants indicate the need of phosphates, providing climatic conditions were normal during the season. On such soils both lime and phosphates can be profitably used.

Using these means of determining the needs of the corn plant, a field survey was conducted in several states of the corn belt last fall. According to the results many fields in southern Illinois, Indiana and Ohio, do not carry adequate supplies of available potassium for corn. Fields differed markedly in their relative supplies of nutrients, and in many cases the effects of growing corn continuously was shown by a deficiency of other nitrates or potassium.

The fact that the specific needs of the corn plant can be detected in this manner, says Mr. Hoffer, should make the method of great practical value.

Difficulty in Getting a Stand of Red Clover

The increased difficulty in getting a stand of red clover, experienced in the last few years by growers in many sections of the country, is largely due to improper soil conditions, disease, contaminated seed, wrong methods of seeding, or to the use of harmful nurse crops, says the United States Department of Agriculture. Improper soil conditions result from constant cultivation and the consequent loss of lime, phosphates, potash and organic matter, making the soil unsuitable for the growth of clover.

Those Dear Girls

"Tell me just what sort of a man your fiance is, Clara."

"Oh, he's everything that's nice."

"I'm so glad. You know I've always said that people should marry their opposites."

A day of freedom is a day of pleasure.—Robert Bridges.

FARM NOTES

Better put the harvester in the machine shed now rather than next winter.

• • •

The round worm is the little pig's worst enemy. Maneuver the pigs to fresh ground.

• • •

Sowing wheat before the Hessian fly free date hastens the time when a farmer can retire and live on the interest of his debts.

• • •

The time has come for the landlord and tenant to begin working together—the stock-share-lease plan is advantageous to both.

• • •

When the spraying season is over, take the machine apart, wash it out, and clean and oil every connection and wearing surface.

• • •

Milk pails and cans should be rinsed with cold water before the milk has a chance to dry on them, and then they should be washed thoroughly in boiling water.

• • •

A high average egg production is much to be desired, but it is still more desirable to keep the cost of the eggs produced to the lowest possible minimum.

• • •

A hen will eat two pounds of oyster shell and a pound of grit in a year. They must have grit and lime in some form to do any work for the egg basket.

• • •

Yes sir, after a couple years, you'll take more pride in showing your neighbors and visitors that forest you set, than the row s/o or the fine stand of alfalfa.

• • •

By treating fence posts with creosote, many kinds of wood that are ordinarily almost worthless may be made to last twenty-five or more years with only a small additional cost for the treatment.

When you buy a car on credit

When you buy a General Motors car on credit, you may be sure that the purchase plan is as dependable as the car itself.

The purchase plan offered by General Motors dealers is another way by which you secure greatest value for every dollar you spend for a General Motors car.

This is the GMAC Plan, operated by a member of the General Motors family. It combines sound credit practice with very low cost.

The General Motors line is a complete line—"a car for every purse and purpose." And under the GMAC Plan, purchase may be arranged according to the circumstances and assured income of individual buyers.

Any General Motors dealer will be glad to explain the GMAC Plan.

Children Cry for Fletcher's CASTORIA

MOTHER:— Fletcher's Castoria is especially prepared to relieve Infants in arms and Children all ages of Constipation, Flatulency, Wind Colic and Diarrhea; allaying Feverishness arising therefrom, and, by regulating the Stomach and Bowels, aids the assimilation of Food; giving healthy and natural Sleep.

To avoid imitations, always look for the signature of Chas. H. Fletcher. Absolutely Harmless—No Opiates. Physicians everywhere recommend it.

Rich Embroidered "Coolie" Coat; School Dress of Woolen Plaid

FROM the extreme of stupidity, the world of fashion is turning its attention to modes of more sophisticated type. This fact is being verified through the first showings of autumn and winter-style collections. Every detail of the newest costumes shows it, from our hats, which are being more elaborately created every minute, to our shoes, which are taking on a superornateness. And as to jewelry! Barbaric splendor marks the cur pen-Mainly going to do a powerful bit in

Beautiful Oriental Garment.

dants, necklaces and bracelets that lets which fashion dangles before us.

In the creation of our lingerie and negligees, frocks and wraps and ever-blouse tunics, it would seem, as if not only fabric elegance was never so accented, but as if the artcraft of every nation had been called upon for its best and most beautiful specimens of handiwork.

One of the most interesting departures into the realm of embroidered garments is the coolie coat, such as shown in the picture. Its uses are versatile. While it serves admirably as a-handsome "at home" negligee, if suitably chosen it can be worn to play the part of an opera wrap de luxe. It will yield most gracefully to the occasion. These handsome coolie garments are styled of rich satin canton crepe and lined in exquisite contrasting both dark and light, with a preference for black.

No less beautiful than the embroidered coolie coat is the costume of the brilliant shawls from sunny Spain.

Wonder if little folks realize what a furore of excitement they are stirring up in fashion circles, just about now. And all because "first day of school" is at hand and oh me, oh my, what heaps of good-looking clothes it is going to require for the weeks and months to follow.

One thing is encouraging, the new bright plaid flannels, said to be in the very top notch of fashion, are cer-

Child's Frock Simple, but Pleasing.

These are finding place in the wardrobe of the majority of women of fashion. If a more elaborate dress is desired, it will need seem, as if not only fabric elegance was never so nearly always some one with whom he had never spoken and who, perhaps, did not know of his very existence. It might be a diffident whose face he had seen at a tiltlee; whose picture he had chanced to behold; or perhaps, some woman of whom he had merely heard or read.

But henceforth she became his guiding star, the object of his reverential homage; the loved one whose glove, veil or sleeve he appeared to wear in his helmet; for whose glory he slew other knights, redressed wrongs, succored the needy. If he won glory he was supposed to lay it all at her feet. And usually that was as far as his acquaintance with her went. THE KITCHEN CABINET

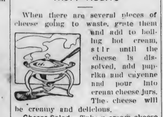
(© 1926, Western Newspaper Union.)

Work, forgetting all responsibility of time, appreciation or censure, enjoy it or make believe you do, and in time you really will. Somebody has said the thing which is needed most in every-day life is imagination; the little child has a happy time in "making believe." Never get too old to "make believe."

TASTY TIDDITS

When there are several pieces of cheese going to waste, grate them and add to boiling but cream, stir until the cheese is dissolved, add pepper and cayenne and pour into cream cheese jars. The cheese will



be creamy and delicious.

Cheese Salad.—Take a cream cheese or two, add thick sweet cream to soften, and well and add chopped chives, green pepper and nuts. Make into balls and serve with a good boiled dressing or lettuce. Cottage cheese enriched with cream and served with dressing on lettuce makes a fine salad.

Olive Salad.—Peel olives, remove the stones, then roll them up over blanched almonds. Cover with french dressing and a handful of chopped mint. Let stand overnight to season. Drain in the morning and add fresh mint. Serve on one bed lettuce with thick mayonnaise.

Banana Cream.—Slice three ripe bananas, press through sieve, add a box of ripe crushed berries, reserving some of the juice; mix lightly with enough powdered sugar to sweeten and set aside to chill. Serve in sherbet cups with sweetened whipped cream and some of the berry juice on top.

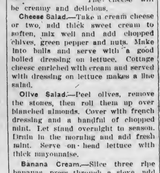
The orange is rich in vitamines and is given early to the small baby, between feedings, always straining the juice. They are rich in sugar, have salts of high value while the flavor is especially attractive. Taken at night they are especially good for constipation. A glass of orange-juice can be taken by the most delicate stomach and is especially recommended for billiousness.

Dredge the tenderloins with flour, season well and brown in a hot frying pan, turning often to keep from scorching, then cook slowly until cooked to taste. Baste during the cooking. Serve rare with baked bananas.

Fruit Ice Cream.—Take the juice of three oranges, three lemons, three bananas mashed and put through a sieve, add one or more cupfuls of sugar and a quart of thin cream. Freeze as usual.

Choice Recipes.

When making blueberry pie add a teaspoonful of vinegar or a handful of seeded nutpe grapes, a tablespoonful of molasses, sugar to sweeten and a teaspoonful of butter. Wrap a twoinch strip of white



industry after wringing the cloth out of cold water. This will keep the juices from running from the pie. Remove as soon as the pie is baked.

Dream Pie.—Whip the whites of four eggs very stiff, add four tablespoonfuls of granulated sugar, and beat again, add four more tablespoonfuls of sugar and beat until well mixed, then fold in one pint of berries (if canned, drain). Pour this mixture into a baked pastry shell and leave in irregular mounds. Bake until brown.

Butterscotch Cake.—Cream one-half cupful of butter, add one cupful of sugar, when well mixed add two egg yolks, beat well, then add two-thirds of a cupful of milk slowly beating well. Sift two cupfuls of flour with three teaspoonfuls of baking powder and one-fourth of a teaspoonful of salt, add to the first mixture. Add a teaspoonful of vanilla and fold in the stiffly beaten whites of the eggs. Bake in layer-tins in a moderate oven. Use the following kind of icing: Melt light brown sugar, one-half cupful of butter and one-half cupful of milk until it forms a soft ball in cold water. Cool without stirring. When it is almost cold spread over the layers and top of cake. Decorate with halves of nutmeats.

Pecan Pie.—Mix one cupful of sugar and three-fourths of a cupful of corn syrup, add three eggs, one at a time, beating thoroughly after each egg is added; next add one-half cupful of butter melted, and one cupful of coarsely chopped nutmeats. Pour into a rich pie crust and bake one and one-half to two hours. Have the oven very hot the first few minutes to bake the crust, then lower the heat and bake slowly.

Tea Box Pudding.—Take one pound of vanilla wafers, one can of shredded pineapple, one cupful of nutmeats, one cupful of butter, four eggs and two cupfuls of sugar. Cream the sugar and butter thoroughly, then add eggs one at a time; beat twenty minutes. Put nutmeats and wafers through the meat grinder. Make alternate layers of the nutmeats and wafers with the pineapple and cream filling until all is used. Let stand in the ice box for twelve hours. Serve with whipped cream.

Nellie Maxwell

Ministers at Foreign Courts

The custom of exchanging resident diplomats was unknown in ancient times. This practice grew out of the commercial dealings between European countries during the Fifteenth and Sixteenth centuries.

Add Smiles

I loved her, and she had gone away. So I wrote, "Will you marry me?" And she replied, "I've got about as much use for a husband as a confession magazine has for a girl named Daisy."

Velvet Hats With Sheer Frocks

To wear with sheer frocks are striking effective large hats of black velvet. Many have wide brims, but others are modeled on beret lines. Occasionally a bit of metal ribbon is used for trimming.

Slippers of Silk

Perhaps the latest note in footwear is the use of crepe de chine for evening slippers. It is often embroidered in color or in gold or silver threads.

Coats for Small Girls

Smart little coats for the youngest member of the family reflect the vogue for printed linens. They are made of linen with a deep cream background and scattered floral motifs in bright colors.

Gray and Silver

An exquisite wrap for evening is made of double thicknesses of gray chiffon embroidered in silver and banded with dull silver ribbon.

WHY DENY YOURSELF THE BEST IN MOTOR CAR BODIES

The finest of the new cars in all price classes have now been announced—Cadillac, Buick, Chevrolet, Oakland, Oldsmobile and Pontiac.

All offer vastly greater values than ever before in motor car history.

All register amazing advantages in performance and ease and economy of operation.

But the greatest factor of their new glory is described in a single phrase—Body by Fisher.

Here is their supreme beauty—setting absolutely new standards in charm of design and interior fitting.

Here are unequalled factors of safety which add so much to your comfort and confidence.

Here are exclusive conveniences and niceties which do, indeed, make the car with Body by Fisher superior in its class.

No matter what mechanical developments may allure you, it is the body of your car with which you live most intimately—that is why the General Motors units, makers of the best of the new cars in all price classes, point so proudly to the emblem—Body by Fisher.

With the finest of the market to choose from there is no reason why you should deny yourself the greater safety, beauty and comfort which only a Body by Fisher can give.

Had Big Banker on Anxious Seat

Talking about financiers being tackled when undesirable, the writer was walking out of the International banking house of Kuhn, Loeb & Co. in company with Jacob H. Schiff one afternoon, when a poorly dressed, rough-looking sis-footer brushily stepped in front of the veteran banker and, in a deep voice, asked: "Are you Jacob Schiff?"

Mr. Schiff looked at the man and then at the writer. "Are you Jacob Schiff?" the intruder again demanded.

"If I were Mr. Schiff, what of it?" asked Mr. Schiff.

"Are you Mr. Schiff?" the fellow repeated, more grimly than before.

The aged banker didn't know what to say or do. He started to walk away. The six-footer grabbed him by the hand. "I think you are Jacob Schiff," he said, "and, by ——, I want to tell you that you are all right."

Mr. Schiff, manifestly relieved, shook hands and smiled. "I am glad he feels that way," he remarked when the man had gone.—B. C. Forbes in Forbes Magazine.

Family Affair

A retired banker of Indianapolis, who had nine brothers, recently sold a company of friends about a wonderful photograph of himself taken with a silk waistcoat on. One day he brought down ten photographs, each brother wearing a flashy silk waistcoat, all taken many years ago.

"You must have had money in your youth, to wear clothing like that," said one of his friends.

"Nope," said the former banker, "that's the same vest on all of us."—Indianapolis News.

It is almost as risky to praise a woman's husband to her, face as it is to criticize him.

Kills All Household Insects

Flit spray also destroys bed bugs, roaches and ants. It scorches out the cracks and crevices where they hide and breed, and destroys insects and their eggs. Spray Flit on your garments. Flit kills moths and their larvae which eat holes. Extensive tests showed that Flit spray did not stain the finest fabrics.

Flit is the result of exhaustive research by expert entomologists and chemists. It is harmless to mankind. Flit has replaced the old methods because it kills all the insects—and does it quickly.

Get a Flit can and sprayer today. For sale everywhere.

It must not be forgotten

The Most Wonderful Book in the World

MORE than thirty million Bibles or Books of the Bible were sold or distributed in 1925.

Would you not love to have companion volumes to help you discover the treasures in that Wonderful Book?

SWEDENBORG
[1688-1772]

explained the Bible's practical application to daily life; how it describes the life hereafter; what the Bible parables mean when spiritually interpreted.

His theological works—as issued by himself—have been published by the Houghton Mifflin Co. in most modern translation from the original Latin, in the Rotch Edition of 32 volumes.

The first twenty give the spiritual sense of Genehis and Exodus as understood in Heaven; and volumes 26, 27, 28 give likewise the spiritual sense of the Book of Revelation.

Volume 20, Marriage Love, views from the union of the Divine Love and the Divine Wisdom the Law of Sex throughout all creation. It shows the crown and jewel of the Christian Religion, the union of one with one only. Price $3.00.

Volumes 30, 31, 32, contain a full statement of the True Christian Religion as revealed from Heaven. $3.00 the set.

The whole 32 volumes in half-morocco at $125; in buckram, $40.

The following are the best introductory books to the Revelations of Swedenborg. They are in large print, bound in buckram, and contain from 260 to 485 pages.

TITLES	PRICE
HEAVEN AND HELL from things heard and seen	$1.25
Angelic Wisdom Concerning—	
THE DIVINE PROVIDENCE, which governs the Universe and the Heavens and Hells, and the least as the greatest	$1.25
THE DIVINE LOVE AND WISDOM, the profoundest book and most encouraging God and His Creation ever written, first published in Latin at Amsterdam 1763; along with this is the "Intercourse Between the Soul and the Body" first published in Latin at London 1769.	$1.25
Price of all three at one time, including postage	$2.75

Who Was Swedenborg?

Emanuel Swedenborg, the son of a bishop, was the great Swedish scientist, philosopher and theologian, whose sort range caused Emerson to spell him the standard of scholars. Dr. Parkes Cadman recently named him the Universal Genius. Officially connected, by appointment of the King, with the great mining industry of Sweden, he mastered all the sciences of his time, and wrote the most useful books on metallurgy, minerals, geology, astronomy, and the human brain.

His life story was for the human soul. How his spiritual senses were opened, after he was 50 years of age, that he might reveal the human soul, the life after death, and the Bible truth; may be read in the above named, uplifting, useful books.

GOOD ROADS

POSTAL SERVICE IS BEING AIDED

The postal service of the United States is today using more than one million miles of public roads in the delivery of daily mail. In delivering mail to 30,000,000 individuals on rural routes, 1,205,572 miles of highway are being used every day. Notwithstanding the great increase in mileage covered through the improvement of roads, there are more than 14,000,000 persons waiting to be lodged as soon as the service can be extended.

These interesting points have been brought out as a result of an investigation conducted by the American Association of State Highway Officials to find out who is really using the highways.

"The Postal department is only one of the many large users of the highways," says the report, and more firms are turning to the roads as a means of final distribution for their products.

"The importance of the roads in the modern scheme of transportation cannot be overestimated, for the tax roots of trade of many of the largest and medium-sized communities now extend down to the smallest communities. This is especially true of those corporations which sell small unit commodities through the mail and through the small retailer.

"One of the three elements used by the federal government in the distribution of funds to states for roads is the mileage of post roads used in each state for rural mail delivery. Our inquiry has brought out the fact that in the past five years, through the improvement of roads, the Postal department has been able to add 1,550 new rural routes which carry mail to 220,800 families. The general improvement in the roads has enabled the Postal department to lengthen the mileage of 2,449 established routes.

The report of the association concludes by calling attention to the fact that "the ordinary length of a rural route is 24 miles, and where routes are over unimproved roads, this represents an all-day job of delivery, but road improvement has enabled Uncle Sam to lengthen many routes and give additional service to rural families. In some instances carriers are able to carry to more families and do the job in half the time required ten years ago, due to the paving of the roads."

Four Important Factors Making for Road Safety

The four important factors affecting safety in highway traffic, said Edward S. Jordan at the recent meeting in Cleveland of the safety council of the National Automobile Chamber of Commerce, are brakes, steering, easy vision and lights.

"Satisfactory lighting," added Mr. Jordan, "has been made difficult by conflicting laws in different states, but there has been increasing progress and most manufacturers have made light control easy by placing the switch on the steering column or in the center of the steering wheel.

"The misinterrupted vision of the driver has been improved. The front pillars on enclosed cars have been narrowed through the use of steel construction, and one-piece windshields are becoming more in vogue, while the almost universal use of automatic windshield cleaners is a protection against obscured vision from rain or snow.

Lime Keeps Roads Firm

Experiments of engineers have developed, it is claimed, that mixture of 2 to 5 per cent of hydrated lime with the top surfacing of country dirt roads has ended excessive rutting and clinging of the clay to feet of animals and tires of automobiles, after rainfalls. The clay and lime mixture does not stick. Instead it tends to smooth out and pack down more quickly than does untreated surfacing. The roads also respond more readily to dragging.—Popular Mechanics Magazine.

Good Roads Hints

Water dunnges more roads than anything else, so clean out roadside ditches.

* * *

State and county roads by the end of this year will total approximately 500,000 miles, according to estimates of the bureau of public roads.

* * *

A good road soon pays for itself in savings of vehicle running expenses for its users, as everybody knows, but the waste goes on until it is improved.

* * *

The United States is now credited with building the finest highways in the world.

* * *

A recent issue of the Detroit School bulletin of the grounds against Jaywalking by the children themselves. Those guilty of the offense are brought before a court composed of the pupils and are tried according to regular court procedure. If the court finds against them, they are given various jobs to do in the way of sentences which make them more careful the next time.

Friends and Enemies

Whatever the number of a man's friends, there will be those in his life when he has one too few, but if he has only one enemy, he is lucky indeed if he has not one too many.—Bulwer-Lytton.

Two Fire Causes

Electric light wires hung over rafts and oily rags thrown into a corner are two of the things which give the newspapers stories about "fires of unknown origin."

Fur From Weasel

Pahmi fur is obtained from an animal of the weasel family, found in central China. It has a heavy pelt of light yellow underfur, with top hair of grayish brown. A white line runs down the back from the neck to the tail. It is longer-only known under the name of Chinese stone marten and grey marmot.

Copper 5,000 Years Old

Copper vanity cases, a copper hand mirror, copper razors, tools, fishhooks and hairpins have just been found in Mesopotamia by scientists excavating the five thousand-year-old palace of the kings of Kush. Copper is truly the everlasting metal.

DEPARTMENT OF CONSERVATION
of the State of Michigan
Lansing, September 8, 1926.

Notice is Hereby Given, That the following described abandoned tax land, situate in the county of Charlevoix, and deeded to the State by the Auditor General under the provisions of Section 127 of Act 126 of the Public Acts of 1893, has been withdrawn from homestead entry by the Auditor General and the Commission of Conservation, acting jointly, as provided by Act 141 of the Public Acts of 1901, examined and appraised and will be placed on the market by offering the same at a Public Auction to be held at the Office of the Department of Conservation, in the State Office Building in the City of Lansing, on Tuesday the 19th day of October, 1926, at ten o'clock in the forenoon, Eastern Standard time, at which time it will become subject to purchase in the manner provided by statute.

In case of sale the deed conveying the same will contain a clause reserving to the State of Michigan all deposits in or mineral, coal, oil or gas found lying or being on, within or under the said lands as required by Section 8, of Act 280 of the Public Acts of 1909, and also those relating to the People of the State of Michigan the rightful ingress and egress over any of said tract lying along any watercourse or stream, as also required by said Section 8, Act 280 of 1909.

Description of Conservation
By John Baird, Director

CITY OF BOYNE CITY
Township 30 North of Range 6 West
Northwest quarter of Northwest quarter and also that part of Southwest quarter of Northwest quarter lying north of Charlevoix road and Ridge street of Chapman and Addis addition to Spring Harbor. Section 27, containing 36.00 acres more or less.

Part of east half of section, commencing on northwest side of Front street 828 feet; north 63 degrees 35 minutes, east of northwest corner of Cobb's addition; north 26 degrees 25 minutes west 171 feet to Pine Lake; east 171 feet to Front street; north 63 degrees 35 minutes east 50 feet to beginning; except 40 feet now used as road of way. Section 24, containing .34 acres more or less.

CITY OF EAST JORDAN
Martin & Keat's Addition to Ward 3 on Lot No. 5 of Block M. .23-5t

Order Issued by Authority of Act 230 of the Public Acts of 1925, which Act Closed Season on Racoon for a Period of Five years.

STATE OF MICHIGAN—County of Ingham—ss.

The Director of Conservation having made a thorough investigation of conditions as they affect the racoon, and for bearing animals recommends the extension of the closed season on racoon.

Therefore, the Conservation Commission by authority of Act 230 of the Public Acts of 1925 hereby orders that the closed season on racoon as provided by section of the Public Acts of 1925 be hereby extended to October twenty-fourth inclusive making it unlawful for a period of five years to take, trap, hunt, shoot, kill or molest any racoon from January first to October twenty fourth inclusive of each year, under penalties provided by Section 5 of Act 230 of the Public Acts of 1925.

Signed, sealed and ordered published this 4th day of August, 1926.

JOHN BAIRD, Director

Order Appointing Time for Hearing Petition

STATE OF MICHIGAN—The Probate Court for the County of Charlevoix.

At a session of said Court, held at the Probate Office in the City of Charlevoix in said County, on the 30th day of August, A.D. 1926.

Present: Hon. Servetus A. Correll, Judge of Probate.

In the Matter of the Estate of Sarah J. Myers, deceased.

Frederic Estate having been admitted to probate and Fred S. Myers appointed administrator thereof.

It is Ordered, That four months from this date be allowed for creditors to present their claims against said estate, and that such claims will be heard by said court on Monday, the 3rd day of January A. D. 1927 at ten o'clock in the forenoon, at the Probate office, in the city of Charlevoix.

It is Further Ordered, That public notice thereof be given by publication of a copy of this order, for three successive weeks previous to said day of hearing, in the Charlevoix Sentinel a newspaper printed and circulated in said county.

SERVETUS A. CORRELL,
Judge of Probate.

ROAD BUILDING

FEDERAL AID IS BUILDING ROADS

The justice of the present system of distribution of cost for federal aid highway building is shown by figures released by the American Association of State Highway Officials. The investigation carried on by the association was designed to secure the true source of income, extending beyond surface payments of revenue.

"In order to arrive at the facts as to who really pays for the roads," says the statement, "it was necessary to trace payments to their original source rather than to stop at the return made by various states."

Taxes collected from several common commodities were investigated. Sugar is one typical example. One company dealing in sugar made returns showing a net profit of more than one and a half million dollars. The taxes on this return were all credited to one state when as a matter of fact the entire income came from sugar grown and largely bought by middle-western and western states.

A biscuit company reporting an income of several millions of dollars was taxed in, and reported from, New York when the income was derived from millions of sales, most of which were outside of the state credited with the tax return.

The same situation was found to be typical as to the tax on coal, on state returns, tobacco taxes, cereals, radiators and cans. "This crediting of payments to certain states without crediting that the true source of the tax is outside that state should be considered in all calculations bearing on who really pays for the highways we are building," says the association.

Railroads and banking houses showing large tax returns in practically every instance derive their incomes from communities and persons far outside the boundaries of the state credited with the tax return.

"Centralization of business in certain centers," the association concludes, "is a natural growth and economically sound. Surplus funds gravitate to certain centers; industries concentrate where power is cheapest or raw materials nearest at hand. States do not own the corporations or the individuals in their business relations. There is a single large city in the entire country which secures its prosperity exclusively from the citizens who live in the same state. Insurance companies, railroads, corporations—all derive the greater share of their taxable income from outside the state in which they are incorporated or report from."

"The only conclusion that can logically be drawn from such facts" concludes the association, "is that the money paid into the federal treasury coming from all the taxpayers and not from any one particular state or section. Regardless then, of where the tax is credited, so long as it is being used for the benefit of all the people it must be in proportionate share of the federal expenses.

Surfaced Highways Now Near 500,000-Mile Mark

Surfaced roads in the United States now approach the 500,000-mile mark, according to the state reports indicated there were 128,347 miles of surfaced road on the state systems at the end of 1925, and that the mileage of surfaced country roads was 356,358, a total of 497,005. Since 31,541 miles of rond was surfaced in 1924 by states and counties, and it is known that progress has been equally as good in 1925, it is probable that construction of the past season will increase the surfaced mileage to more than 495,000. In addition to surfaced, a considerable mileage has been graded and drained according to engineering standards. There were 238,294 miles of such road at the end of 1924, and of this 13,980 miles had been constructed since. These figures indicate that the improved rond mileage of all classes is not far from 740,000.

Burning of Rubbish on Roads Endangers Autos

To protect the highways in Connecticut the state highway and police departments are prepared to prosecute persons burning leaves or rubbish on or adjoining the state roads. Such a practice also is deemed highly dangerous to automobile traffic.

Although the fires are started in the gutters, it is pointed out, the heat from them is sufficient to draw the oils from the bituminous surface of the highway and cause a serious menace to public safety and an increased maintenance expense, inasmuch as many roads are treated with asphalt, tar or other substances containing volatile oils which may be ignited easily.

Gas Tax for Roads

Gasoline taxes collected by the states yielded a revenue of $60,106,-794 in the first half of 1925, of which $53,814,240 is applicable to road work, according to report by the bureau of public roads of the United States Department of Agriculture. Wisconsin collected $531,692. At the beginning of the year there were 13 states which did not have a gasoline tax. A tax is imposed in all states except Illinois, Massachusetts, New Jersey and New York.

French Tricolor

The tricolor was chosen as the national emblem of France because it combines the colors of the nation and its capital. Red and blue are the colors of Paris, while white is the color of France.

Motor Across Sahara

A regular motor freight and passenger service has been established between the oases of South Tunis and the oases of South Algeria by six-wheeled automobiles.

WALTER MERROW SHOOTS SELF

Little Daughter Finds Body On Return From School

Walter Merrow who would have been 48 years of age next February, shot himself at his home this forenoon. His body was found by his youngest daughter, Effie, aged seven years, when she came home from school.

The deceased had tied a string to the trigger of his 38-calibre Winchester, and fired the shot through his head. The body was lying with the head against the wall in the bedroom connected by an archway with the sitting room of his home on Main street.

Mrs. Merrow, who is about 11 years younger than her husband, had been at a neighbors since morning. She heard a shot about ten o'clock but was too frightened to investigate. Her folks live at Ellsworth.

Norman Arnold, a brother-in-law of Mr. Merrow, dropped in for a visit just after the little girl had discovered her father's body, and took charge of affairs. Mr. Merrow is nearly prostrated by the shock and required medical attention.

Besides the little girl who made the gruesome discovery, there are two older children, Mary aged 14, and Willie aged 9.—Mancelona Herald, Sept. 16.

S. S. CONVENTION

Bay Shore, Tuesday Afternoon and Evening

The annual convention of the Charlevoix County Sunday School Association will be held at the Presbyterian church, Bay Shore, on Tuesday afternoon and evening September 28th.

A fine program has been arranged in which the Hudson Sunday school workers and public school teachers of the county will participate.

The afternoon session will begin at 1:30 and the evening session at 7:30 standard time. The supper at 5:30 will be on the community plan, every one to bring a few sandwiches, a dish of food to pass, also plate, cup and silver. The association will furnish coffee, cream and sugar.

Everyone interested in the Sunday school is invited. Every school is urged to send at least two delegates.

Fur From Weasel

Pahmi fur is obtained from an animal of the weasel family, found in central China. It has a heavy pelt of light yellow underfur, with top hair of grayish brown. A white line runs down the back from the neck to the tail. It is longer-only known under the name of Chinese stone marten and gray marmot.

Rough Guess

"What is the occupation of that gentleman who works so hard to entertain?" "Judging from the stories he tells," answered Miss Cayenne, "I should say he is an archeologist."—Washington Star.

Considerate

"Why is it that confounded new maid never answers when we ring the bell?" "I don't think we'd better be too exacting at first, Horace. The girl tells me she used to be employed at a telephone exchange."

Thomas O. Marvin, chairman of the United States tariff commission, which is to be investigated by a special senate committee.

MR. J. O. BEL ISLE

Died Suddenly at Grand Haven Last Thursday, Sept. 16th

Mr. J. O. Bel Isle expired suddenly at Grand Haven last Thursday according to information received here soon after his death. Mr. and Mrs. Bel Isle spent the latter part of the summer in this city according to their custom of many years.

During their visit here of many weeks Mr. Bel Isle appeared to be in his usual good health. That he had some heart ailment he well knew and for some years past was acting on the advice of his medical attendant he has refrained from indulging in business activities of a strenuous nature.

Mr. and Mrs. Bel Isle started to motor back to their home Oak Park, Ill., leaving Charlevoix Tuesday at which time Mr. Bel Isle was feeling as well as usual, anticipating a pleasant journey and with the expectation of returning to Charlevoix again next season; happy, contented, wholly oblivious of the fate approaching and only two days distant.

Mr. Bel Isle has been a regular summer resident here for the past twenty five years. He was an affable companion, a gentleman of the old school and leaves many friends in this region to regret his passing.

Mr. Bel Isle was about 60 years of age. He is survived by his wife and one son, the latter engaged in business in Chicago.

S. S. CONVENTION

Bay Shore, Tuesday Afternoon and Evening

The annual convention of the Charlevoix County Sunday School Association will be held at the Presbyterian church, Bay Shore, on Tuesday afternoon and evening September 28th.

A fine program has been arranged in which the Hudson, Sunday school workers and public school teachers of the county will participate.

A white line runs down the back from the neck to the tail. It is longer-only known under the name of Chinese stone marten and gray marmot.

FLORIDAS' STORM FIFTY-FIVE ATTEND

Many Charlevoix People Have Interests There

First news of the recent Florida disaster in which nearly one thousand persons lost their lives, several thousand injured and property losses aggregating $250,000,000 resulted from a hurricane that swept the southern and east coast of the United States was received here by radio, by several local operators who had their machines "tuned" in for points in the extreme southern part of the country.

This method of sending out news soon broke down, due to destruction of radio towers, at the same time telegraph and telephone lines were out of commission and for hours at a time but little information was obtainable from any source that was authentic. Enough however came through during the early progress of the storm to cause alarm to the general public and fear for those who have having financial interest, relatives and friends in the storm area.

In this there are several in the first class while those having relatives and friends in that region are more numerous. That the storm was severe causing a property loss of a fabulous amount and that many lives had been taken with thousands injured was understood from the first broadcast reports. With the discontinuance of radio information and all wire service disrupted the situation became more tense with local citizens who feared for the safety of relatives and friends and this condition was not relieved until information filtered through reporting the safety of some particular friend, news that was just cause for rejoicing. Then, too, an occasional message was of different import, one such being the announcement of the death of Fred Shutts, the latter a son-in-law of Mr. and Mrs. Joseph Shores of this city, the first of this nature to reach Charlevoix. Tuesday forenoon a message from Miami, from Mrs. L. C. Smith to her sister, Mrs. Franklin C. Sears, contained the information that while family were safe, that their home was standing with roof intact and that they had gone to the east. A meager personal report but sufficient to allay the fears and cause rejoicing to relatives and to some extent relieve the strain. With others interested Mr. M. A. Levinson has a sister, Mrs. Adam Goldman, and brother Alick Levinson who have lived for some years at Miami, in the direct path of the hurricane that swept the east coast of Florida.

L. P. Adams, Frank M. Glassford, John H. Koch and O. Gatti have property holdings in Miami and Mrs. L. A. Moon has like interests in Hollywood; which like Miami is in the devastated area. A recent report states that but a single building—the Masonic temple—remains standing at Hollywood. Sarasota another devastated spot to a smaller degree, is the home of several former Charlevoix citizens: Mason H. Rose and family, Fred Rutter and family, Lynn H. Freeman and family, Fred H. Thomas, John Curtis and family, Miss Helen Mason, George Bacon, Mrs. Constance Gaskin and several others. Messages from Sarasota report all safe in that city.

REPUBLICAN CO. CONVENTION HELD

At Boyne City last Tuesday —Delegates Chosen

Delegates to the Republican County convention met at Boyne City Tuesday forenoon and proceeded under the call for such convention by transacting the usual routine work, gave unanimous endorsement to the several resolutions introduced by various committees, pledged the support of the county to the republican nominees and passed a fine resolution specially endorsing the candidacy of Hon. Andrew B. Dougherty for nomination as Attorney General at the Republican State convention to be held in Detroit next Tuesday.

While the County convention was not as a whole, a perfect love feast, it was in the main harmonious and in a high degree concluded in a manner satisfactory to every delegate.

Delegates and alternates to attend the Republican State convention were elected as follows: John M. Harris, William J. Gallagher, Frank A. Keuyon, Charles Novak and W. J. Pearson delegates; while Lyle H. White, A. L. Fitch, Roscoe Mackey, Frank F. Bird, and Herman C. Meyers were chosen as alternates.

Attorney E. N. Clink of East Jordan, was chosen as chairman and presided at the meeting.

1905 1926

For a Special Purpose

About every so often you receive notices of your taxes, your insurance premiums or something of that kind at a most inconvenient time. Most of us have that experience, but how few of us think of using a special account for this purpose and depositing each month a definite part of the sum required. Think this over, come in and talk to us about it and start saving, so that there will not be any inconvenient notices to handle.

FIFTY-FIVE ATTEND

Enjoyed Banquet at Hotel Charlevoix Friday Evening

Business men from Antrim, Charlevoix and Emmet counties met at the Hotel Charlevoix last Friday night enjoyed a banquet and to some considerable extent discussed resort business and ways and means toward encouragement and improvement of the already large tourist business and at the same time promote real estate interests, the advantages of advertising and to follow some regular channel of activities for the good of Western Michigan in particular, the state in general.

Fifty-five business men attended the meeting participating in the banquet and to some extent in the discussions, the two principal speakers being Glenn M. Porter and J. J. Fagan, real estate operators and promoters of Muskegon, both of whom are experts and prominent in the real estate world.

In their talks each pronouncedly advocated that effort be made through the method of advertising and other publicity measures, of keeping resort and northern Michigan constantly before the public by carrying on a more intensified campaign than heretofore and it is quite probable that this plan will be pursued in the future.

Tonight members of the Chamber of Commerce in Grand Rapids will be in session and will have under consideration the same subject as was placed before the Charlevoix gathering. An invitation has been extended to local business men to be present at the Grand Rapids meeting and it is quite probable that several of those present at the Hotel Charlevoix last Friday night will make the trip to the Furniture City today, and continue their journey of the Atlantic in connection with Grand Rapids association members.

PROOF OF ADVANCE IN TELEPHONE ART

Telephones at Two Philadelphia Expositions 50 Years Apart

At the Centennial Exposition in Philadelphia in 1876, one of the most interesting and undoubtedly the most valuable exhibits was the newly invented telephone which was being displayed to the public for the first time by Alexander Graham Bell. At the Centennial however the telephone was only an exhibit—nothing more.

At the Sesqui-Centennial now in progress in Philadelphia, the telephone is really the nerve center of the exposition. Every building is making use of its services. The giant stadium, with an seating capacity of 100,000 people, is splendidly equipped with a loud speaker system. Public telephones are to be found everywhere, and the thousands of people attending the exposition accept the telephone service as a matter of course, as a part of the general scheme of things, just as if it had always existed.

What a contrast with conditions fifty years ago, when there were but two telephones in the entire exposition and they were exhibits which attracted attention because of their novelty and called forth many queries and remarks as to the gentleness of the invention. In fact, many people believed it was a hoax and that it was merely a question of time before the secret would become public as to "how the thing was worked." For they believed that it was worked by agencies, human and unseen to the eye.

When the telephone was exhibited at the Centennial exposition it first occupied an inconspicuous place in the gallery, but later was removed to a position on the main floor of the Main Building. Illustrative of the great strides which the telephone has made since that time is the fact at the Sesqui-Centennial celebration the American Telephone and Telegraph Company has a large exhibit including its own theatre, at which it is showing the advances made in the art of telephony and is featuring a film of talking motion pictures.

HEARD THIS ONE LATELY?

An old epitaph, considered funny by our grandparents, is going the rounds again, and is reproduced for the benefit of the present generation: "Sacred to the memory of Ebon Harvey, who departed this life suddenly by a cow kicking him in the back lot, on Sept. 15, 1843. Well done, thou good and faithful servant."—Kansas City Tribune.

MRS. SARAH EMREY

Passed Away at Battle Creek Thursday—Funeral Monday

Mrs. Sarah Emrey, pioneer resident and business woman of Charlevoix, passed away at Battle Creek last Thursday, following an illness of many months standing.

Her illness was due to some throat ailment of a peculiar nature such as completely baffled professional surgical and medical attendants who were called to take charge of the case. This ailment at first not considered serious failed to respond to treatment, later developing into complete paralysis of the throat which was followed by

Her maiden name was Sarah Bradley, place of birth York, Ontario, Canada, and date February 2nd, 1862. She is survived by one daughter, Mrs. Madeline Latende of Detroit, and two sisters, Mrs. Margaret Purdy of Los Angeles, California and Mrs. J. R. Mac Mullen of Calgary, Canada.

her death about three days after she was taken to Battle Creek for special treatment and attention.

Mrs. Emrey was a pioneer business woman having been engaged in mercantile affairs for a long term of years—upwards of thirty—as owner and manager of the Emrey Clothing House in this city and in later years to some considerable extent dealt in real estate both locally and in Detroit, having extensive holdings in both places at the time of her death, therefore it can be said that her business career from a financial standpoint has been successful. In business affairs she was a good manager, had judgment as to values, studied the future and in addition was a thrifty, economical business woman, honest to the highest degree and as is shown by her property holdings capable in the management of her affairs.

During her business career she met with extraordinary obstacles, went through periods of financial storms and panics, met with reverses such as are frequently encountered in a business life and met them with courage and sheer pluck won and held her position in the business world; accumulated at a moderate competency but was a moderate spender. Possessed of such had she so desired would have permitted her to retire some years ago from business and live in comfort and ease throughout the balance of her life time without endangering the principal of her holdings. Energy and ambition however prohibited Mrs. Emrey from taking an easy course. The habit of working formed and followed from early life could not be disregarded or broken, nor were they until such time as her physical condition reached a point but a short time before her death when bodily strength failed to respond to ambitious desire. Following this the end of life came quickly.

Mrs. Emrey was accompanied to Battle Creek by Mrs. Thomas Lalonde of Detroit, and Mrs. Louise Elston, both of whom remained with her until the end and returned with the body Saturday morning. Upon arrival here the body was taken to the Elston cottage where the funeral was held Monday afternoon with Rev. G. Matteson D. D. pastor of the Congregational society officiating at the last service and which was attended by a large number of friends.

During the time of the funeral service business places in the city were closed as an evidence of respect in which Mrs. Emrey was held by the community generally.

POULTRY SCHOOLS SEPTEMBER 29TH

Mr. J. A. Davidson, Poultry Specialist to be Present

Plans have been completed to hold two Poultry Schools on September 29th, at which time Mr. Davidson will discuss all poultry problems fully, especially culling, feeding and management. The first meeting will begin at 9:30 fast time, Wednesday morning, at the ranch of Arthur Guild, three miles south of Charlevoix and will continue the rest of the forenoon. This meeting is arranged so as to be convenient for poultry people to attend from the Western portion of the county.

The second meeting will begin at 1:30 fast time in the afternoon of the same day at the farm of Edward Russet, second farm east of Deer Lake school house for the eastern section.

This will be your last opportunity to receive instructions in poultry, as only this one day could be given to Charlevoix county for poultry work and everyone interested in poultry is cordially invited to attend and learn all the latest in poultry management.

MISS CLAUDIA READ

Miss Claudia Read, charming daughter of Col. Beverly A. Read, U. S. A., and a popular member of the younger set in Washington.

PASS INSPECTION

Many Fields of Certified Potatoes in Charlevoix County

Mr. Wheeler, seed potato inspector from M.S.C., recently visited all the certified fields in the county and reports that they all passed the requirements in a very satisfactory manner.

This year very little disease was found, indicating that the past years work in hill selecting seed and destroying diseased hills, has raised the quality of seed to a high degree and as a result will give a good crop which was necessary in comparison with former years.

During the past five years averages show that certified seed has far outyielded table stock and has brought over 50 per cent more money, being sold almost entirely for seed purposes in Pennsylvania, New York, New Jersey and other states.

This year the yield will run, from present forecasts, no doubt to 200 bushels per acre and price will be considerably over the 5-year average. The following are the fortunate seed potato men in this county:

Terry Barber, Boyne City, 4½ acres Russets and 1 acre Irish Cobbler.

Ed Jensen, Walloon Lake, 8 acres of Rural Russet.

H. C. Stephens, Boyne City, 5 acres Rural Russet.

Chas Kotesky, Boyne City, 4 acres same.

Harry Beisling, Boyne City, 3½ acres.

Zell Bricker, East Jordan, 3 acres.

W. E. Straw, Charlevoix, 3 acres.

Remarkable Linguist

Sir William Rowan Hamilton, the celebrated English mathematician, who died in 1865, had an extraordinary faculty for learning languages, and is said at the age of twelve to have mastered 13 languages, besides English.

Another Art

Salesmanship is the art of making yourself believe that a polite refusal is an excuse to go on arguing.—Akron Beacon Journal.

RED CROSS APPEAL

Funds Needed for Hurricane Victims

The following telegram is self-explanatory and probably will meet with liberal response in the way of financial support to assist in relief work undertaken by the American Red Cross officials:

St. Louis, Mo., Sept. 19, '26
Mrs. J. M. Harris, Chairman Charlevoix Chapter American Red Cross, Boyne City, Mich.

Red Cross mobilizing for relief stricken sufferers Florida hurricane. Your chapter should give immediate publicity to this and call attention to great loss of life, large number injured and homeless, announcing readiness to receive and forward contributions. This work should go to entire Charlevoix section. Result daily sums received.

WM. M. BAXTER, JR.

Request is made that contributors in the vicinity of Charlevoix deposit their donations at the Charlevoix Co. Bank.

Copper 5,000 Years Old

Copper vanity cases, a copper hand mirror, copper razors, tools, fishhooks and hairpins have just been found in Mesopotamia by scientists excavating the five thousand-year-old palace of the kings of Kush. Copper is truly the everlasting metal.

Spell of Eloquence

Eloquence is made up at once of individuality and of sympathy. To live much in ourselves, to live much in others—such is the double condition of powerful speaking.—Vinet.

Too Much Sauce

"Don't get saucy with me, big boy!" cried the woman as her husband threw a jar of spice-butter her way.—Denison Flamingo.

The Oldest Bank in Charlevoix County
42nd Year in Business

1884 1926

"I Never Had a Chance"

Whenever you hear a man say that, you can be pretty sure he never had a steadily growing Savings Account. Ten to one he never learned the simple lesson of living on a little less than he earned, and saving the difference. A Savings Account, strange to say, gives everybody a chance to get ahead. If you haven't one now, it will take you less than five minutes and not more than one dollar to open one. Why not come in today?

CHARLEVOIX COUNTY BANK
BUTTARS, BRIDGE & CO.
"The Bank on the Corner."

Parade of Striking Musicians in San Francisco

The strike of theater musicians which has been threatening to spread over the country started in San Francisco. In that city the strikers staged a big parade to further their cause.

New Armored Trucks for Carrying U. S. Money

Director Alvin W. Hall of the bureau of engraving and printing, inspecting the new heavily armored trucks, with bullet-proof windshields, designed in Washington to transport Uncle Sam's money. These trucks have specially constructed turrets from which guards can fire in safety.

The Norsemen

"FROM the fury of the Norsemen—good Lord deliver us!"

This line from the ancient church litany sums up in one sentence the terror inspired all over the civilized earth by the Scandinavian sea-rovers of the Ninth and Tenth centuries A. D.

On the sterile coasts of Norway, Sweden and Denmark lived a hardy race, known to the world at large as "Danes" or "Northmen." Their own rocky countries could not support them. The love of wandering and of battle was hot within them. They were almost unpitiable in their devotion to the sea. Thus just as Europe was beginning to settle into some sort of international peace and stability of government after the turmoil of the dark ages, down swooped hordes of these wild Northmen upon nearly every rich and fertile country they could find, burning, murdering, looting, conquering.

It was the "northern peril" the people of that day dreaded. For no coast-dweller of England, France, Germany or Italy could tell on what morning he might awake to see the horizon dotted by the serpent-prowed, long-oared, shield-hung galleys of the invaders, or find his city in the merciless grip of half-naked, yellow-haired barbarians.

It was before the day of telegraphs, cables or any means of rapid communication. Hence, there was no forewarning of the swift, terrible raids, no opportunity to mass a sufficient force to repel them.

Much poetical luster has since been cast upon the Northmen. As a matter of fact, they were simply pirates, sea-robbers, cutthroats. They had no stable government, no modern laws. Each community was ruled by the admiral of some particular pirate fleet. He was known as a "sea king" or Viking. The victims had no way of retaliating. By the time an army of resistance could be raised the Vikings were at sea again and had vanished into the mysterious North. They were men of iron, their climate and poverty having accustomed them to bear cold, hunger and every other privation without injury. They had no settled home, no patriotic ambitions or pleasures, save war and feasting.

Yet they left their mark on the world and on its history. Undoubtedly a Viking named Rollo a party of Northmen ravaged France in 912 A. D., plundering Paris and getting the French king at their mercy. To appease them, the king gave Rollo a vast tract of French land and made him a duke. On this land the raiders settled, the name Northmen changing to Normans, and their new dukedom taking the title of Normandy. It was a direct and near descendant of Rollo who was destined later to conquer England and change the English language, law and government.

For two centuries Great Britain was devastated by the Northmen. Alfred the Great and Athelstan King who scored any permanent success in clearing the land of them. But on Alfred's death they returned in fresh numbers and soon conquered all England. For many years they ruled the country.

Little by little, as large colonies of Northmen invaded and conquered other lands, settling down in their new possessions, they became merged in the former populations. These communities, lending fresh vigor, energy and hardihood to the conquered races, but losing their own Norse identity. There thus developed a trace of seven-year-old boy in nearly every European race, leading nations to aggressive conquest, to exploration, to marine trade and to personal prowess. In time Scandinavia lost so many men by those wholesale emigrations that there were no longer enough left to terrorize other countries.

Into the lord, a ruddy-haired, ruddy-faced Scandinavian pirate, discovered Greenland late in the Tenth century and settled there. Then, in the year 1000, according to many authorities, Erico son, Leif, carried on a foraging and exploring expedition, with a crew of thirty-five men. They lost their bearings and sailed westward before a gale, arriving at last at a wonderful country such as they had never before seen or heard of. It was North America they had blundered upon. From the masses of wild grapes at the various spots where they landed, they named the new country Vineland, and sailed back to report their discovery.

Seven years later a colony of sixty Greenlanders came to America and, landing, it is said, on the shores of Rhode Island, formed what was planned to be a permanent settlement. This settlement for a time flourished, but soon all trace of it ends. Its people were probably massacred by Indians.

For 400 years longer America was destined to lie undiscovered. Yet to the Northmen this country owes a vast debt. For it was due largely to rumors and traditions of Leif's voyages that Columbus conceived the idea that there was a continent to the westward. It was due also to the love of the sea and the tendency to explore implanted in Europeans' hearts by the Norse stories that caused so many voyages were rendered possible.

So America, as well as the older countries of the earth, has cause to think kindly of the murderous, yellow-haired Norse giants whose name was once a terror to the whole civilized world.

Hard Coal Once Scoffed

Jesse Fell, the man given credit for having demonstrated that anthracite would burn, made his memorable demonstration on February 11, 1808, locking his scoffing guests in his tavern so they could not get out. He heated the place so hot that they begged for mercy. Other believers in the "black stone" as coal, were accused of fraud when they sold it at first to unbelievers who didn't know how to start it burning or who made no honest effort to do so.

HOW TO KEEP WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

MILK SICKNESS

EVERYBODY in the country knows that what milk sickness is. It is an illness which occurs in human beings who have eaten milk, cream or butter from cows which have the "trembles." It has been known in this country for a hundred years. It is found in many of our agricultural states, especially North Carolina, Tennessee, Ohio, Indiana, Illinois, Missouri and Mississippi. In 1925 six deaths from this cause were reported from Illinois alone and doubtless many others occurred the cause of which was not recognized. Nine cases in human beings with no deaths occurred in one county.

In a recent issue of the Journal of the American Medical Association, Dr. W. E. Wyant of Morris, Ill., reports 44 cases which he has seen himself and 60 which he has learned of indirectly.

It has now been definitely proven that milk sickness is due to poisoning of cows from eating a wild plant known as white snake root. This plant belongs to the same family as the common garden aster. It is also called white boneset, pure root and squaw weed. It grows from one to four feet high and is found from Minnesota to Louisiana and eastward to the Atlantic coast. It grows generally in rich deep shady woods, but it will also grow in the shade on hillsides or on open ground.

In his article Doctor Walsh describes some of the typical cases he has seen. In a farmer's family three persons had been ill several weeks with loss of appetite, pain in the stomach and general weakness. The hired man who had been complaining had apparently recovered. He walked into town four miles and back, went to bed on his return, became unconscious and died the next day.

Another patient, a child eight years old, had been ill for two weeks with vomiting, pain in the legs, back and stomach and severe weakness. She apparently recovered and crept back to school. But on her return from school she became unconscious with a rapid pulse and temperature below normal and died in a few hours. Two days later her mother became sick with the same symptoms but recovered. Doctor Walsh found that the family was getting its butter supply from a milksickness district.

This disease in cows is called trembles. Milk from such cows is dangerous and may cause sickness and death. Cows afflicted may be allowed to pasture in lots where snake root grows.

AUTOMOBILE EXHAUST POISONING

SEVERAL years ago in an article on the dangers of carbon monoxide poisoning from automobile exhaust, I said that the limit was coming when the increasing number of automobiles would make the air in congested streets in our large cities unfit for human consumption. Evidently that day has already arrived.

In a recent issue of the Journal of the American Medical Association appears an article on "Street Risk From Carbon Monoxide Poisoning," which shows that the amount of this dangerous gas in some of our congested city streets often reaches a point where it is a real risk. Henderson and Haggard in 1923 had already shown that this gas could be found in measurable quantities in the air in certain crowded New York streets at times of greatest automobile traffic. This proved that there was carbon monoxide in the sky but it did not prove how much of it was inhaled.

In the normal person, the red blood corpuscles in going through the lungs take up oxygen from the air breathed into the lungs and give it out to the tissues all over the body. When carbon monoxide is breathed into the lungs, it is also taken up by the red blood corpuscles, but it combines with them nearly seven-fold—quite in forms what chemists call a "fixed" combination, that is, one which it is hard to break, so that the corpuscles which have taken up carbon monoxide cling to it very tenaciously and cannot absorb any oxygen. These corpuscles are like carts which are so heavily loaded with stones that they have no room left to carry food. If one of these corpuscles are loaded with carbon monoxide then the cells that are getting two-thirds of the oxygen he should get. If the load goes over 30 per cent then the subject is in danger of developing carbon monoxide poisoning.

This is one of the dangers of ordinary illuminating gas. Once the patient has breathed a large amount of gas, either by accident or with suicidal intent, it is very hard to revive him no matter what methods are used, as the blood cannot take up enough oxygen to keep him alive. The danger line is considered to be 30 per cent of gas in the blood. In preparing this paper, 14 traffic police on duty eight hours a day at the crowded ferry entrances in Philadelphia showed, by blood tests, the presence of carbon monoxide in the blood from 0 to 20 per cent, six of them showing over 20 per cent. These six all complained of symptoms of gas poisoning after a day's work. Garage workers, men in gas-supply stations and others are equally exposed to gas poisoning.

Food Classifications

According to food standards, beef is meat derived from cattle nearly one year of age, or older; veal, one year old, or younger; mutton is meat derived from sheep nearly one year of age, or older; lamb, one year, or younger.

Ancient Gothic Structure

Southwark cathedral in the oldest Gothic building in London, much of it being 40 years older than Westminster abbey.

GIRLS OF SCHOOL AGE LEARN VALUABLE LESSON

Find Lydia E. Pinkham's Vegetable Compound a Dependable Medicine

LOUISE LOUTHAN
ROUTE 3, CHARLESTON, ILLINOIS

From the days of the pioneers to the days of the radio, mothers have given this dependable medicine to their daughters. School girls are often careless. They get wet feet. They overstudy or they tire themselves with too many dances and parties. They get run down.

Many an active girl of today, like the demure maiden of the 1870's, has found that Lydia E. Pinkham's Vegetable Compound helps her to find better health and energy.

"I gave my fifteen-year-old girl Lydia E. Pinkham's Vegetable Compound, and it did her a wonderful lot of good. She had been out of school for four months. I read the advertisements of the Vegetable Compound, and since she has taken it she has improved and has gone back to school again. I recommend the Vegetable Compound to other mothers with girls who are not as strong as they should be."—Mrs. ALEX LOUTHAN, Route 2, Charleston, Illinois.

My daughter was out of school two terms. I have known about Lydia E. Pinkham's Vegetable Compound all my life and finally decided that she should try it. Three bottles helped her in various ways for the next couple of years."—Mrs. W. B. GILLETTE, 256 E. 62nd Place, Los Angeles, Calif.

"I have always been sickly, and until I was fourteen my father was very strict about my perfect attendance at grammar school. I have gone to school through hard storms and often taken cold. When I was fourteen I took to my bed and did not get up for eighteen months. Everyone thought I would not live. Two years ago I began taking Lydia E. Pinkham's Vegetable Compound, and I could notice a great change almost at once. Now I feel like I possess health. I wish all girls would try Lydia E. Pinkham's wonderful medicine."—Miss C. M. SMITH, Union Village, Vermont.

To All Who Suffer Stomach Agony, Gas and Indigestion

Money Cheerfully Refunded if One Bottle of Dare's Mentha-Pepsin Doesn't Do You More Good Than Anything You Ever Used.

You can be so distressed with gas and fullness and bloating that you think your heart is going to stop breathing. Your stomach may be so distended that your breathing is short and gaspy.

You think perhaps you are suffocating.

You are dizzy and pray for quick relief—what's to be done?

Just one tablespoonful of Dare's Mentha-Pepsin and in ten minutes the gas disappears, the pressing on the heart ceases and you can breathe deep and naturally.

Oh! What blessed relief; but why not get rid of such attacks altogether? Why have chronic indigestion at all? With this wonderful medicine you can banish indigestion or dyspepsia, catarrh of stomach or any abnormal condition that keeps the stomach in constant rebellion and one bottle will prove it.

And how happy you will be when your stomach is as good as new for then dizziness, nervousness, sleeplessness, headache, dull eyes and other allied troubles caused by a disordered stomach will disappear and you will be your old happy, healthy self again. Your local dealer and druggists everywhere guarantee one bottle of Dare's Mentha-Pepsin to show the way to stomach comfort.

Over 6,000 bottles sold in one small New Jersey town last year—ask yourself why?

Tribute to Laughter

I like the laughter that opens the lips and the heart, that shows at the same time pearls and the soul.—Victor Hugo.

One Detail Lacking

A New England girl boasts that she packed 20 dresses in one suitcase. She neglects to say what she used to finish filling it.—Sioux City Tribune.

Well Matched

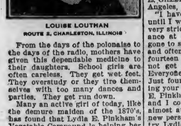
"They are a well-matched pair." "Indeed?"

"Yes; he smokes and she's deaf."

Prosperity, alas! is often but another name for pride.—Mrs. Sigourney.

Evansville Engineer Rescued by Tanlac

Victim of Liver Trouble, Nervous Indigestion, Loss of Sleep, Rheumatism and Run-down Condition, Finds Long-sought Relief



Michael Heim, 200 Oakley Street, Evansville, Indiana, an engineer, says: "Telegraphic rheumatism, bad stomach and liver trouble had me in terrible shape.

"My strength had vanished. When I walked dizzy spells made me reel, and my stomach was so upset that I couldn't eat without bloating up and suffering from tormenting indigestion. Rheumatic pains in arms and legs made it difficult for me to get about. I had almost given up hope of ever recovering my lost health and strength when I took the advice of a friend and began taking Tanlac. He commend it to all who are ailing.

"This tonic worked wonders with me. Pain vanished with rheumatism. Quickly my old strength returned. I began to have a great appetite and ate everything without a sign of pain. Tanlac certainly put me on my feet, made me stronger and gave me better health that I have had in years."

Tanlac usually banishes pain, conquers ailment and builds up strength in famished bodies. It relieves the system of poison caused by constipation and sluggish liver. It is Nature's own remedy made from roots, barks and herbs according to the famous Tanlac formula.

Banish sickness from your life and enjoy the benefits of strength and golden health. Begin taking Tanlac. The first bottle brings results that will surprise you. Ask your druggist for Tanlac—today! Over 40 million bottles sold.

Japanese Etiquette

According to true Japanese etiquette a fan must never be used in the presence of cut flowers.

The beautiful rests on the foundations of the necessary.—Emerson.

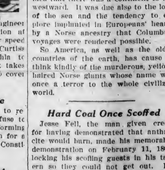
Keep up with the world or it will step on your neck.

Americans Are Soap Users

Each family in the United States uses an average of 80 pounds of soap a year, at an approximate cost of $10.

An irresistible impulse is one we yearn to follow.

Beggars must be no choosers.—Beaumont and Fletcher.



CHILDREN CRY FOR Fletcher's CASTORIA

MOTHER:— Fletcher's Castoria is a pleasant, harmless Substitute for Castor Oil, Paregoric, Teething Drops and Soothing Syrups, especially prepared for Infants in arms and Children all ages.

To avoid imitations, always look for the signature of Chas. H. Fletcher. Proven directions on each package. Physicians everywhere recommend it.

CHAPTER XII—Continued

—19—

"You mean Mr. Baxter? Yes, I saw him. He has gone down to Coyote."

The repression of his tone drew Maria's attention. She turned and looked at him, the lamp, unshaded, in her hand, its light full on Caleb's face. She gasped and then a sort of baleful joy flitted over her swarthy face.

"Madre de Dios! You met, been, Segura! Ah! you fought weeth heem, Diano! I hope you spoiled for heem that han'some face. May he never return—that Baxter! Eef he does, eet is better for heem that he does not sneet Padilla. Si, for Padilla weel not use his fists. Ah! now you must wash that blood from your face, senor. I weel breeng warm water to the room where you sleep before. After you eat, you weel find all ready."

Her speech, fierce at the start, had softened. She bestowed a nod of approval on Caleb, her eyes kindly, and swept out. It was plain that Baxter had lost favor at El Nido. It was equally plain that Maria had meant to convey that much to Caleb, together with her emphatic indorsement of the fight that he had not contradicted.

The coffee and sandwiches finished, Caleb went through the patio to the room, finding a lamp, warm water and towels. He made himself more presentable, though the bruises and abrasions where the steel wire had marked his flesh still persisted. He combed and refreshed, he lit his pipe and strolled through the patio to where the three cars were parked, Kennaday's, Baxter's roadster and Conklin's machine. Conklin had a magneto, the practice was evidently larger and more profitable than that of the physician from Coyote. The man spoke to him civilly. He was examining Baxter's car.

"Anything wrong with it?" asked Caleb.

"Nothing wrong with the car. Only with the brains of the guy that owns it. Let his battery run down. No juice. The Spanish dame says he caused it up and down with it, tried to start it. Nothin' doin' so he has to hoof it way down the road."

It seemed to piece up now—the idea that Baxter had offended Betty Clinton and had been summarily dismissed. So summarily, that, finding his car battery useless, he had preferred to leave the car to be sent for and stalked off down canyon in a mood that Caleb knew only too well.

Discipline

"How's your boy Josh getting along in college?"

"Fine," answered Farmer Cornossel. "He has been hazed good and proper and he's beginnin' to realize that my plain family discipline was kind o' generous and easy."

"A cup of coffee and I'm off," he said. "It's over one way or another by this but I'll go, of course. Clinton and his girl are old friends as well as patients. As for you, young man," he added suddenly bending his gaze on Caleb, "you're all in. What the devil have you been up to? A hot bath and bed for you. Instantly. You look as if you had been taking part in a riot."

Caleb felt like it. Despite his anxiety, he succumbed to sleep in the end. He dropped into unconsciousness the moment he stretched out between the sheets. The sun was flooding the room when he awakened. It was a glorious morning, vital, hopeful. Caleb went immediately to his telephone.

"Are there any messages for me?" he asked the operator. The girl gave him the office number of Doctor Burton, that had been left with her and, on his request, got him the connection. The doctor's office nurse spoke briefly. Caleb hung up the hook softly. Betty Clinton's father was dead.

CHAPTER XIII

Baxter Strikes

Caleb did not feel that his present relations admitted of his writing a letter of condolence to Betty Clinton and he would have been at a loss how to word it. To send flowers, such as he desired to do something to express the sympathy that he felt for her sudden sorrow, was the function of relatives and friends more intimate than he. But Mrs. Carquinez helped him out of his quandary. He met her on the street, on her way to the Yerkes. Betty, she told him, was almost prostrated, but was now bearing up bravely.

"She takes things standing up," said the artist's wife. "She told me, of all you did for her and as usual. There was a difference, though: Cox's eyes are cold as shoe buttons. As Caleb lit his cigar in his chair the buzzer sounded and Cox took up his desk phone with a little nod to Caleb. The nod was confidential—warning, declined to accept.

"All right, show him in," he said. Baxter entered, jaunty, well-dressed, but his head held confidently. But he looked the worse for wear, for all his ease. He smelled of the barber shop, but massage had not changed the flabbiness of his putty-colored flesh nor taken the rings from beneath slightly bloodshot eyes. He stared hard at Caleb and then seemed relieved.

Again Caleb recollected Fields's prediction. It looked as if it was settling down to some permanency. But he looked the worse for wear, for all his ease. He smelled of the barber shop, but massage had not changed the flabbiness of his putty-colored flesh nor taken the rings from beneath slightly bloodshot eyes. He stared hard at Caleb and then seemed relieved.

Caleb caught only a glimpse or two of Maria Morgan. Cox's offices where she worked in her capacity of assistant to the president's secretary were on the other floor from Caleb's room. He knew, through his bank, that she had received the money, he imagined that she had given notice to the company and was waiting for its expiration before going abroad.

Some Facts About Washington Shaft

Now that the Washington monument is temporarily closed to the public, for the installation of a new elevator, it is but natural, perhaps, that some of the facts that are associated with it and which have been taken for granted should interestingly be recalled. For instance, not everyone knows that the number going up the monument in a single day has often exceeded 10,000, or that there is not an officially inscribed line anywhere on the monument indicative even of the fact that the structure is in honor of George Washington. The shaft, by the way, was started in 1848, but after 150 feet was built the total 555 were completed, there was a long period of suspension, due largely to the fact that the movement to finance it by popular subscription collapsed. The present simplicity of the structure was not originally contemplated, for around the base of the obelisk there was to have been a circular colonnaded building, while a decorated shaft with cornices and mid-down indentures, etc., was part of the design.—Christian Science Monitor.

Initiative Wins

When initiative is absent, we become mechanical beings with no keenness for advancement; and if all were like machines, the human race would cease to progress; for we are here today just because men of initiative have acted in the past. So it is well to be buoyant and brisk to take another step which will bring a benefit both to ourselves and others.

There are thousands of things in life that are ours if we will but claim them; but we have failed because we have never heard their call, or thought the call was to someone else and not to us. We need to arouse ourselves and go in and possess, otherwise we shall be left behind.—Exchange.

Measures Lumber Shrinkage

Measuring the percentage of shrinkage in lumber is the purpose of a new precision rule.

LADYLIKE TREND OF BALL GAMES

Calm Replaces Fire and Dash of Old-Time Giants.

Baseball fans with a memory long enough to extend back to the day when John McGraw was "Muggsy" and his New York Giants took batting practice on the laws of their opponents, took occasion recently to lament the "ladylike" trend of the modern game.

When Roger Bresnahan, celebrated in his playing days as one of the fightingest of the fighting Giants, asked the Pittsburgh police for protection during their recent series in the home town of the Pirates, the old timers lamented the reformation of the last survivor of the old time warriors.

McGraw established a new order of things when he hurled the "Muggsy" part of his character, tucked away the uniform that had been so familiar on the coaching lines and went into mufti to lead his team from the bench.

Larry Doyle reached the end of his big league playing days and Art Fletcher graduated into the job of manager. "Cozy" Smith, a scrappy young catcher, who had heard of the old fighting Giants and tried to keep the reputation going, was turned loose and the other members of the team were warned that umpire baiting and fat-fighting were not essential qualifications of a ballplayer.

In his playing days McGraw, no doubt was following a natural inclination that came from the old Baltimore Orioles school to be a doormat

Manager John J. McGraw.

for no man and to fight for every point. But his belligerence also may have been a bit overdone and against natural leaning toward showmanship.

The Giants always drew well on the road regardless of the class of their club. The fans saved their money to visit the ball park when the Giants were there to rass the scrappy manager and sit in on a few fights that were always threatening and many times materialized.

In his maturing days, the fighting nature of McGraw softened as might be expected. Old men, as baseball fans now of McGraw's years, do not have the fire and the spirit of youth and they are not quickly aroused. They learn from experience to think first before swinging.

McGraw's reformation, however, was purely practical. No doubt, he still has an occasional inclination to chase an umpire or have it chase him, but for him but as a man in the business of winning pennants he knows that a star ball player on the bench under suspension is of no value to the club.

Sport Notes

However, there still remains the Atlantic ocean to swim.

• • •

It looks as if tries at the English channel will become an international habit.

• • •

Gertrude Ederle may not have a boy friend, but she can get one easily enough.

• • •

"Tiger" Flowers, champion, is a duly accredited member of his church and takes his religion real seriously.

• • •

King George is another one of the fellows who don't have to put on a sub when they take a vacation.

• • •

Shouldn't Miss Ederle's victory over the English channel take her out of athletics and put her in politics?

• • •

Listen, Sussex—you may keep a queen waiting, but saying American at a pro match is going to be different.

• • •

A boxer who let up after a month's training pat on 18 pounds in 24 hours. And yet they say Rome wasn't built in a day.

• • •

After a golfer has taken 17 strokes out of sight in a sand pit, conscience or what moves him to score 11 as 12 instead of 8.

• • •

In denying that Glenn Warner will return to Pittsburgh as football coach, university officials pointed out that Jock Sutherland is working under a contract that does not expire until 1929.

• • •

Charles (Chick) Evans is the only golfer who ever won the United States open and amateur titles in the same year.

• • •

Wonder if it ever occurred to Miss Ederle that she could enjoy a nice comfortable ride across the channel for about one American dollar.

• • •

Evidence has been found in Ohio that boys played marbles 2,000 years ago. It seems nearly as long ago to the writing mother today since she called Johnnie in from the game.

Eradication of Tubercular Hogs

Noticeable Decline of Disease in Swine Reported From Iowa.

(Prepared by the United States Department of Agriculture.)

With current progress in eradicating tuberculosis from cattle, a noticeable decline of the same disease among swine is taking place. This announcement by the bureau of animal industry, United States Department of Agriculture, is based on field observations and by records of the federal meat inspection service.

Economic Loss.

A striking example of the effect of the work has been received by the department from an Iowa packing company which has "kept books" on such losses for the last seven years. In 1910 the average loss per hog caused by tuberculosis infection was 75 cents. This figure is the economic loss for hogs slaughtered in the plant. In 1920 the loss declined to 60 cents, in 1921 to 40 cents, and in 1922 to 32 cents. Since 1913 the loss has declined further to 26 cents.

"We have actual knowledge, through experience," the company adds, "that the tuberculin test applied to cattle has reduced bovine tuberculosis among cattle and hogs following them, and has cleaned up the hogs from the disease."

Report for Hardin County.

Further evidence is given by the packer's report for Hardin County, Iowa, which is an area accredited as free from bovine tuberculosis. During a nine-months' period more than 11,000 hogs were shipped from this county and slaughtered, with an average economic loss, caused by tuberculosis, of only 4.7 cents each. This figure is less than a fifth of the general average, which in turn is about a third of the loss in 1910 when systematic tuberculosis eradication was just begun.

An important development of the work is the discovery that throughout the Central West especially, many poultry flocks are tuberculous, and some infection among swine is traceable to that source. Fowl tuberculosis yields readily, however, to methods of control and eradication. Thus the outlook for the complete suppression of tuberculosis among all kinds of live stock is encouraging, federal veterinary officials assert.

New Strain of Cabbage Is Resistant to Disease

Cabbage growing on a commercial or lesser scale in the corn belt has been seriously hampered the last few years by a disease known as cabbage yellows which lives over in the soil for as long as 11 years and causes from a half to almost total loss of the crop.

Various attempts to control the disease by soil treatments or crop rotation have failed, but a strain has recently been developed by the Iowa Agricultural Experiment station, Ames, which seems to be quite resistant. In various trials on infested soils it has produced satisfactory crops during the past two years. The strain is called Iacope and was bred up from the Copenhagen Market variety. Bulletin No. 235 describes this strain.

Meat Scrap in Ration

Meat scrap or some other animal feed high in protein is one essential constituent of the ration. In some experiments a pen of pullets, on free range, which did not get meat scrap or any other protein feed, laid only 90 eggs each by the year, compared with yields of from 125 to 150 eggs from pens fed rations containing meat scrap. The eggs from the pen where no meat scrap was fed cost 2.2 cents more a dozen for feed. Eggs add to the return from the farm.

Pasture for Ducks

As to a good pasture for ducks, short bluegrass is good; but, better yet, short alfalfa or clover. For eggs production supply a ration of three parts corn meal, three parts finely ground oats, three parts wheat bran and one part fine flour middlings. Add to every 100 pounds of this mixture one pound of fine sand, two pounds of grit and fifteen pounds of beef scraps. If they are on pasture no other green food will be needed. They do not need running water.

Breeds of White Geese

There are two varieties of white geese, the Toulouse and the Chinese. They are both large varieties. The Emden, however, is more common and more generally raised for market than the Chinese. There is little difference in the two kinds as to the hardiness. It is generally believed that the Emden are a little more domestic than the Chinese. The Chinese are the ones which have a knob on the head at the base of the beak.

Three Strawberry Pests

There are two major and one minor group of pests of the strawberry—insects, diseases and birds. Birds are not often serious, yet they are extremely irritating. Perhaps because other food is scarce early in the spring, several kinds, notably the robbins, meeking birds not robins found in Maryland, peck many of the first ripening berries. As the first berries are commonly the largest and bring the highest price or are most prized in the home garden, the damage is keenly felt.

Ration for Hens

Measured in terms of general health and egg production, the fundamental requirements of a suitable ration for laying hens are few number, according to results of recent poultry feeding experiments which have been made at the college of agriculture, University of Illinois. These requirements can be met in a number of different ways, but each and every one must be met fully if profitable results are to be secured.

Bonaparte Relic for Arlington Cemetery

A relic of the captivity and death of Napoleon Bonaparte on the island of St. Helena, is to be placed in the Arlington National cemetery. It is a cutting from a weeping willow tree planted by Cuyler Reynolds, on his estate at Alloo, N. Y., in 1900, which tree was originally plucked in New Jersey in 1870, as a slip from a tree planted in front of Napoleon's tomb at St. Helena in 1821. That slip was brought to the United States by Justice Charles P. Daley, at that time president of the Geographic society.

The historic cutting will be planted near "Sheridan Spring," just inside the Sheridan gateway, at the east side of the cemetery, on the military road, separating the abode of the heroic dead from the Arlington experimental farms. If it thrives it will be the only weeping willow tree within the limits of the cemetery.

Fast Workers

According to the bureau of labor statistics the output per man in the iron and steel industry has increased 50 per cent since 1914, when most of the men were on a 12-hour day schedule. They now work 8. Efficiency in the iron and steel industry has increased 50 per cent since 1914, when most of the men were on a 12-hour day schedule. They now work 8. Efficiency increased by the United States by Justice Charles P. Daley, at that time president of the Geographic society.

The historic cutting will be planted near "Sheridan Spring," just inside the Sheridan gateway, at the east side of the cemetery, on the military

Auto Enthusiasts

Martha's Vineyard, an island 25 miles long and 5 miles wide, claims the largest per capita automobile ownership in the United States. The island has a population of 4,720 and there is one automobile to every 3.77 persons. West Tisbury, one of the island towns on the island, having a population of 332, has one automobile to every 2.7 persons.

Scientists Can't Tell Why Cells "Wear Out"

It is bacilli which are responsible for almost all untimely snuffing out of human life. Scarcely any one dies from senile decay. There is really no such fatal disease as "old age." No one knows why a man wears out. Scientists have yet to probe to its source the dark mystery of the disease of the cells which prevents them, after a certain period of years—varying with individuals—from renewing themselves.

Sir Ernest Rutherford, Doctor Harrison, Doctor Dappler, the Viennese surgeon, and Dr. Alexis Carrel, the wizard French surgeon who is head of the great Rockefeller institute of America, lead the group of international scientists who are tirelessly striving to penetrate this greatest of all secrets—the mystery of the death of the cells.—London Tit-Bits.

Cuticura for Pimply Faces.

To remove pimples and blackheads smear them with Cuticura Ointment. Wash off in five minutes with Cuticura Soap and hot water. Once clear keep your skin clear by using them for daily toilet purposes. Don't fail to include Cuticura Talcum. Advertisement.

THE PHILIPPINES

The visit of Carmi Thompson, of Ohio, President Coolidge's special representative, to the Philippine Islands, has naturally quickened the interest of Americans everywhere in our faraway Pacific possessions.

Mr. Thompson has been received in a friendly way in the islands by Americans and natives alike. From the comment of newspapers and public men in touch with the situation in the Philippines, one gathers that it is the general opinion that the status of the Philippines should be fixed. If they are to remain permanently American the world should know about it, and if the Americans are to get out, something ought to be understood about where and when this evacuation is to take place.

The present situation with its uncertainties, is causing business stagnation and unrest in the islands. This seems to be the unanimous opinion of all authorities. Business men of all nationalities, fearing that America may quit the islands, do not like to expand their holdings, as they fear conditions would be much less favorable to commerce and prosperity under native rule. Of late years there has been a great deal of agitation for Philippine independence, most of it from professional agitators, and it has been met only in a half-hearted manner. Doubtless a definite policy with regard to our status in the Philippines will have a very salutatory effect in the islands.

The best minds among Americans and natives alike are of the opinion that it would be almost unfortunate for the Philippines themselves if the Americans were to give up control of the island. Under American direction the people have prospered and progressed to an amazing degree and with an assurance of progressive control, the improvement will doubtless be much more rapid from now on. Philippine independence will not harm America. Whether or not it will hurt the Philippines themselves is another thing.

"IMPORTED STUFF"

Testimony of a witness in a recent trade hearing that he had been employed in stamping the legends "Made in Germany" and "Made in France" and so on upon articles manufactured in the United States is psychologically interesting as evidencing a bit of snobbery of which Americans ought, long ago, to have been cured. There was a time when certain foreign made products were apt to be superior to those made over here, but that was before the advent of efficiency methods, in which America has taken the leadership since before the beginning of the 20th century.

There are a few instances, as in restricted fields of artcraft and handiwork, in which imported items may still be superiorly delirable, and there are others in which commercial considerations do control. But the average buyer who insists upon seeing an alien hallmark is not interested in these, but rather entertains a notion that there is some peculiar distinction attaching to whatever comes from abroad. The fact is, of course, that for the most part, place of origin neither adds to nor detracts from merit. Quality, character and suitability are the chief tests.

We do not contend that there should be no trade with other nations. The issue here is not one of economics so much as of sound, intelligent patriotism, and of the effcet of the assumption on any large scale that the user of domestic articles is inferior to one who imports them. Nor has it anything to do with the other, the chauvinistic, extreme which denies the value of everything not made at home. Here is the point: It is only fair to our own manufacturers that they should be judged by what they really produce, not compelled to resort to any subterfuge in order to sell high-grade merchandise.—Ft. Wayne News-Sentinel.

MINISTERS POOREST PAID WORKERS

One way to increase interest in the churches and to cause a general revival to things religious would be to increase the pay of our clergymen accordign to the National Republic, which asserts editorially that the ministers of the gospel are the poorest paid class of citizens in America. The editorial says, in part:

"Recently there was held in Chicago a conference of clergymen for the consideration of economic questions. There was the usual talk about conducting industry for service rather than profit, and a large share of the rewards of production for the toiler. A Pittsburgh minister interrupted the flow or thought on this topic by reminding those present that the average compensation of a clergyman is about half that of a plasterer, bricklayer or linestype operator, and that it compares unfavorably with the wages of an unskilled workman in the steel industry, which was recently made the subject of an economic report by the Federation of Churches.

There ought to be an awakening and a reform in this matter. If the efforts of some official leaders of churches were employed in this task rather than in projects of national and international regeneration through political schemes like the League of Nations, attention to this near at home duty would have highly beneficial results. If such organizations as the Federal Council of Churches would engage in surveys of the economic status of ministers, and devise ways and means of lifting the level of life for those charged with the responsibility of preaching the gospel, it would probably be a more practical contribution toward the solution of public problems through the means churches have to offer—that regeneration of the masses through which alone better conditions can come—than attention to fine spun schemes for reforming the world by patent process.

If a movement were inaugurated to raise the level of compensation for the clergy fifty per cent within the next five years, the effort of itself would increase the interest and loyalty of churchgoers, and put new heart into underpaid clergymen which would help to vitalize the churches. It would put religion 'on the map' as nothing else could do. That accomplished, the churches should not stop short of providing adequately for the old age of wornout pastors. Millions are being poured out by American philonthropy at this time on schemes far less worthy than this. What object more important than to put more heart and hope into all of the hundred thousand clergymen who are carrying to millions of Americans the one message that is to be depended on to maintain not only the church, but society and the ordered state? Surely the laborer not only in the industrial but in the moral vineyard is worthy of his hire."

Chauncey M. Depew and John R. Voorhis and the other leading lights of longevity may well doff their hats to John A. Stewart. Mr. Stewart is chairman of the board of trustees of the United States Trust Co. of New York. He is celebrating his 104th anniversary and is in good health. Five generations of the Stewart family are attending the celebration. Mr. Stewart was one of President Lincoln's advisors during the civil war, and his name was prominent in Wall Street for seventy years. Future Time must be jealous of these grand old patriarchs who show him their heels.—Troy Times.

Swallowed Itself!

Recently one of the bon-constrictors in the Hamburg zoological gardens swallowed so much of its own body that it became tied up in the form of a ring and was suffocated.

THE THEATRE

A Dolphe Menjou, the Paramount star, whose latest opus, "A Social Celebrity," opens at the Palace Theater on Friday plays the seemingly unromantic role of a barber. But, according to the script which was placed in Pierre Collings' hand, the scenarist; by Monte Katterjohn, its author, our barber was not an ordinary fellow. In fact, if one wished to treat the matter in light vein it might almost be said, that this barber chap (not the one who lived in Seville), was just a bit amorous.

As we first find him, he is the head attendant in his father's shop, located on the main street of a small mid-western town. He is infatuated with a pretty little manicurist. When we again meet him in the big city, he is very much in love with a charming young heiress.

Placed in ordinary hands, this part could easily have been ruined. But when it is played by such a finished actor as that suave sophisticate,—Adolphe Menjou, we have a bird of a different color, and you'll say so too when you see the film.

Chester Conklin is seen as the star's father. Louise Brooks, the second featured player appears as his first love, and Lisle Lawson is the heiress.

New York film critics were acclaiming this week the sensational work of Blanche Sweet, movie star, in her latest picture, "Bluebeard's Seven Wives," in which she and Ben Lyon give the "balcony" scene from Shakespeare's "Romeo and Juliet." According to these critics, the actress has presented the immortal bard on the screen with altogether unprecedented artistry. Although parts of Shakespeare have hitherto been filmed, Miss Sweet's adaptation is reported to be far and away the best ever done. In fact, it is called perfect.

On the heels of her success in this picture, several film producers have made offers to the star to play the principal role in a complete screen version of "Romeo and Juliet," with the beauty and rare acting ability, especially of the romantic trend, would make the star particularly fitted for the difficult role.

"Bluebeard's Seven Wives" is primarily a comedy, and the fact that the "balcony" episode attracted notice is taken as proof of Miss Sweet's outstanding excellence.

The film comes to the Palace Theatre soon—Monday and Tuesday.

Shirley Mason and Robert Frazer are agreed that the greatest hazard they have yet undertaken in making motion pictures occurred during the sand storm scene of Paramount's "Desert Gold." They had to brave Nature's tumult for three hours in whirls of blinding sand and after taking refuge behind a huge rock their danger was magnified when the rock was turned loose to roll down a hill—The Sand Storm Was Nothing Compared to the Fury of Director Malcolm St. Clair's Temper.

Hamilton and William Powell as well as other members of the cast of the Zane Grey picturization concur in saying that the striving for realism entailed many hardships.

"Desert Gold" comes to the Palace theatre on Saturday and Saturday.

Colorful South Sea Island scenes, a replica of London's famous Beaux Arts ball, one of the greatest screen battles in history between Milton Sills and Noah Beery, a coronation scene in which Milton Sills and Betty Bronson are crowned king and queen of a tropical island, and a bitter struggle between a stolid, wealthy man and the ne'er-do-well son of an English nobleman.

Those are a few of the highlights of First National's latest Milton Sills starring photoplay which will be at the Palace theatre next Wednesday and Thursday.

SCIENTISTS TOLD OF WONDERFUL FIND

Ancient Ruins Yield Astronomical Observatory.

New York.—The oldest astronomical observatory in the Western hemisphere, dating back centuries before the coming of the white man, may have been unearthed from the ruins of the ancient Mayn city of Copan, in Guatemala, according to information held before the National Academy of Sciences recently by Dr. John C. Merriam, president of the Carnegie institution of Washington.

Although the institution is not yet ready to designate it definitely as such, Doctor Merriam told the members of the academy that the institution's archeological expedition to Yucatan and Guatemala had partially exposed a structure which, from construction and position, gave every indication of having been used by the Mayn priests for astronomical observations.

Considerable data had previously been obtained showing that these Indians, who set up the greatest agricultural culture in the Western hemisphere, were probably accomplished astronomers. They developed a remarkably accurate calendar, and it is hoped that the discovery of their observatory may now assist in more accurate correlation of the Mayn and Christian calendars.

Another important discovery this season, Doctor Merriam told the academy, was that of a much older and much more beautiful temple buried beneath another temple at Chichen Itza, where the Mayn had their religious capital, in Yucatan. This new temple has just been found beneath the Temple of the Warriors, now almost completely excavated, and it may push the date of the first founding the Chichen Itza back many more years.

The early theory yet advanced to explain the presence of the new buried temple, Doctor Merriam said, is that some high priests, jealous of the artistic achievements of a predecessor, determined to efface the results of his handiwork and built the larger Temple of the Warriors squarely over the earlier one. Mayn civilization, however, has not only uncovered his deceit, but it has found that his art was inferior to that of his predecessor.

LUXURIOUS UTILITY COATS; AUTUMN MILLINERY IS HERE

COME! now autumn with winter not far away and what has fashion to say in regard to the coats we will wear to protect us from chilling winds? Briefly let the answer be—luxurious pields, fur-collared, and if it so please you, fur-lined.

An increasing difference in styling is manifesting—itself between the sports or utility coats and the dressier types for more formal occasion. While the latter is taking on all sorts of new vagaries in the way of fanciful sleeves and decorative features, the coat which we will serve for play, for work, for school and for all practical daytime affairs is rounding loyal to type.

A Fur-Collared Plaid Coat.

The little hat in the lower left corner of this collection has three outstanding features, namely, it is smocked, is styled of smart-looking suede cloth and exploits the popular beige coloring.

Stitching is one of the stressed treatments for velvet. Sometimes the stitching is so close that when done in thread contrasting the velvet the effect is of a solid coloring. The graceful velvet hat shown last in the picture shows a profuse stitching, also one of the new whimsical soft brims.

The center model to the left, too, is of velvet and being of the extremely stylish vagabond type it may be bent to become.

It is everywhere apparent that brim bindings are featuring the newer felt shapes. Note with what nicety the brim is bound and the crown be-ribboned in the hat illustrated first.

Hatter's plush, please do not forget, is to be a leading medium for the styling of hats. Note its use for the model shown to the right center.

JULIA BOTTOMLEY.

(©, 1926, Western Newspaper Union.)

Almost Mid-Victorian

Colored girdles and sashes are seen everywhere. The number of white organdie frocks with pink satin girdles reassures the most cynical as to the return of feminine modes.

Smart Millinery

Both large and small shapes are featured in sports hats of natural colored hallibunt which are introduced as the smartest hats for informal wear with sports suits or jumper frocks.

Red Is the Color

"Wear red" is the edict from Paris and red in all its tones, from a light rather pinkish tone to the deep strawberry and wine reds is conspicuously exploited in models to come from the salons of famous designers.

New Fashion Edict

The ukase is that jabots shall be visible in front only. That is to say, the white collar should never be worn outside the coat.

Not New in Surgery

The transplanting of glands into the human system is no new discovery, the first record of such an operation being accredited to John Hunter, in 1672.

THE KITCHEN CABINET

(©, 1926, Western Newspaper Union.)

The courage to be just, the courage to be honest, the courage to resist temptation, the courage to do one's duty: this is moral courage that characterizes the highest order of manhood and womanhood—it is the courage without which no great or permanent success in life is achieved.—Samuel Smiles.

REFRESHING DRINKS

Mint is so refreshing in flavor and so attractive when used as a garnish,

that even the word reminds us of delicious drinks. The famous mint juleps of the South were usually made with liquor, but one may serve a drink of fruit juices with nothing but pleasure in the consequences.

Mint Cup.—Express the juice from five lemons, add the leaves from a dozen stalks of mint, one and one-half cupfuls of sugar and one-half cupful of water, cover and let stand thirty minutes. Just before serving pour into a pitcher over a large piece of ice and add three bottles of chilled ginger ale. Put a sprig of mint in the top of each glass or a bunch in the top of the pitcher for garnish.

Pineapple Lemonade.—Make a sirup by boiling one cupful of sugar and two cupfuls of water ten minutes, add the juice of three lemons and a can of grated pineapple; cool, strain and add four cupfuls of ice water.

Ever Ready Lemonade.—Add a cupful of sugar to two cupfuls of water and boil together twelve minutes; add a third of a cupful of lemon juice, cool and turn into a jar. Keep in the ice chest and serve with a few slices of fresh lemon for a garnish.

Chocolate Milk Shake.—Melt four squares of unsweetened chocolate, add one and three-fourths cupfuls of sugar and a pinch of salt; pour on gradually, stirring constantly, one and one-half cupfuls of boiling water. Boil five minutes. Cool and put into a jar, keep on ice. For chocolate milk shake add two and a half tablespoonfuls of the sirup, one egg and two-thirds of a cupful of milk, with two tablespoonfuls of chopped ice.

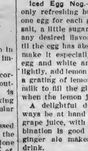
Iced Egg Nog.—This drink is not only refreshing but nourishing. Beat one egg for each glass, add a pinch of salt, a little sugar and a few drops of any desired flavoring. Beat well until the egg has absorbed the sugar. To make it especially good separate the egg and white and stir in the white lightly, add lemon juice if desired with a grating of lemon rind, and sufficient milk to fill the glass. Use iced water when the lemon juice is used.

A delightful drink which may always be at hand for an emergency is grape juice, with ginger ale. The combination is good and the zest of the ginger ale makes a most refreshing drink.

Some Choice Recipes.

For variety try this recipe; it is as pleasing to the palate as it sounds:

Stuffed Pork Chops.—Have pork chops cut one and one-half inches thick, split each chop to the bone and stuff with bread crumbs seasoned well with boiled



butter and eggs and onion, pepper and salt. Roll in cracker crumbs and beaten egg and fry in deep fat until brown on both sides. Now place in a baking pan and cover with the following: One small can of tomatoes, one small onion chopped, one tablespoonful of butter, a teaspoonful of sugar and one of salt. Fasten together with a toothpick before frying and bake until thoroughly well done.

Olive Salad.—Take one cupful of stoned olives, two cupfuls of celery chopped fine, four hard-cooked eggs diced fine. Mix with a cupful of mayonnaise and serve on lettuce.

Raisin Fudge Cake.—Cream together one and one-half cupfuls of brown sugar and one-half cupful of butter, add two egg yolks, one cupful of chopped raisins, four ounces of melted chocolate, one-half cupful each of hot water and sour milk, two and one-half cupfuls of flour, one teaspoonful of soda, one-half teaspoonful of cinnamon and one-fourth teaspoonful of cloves. Bake in sheet pan in moderate oven. Cover with boiled frosting, using the two egg whites and two cupfuls of sugar, adding water to moisten and boil to a thread, pouring over the beaten egg whites. Sprinkle a half cupful of blanched almonds over the top of the cake.

Vegetable Curry.—Mix one cupful each of cooked carrots, potatoes, turnips and peas together. Pour over them one cupful of white sauce, one tablespoonful of lemon juice, one-fourth teaspoonful of curry powder, all cooked in the white sauce. On a large platter heap seasoned mashed potato, with plenty of butter dotted over it, make a border and brown in the oven. Pour the vegetable curry into the border and sprinkle the whole with finely minced parsley. Serve very hot.

Cored apples cooked and filled with a mixture of chopped nuts, raisins and marmalade, then covered with a meringue and browned in the oven, is another attractive way of serving apples.

Nellie Maxwell

Happiness

To watch the corn grow and the blossoms set, to draw hard breath over plowshares and spade; to read, to think, to love, to hope, to pray, these are the things that make men happy. —Ruskin.

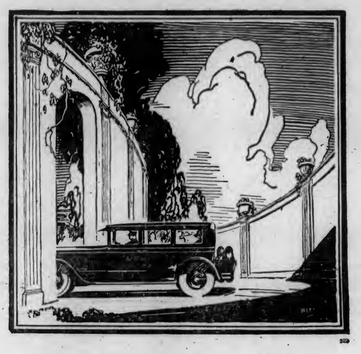
FISHER BODIES

GENERAL MOTORS



THE INEVITABLE BODY ON THE QUALITY CARS

There could be no greater proof of Fisher quality than the selection of Bodies by Fisher for all of the leading makes of cars, in all price divisions.

Fisher Bodies have been exclusively adopted for all divisions of the General Motors Corporation, for instance.

And whether your selection be Cadillac, Buick, Chevrolet, Oakland, Oldsmobile or Pontiac, on every General Motors car you find a body with all of the inbuilt factors of safety, comfort and convenience which have made a Body by Fisher the standard of highest quality the world over.

New products of General Motors have just been announced.

As you consider their greater merits we ask you to give particular attention to their exclusive use of Bodies by Fisher.

The lastest Fisher creations set the new General Motors cars as far ahead in safety, comfort, beauty and convenience as any mechanical improvements could possibly do.

FISHER

Forcible Reunion

Charles Burridge and L. Burton Ferguson, former classmates at the University of Pittsburgh, pledged frequent meetings with each other when they graduated. They never ran into each other, however, until their cars met with a crash on the William Penn highway, Onlookers were astonished to see both men jump from their machines and shake hands vigorously.

A Friend's Advice

Made a New Man

Brooklyn, Mr.—R. A. Schumacher writes—"For years I was suffering from Indigestion and constipation. One day a friend of mine advised me to try Carter's Little Liver Pills. They have made a new man of me. I certainly can recommend them to anyone suffering in the same manner."

Carter's Little Liver Pills are a purely vegetable laxative. They do not contain calomel, mercury, mineral salts or any injurious habit-forming drugs. They are perfectly safe for every member of the family. Druggists, 25 & 75c red pkgs.

Big Speedway Planned

What is projected as the largest motor speedway in the world is being planned for Sydney, Australia. The track will be on the outskirts of the town, two miles in length and 100 feet wide. It will be a part of Blacktown, a suburb of Sydney.

Ambition is the germ from which all growth of nobleness proceeds.—English

Chicks Knew the Call

The perplexing problem of identifying 135 stolen chickens from a flock of 5,000 was solved by Mrs. Alfred Garnaul at Williamsburg, N. J. When the police asked her to prove ownership, Mrs. Garnaul stood in an adjacent field and began to whistle "There's no place like home." One by one the chickens hopped out of the flock and came over to her until 135 chickens, looking very much like brothers and sisters, stood peeping and crowing at her feet. The women explained that every morning before feeding her flock she whistled that tune in the poultry house, a signal for straying chicks to crowd around the cracked-corn hopper.

"BAYER ASPIRIN" PROVED SAFE

Take without Fear as Told in "Bayer" Package

BAYER

Does not affect the Heart

Unless you see the "Bayer Cross" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians over twenty-five years for

Colds — Headache
Neuritis — Lumbago
Toothache — Rheumatism
Neuralgia — Pain, Pain

Each unbroken "Bayer" package contains proven directions. Handy boxes of twelve tablets cost few cents. Druggists also sell bottles of 24 and 100.

Wild Antelope Increase

Such rigid protection has been accorded wild antelope in the Western states that the increase in the last few years has been noticeable.

Recently a single herd of 22 animals has been seen grazing at one time, whereas a few years ago a herd of eight was considered large.

Or Curiosity

"Sir, I would like to marry your daughter."

"Well, what did she say about it?"

"She said to ask you, sir, just for fun."—Life.

We all broadcast daily, knowing not how many receivers we reach, says the Forbes Magazine.

Etruscan Study Planned

The Etruscan, predecessors of the Roman civilization in the Italian peninsula, are to have their little-known history investigated by a group of Italian scholars, who organized for this purpose at a national Etruscan congress recently held at Milan. Present knowledge of the Etruscan race and its culture is very fragmentary, though they had a high civilization and proud cities in Italy when Rome was a mere collection of huts beside the Tiber. Their influence was strongly felt in the days of the early republic, and survivals of their religion probably held in the cults of Rome to the very end of paganism. It is believed by one of the Italian scholars interested in the movement that the famous burled city of Pompeii was originally an Etruscan settlement.

Nuts and Milk Chief Materials for Buttons

An older button than that of the mother of pearl was the so-called horn button, which was really hoof. The hoofs of cattle were boiled and cut up into slices and then pressed into buttons by means of metal dies.

At the present time the two most widely used materials for buttons are nuts and milk. The Corozo nut is the favorite missile of the monkeys in certain riverside regions of Central and South America, and its kernel of vegetable ivory can be turned upon a lathe, cut to any shape, dyed to almost any color. Its use dates to the modern button maker is only equaled by that of sour milk. Milk from which all the cream has been separated is soured either naturally or by means of rennet or some acid, and converted into casein or galalith, from which immense numbs of fancy buttons are made.

Ancient Name for Sea

The name "Erythraean Sea" originally was given by the ancients to the entire expanse of sea between Arabia and Africa on the west and India on the east, including the Red sea and the Persian gulf. During the rule of the Ptolemies, the name "Erythraean Sea" was confined by some geographers to the gulf between the straits of Bab-el-Mandeb and the Indian ocean; but it was far more generally used as identical with the Mare Rubrum or Red sea. Even as late as the Christian era, the expression "Erythraean Sea" was used in its original sense.—Kansas City Star.

Four-Century Watch

A watch which is four hundred and eleven years old and still keeps excellent time is owned by H. B. Cheney of Pasacock, N. H. It is a coin silver watch and is according to family history was purchased in Liverpool, England, by Mr. Cheney's great-grandfather who passed it on to his son. The present owner of the watch came into possession of it forty years ago, but is now eighty-one years old. Mr. Cheney did not realize the value of the watch until a visitor in the house took the watch to clean it and found it had the date of manufacture engraved upon the works.—Exchange.

The Most Wonderful Book in the World

MORE than thirty million Bibles or Books of the Bible were sold or distributed in 1925.

Would you not love to have companion volumes to help you discover the treasures in that Wonderful Book?

SWEDENBORG
(1688—1772)

explained the Bible's practical application to daily life; how it describes the life hereafter; what the Bible parables mean when spiritually interpreted.

His theological works—as issued by himself—have been published by the Houghton Mifflin Co. in most modern translation from the original Latin, in the Rotch Edition of 13 volumes.

The first twenty give the spiritual sense of Genesis and Exodus as written in Heaven; and volumes 26, 27, 28 give likewise the spiritual sense of the Book of Revelation.

Volume 29, Marriage Love, views from the union of the Divine Love and the Divine Wisdom the Law of Sex throughout all creation. It shows the crown and jewel of the Christian Religion, "the union of one with one only. Price $3.00.

Volumes 30, 31, 32, contain a full statement of the True Christian Religion as revealed from Heaven. $3.00 the set.

The whole 32 volumes in half-morocco at $15; in buckram, $40.

The following are the best introductory books to the Revelations of Swedenborg. They are in large print, bound in buckram, and contain from 360 to 485 pages.

	PRICE
HEAVEN AND HELL from things heard and seen	$1.25
Angelic Wisdom Concerning—	
THE DIVINE PROVIDENCE, which governs the Universe and the Heavens and the Hells, and the least as well as the greatest of all things in creation; and in the everyday life of man.	$1.25
THE DIVINE LOVE AND WISDOM, the profoundest book and revelation concerning God and His Creation ever written, first published in Latin at Amsterdam 1763; along with this is the "Intercourse between the Soul and the Body" first published in Latin at London 1769.	$1.25
Price of all three at one time, including postage	$2.75

Who Was Swedenborg?

Emanuel Swedenborg, the son of a bishop, was the great Swedish scientist, philosopher and theologian, whose vast range caused Emerson to term him the mastmodon of philosophy. Dr. Parley Cadman recently named him the Universal Genius.

Officially connected, by appointment of the King, with the great mining industry of Sweden, he mastered all the sciences of his time, and wrote the most useful books on metallurgy, minerals, geology, astronomy, and the human brain.

His life search was for the human soul. How his spiritual senses were opened, after he had 30 years of age, that he might reveal the human soul, the life after death, and the Bible itself, may be read in the above named, uplifting, useful books.

ROAD BUILDING

MORE AUTOS THAN ROADS CAN HANDLE

Construction of paved roads is lagging far behind the further advance in production of automobiles and trucks.

An interesting comparison may be drawn between the number of motor vehicles and the roads paved during the recent years by replacing the mileage of the highways built by-the number of cars that can use them at the same time without too great congestion.

On each mile of two-track road built there is room for 200 automobiles, according to figures recently cited by Dean A. N. Johnson of the University of Maryland, in a paper before the American Society of Civil Engineers at New York. But with this number there can be no passing around slower-moving vehicles, and all cars must move at a uniform speed.

In this paper Dean Johnson gave fifty to sixty feet as the minimum spacing between cars—or sixty to seventy-five feet, including the length of the car itself—when the cars were moving freely at twenty-five to thirty miles an hour on a main highway. Reducing this somewhat to be conservative, 100 cars can be accommodated in use on each side of a mile, or 5,280 feet, of pavement 18 feet wide, so long as they keep in line and all run at the same rate.

On this basis last year only one-third of the 3,050,000 motor vehicles registered could be used at one time on the concrete roads built during the year. While this is a better showing, proportionately, than in 1910, when less than one-sixth of the new cars could be so accommodated, in the actual number of surplus cars the congestion is growing. In 1914 the difference between those made during the year and those that could be accommodated by the concrete roads built was only 350,000; in 1919 it was 1,960,000, while in 1924 it had risen to 2,480,000.

Automobiles Tested to Find Wind Resistance

The engineering experiment station of the Kansas State Agricultural college is working on a problem to determine the wind resistance encountered by the average automobile on the public highways. This experiment, under the direction of Fred L. E. Conrad, head of the civil engineering department, is only one of a group of investigations being carried out by the national highway research board in an effort to discover the best material for surfacing roads.

The college has already completed a large share of its work, as tests have been made of 18 different types of bodies on various cars. The experiments are being carried on in an improvised wind tunnel 50 feet long 12 feet wide and 10 feet high. A motor-driven fan is placed in a position to offer a maximum wind velocity of 80 miles per hour. An automobile is driven into the tunnel and fitted on a swinging platform to which are attached spring balances for measuring the resistance of the car's nose against the wind pressure.

The data so far taken is interesting. It has been found that a car traveling at 10 miles per hour develops a wind resistance of only five pounds per square inch, while at 40 miles per hour the total resistance of wind amounts to 110 pounds, or 2½ times greater than the first speed with only quadruple speed.

Plan Widening Lincoln Way in Pennsylvania

The project of a 40-foot roadway on the Lancaster pike from Philadelphia to Downingtown (30 miles) is decidedly welcome. The 20-foot width has long since ceased to give effective accommodation to the large and growing stream of traffic along this section of the Lincoln highway.

The improvement, which has already begun, will be an addition of a 10-foot concrete bed on each side of the tar surface. The latter is pronounced good for years to come. This is highly questionable. But when it does become unserviceable, it will be replaced by concrete, making a 40-foot concrete pike. The policy in later to increase the width to 50 feet.

All this is a start in the right direction. Effective progress in highway building which shall accommodate the traffic of the future means the adoption of a simple policy to be applied on all through routes. It is "concrete roadways 50 feet wide." The sooner the carrying out of such a policy be gine, the better. For the next few years the aim should be to be ahead of traffic requirements, not merely up to them or a little behind.

Need of Improvement

Further need of road improvements in national parks to meet the requirements of increased travel, was emphasized in the annual report of the national park service, made public by Secretary Work. The road improvement work, which was begun under a congressional appropriation of $2,500,000, the report said, will be continued until the park roads are brought to the highest standard for automobile highways and will make it a pleasure to travel.

Friends and Enemies

Whatever the number of a man's friends, there will be times in his life when he has one too few, but if he has only one enemy, he is lucky indeed if he has not one too many. —Bulwer-Lytton.

Two Fire Causes

Electric light wires hung over nails and oily rags thrown into a corner are two of the things which give the newspapers stories about "fires of unknown origin."

MORTGAGE SALE

Default having been made in the conditions of a certain mortgage executed by Guy Peart and wife, Marion Peart, of Charlevoix, Michigan, unto Charlevoix State Savings Bank, a Michigan Corporation of Charlevoix, Michigan, dated May 21st, 1924, and recorded in the office of the Register of Deeds for Charlevoix county, Michigan, May 22nd, 1924, in Liber 64 of Mortgages, on Page 142, on which mortgage there is claimed to be due at the date of this notice the sum of $594.22, including the principal sum due with interest, together with an attorney fee as provided by statute and no suit or proceedings at law having been instituted to recover the money secured by said mortgage, or any part thereof, and whereas the taxes required by the statute to be paid on said mortgage were duly paid prior to the recording thereof.

Now Therefore, Notice is given that by virtue of the power of sale contained in said mortgage and of the statutes made and provided, said mortgage will be foreclosed by sale of the premises therein described, or so much thereof as may be necessary to satisfy the amount then due thereon together with the costs and expenses of the foreclosure, including the attorney fee provided by statute, at public auction, to the highest bidder therefor, at the front door of the Court House in the City of Charlevoix, Charlevoix county, Michigan (that being the place where the Circuit Court for the County of Charlevoix is held), on Saturday the 15th day of December, 1926, at eleven o'clock in the forenoon on that date.

The premises described in said mortgage being the land and premises and mortgaged by the said City of Charlevoix, County of Charlevoix and State of Michigan, viz: Lots seven (7) and eight (8) pointing the north fifty feet of Lot seven (7) of J. Milo Eaton's addition to the Village (now city) of Charlevoix, Michigan, according to the recorded plat thereof.

Dated, September 15, 1926.

Order for Publication—Sale or Mortgage of Real Estate.

STATE OF MICHIGAN—The Probate Court for the County of Charlevoix.

At a session of said Court, held at the Probate Office in the City of Charlevoix, in said County, on the 20th day of Sept. A. D. 1926.

Present: Hon. Servetus A. Correll, Judge of Probate.

In the Matter of the Estate of Feodora Pyotr, deceased.

John C. Gallagher having filed in said court his petition, praying for the sale of the interest of said estate in certain real estate therein described.

It is Ordered, That the 14th day of Oct. A. D. 1926, at ten o'clock in the forenoon, at said probate office, be and is hereby appointed for hearing said petition; and that all persons interested in said estate appear before said court, at said time and place, to show cause why a license to sell the interest of said estate in said real estate should not be granted.

It is Further Ordered, That public notice thereof be given by publication of a copy of this order, for three successive weeks previous to said day of hearing in the Charlevoix Sentinel, a newspaper printed and circulated in said county.

SERVETUS A. CORRELL,
22-31 Judge of Probate.

Final Administration Account

STATE OF MICHIGAN—The Probate Court for the County of Charlevoix.

At a session of said Court, held at the Probate Office in the City of Charlevoix, on the 15th day of September A.D. 1926.

Present: Hon. Servetus A. Correll, Judge of Probate.

In the Matter of the Estate of Sarah Jane Meyers, Mentally Incompetent.

Fred G. Meyers having filed in said court his final administration account, and his petition praying for the allowance thereof,

It is Ordered, That the 7th day of October A.D. 1926, at ten o'clock in the forenoon, at said Probate office, be and is hereby appointed for examining and allowing said account and hearing said petition;

It is Further Ordered, That public notice thereof be given by publication of a copy of this order, for three successive weeks previous to said day of hearing, in the Charlevoix Sentinel a newspaper printed and circulated in said county.

SERVETUS A. CORRELL,
21-31 Judge of Probate.

DEPARTMENT OF CONSERVATION
of the Stateof Michigan
Lansing, September 8, 1926.

Notice is Hereby Given, That the following described abandoned tax land, situate in the county of Charlevoix, was decided to the State by the Auditor General under the provisions of Section 7 of Act 126 of the Public Acts of 1893, has been withdrawn from homestead entry by the Auditor General and the Commission of Conservation, acting jointly, as provided by Act 141 of the Public Acts of 1901, examined and appraised and will be placed on the market by offering the same at a Public Auction to be held at the Office of the Department of Conservation, in the State Office Building in the City of Lansing, on Tuesday the 19th day of October, 1926, at ten o'clock in the forenoon, Eastern Standard time, at which time it will become subject to purchase in the manner provided by statute.

In case of sale the deed conveying the same will contain a clause reserving to the State of Michigan all rights in any mineral, coal, oil or gas found lying or being on, within or under the said land, as required by Section 8, of Act 240 of the Public Acts of 1909, and also reserving to the People of the State of Michigan the right of ingress over and across any of said tract lying along any watercourse or stream, as also required by said Section 8, Act 240 of 1909.

CASH For Dental Gold, Platinum, Silver, Diamonds, Magneto Points, False Teeth, Jewelry, any valuables. Mail today. Cash by return mail.
Hoke S. & R. Co., Otsego, Mich.

Office of Uncle George H. Van Pelt in Hotel Lobbies and on Hotel Porches

Charlevoix, Michigan,
Sept. 10th, 1926.

I was compelled to leave my many friends in Charlevoix in considerably more haste than I had anticipated. Perhaps many good-byes which I wanted to make, were left unmade. But I am doing much thinking of Charlevoix and my friends there, as I hit the high places on the roads through the central states and New England, en route to Boston. On this motor tour, the subject of roads will naturally be much in my mind, and here are some of the thoughts that come to me.

Something Worth Remembering.

1. That the first cost of a concrete road is the LAST cost.

2. Remember that concrete roads are of the greatest importance in prompt delivery of freight, as well as passenger traffic. These roads are overcoming the prejudice of the "indifferents" for those who don't care a blank whether they carry one-half ton of produce or freight, or three tons, to a load.

3. Remember that those who neglect to boost any improvement for the county are naturally against it, perhaps not openly, but there is no other conclusion to arrive at but that indifference is, at best but mild opposition.

4. Remember that we have hidden adversaries here who should be with us, and we must know that right will prevail, and that evil has not the power to overcome good. We must know that, if it is right for us to have a good permanent road around Lake Charlevoix we surely will have it, and the great reason why we shall have it is not only because we wish it for ourselves for our own particular benefit, but that it also will be for the benefit of those who come after us. Remember people here, who will then go on up to the north Peninsula, and in this way more people from other states will know of the great beauty of our State. We must also know that all jealously, hypocrisy, under dealing, and ill appearance of seeming to be with us when you know that they are "agin" us never yields any good to the operator. The good book says in Psalms, Keep the tongue from evil and thy lips from speaking guile.

5. Remember that it is your duty to attend all meetings of your Chamber of Commerce and also of the Charlevoix Resort Commercial Association, thereby encouraging your Presidents in the great work they are doing for you, for you cannot expect them to do as much for you without your help as they can do with it.

6. Remember that every town has a certain claim of goodwill, and that is something to help build it up in any way, yet they participate in all the public good that they

Aviators Who Won in the National Air Races

Here are the winners in the national air races conducted at Philadelphia. Sitting, left to right: Lieut. L. N. Wolf, United States army, winner Liberty Bell trophy; R. B. Heath, Chicago, winner Aero Digest and Betsy Ross trophy; H. H. Davis, Atlanta, Ga., winner Valley Forge trophy; C. C. Champion, Jr., Philadelphia, winner Detroit News Air Transport Trophy and Aviation Town and Country Club of Detroit trophy; Casey Jones, Garden City, L. I., winner Independence Hall trophy; Lieut. G. T. Cuddihy, United States navy, winner Kansas City Rotary Club trophy; Fred Dye Hoyt, California, winner the-big-Sequel race and trophy; Lieut. L. C. Elliott, United States army, winner John L. Mitchell trophy. Standing in rear: H. N. Taylor, Philadelphia, chairman race committee; H. J. Wymer, Detroit, committeeman; Bob Hewitt, Philadelphia, winner Aero Club of Pennsylvania trophy; Porter Adams, Boston, president National Aeronautic association; Lieut. Orville Stephens, United States army, Liberty Engine Builders' trophy.

Soured Wine Rescued by Children in Brooklyn

This photograph shows the remarkable scramble among children of Brooklyn, when a lot of soured wine was dumped in the gutters. The boys and girls scooped up all they could and carried it to their homes.

Mountain Lions Are His Game

Jay C. Bruce, state lion hunter of California, has returned from a six weeks' hunting trip in the El Dorado National forest, during which he killed eleven mountain lions and captured two 15-pound cubs alive. He is shown above with three dead lions draped over his automobile. In all, he has killed 275 of these animals.

Krim Sailing to Exile on Reunion

SHORT ITEMS OF INTEREST

Opium provides more than one-fourth of the revenue of Indo-China and British Malaya.

Apple growers in Washington state are attempting to kill off codling moths by running a powerful electric current through the trees daily.

Autopsies performed in hospitals indicate that about 20 per cent more people have cancer than are known to have it at the time of death.

In the opinion of many students of bird life the gray linnet has the most beautiful voice.

According to an English scientist modern man consumes from three to four times as much food as his stone-age ancestor.

Refrigeration of foods has come down through the centuries from the time when Alexander the Great stored wines in snow-filled ditches.

Uniform Marking System Is Urged

Plan Would Reduce Errors in Regard to Ownership to Minimum.

(Prepared by the United States Department of Agriculture.)

Marketing of live stock in co-operative shipments is a very important feature in conducting the business of the shipping association, especially if the stock is to be sold according to ownership or if the commission firm is expected to operate the returns to each owner. It would be advisable to establish a uniform system of marking live stock for use by all associations in the country, says the United States Department of Agriculture. Such a plan would reduce errors in regard to the ownership to a minimum. A system of marking which is suitable to the needs of all associations has been suggested, and is, briefly, as follows:

Mark Cattle and Calves.

Cattle and calves would be marked by using shears to clip numerals in Roman numerals on one hip, preferably the right hip, only the first ten numerals would be used. A single bar, like a minus sign, placed before each numeral would raise the number by ten. Two parallel bars before each numeral would raise it by 20. Thus V, —V, =V, would mean 5, 15, and 25, respectively.

Hogs are marked by clipping the numerals on the top of the shoulder, back, or rump, using only such combinations as can be made with four marks or less. Or they may be marked on the side of the shoulder, body, or ham, in which case not to exceed three marks would be used. Shears with curved blades about eight inches long, commonly called "roaching shears" are most generally used for marking.

Fluid for Sheep.

Sheep are marked by using branding fluid applied with a half-inch stiff round-bristle brush. The marks should be placed on the head, top of shoulders, back, or rump. In no case should paint be used for marking any kind of live stock. It is detrimental to the wool of sheep and unsatisfactory on hogs because it smears.

Cut Alfalfa Soon After It Lodges, Says Expert

Just what is the best time to cut alfalfa for hay, all things considered, is a problem which farmers and agricultural experiment station workers have not definitely solved, according to A. C. Arny, field crops specialist of the Minnesota Agricultural Experiment station in a talk before a group of scientists at the Minnesota station.

About one thing, however, Mr. Arny was emphatic, and that was that alfalfa should be cut very soon after it lodges, as it does generally in Minnesota. The reason for this is that when the crop lodges the leaves underneath turn yellow and fall off and the hay produced is decidedly inferior. In 1924 alfalfa cut before lodging retained 70 per cent of its leaves, while alfalfa cut after lodging retained only 24 per cent.

Mr. Arny, therefore, advises the immediate cutting of alfalfa that has lodged, even if it is only in the bud stage.

Black Raspberry Culture

The old wood of black raspberries should be pruned out as soon as it has fruited, and the laterals on this year's wood should be cut back to a foot or 18 inches next spring before growth starts. Clean cultivation is the rule, usually done with a one-horse cultivator, although the small garden tractors are beginning to take the place of the horse. On very light soil, a shallow cultivation after each heavy rain will be found beneficial, and in any case the surface soil should be kept loose and open.

Blindness in Hens

Hens may become blind due to bits of foreign material lodging around the eyeball and starting irritation, or it may be due to ocular roup. Most forms of colds and roup cause more or less trouble in the eyes of the bird. The blindness and weakness may be the symptoms of some disease. Sometimes a hen gradually becomes blind, due to causes which it seems almost impossible to determine. In such cases the only remedy is to kill the bird.

Exhibiting Cattle

Exhibiting good cattle at fairs is the best local advertising possible, but leading out dirty, undersized cattle is expensive advertising. Dairy cattle need only be in moderate flesh to show to advantage. Cattle to be shown should receive some grain, however, from now until fair time and large amounts of hay in order to develop middle. It will improve the quality of hide and hair to blanket the animals with burlap sacks for six weeks previous to showing.

Farm Hints

Don't turn cattle or sheep in clover when the dew is still on. They are likely to bloat.

* * *

Cattle should be blanketed for a period of six weeks prior to showing them at the county fairs.

* * *

It usually pays to spray potatoes even though there may not be any conspicuous blight on them.

* * *

Young chickens should have plenty of range and roosting space if they are to make good gains. Feed will not compensate for scanty quarters, especially if they are to be breeding stock.

* * *

A root storage cellar is an essential part of the farm equipment. A bulletin put out by the New York state college of agriculture describes the construction and management of them. Ask for it by number—E 22.

IN BRIBERY CASE

Mrs. Mary F. Finan of Chicago who was elected president of the International Federation of Catholic Alumnae in convention at Notre Dame university, South Bend, Ind. Mrs. Finan is an alumnus of Mount St. Joseph college, Dubuque, Iowa.

Richard Merton, chief witness in the trial of Harry Daugherty and W. Miller, accused of conspiracy to defraud the government in the "enemy case," has testified to paying a large sum to the late John T. King as a fee for his services but claimed that he had any intention of bribing the defendants.

Smell Like Peppermint

At a recent flower show there was exhibited a plant called the bull's-eye geranium. It has thick velvety leaves and a mauve-colored flower. The leaves have a rich scent of peppermint.

Speak for Themselves

Honest and courageous people have very little to say about either their courage or their honesty. The sun has no need to boast of his brightness nor the moon of her effulgence.—Hosea Ballou.

COATS OF UTILITY TYPE; MILADY'S SHOES COLORFUL

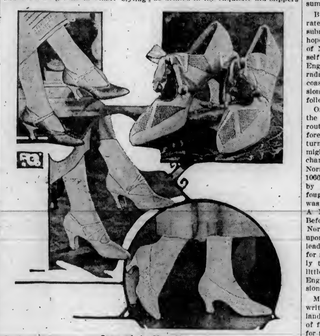
IT IS high time to be buying one's new coat for fall, and just what shall it be? It all depends, for there is a most clean-cut distinction drawn this season between informal and formal coats. As to the practical utility coat, and it is the one which interests most of us who are either at school or at business and if at leisure planning health-giving hikes over countryside and moor, the major trend is to handsome and striking novelty woolens, fur-collared and often fur-cuffed, generously pocketed and sturdily built in fashion smart as smart can be.

When it comes to dressy wraps for social occasion, that is a different

Fur-Collared Woolen Coat.

and endless scar of whims and fancies, of intricacies of design and elegancy of fabric sometimes gleaming with gold and silver interweavings, richly fur-laden and garnitured with handiwork of world-wide attainment.

Tweeds of dumbly promise accent deep rich colorings this season and the very last word in practical cloakings of irresistible attraction is the fabric of ombre coloring, that is plaids or stripes shaded in gradations. There are such combinations available as red ombres in wide stripes, plaids; also small block designs. Then there are soft brown ombres done in complementary tints and the new greens in ombre styling



Some of the New Shoes.

are exceptionally handsome. Black and white plaids in deep-pile wool are stunning trimmed with either black or white fur.

It seems as if novelty woolens call for fur as unique and it is a fact fur trims are almost without exception included in every coat styling. A fur collar is almost a certainty on every topcoat for sports or utility, and often there are wide fur cuffs, likewise frequently neck to hem revers, but bonfline borders are conspicuous by their absence.

The attractive topcoat in the picture aptly defines the popular trend in coats for schoolgirl, business woman and for general practical wear. The fur collar is toned to the browns in the fabric patterning, as is also the lining which is of quality-kind crepe de chine. The raglan sleeved topcoat is very much in evidence this season.

Let's talk of something cheerful—shoes for instance, for never have there been more fanciful, more colorful or more beautiful than at this very moment, and for time to come according to displays of advance autumn modes. Not only are the leathers of which present-day shoes are made almost sensationally unique, but there is also an interesting use of fascinating color.

To be sure, for practical utility wear, there are excellent styles which help us keep in mind that "shoes is shoes," but when it comes to the dressier modes, oh me, oh my! where are the adjectives to describe them. Perhaps this picture of four of the reigning styles will best tell the story of the elaborate trend of modern shoe-ology.

In the list of shoe fashions the pair shown first in this illustration register as strap sandals. In line with the thought that the smartest footwear this season invariably features a combination of colors, narrow underlays and heels of blond kid combine with champagne kidskin.

A French tie-model is shown to the right which declares most frankly the supremacy of the extremely ornate, in that it combines royal blue lizard skin on a background of pearl gray kid.

The newest note in Paris is the slipper which appears from the outer side to have but one strap, which develops into three narrower straps across the instep. This model pair in the illustration shown to the left, are of parchment kidskin.

Cutout effects are very fashionable as defined in the exquisite kid slippers which conclude this interesting group of leading footwear styles.

The close relationship between fall dress colors and the tones and tints of new leathers is a subject to ponder over. Many snakeskin slippers appear to have been dyed to match the costume. Bright green, royal blue and red are shades noted in footwear now at fashion's rendezvous.

In practical daytime styles for fall, favor is expressed for black patent leather, also tan in both dark and light shades. Growing demand for moderate cuban heels is noted, especially among American women, although abroad the higher heels are very much in evidence.

JULIA BOTTOMLEY.

Mole to Be Popular

Mole, somewhat neglected as a fur recently, is mentioned most favorably as a fall trimming. It combines advantageously with the fashionable greens and reds of the moment.

Striped Jumpers

Jumpers of fine white wool striped in red and beige are worn with the new sports skirts of beige or white wool crepe. These are plaited in groups to allow free movement.

Ostrich Boas Two-Toned

Ostrich boas are being conspicuously featured in the smartest shops. A number of the best dressed women in Paris have recently appeared with uncurled ostrich boas in two-toned shadings, the colors matching those of the hat.

Tailored Effect

Rows of scalloping, giving the effect of many tinies, trim some of the new chiffon frocks.

THE WORLD'S GREAT EVENTS

ALBERT PAYSON TERHUNE

(© by Dodd, Mead & Company.)

The Conquest of England

LITTLE has been said of England in this series. Not that its history up to this point had not been of great interest, but it had lost until the Eleventh century comparatively little influence on the general history of the world.

In the early days the country had been populated by heathen, savage tribes forever at war with each other. They had combined against the Romans who invaded the country under Julius Caesar, and for a time were successful in repelling the better-disciplined foe. The Romans won difficult foothold in Great Britain, but the natives at last drove them out and won independence. Then Teuton warriors from the borders of Germany and Scandinavia overran England. These new invaders were known as "Saxons," though in time they called themselves "English." They completely won the country, which they proceeded to apportion and then to fight over among themselves. Danes came the Danes, or Northmen, conquered the Saxons and gained control of England. But the Saxons within a quarter century put down the Danes, and made themselves once more masters of the sorely distraught island. After which, in spite of internal strifes and petty wars, they remained in power until the middle of the Eleventh century.

Then came a political snarl whose rights and wrongs have never been clearly settled. The muddle, briefly, was as follows:

Edward, king of England, had no sons. He was related to the dukes of Normandy (descendants of the Norse pirate, Rollo), and promised to make Duke William of Normandy his heir. As the English throne was not a private possession to be bestowed at will, Edward had not the slightest right to make this promise. He was a man whose alleged piety served as a cloak for political intrigues and won for him the nickname of Edward the Confessor. He was Norman in sympathies, and though he knew his Saxon subjects hated the Normans, he still planned to overthrow the brave Saxon dynasty in the latter's favor.

The "political boss" of England at the time was one Earl Godwin. He was the people's idol, represented the pro-Saxon, anti-Norman element and was strong enough to defy even the king. Godwin's son, Harold the Fair-Haired, was exiled from England and fled to Normandy, where Duke William, for reasons of his own, received him cordially. In return for this kindness (the Norman duke later declared) Harold promised to support William's claims as Edward's successor and did him homage as his rightful master. Harold returned from exile, and on Godwin's death inherited the old earl's popularity and political power.

So when, in 1066, King Edward died without an heir, the people unanimously chose Harold as king of England. William at the same time sent envoys to remind him of his promise. Harold packed the envoys' off again with no satisfactory reply and assumed the sovereignty of the country.

But the strain of Scandinavian pirate blood would not allow William to submit tamely to this downfall of his hopes. He stirred up Hasbrudn, king of Norway, against Harold, and himself fitted out an expedition against England. The Norsemen under Hadrada swept down upon the British coast (the last of their many invasions) and William raised an army to follow their example.

On September 24, 1066, Harold met the Norwegian army and utterly routed it, driving the Scandinavians forever from British soil. Then he turned to meet William, who, with a mighty Norman host, had crossed the channel. The two armies—Saxon and Norman—met at Hastings, October 14, 1066. Harold's army, already weakened by their battle with the Norsemen, fought heroically, and ever in the van was their gigantic, yellow-haired king. A Norman arrow smote Harold. Before he could recover himself four Norman knights hurled themselves upon him and killed him. Seeing their leader fall, the Saxons fled. Though for five years longer they fought valiantly to repel the Normans, they were little by little subdued, until by 1071 England was a mere Norman possession.

Much pathetic nonsense has been written of the brutal conquest of England by Norman robbers. As a matter of fact, it was the best possible thing for the country. The Saxons had been a heavy, boorish, stupid, unprogressive race. The Normans were up to date, alert, eager for improvement and advancement of all sorts. The rough strength and ruder virtues of the Saxons bleached at touch with the skill, culture and chivalry of the Normans; the combination forming one of the greatest, most powerful nations the world has ever known. Within a few generations Saxon and Norman were merged. To the result of this "merger" England owes her later progress. But the conquest's chief result was the wedding of the Saxon and ancient French dialects into the English language.

While the conquest itself was without legal or moral justification, yet its prime mover's genius made it the ultimate benefit to humanity at large that it proved to be.

Ice Boat's Velocity

It is a fact that an ice boat can go faster than the wind that drives it? An ice boat encounters the greatest velocity of wind when its course is 90 degrees from the wind and when the apparent wind is twice the actual velocity. The greatest speed is attained at 120 degrees, when her speed is twice that of the wind. The most rapid progress to leeward is made at 150 degrees, when the apparent velocity of the wind will be equal to its true velocity.

Too Much "Acid?"

Excess Uric Acid Gives Rise to Many Unpleasant Troubles.

AUTHORITIES agree that an excess of uric acid is primarily due to faulty kidney action. Retention of this toxic material often makes its presence felt by sore, painful joints, a tired, languid feeling and, sometimes, toxic backache and headache. That the kidneys are not functioning right is often shown by scanty or burning passage of secretion. Thousands assist their kidneys at such times by the use of *Doan's Pills*—a stimulant diuretic. *Doan's* are recommended by many local people. *Ask your neighbor!*

GERARD ON TARIFF

James W. Gerard, ambassador to Germany under President Wilson, and treasurer of the Democratic National committee in 1920, in a recent interview said:

"The only way the United States can defeat the hand of European and Asiatic onward us is to maintain the strongest fleet, army and air force in the world. Europe is boiling. Europeans feel that we are economically rich, that they are kept out of this country and can't sell their goods here, because they hate us as was evidenced by the proposal of the League of Nations Council at Geneva that the league have power to act against commercial supremacy, a direct slap at the United States.

Germany took advantage of her fall in currency to put all her large industrial plants in order, and is now ready for producing goods on a large scale capacity, greater than any other nation. The high tariff is the only protection the United States has as an offset, for if it is lowered the high waged American worker will meet the direct competition of the low waged German. As a Democrat I think it is impossible to change the present tariff.

Mr. Gerard is one of the leading men of his party and his statement supporting the present tariff came as a real blow to the free traders who have hoped to capitalize the present unpopularity of the United States in Europe, in an effort to reduce the tariff below the point of protection. Mr. Gerard is undoubtedly right. There are only two courses open. We must keep our defensive armor, including the merchant marine intact, must protect our American producers and American wage earners; and must continue to mind our own business, or we must supinely yield to the pacifists, turn our home markets over to the cheap labor of the world and submit to the control of the League of Nations as an misguided sentimentalist effort to make Europe love us.

Viewed from this light there is only one thing America can do and that is to stand up for its rights as a free nation and protect the progress and prosperity of its people. To surrender would get us no affection, only contempt: Sentimentalism would be mistaken for cowardice. Mr. Gerard has given the free traders and internationalists a timely word of warning. Let us hope that they heed it.

AN AMERICAN FLEET

The expression of the President's views in behalf of a merchant marine under the American flag was a needed utterance. It came with particular timeliness following the extraordinary interview with Matthew C. Brush, advocating the sale of the government ships to foreign owners, if need be.

In defence of this move this American shipping expert argued that an American fleet was unnecessary for national defence. We could seize enough ships in our harbors in the event of hostilities he declared. Just how we could take over the ships of neutrals he did not explain. Nor did he discuss the relevent fact that our present giant fleet was built to meet an urgent war need that no amount of seized shipping could fill.

Mr. Coolidge laid down a sound rule in declaring that no ships should be sold save to be operated under the American flag. A possible exception might be made in the case of small vessels of the tramp class. The national need of the faster freighters is at great in time of peace as in time of war. Regular fast service under our flag is essential to develop and protect American commerce. As the President suggested the country is ready to spend enough money to operate these ships pending their sale.

The pity is that Congress is so slow to face the realities of this cost. The present methods of operation are wasteful, and, in many cases, do not develop bona fide American lines. The vices of government operation, demonstrated repeatedly in many fields, cannot be avoided by lease or similar methods of control. The country desires a powerful merchant marine. It is willing to pay for it. Why not spend this price in the most efficient possible way by payments in private lines upon a basis of mail service or whatever other basis seems most effective?

With such a system of government support there would be little difficulty in selling the fleet to American owners. The wastes of government operation would be ended and the upbuilding of our American shipping personnel ashore and afloat would be certain of accomplishment. Meantime it is good to know that the fleet will not be dispersed among foreign owners.—New York Herald Tribune.

SENT TO DEBTOR PRISON

There are a few more interesting stories than that of Robert Morris the financier of the American revolution and close friend of George Washington, who after rising to great wealth and providing the money which made possible a successful fight for independence, became a bankrupt and spent years in a debtor's prison.

Under the title "The Financier of the Revolution," H. O. Bisl.op writes in the National Republic of Mr. Morris and says concerning the reversal of his fortune, due to unwise speculation:

Morris made the mistake of his life when he embarked on an orgy of speculation. 'A contract to furnish French merchants with 60,000 hogsheads of tobacco in 1785, 1786 and 1787, proved unfortunate. He sent a vessel to China by way of Australia, which failed to bring him wealth. He successfully traded in wild land in western New York for a time and then decided to conduct similar operations on a large scale. In 1795 and 1796 he bought large acreages in various states, and, with his associates formed the North American Land Company. Their holdings, six million acres in all, were located in Pennsylvania, Virginia, North and South Carolina, Georgia and Kentucky. Washington remonstrated with him for going into these enormous speculative enterprises at his advanced age, but he replied that he could not deal with small things. 'I must be either a man or a mouse,' he declared.

Finally, the crash came, and poor old Robert Morris, in accordance with the law of that time, was obliged to enter a debtor's prison on February 16, 1798, and remained until August 26, 1801. It was a trying ordeal for a once wealthy man 64 years of age. To a friend he wrote: 'Starvation stares me in the face; I have not money enough to buy bread for my family.' After a few weeks he became reconciled to his fate and even wrote a verse of poetry, and jokingly invited a friend to dine with him at the 'hotel with the grated doors.' His wife and daughter visited him daily, and their distress greatly affected him. Washington visited him in prison and offered words of consolation. General and Mrs. Washington extended a warm invitation to Mrs. Morris to visit them at Mount Vernon."

HELPED REVOLUTION

One of the real causes of the Revolution was a desire by the colonists for a protective policy to foster their manufactories, a policy resented by Great Britain according to George B. Loekwood, in the National Republic under the caption "The South and Protection." Mr. Lockwood says that the early southern leaders were for protection and he predicts that the South will soon again be a bulwark of the protective principle. In conclusion he says:

"The only hope for permanent relief for the farmer is the solution of the problem of over-production. That over-production can be cured only by more withdrawal from the farm to the factory. That withdrawal is possible only in case we maintain and expand our industries, and protect American farm products in our own markets. The slowing down of industry can only result in forcing more people to the farms, with further depression of prices of farm products.

As for the South, it will soon be again, as it was immediately after the Revolution and even during the lifetime of the Whig Party, a stronghold of protectionist sentiment. For the South has learned the unwisdom of putting all its economic eggs in the agricultural basket. It has learned better than to be simply a producer of raw materials out of which others make the money in turning them into an infinite variety of products for human use. If the protection cause has lost the support of great eastern industrial and financial interests which have become international in their sentiments as well as in their investments, and if the western warmers are foolish enough to want to punish themselves over the shoulders of American manufacturers, it is rapidly gaining the support of the majority of southerners who are seeing the lift of the section quickened and its progress rapidly advanced through the introduction of domestic manufacturers."

TARIFF AND CANCELLATION

One of the personally popular statesmen in the United States Senate is Senator Pat Harrison of Mississippi, who is noted among other things for his humor. And he is so full of humor that sometimes he is humorous when he intends to be serious. A good proof of this is furnished in the Senate's recent statement concerning the proposed cancellation of the allied debts. Senator Harrison very properly opposes cancellation and proposes that these debts be paid. He also warns us very properly against an insidious campaign of propaganda looking toward the creation of sentiment for the cancellation of the debts.

Mr. Harrison properly mentions Newton D. Baker as one of those who are urging cancellation. And then comes the unconscious humor, when he says:

"This propaganda is being engineered in this country by certain people who favora high tariff. They believe the high tariff would hinder Europe paying the debts, and elimination of the debts would end agitation for lowering the tariff."

Doubtless Mr. Baker is one of the high tariff advocates whom Senator Harrison has in mind. If you think Mr. Baker is in favor of cancellation in order to stop agitation against the tariff just ask him.

As a matter of fact those who are seeking cancellation are the internationalists. Most of them are the people who take the viewpoint of Europe on nearly every occasion. Nearly every debt cancellationist is in favor of our going into the League of Nations, is against any form of aid to maintain the American merchant marine, is against the protective tariff in principle and practice. For some reason or other all these tendencies seem generally to go together.

The cancellation of the debts which Europe owes us would not stop the agitation against the high tariff. A victory of this kind would only whet the appetites of the internationalists. They would pass from cancellation to a demand for free trade, from free trade to the League of Natious and anything else which might take Uucle Sam into a chimerical universal brotherhood in which all we would have to do would be furnish the money and act as valet to Europe's political complications.

Senator Harrison is right. The debts ought to be paid but they can be paid without disarranging our tariff. Our present volume of imports indicates this. And if they are cancelled the people in America who will rejoice will not be the protectionists and other nationalists but the pacifists, the free traders and the little brothers of Europe.

"So long as our government attends exclusively to our interests, the welding of our racial groups into one people goes forward normally—and, to the eyes of history, rapidly. But the moment when, without provocation, we take sides in European disputes, every one of which had its roots in local prejudices, ambitions, rivalries and hatreds hundreds of years old, that moment the merger of our racial groups stop; and the members of those racial groups begin to think and feel in terms of the land of their origin—and they vote accordingly. They become factions of other countries, and those cease to be exclusively American.. In this fashion racial groups are revived and fostered But the persistence of those groups is fatal to American solidarity; and to achieve American solidarity is our basic problem. Upon the solution of that problem depends our permanent well-being and happiness as a nation and, in the end, our security and even existence as a people. Our racial evolution must go on until every citizen thinks and feels that he or she is an American and nothing but an American. Every American must be able to say, and say from the heart, not that I am an American first but some other country second—for America first but Italy second, America first but France second, America first but Germany second, America first but England second, America first but Ireland, Lithuania, Poland or Czekoslovakia second—but first, last, all the time and exclusively I am for the United States."—Albert J. Beveridge, former United States Senator of Indiana.

THE THEATRE

What is the new commandment? Moses wrote ten of them. But another man added one to them. That man is Robert T. Kane, movie producer, who now stands in a fair way of sharing Moses' fame with "The New Commandment," at the Palace theatre, Saturday and Sunday, Oct. 2-3.

"The New Commandment" is a society melodrama full of thrills, pathos, comedy, beauty and romance. It is dazzling entertainment with novelty to spare.

Howard Higgin directed "The New Commandment" and in so doing achieved a directorial victory. Sada Cowan and Higgin made the screen adaptation of "The New Commandment" from Colonel Frederick Palmer's great novel, "Invisible Wounds."

The lobby of a prominent New York hotel is turned into a menagerie when a grizzly cub belonging to the daughter of a wealthy Alaskan miner escapes from his room. The incident occurs in "The Wilderness Woman," Robert Kane's new production, which will be shown next Monday and Tuesday at the Palace theatre.

Aileen Pringle, Lowell Sherman and Chester Conklin are featured in "The Wilderness Woman." After escaping from his room the grizzly spreads consternation among the hotel guests by his wild antics. The cub is a polished actor. He has appeared in the movies before and knows his business.

American girls have become countesses and duchesses through marrying foreign noblemen, but in "The Crown of Lies," which will be at the Palace theatre next Wednesday and Thursday, Pola Negri becomes a queen when she ends up by wedding a likeable young American salesman, in order to rule his tiny cottage.

This new Paramount production unfolds a story of colorful romance. It shows gorgeous Pola in the simple garments of a boarding house maid. In an amazing conspiracy, she reigns as queen of a small Balkan kingdom and her striking gowns seem to sound a new fashion note for the coming season.

Excitement! Thrills! Pageantry! Pomp! Splendor! Beauty! Paris! Duels! A Castle Afire! Military Festivals! Mystery! Love! Melodrama! All this—and more, is promised the movie-goer on Friday, Oct. 8th, when Paramount's "The Secret Spring" is shown at the Palace theatre.

The film was made in France by Leonce Perret, the man who directed Gloria Swanson in "Madame Sans Gene," and the principal roles enacted for the most part by players of the Comedie Francaise. Hudsette Duflos, acclaimed France's fairest, has the leading role. "The Secret Spring" was adapted from Pierre Benoit's famous novel "Koenigsmark."

Narrowly Escapes Making His Exit.

It is not our custom to shift the responsibility of mistakes this paper makes to the shoulders of some one else, but last week our patience was tried to the limit. In lifting the type for an obituary, the boy in the office, in some manner that he is unable to explain, got a one-line ad for the show at the Princess theatre mixed in with the obituary. The line read: "What has became of Sally?" It appeared in that part of the obituary that told about the funeral. Nothing that has appeared in this paper in years has created so much comment and as much as we regret the mistake we are trying to bear up under the strain and assure our readers that if anything like that happens again we will be ready to quit and take a job on the section." If the name of the deceased had happened to been Sally all we can say is that we would have been running yet. —Paul Riley in Neidenbh, Kan., Register.

Michigan's Blind Babies

Away back in 1913, on May 16th, Governor Ferris of Michigan, signed the bill giving the Superintendent of Public Instruction, power to provide for the Blind Babies of the state. They were sent to the Monroe Home for blind babies. In time, the Monroe home was closed and the babies taken to Coldwater and placed in a cottage there. More or less changes have been made since but the mothers of the state are slow to report their babies. It may be that they don't know of the care the state is prepared to give.

The International Sunshine Society, a philanthropic newspaper club, with headquarters at 95 Fifth avenue, New York City, Mrs. John Alden founder and president general, urged the passage of the Blind Baby Bill in Michigan and helped to establish the Monroe home.

This society has handled over 600 blind children, mostly babies, and a large institution for their care has been established in Senaga, N. J., chiefly to accomodate emergency cases from any state in the union. Summer school has just closed but there are no Michigan babies in the class of 50, for Michigan takes better care of the infant blind that most states.

However, Mrs. Alden is urging the Club women of Michigan to report to her every blind baby they come across and together they may be able to induce the mother to give their children the special care the state now provides for them.

Swallowed Itself!

Recently one of the lion-constructors in the Hamburg zoological gardens swallowed so much of its own body that it became tied up in the form of a ring and was suffocated.

Wonderful Weighing Machine.
A laboratory weighing machine has been invented so small that it weighs only three grains itself, and sensitive to a ten-millionth of a milligram.

WANT COLUMN

HOUSE FOR RENT—Will rent for winter months, residence located at 104 Garfield-av. Interested parties call at the residence.

New Palace Theatre

ATTRACTIONS FOR THE WEEK

Saturday-Sunday, Oct. 2-3

"The New Commandment," with Blanche Sweet and Ben Lyon. To him who had known many loves came the angel of Flanders. Her tender hands reshaped a life pledged to finish on a field where win or lose, all are heroes. From her lips he heard the new commandment. From the novel "Invisible Wounds," by Col. Frederick Palmer. Also comedy, "Meet My Girl."

Monday-Tuesday, Oct. 4-5

"The Wilderness Woman," with Aileen Pringle, Lowell Sherman and Chester Conklin. She has a punch like dynamite—a figure like a queen—a temper like a tornado—the soul of a baby girl—and the heart of a woman. Her father made a million with a pick. She helped him spend it with a shovel. And when love came into her life, why—you'd better be there to see the fun. Comedy, "Who's My Wife," and Felix, the Cat.

Wednesday-Thursday, Oct. 6-7

Pola Negri in the "Crown of Lies," with Noah Beery in the cast. The truth about "The Crown of Lies" is that its Pola's greatest film. And she's every inch a queen in her gorgeous gowns. Also Fox News.

Friday Oct, 8th

"The Secret Spring." See the bathing beauties of L'Exotic, Paris' leading cabaret. The big Royal wedding; wild auto chase; spectacular fireworks display. Also comedy, "Soapsuds Lady."

Highway Research Board Seeking Low-Cost Road

Natural earth roads, which compose 85 per cent of our rural highway systems, have been the subject for a series of studies by the federal highway research board.

"We realize what a great economic waste this is," says Prof. S. S. Steinberg of the University of Maryland, "when we consider that one-third of all the automobiles in use are owned by farmers, most of whom are compelled to use the earth roads.

"Many attempts have been made to solve this problem. North Carolina has used a sand asphalt surface, made up of a mixture of 93 per cent sand and 7 per cent of asphalt.

"Realizing that this is one of the most important problems confronting highway engineers, the highway research board is attempting to co-ordinate completed and current research on the subject with the hope of developing a low-cost road surface that will be suitable for light traffic."

Illinois Paves Roads to Save Maintenance Costs

The vast saving in annual maintenance charges resulting from the paving of Illinois' roads is indicated by comparing the cost of maintenance in Illinois and Iowa. The report on Lincoln highway maintenance in Iowa, shows that it cost $201,371 to keep in repair the 380 miles of the Lincoln highway in that state last year. Eighty miles of the reconstructional road are paved, subtracting greatly from the total expenditure, but even then the average cost of upkeep was $529.52 a mile. In Illinois where the entire mileage of the Lincoln highway is paved, the maintenance cost is estimated at $17,646.20 for the same period or an average of $103.80 a mile. Apparently, if the Lincoln highway were paved entirely across Iowa a yearly saving of $450,12 a mile would be effected, or over $102,000 a year.

Cottage Rentals for the 1927 Season

Sir Chunihal Mehta, the new finance minister of the Bombay government, has inaugurated the dry movement in the Bombay presidency.

Reasonable Deduction

A well-known criminal lawyer who has a remarkable memory was accosted on the street one day by a man who, he remembered, had a long jobon record. The man produced what he termed a rare type of parrot, but the lawyer immediately recognized it as nothing more than a painted sparrow. "This bird flew into my room," he began. "What species do you think it is?" The lawyer after pretending to examine the sparrow, replied, "No, I can't tell you exactly what breed it is, but judging from the company it keeps, I should say it is a jail-bird."

—) PERSONALS (—

Mr. and Mrs. T. J. Brady visited friends in Petoskey last Sunday.

Mr. and Mrs. Albon Smith and Mrs. Viola Ward were Petoskey visitors last Monday.

Messrs. Perry Smith and Albon Smith were business visitors in Cheboygan early this week.

Miss Cecile Louise Pollock entered Albion College and Conservatory of Music last week.

Mr. R. J. Dallas, of Corunna, a hay fever victim, is spending a short vacation in Charlevoix and vicinity.

Mr. and Mrs. C. G. Cooper were the guests of friends at a bridge party in Boyne City last Thursday night.

Mr. Lou Briggs, of St. James, spent two or three days in Charlevoix during the first part of the week on business.

Mr. Robert P. Hargitt returned to Cincinnati, Ohio, yesterday after spending a vacation of several months here.

Mrs. Russell Blakeslee, for some weeks past visiting her parents, Mr. and Mrs. James Gaskin, returns to Detroit today.

Mrs. Irving Leventon, who spent about one week with relatives in Chicago recently, returned to Charlevoix last Friday.

Elmer McCann and Earl Gallagher returned to St. James last Saturday after spending several days with friends in this city.

Mr. Norman Broderick, a guest for several days at the home of Mr. and Mrs. F. S. Myers, returned to his home, Mount Clemens, last Friday.

W. E. Parmelee made a business trip to Lansing this week, leaving here Sunday and returning Tuesday, making the round trip via the motor route.

John Pollock went to Ann Arbor last week, entering upon the fifth year of his course in electrical engineering. He expects to receive his degree in June.

Patrick Lafreniere, of St. James, was a visitor in Charlevoix during the first part of this week, making the trip from St. James Sunday and the return Tuesday.

Mrs. J. C. New, who occupied the W. B. Francis cottage, 308 Belvedere avenue, through the summer season, returned to Indianapolis, Ind., a few days ago.

Lou Briggs returned to St. James Tuesday, taking with him a new Willys-Knight 70, a purchase made early this week through the local agency of Brown & Wallace.

Miss Elizabeth Harris who has been at the Harris summer home for several weeks returned to Oak Park, Ill., Wednesday, making the trip via the Steamship Manitou.

Mr. Jerome Cole, of Boyne City, was in Charlevoix yesterday with three or four lads, juvenile offenders, who were before Judge Correll to answer to some petty charges.

Mrs. John G. Clark and daughter, of Toledo, are spending the week with Mrs. Clark's mother, Mrs. H. L. Iddings and incidentally attending to personal business affairs.

Mr. and Mrs. Joseph Howard motored to Sault Ste. Marie last Friday, where they will spend a week or two with a sister of Mrs. Howard's, Mrs. Emory Pierce and family.

Walter Smith went to Muskegon last Saturday and may decide to spend the winter at that place. Should he conclude to remain in Muskegon his family will join him soon.

Nothing will ruin the country if the people themselves will undertake its safety; and nothing can save it if they leave that safety in any hands but their own.—Daniel Webster.

W. L. McManus Jr., manager of the Cushman House, Petoskey, was elected president of the Michigan Hotel Association at a meeting held by the Association in Port Huron last week.

Harry McHugh of this city and George Jaquays of East Jordan, will be called to Grand Rapids as trial jurors at the October session of the court for the Western district of Michigan.

Mr. John Johnson is spending a little time in Petoskey this week and contemplates living with his daughter, Mrs. John Foley, in that place during the major part of the winter months.

The Emrey Clothing House is temporarily closed for a few days in order to make a complete inventory of this part of the estate of the late owner, Mrs. Sarah Emrey, who passed away recently.

Leon Gödehaux and family returned to their home, New Orleans, last Thursday, having concluded the summer vacation in this city. During the season they occupied the Sorensen cottage, 202 State street.

Miss Marjorie Myers will spend the coming year pursuing a course of study at the U. of M. She has been at home with her parents, Mr. and Mrs. F. S. Myers, for some weeks, leaving for the University City last Friday.

Mr. and Mrs. F. E. Pratt, of South Haven, spent some time here early this week. They are taking a vacation and will spend the time motoring and will visit in Montreal, Canada, and other points of interest during their trip.

Mr. and Mrs. B. L. Harrington are taking a vacation of fifteen days and will spend the same by taking a motor trip through Michigan, Indiana and Illinois. They leave Charlevoix on their trip south this morning.

Mrs. Lisle Shanahan is entertaining her father and mother, Mr. and Mrs. Curtis Dunham, of Petersburg, Mich. They arrived a few days ago for a short visit with Mrs. Shanahan and family and other Charlevoix friends.

Rev. E. B. Page and son, of Traverse City, will give a Spiritualist Lecture and give messages at the Moose Hall Sunday evening, October 3rd, commencing at eight o'clock prompt. Everybody welcome. H. E. C.

Miss Edith Harris returned to Oak Park, Ill., last Tuesday following an extended stay at the Harris cottage near Ironton. The return trip to Chicago was made by the several motor bus lines through the western part of the state.

Col. A. J. Hamilton is a patient at the Charlevoix hospital this week. He entered this local institution last Monday and shortly afterwards underwent a major operation. His condition for complete recovery is pronounced very favorable.

Mrs. L. P. Adams, Mr. and Mrs. Emory Nyman and daughter left for Waukesha, Wis., last Monday, where all except Mr. Nyman will remain for some days with the little girl who was taken to Waukesha for observation and treatment.

Several members of Charlevoix Lodge No. 262 F. & A. M. attended a school of instruction held at Petoskey last Tuesday night. Fraternal members from a number of other F. & A. M. lodges in this region were also present at the session.

Mrs. Edw. Lagerman, better known here as Miss Margaret Left, was a passenger on the Manitou from Chicago, Wednesday morning. Mrs. Lagerman continued her trip to St. James the same afternoon where she will visit relatives and friends.

John Ketchum committed suicide at his home in Petoskey last Tuesday. Despondency is given as the cause of his suicidal act. In order to commit the act successfully he entered the kitchen of his home, closed all doors and windows and turned on the gas.

Mr. and Mrs. Eddie O'Neill and family with the exception of Louis, are motoring to Detroit today for a short visit with Mr. O'Neill's mother, Mrs. L. J. Thay. They will be accompanied on the trip by Mrs. Ray W. Faulkner who will make an extended visit to Detroit.

Mr. and Mrs. J. W. Keller have closed their summer residence, 407 Michigan ave., for the season and returned to their home, Paducah, Ky. Mr. and Mrs. Keller are members of Charlevoix's summer colony among the first to arrive in the spring and with those who linger latest in the fall.

Information from Miami, Florida, recently received is to the effect that Fred Shutts, son-in-law of Mr. and Mrs. Joseph Shores did not lose his life during the hurricane that raged through the south a few days ago but that the victim of the storm was another person bearing the same name.

Jacob E. Chew, of East Jordan, was a Charlevoix visitor last Saturday. We learn that he was carrying his left arm in a support. Inquiry as to the cause brought forth the information that Mr. Chew had fallen to the floor of his barn from the top of the haymow, a distance of several feet, striking on his shoulder and severely straining both arm and shoulder.

Albion College has just completed a fine modern dormitory accommodating two hundred girls. The dormitory is named for the late president, Dr. Bryant. A gymnasium has recently been added to the equipment of this school, and the Methodist churches of Michigan have increased the endowment by another half million dollars. Albion offers fine advantages to the young people of the church, and others.

Fire just before the noon hour last Tuesday destroyed a building in the rear of F. E. Cartier's tailor shop used for a dry cleaning department in connection with Mr. Cartier's business, together with his equipment used in this department and several pieces of clothing left by customers for renovation. No insurance was carried by Mr. Cartier, making for him a total loss.

Harbor Springs and Mancelona foot ball players met on the Mancelona field last Saturday and played a full and scoreless game. Once or twice Harbor Springs was on the point of scoring but lost the opportunity when one of the players "fumbled" the ball. The game was most interesting, and fans are anxiously waiting to see the same teams matched in their next game, at which time the prediction is freely made that it will be some game.

Mr. and Mrs. John J. Wagner started for Florida last Monday morning. They are making the trip via the motor route and will visit friends at various points in Michigan before continuing south, South Haven and Fowlerville, following this they go to Toledo and thence to Washington, D. C., for a few days. Clearwater, Fla., is their objective point and where they expect to arrive in five or six weeks from the time of their departure from Charlevoix.

Lost—Fourth volume Tolstoi's War and Peace. Property Public Library. Reward. L. R. Chase.

Do you want a police dog? See ad of Sears Fox Farm.

Mr. Dave Vaughan, of Boyne City, nominee for Sheriff on the republican ticket, was a visitor in this city Wednesday.

Guy Reed, of Marquette, a nephew of Mrs. W. A. Smith, 203 Park-av., was a visitor in Charlevoix for a few hours yesterday.

Thursday evening, October 7th, Mrs. Leon Miller, Elocutionist of Detroit, will entertain at the I. O. O. F. Temple in this city. Mrs. Miller comes highly recommended by representative citizens of Detroit as a high class entertainer, gifted and interesting in her profession. Price 25c.

Mr. and Mrs. George W. Priest according to their annual custom, will spend the winter months in St. Petersburg, Florida. They are leaving Charlevoix today and will make their trip south by automobile. Their permanent address is St. Petersburg will be No. 1313-25th Avenue North.

A Community Reception will be held at the M. E. Church, Friday evening, October 1st, for the teachers in the Charlevoix public schools. It is desired that every one will attend this function which promises to be a very enjoyable one. This function is under the auspices of the W. C. T. U.

Mr. and Mrs. Lester Cannon returned to Charlevoix last Sunday from a vacation spent on a motoring trip through southern Michigan. During the trip they drove nearly two thousand miles, in about two weeks, visited many nice towns and cities and report having had a splendid time even though weather conditions were decidedly out of tune.

Captain and Mrs. M. J. Bonner will visit friends in St. James for a few days. They make the trip across to St. James today. The captain, hunter of local renown, expects to shoot at a few wild ducks with the intention of bringing some of them home. Whether or not he will succeed in his effort is another question—one that will be decided later.

The County Sunday School Association held their annual convention at Bay Shore Tuesday afternoon and evening, September 28th. One hundred and twenty-four enrolled, there being delegates or representatives from practically every Sunday School in the county. The program was most helpful and interesting. A splendid spirit of unity and good cheer prevailed and it is hoped that many others will avail themselves of these opportunities to further interest in the Sunday School work of our county.

For the season just closed in Charlevoix we have one good cause for congratulation. We can now walk thruo the business section, even to our homes without being halted in our progress or stopped on street corners by traveling professional impedements, street beggars and over zealous solicitors with which this city, like all resort cities, is thronged during the tourist season, the major part of whom get in their work on gullible persons with no sympathetic tendencies. We believe in charity work to the fullest extent and think our efforts along charity lines can be best observed by making a careful study of local conditions, persons and charity supported institutions, thereby understanding who and which is worthy, instead of making donations indiscriminately, without knowledge concerning the needs of the supposed object of charity. There is an old saying "clean-ly begins at home." In other words it means take a survey of local conditions. Then carry on the good work.

Land of Fighting Men

Poole, in Dorset, was a great home of fighting men in ancient days. The native product found continuous adventure around the Hampshire isle of Purbeck, while the castle of Brunksea was an inspiration to romantic youths, says the London Daily Chronicle.

Such environment produced fellows like "Arthur" or Harry Page, who about 1400, kept the seas against France and Spain, and knew more about buccaneers and smugglers than any man of that time. And there was William Thompson, who, with a man and a lad, captured a French privateer, in 1695, the enemy fortunately being struck speechless with surprise.

"Carrying Coals"

Newcastle is a center of the British coal trade, and a great part for the shipping of it. To "carry coals to Newcastle" is a waste of labor, a futile, or unnecessary effort to supply a need already well supplied. The phrase is of Seventeenth century origin, or perhaps older. But similar proverbs exist in many languages. There is one in French about "carrying water to the river." Ancient Greece has one about taking owls to Athens—Athenian coins being stamped with the owl; and an Oriental poet speaks of "importing pepper into Hindustan."

Card of Thanks

We wish to express our thanks, appreciation and gratitude to our friends and various fraternal organization for floral offerings, their many acts of kindness and expressions of sympathy extended to Mrs. Priest during her recent prolonged and serious illness from which she has practically recovered.
Mr. and Mrs. Geo. W. Priest

St. Mary's Catholic Church

Sundays 8:00 a. m., and 10:00 a. m.
Mondays and Tuesdays 8:00 a. m.
Saturday 7:00 a. m.

Methodist Church.

C. E. Pollock, Pastor.

October is Rally month for all church activities. "Dust and Divinity," second sermon in the Christian Cardinal series, 10:30 a. m. next Sunday. "The City Foursquare," sermon lecture to emphasize an unusual and important truth, 7:30 p. m. next Sunday. This will be a feature service—fine young people's chorus choir, choral songs, prayer song under the lighted cross and a good fellowship hour.

The Sunday School is rapidly growing in number and interest. Be sure to come on time for the hour is twelve o'clock sharp.

The Epworth League meets at six thirty each Sunday evening. The League room was nearly full of people last Sunday evening, but there is room for more next Sunday evening. A splendid hour is planned by the young people for next Sunday.

Prayer meeting calls at 7:30 each Thursday evening and is being attended by good congregations. Young and old are always welcome. Each Thursday evening the pastor presents in a bible address some pertinent phase of the Sunday School lesson for the following Sunday. Teachers find this profitable.

PURPOSE SERVICES.

Unusual Sunday evenings planned for the Methodist Episcopal Church. A unique Sunday evening hour is planned for the Sunday evening worship service at 7:30 at the First Methodist Episcopal Church next Sunday evening. It will be a Key Note service for the general church activities for the next three months. About four such extraordinary services are planned for the year, and they will be very happy events in Methodist Church life. The special features for next Sunday evening will be a key note sermon by the pastor with the subject, "The City Foursquare". Piano and organ music, choir, al songs, entirely different from the usual Sunday evening hymnology. An unusual prayer song under the lighted cross, a candle lighted church with a candle lighting purpose closing service. There will be special music and something for everyone to do as an act of Divine worship. The public is invited to enjoy these happy thoughtful and fitting services, and be on time for a good sitting.

Church of God

Rev. Paul L. Jane, Pastor

Services held at the Chapel regularly. Sunday School at 10 a. m.
Preaching at 11 a. m.
Young Peoples' class meeting 6 p. m.
Preaching at 7:30 p. m.
Wednesday evening prayer meeting at 7:30 p. m.
Members of the Sewing Circle will meet at the Chapel Thursday 2:00 p. m. They will start on the regular yearly sewing. All those who may care to help in this cause be present. Volunteer services in all that we expect. Either your name on the roll, your presence is needed. All may be eligible from 16 years upwards. You need not be a member in the congregation, to enter—come and help us. We extend an invitation to anybody who may be interested.

CHAPTER XIII—Continued

—20—

"Quite right, Baxter." Cox's manner was crisp. "Mr. Warner is entirely in your confidence, Sir Galahad."

"Uh, very well. I take it that Mr. Warner knows all about my interest in my friend Kaufman in connection with this matter. An excellent engineer, I believe?"

Neither Cox nor Caleb answered. Baxter drew a long envelope from his inside pocket with a bit of a flourish. Cox's eyes fixed upon it. He fancied that this was the boomerang.

"This company has got to have Hermanus valley for its reservoir. Hermanus canyon at its head for its dam site. Never mind where I got this information. There's a model in your directors' room that proves my assertion." For a moment he faltered. Cox and Caleb had exchanged glances. Baxter sensed suspicions of them.

"I've got the privilege of sale on that property," he went on. "For one year, and thereafter until revoked by the parts of the first part. Now don't get excited. It is an option-contract. Binding on the heirs and assigns of the said Caleb Clinton. At any time I offer it to the company at a fair price with the stipulation already stated to you conferring Mr. Thompson. Here's the agreement. The price to me, as you will see, is one hundred and twenty-five dollars an acre. My price to you, one hundred and fifty. A fair profit and a fair price. No chance for condemnation proceedings. The handing the document to Cox, who ran swiftly over the two pages, refolded it and passed the paper to Caleb.

Caleb's face hardened as he read. The essence of the contract, as it applied to the situation, was that in it Baxter was given permission to sell the land without reservation as to the use, for any purposes, without mention of the ranch-house—in fact, the little cemetery where Clinton himself now lay buried.

"Why, you, Cox, but this thing has got to be settled immediately. Or—I go to Oakville."

Cox took the paper refolded by Caleb as the latter laid it on the desk. And he handed it back to Baxter.

"Doesn't interest us," he said.

Baxter's jaw sagged. He checked a "What?" by biting his underlip as Cox went on:

"So far as the Crystal Springs Water company is concerned, so far as any water company is concerned, that carbon is not worth the paper it is typed on."

Baxter had braced himself and managed a lunch as he leaned forward.

"I'm not here to bluff," he said. "Why but it?"

"I'll tell you, if you insist." Cox spoke as if he had already dismissed the matter and talked only out of bored politeness. "You got information about our project, Warner's preliminary prospectus and the model, in the next room, through leaks in this office. There are leaks in every office. We guard against 'em. Warner found out long ago that the bad rock, as the side formations, in Hermanus canyon are not structurally able to support an impounding dam.

"He gave up the idea of that dam site, but we didn't bother to change the model. The details of Warner's amended plans were submitted to us and we approved of them. But those details transcribed by a man whom I can absolutely trust—my own secretary—were filed, where anyone might get a look at them—as was the case with the original prospectus. They were filed back of you, Baxter, in that steel cabinet, here in my own room, under a key that I alone hold. No leaks from that, my son. I repeat, we are not in the least interested in your option."

The boomerang had struck its wielder.

Baxter looked from one to the other, a muscle twitching high up in one cheek. His glance lingered venomously on Caleb, who had outwitted him.

"So that's your joker card, is it? Well, I've got one to match it. Cut, this one." He put the paper away, and stood up. "Don't forget I've got enough information to interest Oakville. I've got an idea they'll block your project. You won't be able to tap-up your lakes on the quiet. I'll attend to that even if Oakville doesn't take hold. Though I fancy they will and pay me for the information, too. I'll put the ranchers wise and I'll boost the price of Cliente Sink and all the watershed until the cost will swamp your scheme at its outset." He whirled on Caleb with a snarl. "And you'll lose your big stake and your job at the same time, Warner, for all your cleverness. Good morning—and be—4—to both of you!"

Baxter, starting for the exit, stopped short as it opened abruptly. He stared and faltered as Mary Morgan came swiftly in and shut the door, leaning against it. Her face was white save for two spots of red, her blue eyes were unmeeting as she fixed them upon Baxter and her breast heaved tumultuously while she took some papers from inside her blouse and held them tight gripped.

Baxter made a sudden move toward the girl, his eyes fixed on the papers she held as if he had suddenly become suspicious of them. She held out one hand against him.

"Mr. Warner," she said, her breath coming short, "please give these papers to Mr. Cox."

Caleb took them wonderingly, though he sensed the culmination of an act in the drama between Baxter and this girl, a scene in which he was cast for a supporting role, together with Cox. She stood fast in front of the door, her arms spread, her fingers clutching the outside of the frame on either side. Baxter strode toward her.

"This doesn't interest me," he said. "Get out of my road."

"No!" The monosyllable was an explosion of loathing and contempt. Baxter recoiled a little before the girl. The blonde stenographer was an embodiment of hatred and of determination.

"Get until Mr. Cox has read those papers and heard what I am going to say."

Caleb looked at Cox and the latter nodded slightly in understanding.

"All right, Miss Morgan," said Caleb. "You needn't stand by the door, Mr. Baxter will wait."

She looked at him and read his face, then moved away a little while Caleb lounged against the door panels and Baxter retreated before the fury that the girl manifested. Cox looked at the transformed stenographer through half-closed lids. He had not yet read the papers.

"I don't imagine you hear office gossip, Mr. Cox," she began, "but almost everyone in your office knows that I am going to have a baby. This—Baxter—is the father. He has promised a score of times to marry me or to give me money enough to go away. He preferred the latter. And the promises were like himself, worthless."

Baxter looked away from her scorn, first at Cox, sphinxlike in his chair, then at Caleb guarding the door with an air of willing readiness to oppose his exit. He had lost his poise. The girl had shed the whips of her words and attitude. Thus he tried to brave it out, with a sneer that lacked definition.

"This sort of stuff . . . " com-mented Baxter.

"Keep quiet." The order from Cox was so brusque that the boss spirit gualled. "Go on, Miss Morgan."

"Baxter came to me," continued the girl, "some time ago with a form of option that he wanted me to type. In it Captain Clinton agreed to sell his farming purposes only; he reserved the ranch-house and some few acres around it later. It was to be typed in duplicate and I made an extra carbon, which I kept. You have it here. I kept it for reference. But when he brought me a blank form the day before yesterday, with the name of Captain Clinton and a witness already signed, when he asked me to type in the manuscript text that he supplied and to do it so carefully that it would look as if the signatures had been naturally made, in spaces cooling at the right distance from the conclusion of the typing, it was not hard to know that something was wrong—that Baxter had practiced those signatures on blank sheets until he had got them perfect. This option had no reservations. He did not want a carbon of that—no copy of it will be found among Captain Clinton's papers. But I made a carbon, the second paper that you hold, Mr. Cox."

Cox had glanced over the documents as the girl made her points and now he laid them down.

"You suspected the signatures were forgeries? You knew Captain Clinton was dead?" he asked.

"Yes." She spoke half defiantly, almost. "I knew that. I have done more than that. I gave Baxter information I got in the office here. I did it all because, up till then, I wanted him to marry me. He swore that he would if I typed this last contract. He said it would bring him in a lot of money, that the signatures were genuine. I didn't challenge that because . . . "

For a moment she wavered but caught herself up.

"But I didn't trust him. That is why I made the second carbon. When I asked him to go with me and get our license, he laughed at me. Then I did accuse him of forgery. He said that if it was, Clinton would not rise from the dead to dispute it, that no one could detect it, that the witness only signed with a cross and could not read what was in the option. And that I was just as deep in it as he was."

Belief in Mesmerism Once Was Widespread

Ever since prehistoric days there have been medical quacks. One of the strangest was Anton Mesmer. In Paris he found prodigious vogue, especially among women. To enter his house was an impressive experience. He had assistants who were claimed to be able to transfer magnetism from silk embroidered with gold, and with his ivory wand, would stroke her eyebrows or her spine and calm her. The queen of France commended Mesmerism and a pension of 20,000 francs was offered Mesmer if he could prove that he had made any discovery in medicine and would communicate it to the king's physicians.

Mesmer objected to the latter part of the offer and left Paris. Two royal commissions were then appointed, on one of which Benjamin Franklin was a member. After five months of experiment a report unfavorable to Mesmer was returned, after which Mesmer retired to the country, with a fortune amounting to 340,000 francs. He died in 1815, at the age of eighty-one.—Dearborn Independent.

Parent of Languages

Sanskrit is the earliest classical tongue of the Hindus, and the oldest preserved form of Aryan, or Indo-European, language in existence. It ceased to be spoken about the Fourth century B. C., and is preserved only in the Hindu sacred writings. Sanskrit is the parent of all the modern Aryan languages of India, and the language most closely related to the original tongue of the ancient Aryans, from which have descended the Celtic, Graeco-Latin, Teutonic, Slavonic and Persian languages. Sanskrit literature, which begins with the Vedas, extends back as far as 2000 or 1500 B. C. Sanskrit is still cultivated as a classical language by the Hindus, and many of the sacred books of the Brahmans.—Kansas City Star.

I suppose it was criminal. I have resigned my position here. I have played false to the company. You can do whatever you want with me. I do not mind punishment as long as he has to share it."

Baxter winced. The girl was in deadly earnest.

"How about it, Baxter?" asked Cox. "A mess of lies. She's cooked it up because I won't marry her. And I wouldn't because I am as doubtful of the paternity of the child as she affects to be of the authenticity of the option."

"Oh!" The girl stood rigid, her hands clenched to talons. Baxter took a swift step back. Caleb came from the door, his fists doubled. Then Cox, coming out from behind his desk in rapid movement, caught her as she tottered and helped her to a chair, where she collapsed, sobbing hysterically.

"Both those options are genuine," blustered Baxter, "I defy you to prove them otherwise. I got the second one from Clinton after my land deal fell through. He was anxious to realize on his estate."

"You admit the two documents?" Cox's words were crisp.

"Certainly. And now we'll leave Miss Morgan and my personal affairs out of it. If you haven't anything in any way this young lady, I'll start something, Baxter, that you will find it very hard to finish. You know me, and I know you. You're clever but you're not sound. The witness to those options, Padilla, may be illiterate, but I fancy he'll remember that he did not sign two papers in the same day. You forgot to change your date, Baxter, when you altered the first one. We've even need Miss Morgan's testimony. And, if I have to get after you, my son, I won't hesitate to bring my influence to bear that I possess. You're trailing in a sunsh fast enough on your own account, but you'll need a lot more swiftly if I get busy. Now, you grasshopper, hop out of this office!"

He turned on his heel. Baxter slunk past Caleb to the door. His dauntless bulk nothing left but a whipped cur. But that was virulent as the hiss of a snake to Caleb.

"I'm not through with you yet." And his face, his eyes, were not those of a sane man.

Mary Morgan had smothered her hysteria and stood by the desk, awaiting judgment.

"You spoke of going away, Miss Morgan," said Cox in a voice that surprised Caleb by its gentleness, as it did the girl. She looked at him hesitatingly, wiping her eyes.

"I meant to go east, until it was born," she said. "A friend," she did not glance at Caleb, "furnished me the money. But I will stay here where you can find me. I should rather not leave California—only . . . "

"You don't have to. Though we shan't need you in this affair, Baxter's through. After it is all over, come to me, or write me and I shall be glad to help you to a position. With the Capitol Land and Irrigation company at Sacramento, in all probability. They will always be glad of service as capable as yours. You have managed to render us a service that quite writes out anything else you may have done foolishly."

Bewildered, she tried to express thanks.

"That will be quite all right, Miss Morgan. Don't forget to apply to me. And now you are excused for the day. You can go out through my door to the elevator. I'll have Harry get your things."

Caleb had imagined Cox just hot and tightly turning to the side of mercy. Still the girl had effectively disposed of Baxter. And she had indirectly saved Caleb a hundred thousand dollars, besides his salaried position. After she had gone Cox turned from the window.

"Poor little devil," he said. "Baxter made a fool of her. I've got a girl at home, Warner, just about her age. She hasn't had to earn her living, luckily for pretty things to wear or her full share of fun and good times. This girl may turn out all right, with a helping hand. She has spunk. As for Baxter, he hopped too far. She's cleverer than he is. He's got a chrome streak down his back; he's zebra-striped with yellow when it comes to a showdown.—D—d shame the girl hasn't got a brother. He deserves a good licking."

Caleb, remembering the fight on the bridge, knowing Baxter's financial straits, fancied he had not been without punishment. That final threat he dismissed as idle.

"He nearly had us," wound up Cox. "Publicity—or Oakville—would have ruined our plans. But he's hopped for the last time in my meadow."

(TO BE CONTINUED.)

HOW TO KEEP WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

PREVENTING GALLSTONES

GALLSTONES are hard masses of which form in the gall bladder, usually following and as the result of infection and inflammation of the gall bladder. They often exist in persons of middle age without causing any symptoms of any kind. In at least 10 per cent of all post mortem examinations of persons over twenty-one or more gallstones are found in the gall bladder, although the persons have often been entirely unaware of the condition and have died of some disease in no way related to the liver.

When symptoms do develop it is usually very gradually. In women gallstones are apt to develop after childbirth. Generally the first symptoms are those of inflammation of the gall bladder.

The first symptoms are those which are popularly called dyspepsia, an uncomfortable sensation of fullness in the stomach after eating, with the presence of gas. The patient attempts to relieve his discomfort by belching. Along with this comes sour risings, an excess of hydrochloric acid in the stomach, or what is popularly called a sour stomach or an acid stomach. This excess of acid may produce a burning or "hunger" pain beginning two or three hours after eating. This is because the food from the preceding meal has been entirely passed out of the stomach, leaving the stomach walls exposed to the free acid. The effect of the excessively acid secretions. This hunger pain is generally relieved by taking more food, by alkalies, such as soda, or by vomiting. There may be a slight rise of temperature and there is usually a chronic constipation with occasional attacks of diarrhoea.

Pain may be felt in the pit of the stomach, on the right side or in the back. Careful examination may reveal a tender, painful spot on the right side.

Numerous attempts have been made to dissolve or remove the stones from the gall bladder by the use of various medicines. They are mostly of no value. If stones have formed which are large enough to show on X-ray photograph, the only way they can be removed is by a surgical operation opening the gall bladder, removing the stones and either draining the gall bladder or removing it.

As the stones result from the inflammation of the gall bladder, vague symptoms of dyspepsia should receive attention as soon as they appear, before the stones have time to form. Avoid cream, fats, eggs, butter, fried and sweetbreads, all of which tend to form gall stones. Most persons with gallstones are fat. Regulating the diet by cutting out fats will reduce the weight and help to prevent gallstones.

WHAT HEALTH COSTS

NOW that it is generally recognized that each village or city can fix its own death rate by the amount it is willing to spend for disease prevention, naturally the question arises as to how much this health protection is going to cost. The best way of answering this question, Yankee fashion, is by asking another, how much does it cost those villages and towns which have it?

In New York state the law provides that any city or incorporated village may levy a health tax on its citizens, establish a health department and employ a health officer and that the health officer's salary be not less than ten cents per capita of the inhabitants.

If a community wishes, it may tax itself for more, but that is the least it can pay its health officer. Many cities and villages do pay more, as is shown by a study of town and city health work by Dr. Huntington Williams of the New York health department.

He—Williams shows—that those—cities in New York have three first-class cities. In 1923, New York city, with a population of 5,620,048, spent about $1 per capita for health. Buffalo, with a population of 500,775, spent 67 cents for each citizen, and Rochester, with a population of 293,750, spent the same as New York city, $1.

There are eight second-class cities. Of these the average health expenditure was 81 cents, the lowest being 38 cents and the highest $1.81.

Third-class cities are those with a population under 50,000. There are 43 such cities in New York and the average health tax in each was 40 cents for each person, running from 15 cents in a city of 10,000 to $1.50 in a city of 18,000.

Incorporated villages in New York range in population from 500 to 10,000. The health expenditures of 118 were studied. Of this number, 91 spent from 10 to 20 cents per capita. Twenty-four spent from 20 to 70 cents.

The New York law also allows townships to levy taxes for health purposes. But of 447 townships, 425 spent from 10 to 20 cents, fifty-four townships spent from 20 to 45 cents.

The largest expense per capita was in the town of Newcomb, a lumber camp, where in order to keep a doctor in a thinly settled region, the doctor was paid a salary by the town. This involved an expense of $7 per capita.

Golf's Dangers

A man who had grown suddenly rich was going around the Wilmington Health golf course, accompanied by his wife. He got into a bunker, and after his forty-seventh shot his wife said: "If yer go on like this, every one'll think yore workin' fer."—London Express.

Laugh Reveals Character

STORING APPLES FOR THE WINTER

With proper farm storage facilities and careful handling, Stayman, Rome, Baldwin, Paragon, Stark, York Imperial, Winesap, and other varieties of apples may be marketed through the winter, thus lengthening the apple season, removing the usual glut on the market, increasing consumption and generally returning a greater profit for the grower. In making this statement A. Freeman Mason, fruit specialist at the New Jersey state college of agriculture, explains what he considers proper facilities and careful handling.

"The essential features of a storage room are: protection from heat, frost, and rodents; ample ventilation to carry off gases developed by the ripening processes; and the maintenance of humidity to prevent shriveling."

"A cool, damp cellar with several windows, doorways, or ventilators which can be opened at any time the outside temperature is lower than that of the room, makes a desirable storage. A building above ground, having double walls and ceiling insulated with dead air space or filled with sawdust, is also good. It is very necessary to keep conditions uniform in the air. This will be possible if the floor is a damp earthen one, but if concrete is used, it should be moistened daily, or as often as it becomes dry.

"Where crates using the best storage package, because they are economical of space and are well ventilated. The packing effect of the commonly available, round basket baskets, hampers, and barrels do not offer as good a ventilating system, but they may be used. Barrels should never be headed when put in common storage.

"Wrapped apples keep best. Newspaper or tissue wraps may be used. Oiled wraps, covered with an absorbent oil which takes up the injurious gases given off by the ripening fruit and thus preventing scald, are on the market and are highly recommended."

Old Strawberry Plants Transplanted in Fall

We have transplanted strawberries in every month of the year except December, January and February, and made them live. That was in northern New Jersey. The best time is late March or April, but many prefer late summer or early fall. It is less common in the vineyard and plants that have borne one crop—strong runners are better. Yet if you care to do so you can probably make these plants give a fair crop next year, says a writer in the Rural New Yorker. After they have fruited cut off the tops and dig the plants up with a ball as large as possible around the roots. Wait until there has been a good rain and then put the plants in the new place—a little deeper than they stand in the old bed. There will be much use trying to transplant such plants while the soil is dry. Properly handled they will give a fair crop next year. As for wild plants we would let them alone. We have dug up many of them and planted in good soil on the theory that in this way we might find some superior variety that would come back when given good culture. But out of the hundreds we have planted in this way only two ever proved superior. The rest were inferior—hardly worth picking even when given the best of care. Better let these wild seedlings alone. Use only strong plants of well known varieties.

Survey Is Made of New Jersey's Peach Trees

How many peach trees are in the commercial orchards of New Jersey? What county leads in the number of peach trees? These and several other questions are answered in the report of a survey made by the United States Department of Agriculture and the state department of agriculture.

Judging from the number of peach trees three years old or under the ravages of diseases and insects have been discouraging our fruit growers. According to the report there are 583,000 of such trees in the commercial orchards of the state. Of trees of all ages there are 2,290,000.

Elberta at present is the favorite variety, leading the list with 889,000 trees. Belle is a poor second with nine hundred, having only 265,000. Carman ranks third with 215,000. Growers, however, are rapidly abandoning this semi-clingstone variety, as it cannot stand the competition of better varieties. Its production has become unprofitable. Horticulturists at the New Jersey experiment station have accordingly perfected several varieties of excellent quality to supersede the Chrysus.

Damage by Plum Curculio

The plum curculio is a species of beetle which attacks peaches, plums, and other fruit. As a result of control activities followed since the unprecedented outbreak of the curculio in Georgia peach orchards in 1926, this insect seems to be under complete control. A report received from its local representative by the United States Department of Agriculture states that the Georgia peach crop this season is estimated to be the largest in the history of the industry.

Strawberry Grief

A certain amount of the difficulty frequently experienced in hot, interior sections in strawberries are grow, ing on sandy soils, may be attributed to a combination of reflected heat and extreme fluctuation in surface soil moisture. Heat reflected by sandy, light-colored soils is often intense, and growers have difficulty in maintaining a uniform moisture supply. Wise ones are overcoming this by frequent waterings and by use of protective mulches.

FIRST to adopt DUCO

THE General Motors Research Laboratories cooperated with E. I. du Pont de Nemours & Company, Inc., in the development of Duco—an achievement ranking in importance with the invention of the self-starter.

DUCO is not only far more lasting than paint and varnish; it is finer, more beautiful and more economical to apply in factory production.

DUCO was first adopted by Oakland, and immediately thereafter by the rest of the General Motors cars.

BUYERS of General Motors cars have profited by the development of this finer, more enduring finish. Their cars wear well longer.

HOW I IMPROVED MY HEALTH

Did It in Less Than One Month

As Mrs. Weaver herself says: "I was never very strong. This is a mild statement describing her condition, for, according to her letters, she was subjected to no small amount of ill health. Fortunately, her situation was found. The health was brought to her attention by a friend with Lydia E. Pinkham's Vegetable Compound and begged Mrs. Weaver to try it. "After three or four weeks," writes Mrs. Weaver, "I felt a great difference in myself. I would go to bed and sleep sound, and actually could not do very much work. I seemed stronger. I kept on taking it and now I am well and strong, do my work and take care of three children. I sure do tell my friends about your wonderful medicine, and I will always be letters from women asking about the Vegetable Compound."—Mrs. Laurence Weaver, East Smithfield St., Mt. Pleasant, Pa.

If you know that thousands of women suffering from troubles akin to those you are enduring had improved their health by taking Lydia E. Pinkham's Vegetable Compound, wouldn't you think it was worth a trial?

In some families, the fourth generation is flourishing the merit of Lydia E. Pinkham's Vegetable Compound.

Modern Girl Knows All About Gasoline

The night watchman on the road frequented so early in the morning. Suddenly the motor gave some convulsive sobs and stopped dead. Bill, much perturbed, made an earnest effort to start, but the motor failed. After getting out and looking under the engine, he turned to Betty and said:

"This is bad. The gasoline tank seems to be full of water and we can't move a foot."

Betty was far less perturbed. She replied:

"Come on inside and stop looking worried. This has happened to me before. All we have to do is to put in the car for about an hour and the water will have time to separate from the gasoline."—Los Angeles Times.

Hindu Boy Scouts

The boy scout movement has penetrated well into India, where several good working organizations have already made themselves felt with the people of the land. The Hindu boy scouts recently held an exhibition showing the results of their work in camping, pioneering, and many honour as well as all of the outdoor arts. Strangely enough the movement was adopted any of the Indian games for scouting purposes.

Convenient for Autoists

With every car sold in Paris automobile dealer supplies a pot of special paint and a sprayer, about the size of a fountain pen, so that scratches and mars can be touched up at once to keep the body looking new. Pressure for applying the paint is obtained by blowing through a tube connected with the sprayer. While the preparation is specially adapted to covering leather, it also may be used on fabrics and leather.

Shell Fossils in Well

In drilling an oil well recently near Medicine Hat, a stratum of fish and shell fossils was found. The fossils were struck at a depth of 3,720 feet, and it was ripparent that they were being washed into the well. Often fossils were reported, long cyrtina and fatrum were found at varying depths, the fulcrum rock being about 750 feet deep.

He that accuses all convicts only one.—Burke.

FIRST to adopt DUCO

THE General Motors Research Laboratories cooperated with E. I. du Pont de Nemours & Company, Inc., in the development of Duco—an achievement ranking in importance with the invention of the self-starter.

DUCO is not only far more lasting than paint and varnish; it is finer, more beautiful and more economical to apply in factory production.

DUCO was first adopted by Oakland, and immediately thereafter by the rest of the General Motors cars.

BUYERS of General Motors cars have profited by the development of this finer, more enduring finish. Their cars wear well longer.

THE KITCHEN CABINET

"We must be as courteous to a man as to a picture which we are willing to give the benefit of a good light."—Emerson.

SEASONABLE FOODS

The tender new cabbage which is now on the market makes a vegetable which is delicate and full of flavor. But to cook cut into halves or quarters according to the size, removing the hard core. When cooked in as little water as possible, stir in butter, steamed, dress with cream or milk and butter, season with salt and pepper and serve. Grated cheese added to the hot cream adds much to the nourishment of the dish as well as its flavor.

Nut Loaf.—For those who enjoy the meatless diet this recipe will appeal: Take three fingfuls of flour, three teaspoonfuls of baking powder, two-thirds of a cupful of sugar, one cupful of milk, a teaspoonful of salt and one cup well beaten, one cupful of peanuts. Sift the dry ingredients, add milk, eggs and nuts. Pour into a greased pan and bake twenty-five minutes. Bake in a slow oven nearly one hour. Nice for sandwiches with a salad, nutking a well balanced meal with a hot drink.

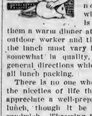
Spiced Tongue.—This is pre-eminently a warm weather dish, but seldom seen at that in our home. Drop a fresh beef tongue into boiling water to cover; add a pinch of salt and a good sized pepper pod. Usually until the tongue is tender. Remove from the water, cool and peel off the skin in a saucepan with four tablespoonfuls of sugar, one tablespoonful each of ground cloves, allspice, and cinnamon, a cupful of water, and one-half cupful of vinegar. Simmer until the liquid is entirely evaporated. Turn often. Chill and cut into thin slices when ready to serve lemon and parsley.

Cucumber Soup.—Peel and slice two large cucumbers, remove the seeds and boil in salted water for ten minutes. Melt two tablespoonfuls of butter in a deep frying pan, put in the drained cucumber, cover and cook gently for half an hour; drain, put through a sieve. Mix two tablespoonfuls of flour with two of flour, and add a quart of rich stock and a pint of milk. Add the cucumber and simmer for a few minutes. Rent the yolks of two eggs with two tablespoonfuls of heavy cream, add to the soup and serve at once.

Hints.—Bacon rind is a toughness to ease and self-indulgence, to which men are by nature prone, that the glory is all the greater if we have risen to a high or to a modest fortune, nevertheless take no active part in the work of their generation. Keeping busy, doing something worth while, saves many a heartache and many hours of suffering.

Children's Lunch Boxes.

Packing a school lunch box five days a week for thirty weeks or more on a



stretch is powerful constaux and monotonous. Of course children to do good work must be well nourished and when possible it should be best to give them a warm dinner at night. For the noontime meal when the office manager the lunch must vary in quantity and somewhat in quality, but there are several things which will apply to all lunch packing.

There is no one who is so blind to the niceties of life that he does not appreciate a well-prepared and packed lunch, though it be nothing but a sandwich. Throwing together a mess of food, totally unrelated, pairing flavors and making a messy, unsightly appearance would disturb the digestion of an ostrich.

The daily sandwich is almost a necessity, though at times scrap out a roll or two and fill with, if you are not too moist, which will make a most palatable dish.

Personal tastes must always be taken into account when preparing a lunch basket.

The one who likes a hot or cold drink can carry it in a thermos bottle.

For those who are fond of fresh ripe tomatoes a most appetising sandwich may be prepared. Place a slice of tomato, a thin slice of cheese, with a little salad dressing between slices of buttered bread. Two of these with two of some other variety, with a cup cake and an apple or other fruit will make a good lunch with a glass of milk.

In many of our country schools where domestic science is taught the children prepare one hot dish at noon. This helps out the mother with her lunch packing.

Two sandwiches of bread and butter with jam or jelly and two of chopped ham and a glass of apple sauce, with a piece of ginger bread and a cup of hot cocoa is another good day's luncheon.

A handful of nuts, a few dates, a piece of candy, a fresh apple, pear or banana will always delight the child.

Those of us who can remember when we carried a lunch to school, what a thrill we had on finding down in a corner a hidden carefully a small treat all wrapped away to surprise us, will be happy to do the same willing service for those who must carry lunches.

Nellie Maxwell

Music From Water

Splashes of water drops are said to form small pockets by the water surface on which they fall, and these pockets act as resonating chambers, making a musical note, whose pitch depends on size of pocket.

Arrangement of Medicines

When arranging the medicine cabinet, place those drugs and medicines which are oftenest in demand on the front of the shelves and those for more occasional use in the back rows.

COMMUNICATION

Hamburg, N. Y., Sept. 21, '26.
To all Four Papers in Charlevoix, Co:

Office of Uncle George H. Van Pelt has been removed from 'In the Saddle and on the Jump' to 'In Hotel Lobbies and on Hotel Porches.'

Our last few days in Michigan, we left Manistee Sunday, September 12th, at ten a. m., dined at Muskegon and arrived at Grand Rapids at four p. m., a beautiful ride on concrete roads. Of course we pulled up at the Pantlind Hotel, the home of tourists, commercial men and all others in pursuit of happiness, comfort and the best things to eat, all these things with the best of service. Everyone loves the Pantlind, which, under the management of Fred Pantlind, is considered one of the very best hotels in the United States. We remained here until Tuesday p. m. and then motored to Lansing. This being primary election day everything was closed, so we rested.

Wednesday we called on our good old reliable State Highway Engineer, Mr. Frank F. Rogers, who gave me great encouragement for the changing of the Dixie Highway in Charlevoix from Bridge street onto Dixon avenue, via the big P. M. Hotel Inn, passing by beautiful Lake Charlevoix on the Petoskey road, or M-11, as it is now known.

We then drove from Lansing to Flint and this Wednesday p. m. and evening was without a doubt one of the happiest I have had in many a moon. Just let me tell you about it, as a lot of you fellows know, Ben Bennett and his wife both lived with the Van Pelts at Norwood for several years, something like twenty-five or thirty years ago. Well, Ben Bennett was what we called an extra good man. Sometimes we called him a —— of a good man, and his wife, Jessie Bennett, was even a better man than Ben. They not only worked for us but they raised an awfully good family. When the World War was on Roscoe, their oldest son, volunteered, went across and while in France he wrote the most beautiful letters to his mother that I have ever read. After the war was over he began working for the Buick people in Flint. His father and his brother Howard also worked for them. Then he wrote me a letter saying, "we three are paying $9 a week for our board and we cannot rent a house to live in. The General Motors Company are building a sub-division and if I had $600 I could build a home, but he said he did not know how or where to get it, and that his father suggested he should write to Uncle George and perhaps he could tell them how they could get it. This he did and they now have the house, a fine home, and it was there we had our party and a dinner I will never forget.

The hotel parlors were getting a little cool for news gatherings, consequently we have adjourned to the lobbies.

One traveler told me of an experiment made with a magnet, which was placed on the rear end of a truck and in going five miles it picked up 150 lbs. of scrap iron, nails, etc. It is an experiment made for the purpose of showing that nails and such things can be picked up by a magnet and many punctures could thereby be prevented.

In the world growing better or "worser?" Judging from the fact that many people who went to church "years and years" ago but who during the war and other unusual excitements, such as the false land boom in Florida and around the shores of our great lakes and smaller bodies of water, become "cool" and they withdrew from the church or lost interest in religious matters. They become estranged from the church, and golf probably has more to do with it than any other one thing. Well, these men are remaining at home and listening to splendid sermons now being broadcasted throughout the land by-radio. During the golf game these sermons are being cussed and discussed. Cussed because the preachers can hammer the truth to the unbelieving in strong terms and not be worried as to their salaries. We may seem disinterested boys, but we all know that there is a God and it is His laws that must be obeyed and learn that there is no such thing as buying our way into the Kingdom of Heaven with money. It is a dead sure thing that we must work out our own salvation and these strong sermons and the every day talks given by Rotarians, Lions and other clubs in which they call attention to the eternal life beyond this present one is resulting in enabling us to answer the question in the affirmative. Yes, the world is growing better. This leads to another question. What are you and what are you doing to make the world grow better? One man in the lobby said, "I hope the world is no worse for my having lived in it."

It was my pleasure last Sunday night to listen to a wonderfully good sermon over the radio. The subject was "Good Will." This sermon is one which we can all preach to both ourselves and to others and if followed up practically it will be productive of much good.

I continue sending my letters to the papers in Charlevoix county in the hope that if not already convinced you will be convinced by reading them of the foolishness, yes the actual sin and wastefulness of building anything but concrete roads on all our main thoroughfares and that you will use your influence in favor of building them to the exclusion of all others, not only in our own county but in our adjoining counties. If you are now absolutely convinced of our great need of the concrete road around Lake Charlevoix, the reading of this letter and all others to follow may still strengthen your convictions and stimulate your efforts in this great cause. The hundreds of millions of dollars that have been wastefully spent on imitation roads in the United States would go a long way in paying our national debt.

I have interviewed several men regarding the Covert Act plan in getting roads, and all, without a single exception, say, it is a good plan. Now convince yourselves and if you too are convinced go-to-it, for it will be the making of Charlevoix county and will put it ahead of all other counties as a summer resort. Don't take my word for it but live and learn and see for yourself, then you can safely and consistently blow your own horn.

Very truly yours,
Uncle George H. Van Pelt.

As a progressive Dairyman desiring to secure maximum profits from my milk herd, I realize the necessity of adhering to an organized schedule of care, feeding and handling.

AVERAGE MILK PRODUCTION COW TO SUPERIORITY
Indicated records per cow

NETHERLANDS
SWITZERLAND
GERMANY
DENMARK
SWEDEN
FRANCE
BELGIUM
ENGLAND
U.S.A.

Any cow in my herd reported at below a standard of efficiency, lacking in necessary qualifications shall be disposed of at once. Any cow not what I consider up to herd standard will be sold at once and replaced with a good one.

Yeiling Heifers. I have picked that pure milk strain that yielded milk and butter fat in paying quantities and I have a few heifers from such dam for sale.

During the hot months, whenever possible, I shall supply my herd with a cool, shaded pasture. Where this is impossible they will be fed green cut feeds and roughage in the shade of barn.

My feeding should be of a true type herd sire—a scientific mixture which should always consist of mild grain and good judgment.

Prize Ayrshire cow and calf. Calves will bring in new rewards in more milk, better milk and better profits.

A City condition fills that need in my herd. Never does my herd suffer from lack of water. I think city water is healthful for my herd as well as a pure drink.

The comfort of the animal is important. Thorough cleaning aided by regular dipping about flanks, udders and under. Now Spring grass months and all cow must be free of ticks. Dip will be done and shall be part of my program. Clean stalls, clean milk with few bacteria count.

A dairy barn should be well lighted. Thorough cleaning aided by regular dipping about flanks, udders and under. Now Spring grass months and all cow must be free of ticks. Dip will be done and shall be part of my program. Clean stalls, clean milk with few bacteria count.

The growth in the number of cow testing associations everywhere has met unanimity, also in one in a good thing. I claim my association full support and co-operation.

We strive for economy in production. Buy my feeds in large quantities and mix them to my own formula. Quality is the control.

Prize feeding is special. Therefore I shall always use this a scientific balanced ration for my herd, if still in a position of a profitable dairy, plain value.

That this my self-imposed task may be accomplished I invite your inspection of my herd, my methods and my product. Let me show you how I am trying to make my herd, my product and my dairy a credit to the community in which I live.

Very truly yours,

MORTGAGE SALE

Default having been made in the conditions of a certain mortgage executed by Guy Pearl and wife, Marion Pearl, of Charlevoix, Michigan, unto Charlevoix State Savings Bank, a Michigan Corporation of Charlevoix, Michigan, dated May 21st, 1924, and recorded in the office of the Register of Deeds for Charlevoix County, Michigan, May 22nd, 1924, in Liber 64 of Mortgages, on Page 113, on which mortgage there is claimed to be due at the date of this notice the sum of $5312.22 including the principal sum due with interest, together with an attorney fee as provided by statute and no suit or proceedings at law having been instituted to recover the money secured by said mortgage, or any part thereof, and whereas, the taxes required by the statute to be paid on said mortgage were duly paid prior to the recording thereof:

Now Therefore, Notice is given that by virtue of the power of sale contained in said mortgage and of the statutes made and provided, said mortgage will be foreclosed by sale of the premises therein described, or so much thereof as may be necessary to satisfy the amount then due thereon together with the costs and expenses of the foreclosure, including the attorney fee provided by statute, at public auction, to the highest bidder therefor, at the front door of the Court House in the City of Charlevoix, Charlevoix county, Michigan (that being the place where the Circuit Court for said County of Charlevoix is held), on Saturday the 18th day of December, A.D. 1926, at eleven o'clock in the forenoon on that date.

The premises described in said mortgage being the land and premises and property situated in the City of Charlevoix, County of Charlevoix and State of Michigan, as Lots eight and nine (being the north fifty feet of Lot seven of J. Milo Eaton's addition to the Village (now city) of Charlevoix, Michigan, according to the recorded plat thereof.

Dated September 18, 1926.

MORTGAGE SALE

Default having been made in the conditions of a certain mortgage made by Irene E. Young, of Charlevoix, Michigan, to Sarah Jane Myers, of Charlevoix, Michigan, dated the 22nd day of November A. D. 1922, and recorded in the office of the Register of Deeds for the County of Charlevoix and State of Michigan, on the 29th day of November A.D. 1922, in Liber 51 of Mortgages, on page 465, whereby the power of sale contained in said mortgage has become operative, on which mortgage there is claimed to be due at the date of this notice the sum of One Thousand Twenty Three Dollars, for principal and interest and taxes paid by the mortgagee to protect his security, and an attorney fee of Twenty-five dollars, provided for in said mortgage, and no suit or proceeding at law having been instituted to recover the moneys secured by said mortgage or any part thereof;

Now, Therefore, By virtue of the power of sale contained in said mortgage, and the statute in such case made and provided, notice is hereby given that on Friday the 24th day of December A. D. 1926, at ten o'clock in the forenoon, I shall sell at Public Auction to the highest bidder, at the east front door of the Court House in the City of Charlevoix, in the County of Charlevoix, State of Michigan, (that being the place where the Circuit Court for said County of Charlevoix is held,) the premises described in said mortgage, or so much thereof as may be necessary to pay the amount due on said mortgage, with seven per cent interest, and all legal costs, together with an attorney's fee of Twenty five Dollars, as provided by law and as covenanted for therein, the premises being described in said mortgage as follows, to-wit:

Lands and premises situate in the Township of Hayes, County of Charlevoix and State of Michigan, viz: East Half of the Northeast Quarter of Section Two, Township Thirty Three North, Range Seven west containing Eighty acres of land according to the return of the Surveyor General.

GOOD ROADS

HARD ROADS WILL HELP MERCHANTS

Merchants invariably report an increase in their volume of business when a hard-surfaced road leading to their town is opened for traffic. This has been clearly demonstrated in many communities. The following editorial from the Hubbard (Wis.) Northwestern cites a specific instance:

"Without question the hard-surfaced highways helped to increase the volume of local holiday trade. Many shoppers came to Oshkosh from points thirty and forty miles away, some of them in private autos, and others in the buses now in operation. These bus lines were taxed to the limit, and with the favorable condition of good weather they maintained their schedules with gratifying regularity. The growth of this business during the past season has been a revelation of what can be accomplished along this line.

"When the highways are properly improved, it is a safe prediction that a similar service will reach every section within fifty miles of Oshkosh. All this territory naturally is tributary to Oshkosh as a marketing and shopping center, and merchants are naturally interested in obtaining and holding the trade of this rich and populous section. The way to do it has been disclosed by what already has followed the improvement of the highways. Highways and the people and business interests of Oshkosh have a good reason to favor and encourage further improvement of the highways until a perfect system of good roads is obtained.

"The benefits and advantages will be mutual, for quick and easy transportation is a convenience that promotes the welfare of all. Of course, the supervisors in charge of the trunk roads and the electric lines, but modern, improved highways throughout this section is the next big development, and it will do much to add to the success and prosperity of Oshkosh and all adjacent sections."

CHARLEVOIX PUBLIC LIBRARY

THE CHARLEVOIX SENTINEL

Volume 57 — Charlevoix, Michigan, Thursday, October 7, 1926 — Number 24

HOLD RECEPTION

For Public School Teachers Friday Evening at Church

A Community Reception for our public school teachers was held at the Methodist church last Friday evening, under the auspices of the Women's Christian Temperance Union and was attended by a large number.

A short program was presented at which Dr. Burns presided. Mrs. Saltonstall made the address of welcome. Mrs. Archie Swinton played an instrumental solo and Miss Darcy sang "How Do You Do, How Are You," making a happy hit at the superintendents and faculty.

The pastors and several of the school men spoke on the value of Parent-Teacher meetings, expressing the wish that a Parent-Teacher association might be organized here. Following the program light refreshments were served.

The committee in charge, Mesdames Geo. Meldrum, Geo. Russell, Cecil Pollock, B. G. Mattson and E. C. Sterrit, did everything possible to make it a most pleasant one, and the only regret was that more did not avail themselves of the privilege to meet the guests of honor.

BAND TO REORGANIZE

Meeting Called for Monday Night October 12

NEW MATERIAL TO BE ADDED

Plan to Increase Membership of Old Organization for a Better Band

A movement is under way for a complete reorganization of the Charlevoix City Band. With this object in view a meeting for parties interested will be held at the Court house next Monday evening Oct. 12th, at which time parties interested are requested to be present.

Several members of the organization have left the city, some temporarily, one, or two permanently, thereby reducing the membership. In order to remedy this new members can be placed in the musical company.

Recent plans include the taking in of those interested in music both beginners and advanced student musicians thereby increasing to some considerable extent the membership of the old organization, all making for a larger and better Charlevoix band.

Drops Gather Weight

The weather bureau says that the chief reason why frozen raindrops are of so many different sizes is the fact that partially frozen drops collect the others. Logically, grind shapes that vary with the number and size of the adhering drops, and the extent to which they accumulate before they collided. Entirely liquid drops on collision form, if they unite, only one larger but still spherical drop.

TINY ANIMAL MAY SOLVE MYSTERY OF BIG GLACIER

Scientists Expect to Determine When Grasshopper-Filled Ice Was Laid Down.

Yellowstone Park, Wyo.—The mystery of Grasshopper glacier, just across the Montana state line outside the northeastern corner of Yellowstone park, may be unlocked by the frozen body of a tiny midget no larger than a mouse. The glacier has been famous for many years for the immense number of dead insects and grasshoppers with which its ice is filled and from which it derives its name. The specific reason for the name, but no one has yet been able to guess when these creatures were overwhelmed with cold and buried in snow that eventually became ice. It might have been hundreds of years ago or it might have been thousands.

Now, for the first time, the body of one of the higher mammals has been found among the insects. It is of a shrew, a tiny creature resembling a mouse in general appearance, but not closely related to the mice. It was found by a tourist, R. E. Bolton of Livingston, Mont. At the Park museum its identity was made sure by examined by Park Naturalist E. J. Sawyer and Vernon Bailey, chief field naturalist of the United States biological survey.

Though quickly identifying the animal as a shrew, the two scientists stated that because of the shriveled condition of the body it would not be possible to determine its exact species without careful dissection and measurements. Once this is determined, however, it may be possible to form some idea of the climatic conditions under which the grasshopper filled ice was laid down, because the range of animals is strongly influenced by the temperature, moisture and other conditions of their habitat.

METHODIST VESPER FEATURE SERVICES

The Vesper Services which proved so attractive a feature of the winter program at the Methodist Church last winter will be utilized again this season. The first of the series will be held next Sunday at 4:30 p.m. It will feature the Gospel of the Autumn season. Special features of the hour will be, big young peoples chorus-pantomine; the Autumn Judgment Day, a strong presentation by an Interme diate Sunday School class; a stirring sermon, "Beautifying the Gospel;" Pantomine, "The Song of the Coast Guard," presented by a Junior Sunday school class; a profusion of Autumn decoration, attractive lights and a real spirit of worship.

The public is invited to enjoy these unusual services. The early hour make it possible for church goers to spend a Sunday evening at home or at some other church one evening per month. The offering will be used for local church expenses.

WINTER PROGRAM

For Hotel Charlevoix—Betterments that will be Appreciated

Improvement work of an extensive character has been under way and still continues at the Hotel Charlevoix, all making for permanent betterments that will be appreciated by both local citizens and the traveling public. At the same time a special effort is being made to improve the service in every possible way for the comfort and pleasure of guests, local and transient.

One improvement in particular that will be appreciated during the winter months has been in connection with the heating plant by way of extension of this service which with the addition of the large stone fire place in the lobby insures the guests of positive comfort even during extremely cold days and nights, a matter that to some considerable extent is overlooked by hotel owners and managers in this northern region.

Meals will be continued as in the past on the European plan, with special dinners and luncheons at fixed prices. While for permanent patrons reasonable rates will be given for board and room American plan, or such can be arranged for.

Home cooking will be a special feature in the dining service and in this department of the hotel extreme care will be exercised in making purchases of only the choicest foods available taken into consideration and served to guests.

The manager, Mr. G. J. Winder, is desirous of making the Hotel Charlevoix a social center during the winter months and cheerfully extends the hotel privileges to local citizens and their friends, and in this part of the winter program the manager proposes to furnish entertainment and entertainers if necessary to insure complete success of the program as planned. To further this an up-to-date radio has been installed.

Monotony of Waiting Too Much for Billy

It is hard for grownups to see things from a child's point of view, and to realize that our ideas of politeness must sometimes seem strange to him! The Woman had this fact brought to her notice the other day.

She was visiting a friend who has a small son. Billy had been sitting near his mother when the Woman entered the room, but at his mother's "run and play, dear," he retired to a corner with books and blocks. Presently, however, he returned and slipped into his little chair between the two ladies. The grownups continued to talk, and Billy, holding a book in his fat little hands, looked covertly from one to the other in the hope that a pause in the conversation would give him a chance. Failing this, he presently laid a hand on the Woman's arm, "Excuse me," he said softly.

"Certainly, dear," replied the Woman, "what is it?"

"Nothing; I just wanted to speak to my mother a minute," answered Billy, and turning to her he spoke quickly, before the stream of adult conversation should start again. "I found that story about the kitten! You found me—excuse me—when this lady has to go."—New York World.

CONGREGATIONAL SUNDAY SCHOOL

Rally Program Rendered—"Closing with Pageant

The Congregational Sunday school had for its slogan during September "Every member of our class present on Rally Day," but only two classes, the Willing Workers and Blue Birds, reached the goal and received the Star Attendance banners. Most of the others looked only one or two to the session of the school at twelve o'clock was well attended.

At five o'clock a Rally program was rendered by the school, closing with a pageant entitled "To Whom Shall We Go." Thirty-four members of the school participated in the pageant, several from each department, appealing to the principal character—the Church — voicing the needs of their group.

M.E. LADIES AID OUTLINE THE YEARS WORK

The Ladies Aid Society of the Methodist church met with Mrs. C. E. Pollock last Tuesday. There was a fine attendance. Plans on a large scale were made for the year. Bimonthly meetings will be held this year. The new year's leaders are:

Mrs. H. B. Hooker, president; Mrs. Chas. Arnold, vice president; Mrs. Jones Durance, secretary; Miss Jennie Black, treasurer.

MRS. BARBARA COOK PASSES ON

Charlevoix County Pioneer, Thursday, Sept. 30, Aged 89

Mrs. Barbara Cook, widow of the late Edwin Cook, passed away at the home of her son, James Cook in Marion township at an early hour Thursday, Sept. 30th, aged 89.

Mrs. Cook was a native of Scotland. Her maiden name was Barbara Law and date of birth November 23, 1837, therefore at the time of her death 88 years, 10 months and 7 days old.

When 11 years of age she left Aberdeen, Scotland, her birthplace, accompanied by her mother, half sister and brother, making the trip across the Atlantic ocean in a sailing ship and at the end of the journey, which required seven weeks time, landed at Quebec, Canada, to make a home in the new world.

In 1861 she was united in marriage to Edwin Cook. Eighteen years later, in 1879 the family moved to Norwood township where they continued until recently years, the latter 20 years spent with her son James.

Early in life she embraced the Presbyterian faith, joined the church at Fergus, Canada and continued her membership with the same denomination and church throughout her lifetime. Mrs. Cook is survived by two daughters, Mrs. Jennie Burns, Mrs. Lucy Peart and two sons, James and Edwin Cook, all residents of Charlevoix

Funeral service was held last Saturday at the Barnard church, Rev. Mr. Foster Herman Burns D.D., officiating.

MICHIGAN HIGH DEBATING LEAGUE

Charlevoix High School Has Recently Joined the League

The Michigan High School Debating League was organized by the Board of Regents of the University of Michigan in 1911, and this year begins its tenth year of activity. Any four year high school in the state may become a member by sending a fee of $2.00 to G. E. Densmore, U. of M., Ann Arbor, Michigan.

Applications for membership will be received up to and including Oct. 25. Debates are sponsored by the League, and each school will participate in the four preliminary debates. Those schools winning the highest records in this will enter the Elimination Series which will by successive debates reduce these schools to two which will come to Ann Arbor for the championship debate in May.

The dates for the Preliminary Debates will be as follows: First, Nov. 19, '26; second, Dec. 10, '26; third, Jan. 14, '27; fourth, Feb. 11, '27. The question that will be debated this year is, "Resolved, That the United States Government Should Own the Coal Mines."

Enrollments in the League are coming in rapidly. Many new schools have applied for membership. The enrollment today is ahead of a year ago, and is expected that the enrollment for the year will exceed that of last which numbered 200 high schools. Last year these 200 schools held over five hundred debates in which over a thousand pupils participated. In the final state championship debate, held at Ann Arbor last May, Kalamazoo Central High School won first honors and Hudson high second. The audience assembled for this debate numbered 2,500, representatives of the different high schools of the state, the largest audience that ever attended a championship debate of the League. Sixty three high schools and colleges were represented by one or more delegates.

Charlevoix high school has recently joined the League.

NOTED TRAMPS PLY ROADS IN SCOTLAND

Aged Woman Says She Never Slept in Bed.

Rumoch Moor, Scotland.—The most picturesque tramps of the United Kingdom are Scotsmen who ply the broad high road which runs along Loch Lomond and across the wild and desolate Rumoch moor to Inverness.

Probably the best known is "Lona Jock." For half a century this totally-blind mendicant has fiddled his way along the Perthshire roads, accompanied by two dogs. He shares all his meals with the dogs and at night wraps his six-foot tartan plaid about them and himself and sleeps out under a tree.

"Old Johnnie" is another. He's a genial fellow in a flatcrowned bonnet and tattered frock coat. He has a wealth of humor and is known to be a master of repartee. He has been on the road for 80 years.

Highland tramps, or "tinkers," as they are called around Rumoch moor, speak the Gaelic language. They move in clans and are known by the family names, which often go back for centuries. The oldest member of the clan is the chief and his word is law. They are strict Sabbatarians and will not open their lips from Saturday night until Monday morning.

One old woman who has been on the tramp in the western highlands for 70 years boasts that she has never slept in a bed. She has brought up finally on the king's highway and wears a wedding ring that has been handed down from mother to daughter in her clan for 300 years.

They have a jolly life. Every five or six miles along the road is a "tramp's hotel"—a barn or lot where they can rest for the night or find shelter from the storms. The highland farmers and shepherds know them by name and exchange greetings whenever they meet.

Some land banks refuses never worry these days as the end there is a tramp cemetery in Strathgalbe called "No Man's Land."

CALLING THE HOGS

Fred Patrel of Omaha is the champion hog caller of Nebraska. He can be heard by the porkers for three miles or more and he has challenged all comers to meet him in a test of lung power and schoolfreeness.

Vocal Power General

A living thing is rarely found that has no way of expressing itself by means of sound. All birds and mammals have vocal power of some kind, and even insects, voiceless, can call attention to their presence by means of vibrations.

EAST JORDAN 6 CHARLEVOIX 0

Local Team Lost Saturdays Game

Charlevoix lost to East Jordan football players, in a game played on the Charlevoix grounds last Saturday, making six points while the locals failed to score.

East Jordan team weigh up perhaps a little less in avoirdupoise than does the Charlevoix players, but what they lack in this regard they made up in peppy work and snappy playing, however in this respect there was but slight difference, while the East Jordan team showed superior work on account of having had more practice and active work during the season.

Charlevoix outpointed the visitors on defense work in the opinions of spectators but in other features were perhaps a shade below the contesting team.

GRAVEL BOAT IS WINDBOUND SEVERAL DAYS

The tug General and the tow barge Central, of Detour, Mich., transporting gravel from the South Fox Island to the Sloan-Lyons Construction company, for their real operations near Whitehall, have been windbound at the South Manitou Island for several days. The tug and its consort were bound for Whitehall, loaded, when the fierce northwesterly winds forced them in at South Manitou.

FARM TAX FIGURES SOUGHT BY M.S.C.

Determine Ratio Between Earning Power and Valuation

The ratio between the earning capacity of Michigan farms and their assessed valuation for the past seven years will be sought through questionnaires which are being mailed out over the state by the department of agricultural economics of the Michigan State College.

Figures received in answer to these question forms, and the ratios determined upon, will then be available to any individual or organization interested in the problem of farm land taxation, according to R. W. Wynn Newton, research associate in the M.S.C. economics department, who is conducting the tax survey.

A total of 20,000 of the questionaires will be distributed to Michigan farm owners; in order to get information from every section of the state. The division of Finance and of Land Economics of the U. S. Department of Agriculture are said to be cooperating in the work.

"This investigation is an opportunity for farmers to submit their side of the land taxation question," said Mr. Newton. "A high percentage of questionaires filled out and returned will insure accuracy in the figure determined upon to represent the ratio between the earning power of farms and their assessed valuation."

FOURTH MEETING REAL ESTATE BOARD

Members of the Tri-County Real Estate Board held their fourth meeting in Harbor Springs at the Emmet Hotel, Friday, October 1st. This new organization is getting well under way, and many benefits to the real estate business and to the region generally, are foreseen through the functioning of the board.

Charles Rainey, Earl Young and Lawrence Chase went from Charlevoix. A special meeting will be held at the Castonan hotel in Petoskey, at o'clock Friday, October 15th. There will be a dinner preceding the business meeting and it is hoped that all real estate brokers, and business men who are directly interested in the real estate business of the tri-county region will attend. This region embraces Emmet, Charlevoix and Antrim counties.

By a recent change in the postoffice force at Sarasota, Florida, Mason H. Rose, formerly of Charlevoix, has been promoted from the position of city carrier to superintendent of mails, dating from October 1st. This promotion carries with it an increase in salary of three hundred dollars per annum, while the new position is less laborious than the one held since July 1st, 1925.

FARM TAX FIGURES SOUGHT BY M.S.C.

Determine Ratio Between Earning Power and Valuation

The ratio between the earning capacity of Michigan farms and their assessed valuation for the past seven years will be sought through questionnaires which are being mailed out over the state by the department of agricultural economics of the Michigan State College.

Figures received in answer to these question forms, and the ratios determined upon, will then be available to any individual or organization interested in the problem of farm land taxation, according to R. W. Wynn Newton, research associate in the M.S.C. economics department, who is condcting the tax survey.

A total of 20,000 of the questionaires will be distributed to Michigan farm owners; in order to get information from every section of the state. The division of Finance and of Land Economics of the U. S. Department of Agriculture are said to be cooperating in the work.

"This investigation is an opportunity for farmers to submit their side of the land taxation question," said Mr. Newton. "A high percentage of questionaires filled out and returned will insure accuracy in the figure determined upon to represent the ratio between the earning power of farms and their assessed valuation."

SAFETY CAMPAIGN

Dewey J. Pearsall in Charge —Will Make Talks to Students

Public schools on main thoroughfares are being visited in this region by state police. Dewey J. Pearsall is in charge of an instruction program that will be carried out and will make short talks to students, old and young, regarding matters of public safety.

This program is being carried on throughout the state the main idea being to educate children relative to danger and the avoidance of same while traveling on the public highways.

Another part of the program consists of the appointment of one or more of the older boys in each school district as safety patrolmen. When such an appointment is made the student will receive a special arm band whereby he will be designated as one of the safety patrol workers.

The duty of the safety patrolmen consists in the main in protecting and educating the younger student of dangers encountered and to be avoided along heavily traveled roads.

The department of Public Safety and Detroit Automobile Club have arranged to give a bronze medal to each member of the students safety patrol that faithfully performs his duty during the school year.

NEW FIRM ORGANIZED

James Simmons and Henry Block

TAKEN THE AUTOMOBILE AGENCY

For Oakland, Chevrolet and Pontiac Cars as an Added Line

The business heretofore conducted by James Simmons, according to present plans, will be greatly enlarged and in the future the new firm of Simmons and Block will continue the present lines and in addition have taken over the agency for Chevrolet, Oakland and Pontiac cars, and in addition will open a first class repair shop following along the lines with which Mr. Block is familiar, suchas he has been engaged in during recent years.

Messrs. Simmons and Block have an extensive acquaintance throughout, this entire region are engaged in a business with which they are familiar, understand the requirements and needs of the public both local and transient from which it appears that the new combination will start out with every prospect of a most prosperous and successful business future.

In Boston Keep Going

Persons who visit Boston are often perplexed by its maze of streets. A visitor was complaining to a resident that he was constantly getting lost. "Never mind!" said the Bostonian. "Just keep on going straight ahead and you will always come out where you went in."—Exchange.

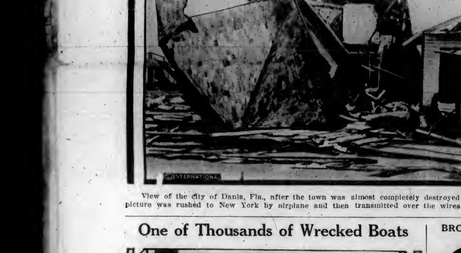
Scene of Devastation on Miami Beach

How Miami Beach was devastated by the hurricane is indicated by this photograph showing trees torn up, with water in the streets four blocks from the ocean shore.

Famous Roman Pools and Casino Were Wrecked

Miami Beach's famous Roman swimming pools and Casino after the terrific hurricane had practically destroyed them. At the right is the huge Roney-Plaza hotel.

One of the Smaller Cities Smashed by Hurricane



View of the city of Dania, Fla., after the town was almost completely destroyed by the recent tornado. This picture was rushed to New York by airplane and then transmitted over the wires of A. T. and T. to Chicago.

One of Thousands of Wrecked Boats

Large motor boat, which, anchored in the Miami harbor when the storm broke, was caught in the flood and swept more than a quarter of a mile into the heart of the city, finally resting in a vacant area near one of the hotels.

SHORT ITEMS of INTEREST

One hundred million atoms can be placed within the space of an inch.

Some of the malaria-carrying mosquitoes themselves die of the disease.

A "fountain pen" has been invented which emits gas that "knocks out" an outlaw for 30 minutes.

A clock is being made in England, the hands of which weigh half a ton. The minute hand is 15 feet long.

Japan still likes to go awheel, and in Tokyo alone there are nearly 100,000 bicycles, some with side cars and some with trailers, clogging city's streets.

The Cincinnati inventor of air cushions to replace the usual elliptical springs on automobiles claims they afford greater resiliency and act more quickly.

A marine worm, hitherto unknown to science, has eaten through the lead covering of an ocean cable and then severed a wire seven-tenths of an inch thick.

Seventy-one towns in Germany are named Neudorf.

The glass roof of the Victoria station in London covers ten acres.

Free libraries for the people are being established throughout Turkey.

One planting-sugar company of Hawaii packed 1,680,000 cans of the fruit a day for ten consecutive days this season.

Richard C. Dillon, the Republican nominee for governor of New Mexico, began his career in the southwest some 30 years ago as a railroad track laborer.

Potters in Sheffield, England, who make molds for crucibles, still tread the clay with their feet to remove air bubbles, because machinery does not give such good results.

For attaching metal roofing, nails have been invented with soft heads that can be hammered to seal the holes they make and prevent water entering to rust the metal.

Irrigation Useful for Apple Disease

Picking Fruit at Right Time Also Is Big Help.

(Prepared by the United States Department of Agriculture.)

Water core, a serious disease of apples especially in practically every important apple-growing section of the world, may be reduced considerably by liberal irrigation and by picking the fruit at the proper maturity, according to Dr. Charles Brooks, pathologist of the United States Department of Agriculture. Six years of investigation have served to show that, contrary to the prevailing opinion, the disease occurs when the supply of water in the soil is inadequate rather than when it is excessive. The real cause of the trouble, however, is in connection with high temperatures, intense sunlight, and the accompanying high sap concentration in the fruit.

The watery or glassy appearance of the flesh of the apples, a characteristic distinguishing water core from all other apple diseases, is due to the filling of the intercellular spaces with cell sap instead of air. When water is not available in sufficient quantity high temperatures and intense sunlight cause the sap in the fruit to concentrate and cause enormous pressure on the cell tissues to a point where they break and tear. In irrigated regions experiments showed that apples from heavily irrigated trees developed less water core than those from lightly irrigated trees. Also less water core developed when light irrigation was followed by heavy irrigation than when the practice was reversed.

Picking at the proper stage of maturity is the most practicable preventive measure of the trouble, especially in the nonirrigated regions. The study showed that water core might increase as much as 50 per cent in 10 days after the proper time for picking.

Tests Show Best Means of Inoculating Legumes

Pure cultures of legume bacteria grown on artificial or nutrient media have been found superior to soil for inoculating legumes, when judged by the number of nodules obtained per plant, according to results of experiments made by investigators at the college of agriculture, University of Illinois. When the same legume is grown a second time in the same field, good nodule development is secured both from pure cultures and from soil. These findings have been made in studies of the factors influencing the inoculation of soy beans. The effectiveness of either method of inoculation is decreased by failure to sow the seed soon after inoculation. To give the best results, bacteria should be applied to the seed within twenty-four hours of the time at which the sowing is done.

Illinois Trying to Get Improved Types of Oats

Seventeen of the best-known different varieties and strains of oats are being studied by plant breeders in the experiment station and investigators at the college of agriculture, University of Illinois, in an effort to get improved types of oats. These tests involve several different characters, such as black and white grain color, awnedness and form of awns, and presence and absence of lignules. An attempt is being made to combine high yield and good quality with other desirable characters.

Best Breed of Chickens

In starting out in the poultry business, it is best to start out with a well established breed because they are more likely to breed true to type and color than the newer breeds and there is also more demand for the hatching eggs and breeding stock from the old well known breeds than from the novelty. Of course, each individual has some preferences as to color and type, which should not be overlooked.

FARM NOTES

Dig the weeds out of the lawn before they go to seed.

* * *

Silage corn should be cut when it is in the dough stage.

* * *

One reason why dairy cows make money is because they are where they utilize a lot of roughage that otherwise goes to waste.

* * *

Farming with only the hands leads to overdrafts at the bank. Using both the head and the hands keeps the account out of the red.

* * *

A bulletin on planning the farm layout is available at the college of agriculture at Ithaca, N. Y. It may be had by asking for # 55.

* * *

Haste does usually make waste, but the rule doesn't hold in preparing the seed bed for wheat—plow early.

* * *

An arrangement that will save labor in caring for chickens is to place the hopper where the source rather than in a long row.

* * *

Three pints of a good silo, are: Strong walls, smooth inside, and tightness enough to keep the juice in and the air out.

* * *

A chicken's life must be tough—just think of that: Entomologists say a single pair of flies will number 125,000 in eight weeks.

* * *

Spontaneous combustion seldom occurs in hay that has been cured entirely fully. Bulk or dew on it is more dangerous than the grass.

* * *

Cement makes the best floor for a poultry house. When properly built it is economical; easy to clean, rat proof, durable, and free from dampness.

Edward B. Hussing, of station WJZ, who broadcast the warnings of the Florida hurricane through an east coast chain of radio stations. Undoubtedly, many people who heeded the warning escaped injury or possible death by postponing intended trips out to sea or by leaving the zone of danger.

Nero Lost of Family Line

Nero was the last of the imperial family of Caesars, but thereafter Caesar became a title of dignity. From the name were derived the German "kaiser" and Russian "tsar."

Memory

We consider ourselves as defective in memory either because we remember less than we desire, or less than we suppose others to remember.—Johnson.

Simple Pleasures Best

How sweet and wholesome are the pleasures that go into small room—the humble, simple, unostumed sights and sounds that bring the soul at once into the open air.—Dora Greenwell.

Hold!

It is said that an American has four chances in 100,000 of living a century. Don't spoil your own prospect of being one of the four by racing your car against the locomotive at the grade crossing.

Orchard Information

APPLE STORAGE IS QUITE IMPORTANT

For 18 years the pomology section of the Iowa agricultural experiment station at Ames has been investigating the control and prevention of apple storage diseases, and the fourth report in the form of Bulletin No. 227, which may be secured by anyone interested who will address his inquiry to the Bulletin Section, Iowa Agricultural Experiment Station, Ames, Iowa.

This report, containing 64 pages, covers internal breakdown, apple scald, Jonathan-spot and soft-scald. It describes each of the diseases and reports what measures were found most effective in the control of each.

The investigations reported were carried on mainly with Jonathan and Grimes apples. It was found that apples of either variety should not be held after January 1, because Jonathan-spot is likely to affect Jonathan after that date and because of the danger of internal breakdown attacking Grimes.

Jonathan-spot was best controlled on Jonathan when they were picked before becoming too mature and stored immediately at about 32 degrees Fahrenheit and in relative humidity of 80 to 90 per cent was maintained. Although early picking reduced Jonathan-spot, it also increased soft-scald on Jonathan apples and the authors of the bulletin, H. D. Pierce and T. J. Maney, feel that more experimental work is necessary to determine the best picking date for Jonathan.

Jonathan-spot affects deeply red colored apples most and occurs on Rome Beauty, King David and Esopus as well as on Jonathan. It occurs as greenish tinge to blackish colored spots which range from one-sixteenth to one-fourth inch in diameter.

Apple scald on Grimes was best controlled by delaying the picking date and by wrapping the apples in oiled wraps, but here again internal breakdown was most extensive if picking was delayed too long. The best control found for internal breakdown were to pick Grimes before they had become too mature and then to store at low temperatures.

Apple scald is said to be most likely to affect the Arkansas, Grimes, Rome Beauty, Sheriff, Yellow Newtown, York Imperial and Winesap varieties, and that the Willow Twig, Northern Spy, Jonathan, Missouri Pippin, and Ralls varieties are practically immune.

Plan for Growing Apple Seedlings During Fall

In the growing of apple seedlings the usual practice is to secure apple pomace in the autumn and sift out the coarser material and then wash the balance until the seeds can be separated. The pomace will rise and the seeds sink in the water. They may then be dried with dry sand and sown in a cold frame or in the field. Some nurserymen store the seed in sand or sawdust until spring but they should never be allowed to become dry and hard or the germination is very slow and uneven.

Excellent seedlings may be secured by removing the seed from apples at the present time. Sow in rows in a flat and place the flat in a greenhouse or in a favorable location in the house where the temperature is fairly uniform. The seed will germinate almost at once and when the ground is ready to work, plant these little seedlings in the open and they can then be worked by hand through the season. Good plants can be secured in this way.

All Raspberries Require Some Kind of Protection

This kind is best for the home selection. This is provided by covering the canes in the fall with earth. The tender raspberries need similar protection but if you are sure of having sufficient snowfall to cover the canes all winter, less protection would be required. However, it is safer to protect them.

The fall-bearing red raspberry is one of the hardiest sorts. The Minnesota State Horticultural society recommends the following black raspberries: Cumberland, Plum Farmer, and Gregg. Red varieties: King, Cuthbert, Sunbeam, Ohita, and Latham. In buying plants be sure to get them from companies having disease-free stock. This means that the mosaic disease has been injuring many of the red varieties. The state nursery inspection office is willing to help control the disease by carefully inspecting the growing plants twice each year.

Horticultural Facts

We are raising the majority of our insect pests.

* * *

Between 240,000 and 400,000 cars of fresh, canned and dried fruits are shipped annually from California.

* * *

The time to kill chewing and leaf-sucking insects is when they are there.

* * *

Keep the gooseberry and currant bushes thinned out so that they will not become infected with mildew in midsummer. Spraying with a solution of potassium sulphide—one-half ounce to a gallon of water—is helpful.

* * *

One of the principal items in the care of grapevines is the close observation of all parts of the plants to observe the first attack of any enemy insect or disease. If such is found, control measures should be started at once.

SMITH'S PUTTER DOES GOOD WORK

Pro's Success Due to Caution and Accuracy.

McDonald Smith, one of the greatest stylists and shotmakers in professional golf, has a "cop-look-and-listen" method of putting, but it usually gets results. "Mac" takes the utmost of his native Scotch caution with every stroke on the greens, examining contours, feeling the resiliency of the sod, sighting his ball fore and aft, then making a final tour of inspection to eliminate all stray obstacles, no matter how minute.

An excellent illustration of the effectiveness of his putting methods was furnished by Smith in carrying off the Metropolitan open golf title in a third play-off round with Gene Sarazen. Sarazen, the defending champion, shot a 70, and was thereunder par with, a card good enough to win nine out of ten matches. But Smith's uncanny work on the greens gave him a record-breaking 69—and the crowd. Mac's magic wand was an aluminum putter of the Scimeca- Indy type and with it he was finding the hole from distances of 40 feet as easily as he did from four.

In the catalogue of golf's outstanding scoring feats of 1925, Smith's 69 at Salisbury and his average of 74 4-7 for the seven rounds necessary to decide the Metropolitan tournament are ranked by critics on the same plane with Bobby Jones' 134 in the British open qualifying play, and Walter Hagen's record-breaking 292 for the first two rounds of the Eastern Open championship.

Carey Remains One of Most Remarkable Stars

Max Carey, Pittsburgh's veteran out fielder, continues to remain one of baseball's most remarkable products, writes Grantland Rice in the New York Herald-Tribune. Wagner and Lajoie retained the glint in their batting eyes for years, but Carey can cut bit with the best. Pep Ansou was a great hitter for 23 years.

But none of the latter ever were able to hold the speed of youth. The batting eye remains longer than any other adjunct. Speed is the thing first to fade.

Carey, after 16 campaigns, is as fast as ever. He was the best base runner in the game last year and one of the fastest. He can still step with any of the young speed stars and his value to the club never has been quite appreciated by the outside public.

Carey belongs to the period which turned out Cobb, Collins, Speaker and Johnson, although he came on just a little later. But he was among that great group which emerged between 1905 and 1910, which also gave baseball Stuffy McInnis, Zach Wheat, Frank Baker and a few more who'll be in the Hall of Fame before the ivy covering football season between rounds of golf.

First Curve Ball Ever Pitched Amazed Batters

Candy Cummings, of the old Stars of Brooklyn, is credited with being the first pitcher to release a curve. However, Joseph M. Mann, of Prince ton, really did as much as Cummings, probably more, to popularize what was then a "freak" ball.

Mann was the first to accomplish a nasty curve, and it was largely through the use of it that he earned this distinction. Mann, pitching for Princeton, shut out Yale at New Haven, May 29, 1875. So astonished were the Yale players at Mann's ability to curve a ball that they gathered round the plate as the Princeton star fanned out the Eli batters.

George Wright, of the old Cincinnati Red Stockings, pulled the first double play. It was in a game against the Atlantics, of Brooklyn, played on Long Island, in the tenth inning, with a man on first and second, the batter popped up to Wright at short.

Instead of catching it, as the runners anticipated, Wright "trapped" the ball by scooping it on the first bound. He then threw it to third, and the man on first, who by the time was shot it to second. Two runners were out, and the first double play had been performed.

Use Uniform Rules

Uniform players' rules will be used in the interprovincial and intercollegiate rugby unions this fall. Practically only one outstanding change has been made in the rules this season and that is the elimination of the placement kick which followed the scoring of a touchdown, in preference to the dropkick. All touchdowns will now be converted in both organizations playing the English style of rugby in the Dominion of Canada by the dropkick.

Mesmerism Does Away With Pain

The theory of suggestion has recently cropped up in quite a new form. It is now claimed that the pain of dental extractions can be allayed by mesmerism.

The method used in this peculiar form of painless dentistry is to place the patient in a chair and put before him an optician's test card. The sufferer is invited to gaze steadily at a particular letter on the card, after which the mind "rests" the eyes and try to fix in his mind a picture of the letter.

After several attempts he will be able to do this satisfactorily and mentally hold both color and outline in his brain to the exclusion of other thoughts and feelings. When this state of complete mental subjection has been reached it is possible for the dentist to extract teeth forceps without fear of causing pain.

Real Apple Pie Feast for Gods

The really valuable apple pie is to be found not so much in restaurants as in rural homes. There the pie is carefully compounded according to ancient and approved rules, and after having been baked, a delicate operation lifts the upper crust of the pie and the steaming apple slices underneath may be inserted before cutting by the addition of butter and sugar, both being melted by the heat. An ancient practice, now often neglected, added nutmeg as well.

But, alas! Satan often contrives to mar perfection, and so it comes about that in due time pies made of dried apples appear, though the evil, thinks to the cannories, is now diminishing. Evaporated apples form inadequate material for pies, but they are far superior to the famished product, regarding which the less said the better. The apples, let us hope, will reach the pie-eater in their natural state, in which event Thanksgiving day should be marked by more than the normal volume of thankfulness.

Poetic Intoxicant

A new intoxicant has appeared in Japan. In the precincts of a shrine at Kamedo in Japan the other day a policeman on patrol discovered what he took to be a corpse. He telephoned to the village office for a coffin, which was at once sent, and the body put in. On the way to the village office, however, the corpse in the coffin revived and began to sing and dance, to the intense relief of the bearers. It was later ascertained that he was a young man, aged twenty-three, who had been made intoxicated by viewing the cherry blossoms.

A woman not only wants to be beautiful but she wants to be told that she is.

Most of us having the key to success can't find the lock.

Turn on the Cold

Cold distributed on the same general principle as heat is an innovation of the ancient Romans' dwellings in some of the large cities. Instead of installing bulky machinery in individual apartments for keeping refrigeration purposes, one central machine is used in the basement, just as one furnace or boiler is used. From this central plant the individual apartment housewife can control the cold in her iceless refrigerator, turning it on or off as simply as she regulates a radiator.

Genuine Gratitude From One Who Knows
New York, Mr. R. Rudich writes: "After trying many ways and means these past 10 years to find relief from terrific headaches, which have made my life more or less miserable, I decided to try 'Carter's Little Liver Pills.' My pains soon diminished. I feel like a new man. I never cease to express to you gentlemen my wholehearted gratitude."
Carter's Little Liver Pills generally remove the cause of sick headache by eliminating the constipation poisons from the system.

CHAPTER XIV

21—

You Yankees!

When Caleb had discovered the weakness of the rock in Hermanos canyon he looked for another dam site and his inquisitive caution had cloned his mouth in the matter until Baxter's treachery had next him on his visit to El Nido the day that Clinton died, ready to make explanations that he felt would exonerate him from Baxter's charges.

He had discovered his alternative in Boca-Blanca basin. Caleb's engineer's eye saw its possibilities the day of the barbecue and later investigation convinced him that here was his site, better in some ways even than Hermanos. Two creeks ran through it, for one thing, the slopes drained more gently but with sufficient pitch. Clearance work presented no alarming problems or cost.

It was a month after Baxter had been warningly dismissed by Cox that Hinckley, paying flying visits to his offices between field trips, came into the room where Caleb bent over his drafting and slapped him on the back.

"I've finished my report to the board of directors, Warner," he said jubilantly. "Dictated it this morning. It's entirely favorable. They meet the day after tomorrow. I understand they're practically completed the options for the watershed. All they now have to do is to vote money for purchase and our end of it and then—it's up to the pair of us!" You've earned your hundred thousand dollars, which, I imagine, will be transferred tomorrow. I wanted to be first with my congratulations. I haven't given you any the best of it in my investigations. Hey, but I'll be glad to buckle down into the harness again! With you come up to the house to dinner tonight, and talk over things afterward?"

Caleb assented gladly and Hinckley said good-by. He had been gone but few minutes when a boy arrived with a request for Caleb to see Mr. Cox.

Cox opened the conversation to the point without preamble.

"Say, Hinckley, Warner? Then you know that his report is favorable. Now, then, we could close up the whole matter at the meeting tomorrow and pass appropriations, but for one thing."

"That's the purchase of the Boca-Blanca basin. We can't get option or purchase price on it out of Wiburton, who was handling it. He's stalled me off till yesterday for some reason and I don't like it. He has recently sold it and he says that he has instructions not to disclose the name of the purchaser. Part of the provisions of the deal. We've got to have it to complete the project. You know that. I did not imagine there would be any difficulty. It's valueless land and no one but an engineer would ever imagine it as a reservoir site. Unless there has been some leaks. Did you ever get any line on who owns Boca-Blanca? You found out the owner of the Caliente gravel beds."

"I own the Boca-Blanca basin," said Caleb quietly.

"You do?" Cox's left eyebrow went up.

"I expected to tell you as soon as I knew that Hinckley's report would be favorable. Otherwise my investment would be useless except for reality."

"Your investment?" Cox laid down softly the pencil he was balancing and subjected Caleb to a searching scrutiny. His demeanor changed. All friendliness left it, the president's face hardened, his jaw shot out and his eyes became again the color of ice in shade. "How much do you want to make on your little—investment?" he demanded.

"I paid ten thousand for the whole valley, bottom to hillrim," said Caleb. "Six thousand in cash—four thousand on a mortgage secured by a five-years' note at six per cent interest.

"I'll turn it over to the company for exactly what it has cost me as soon as my agreement with you is satisfactorily upon the acceptance of Hinckley's report. I was in a position to get hold of this property when there was no chance of its value being tilted, at a low price, and I took up the opportunity. I have always intended to deliver it to the company when my own deal was closed."

Cox's face showed faint signs of relief, his eyes were still keen, but now they held a quizzical light.

"When your own deal was closed! Had an ace in the hole all the time, eh, Warner? It was you I understood. It isn't so often that you find an engineer a first-class business man. You'll go far, Warner. Part of the way with us, I'm glad to say."

Caleb flushed a little.

"It was hardly an ace in the hole," he said, "since I expected to play it with your hand. I felt that it was a business measure to protect myself, Mr. Cox. I did not doubt your sincerity, but . . ."

"It was a d—d smart move, Warner. You didn't know us. You Yankees!" he chuckled. "I appreciate it personally and for the company. I mean your turning it over as you will. You could have held us up for a stiff profit and that, too, would have been business. But, your New England conscience walks hand-in-hand with your New England forehandedness. You should play a good game of chess, Gad, you've taken a weight off my mind! Wharton and Baxter being so close I began to think that grasshopper had cooked up something, after all. But you blocked it too early in the game, even if he thought of it.

"Tomorrow will see you with your cheek in hand for a hundred thousand dollars. If you want to invest that in our new stock issue, Warner, I'll see that you can get a block of it. It's coming to you. How about it?"

"I'll think it over, with full appreciation of the offer," said Caleb. "After this project is completed I may want to use my capital in a hurry."

Cox was all cordiality again. It was plain that Caleb's protective purchase of the key to the project appealed to him.

That afternoon Caleb took his deeds to Boca-Blanca out of his safety-deposit drawer at his bank. So far he had won a third of what he desired—the price of his discovery. Now came the work, the enduring sign. There still remained Betty Clinton.

CHAPTER XV

The Work

The rains came sheeting down with blustering winds or days of steady downpour. Caleb was astonished that a California weather could be so wild but they worked. Tarpaulins could keep out the rain, there was no frost, none of the hinder in cement and of the excavator. Caleb dug deep into the gravel beds, although the creeks were running wild, and he was forced

Later Investigation Convinced Him That Here Was His Site.

to halt at thirty-five feet and wait until spring brought a lowering of the water table to level. He pushed work on the subsurface project. Men swarmed like ants, in busy multitudes.

As the work proceeded toward completion Caleb still found the project good. By June the company began to talk of a ceremonial opening. There would be a picnic-de-luxe, an elaborated barbecue, speeches, general inspection of dam and filtration system. All this was set for August, after a year's top-speed toil.

Caleb was seldom away from the actual scene of labor, he had not seen Betty Clinton, he had seen no one who might have seen or heard of her, but it was not often that thoughts of her were absent from his leisure hours, which were few and apt to find him mentally and physically tired and drowsy.

The year of her mourning would be up with the opening of the works. He hardened his heart with things which he hoped to go afield for the next adventure with Betty, to find it for themselves and work out its problems together.

He realized that there had been a change in him.- He had expanded and he was no longer the self-contained young engineer who had worked on the projects in New England, beside which this present affair was enormous. He had glimpsed the human side. It was no longer so many yards of excavation, so much concrete, so much flow, levels, logarithms, trigonometry. The personal had entered into the mechanical.

He did not hire the men under his charge. That he left to the company's superintendents and foremen. But he tried to know each by sight and greet them with a nod that recognized them with himself as partners in the work, each accordilg to his measure, capacity. A tuber camp had been established in the lee under canvas and light lumber, bunkhouses, dining rooms and a few concessions all under strict supervision of the company.

It was on Sunday when Caleb, riding over to meet Hinckley at the big dam, passed a man coming out of a little store that carried stationery, candy, tobacco and newspapers and magazines. He had a paper bag tucked into his side pocket, from which he abstracted a sweet morsel for his mouth as Caleb, astride a horse is preference to the car provided by the company, went by him. The man saw and his inquisitive caution had a little color. His clothes were of unusually good material, but the scarcity and high price of radium made it difficult for most surgeons and hospitals to get enough for use.

During the war, the great demand for all kinds of radium material stimulated production and led to the discovery of large radium deposits in Arizona, also to the development of better methods of treating low-grade radium ores. After the war was over, radium was much cheaper and more abundant, so that today many of our hospitals are provided with enough of this material for treatment, so our knowledge of the value of radium treatment in cancer is rapidly growing.

Another result of the war was that in Germany scientific men, being deprived of radium by the blockade, were forced to develop X-ray treatment and so greatly improve X-ray machines and methods in the treatment of cancer.

So the war greatly increased our knowledge of the treatment of cancer, both by radium and X-ray.

As far as knowledge of the cause of cancer is concerned, the most important advance is the work done by Gye and Barnard in London. Gye, a well-known microscopist, claimed to have found a very minute germ which he considers the cause of this disease. The nitty of the work is too long and technical to tell, but it can only be said that so far the work of Gye and Barnard is regarded by authorities as interesting, but not yet proven.

Perhaps the most promising advancement in the treatment of cancer is the work done by Prof. W. Blair Bell of Liverpool, on the use of lead in the treatment of all kinds of tumors. Lead in most forms is a dangerous poison. Blair has succeeded in making a form of lead which is harmless to the healthy cells, but which collects in the tumor cells and poisons and destroys them. In 250 cases of persons who were considered hopeless, about one in five were apparently cured.

WHAT IS LIGHT?

UP TO recent years little has been known about the effect of light on life and living processes.

Naturally, investigation on the subject began with sunlight, as the light we get on this earth from the sun is the source of all other forms of light. So the first question asked was, "What is sunlight?"

Sunlight comes to the earth from the sun, which is approximately ninety-three million miles away. What is it and how does it travel this immense distance?

Sir Isaac Newton believed that light was a form of matter and that particles of light were transported from the sun to the earth. Since sunlight did not appear to be a continuous string of matter, it must be transported, he reasoned, in finely divided particles with spaces between the particles. So he called these particles corpuscles and his theory of light was called the corpuscular theory.

Newton's theory was the best that could be offered with what was then known about light, but today, with a much greater knowledge of electricity, visible and invisible light rays, wireless waves and other natural conditions, Newton's theory no longer fits the known facts, so it has been generally discarded by scientific men.

No one has as yet been able to work out a theory of light which fits all the known facts. There are today two theories of light, what is called the wave theory and what is known as the quantum theory.

To discuss these two theories in detail would fill many volumes. Most scientific men are agreed today that light is the vibration of electric waves at different degrees of speed; that light, electricity and heat are all different forms or results of these vari. ous degrees of vibrations and that visible light, which can be seen by the human eyes, forms a very small part of this vast field.

The limited amount of light or vibrations which we can see can be broken up by the spectrum into seven primary colors—red, orange, yellow, green, blue, indigo, violet. Beyond the red rays are the rays which are too long to be seen by the eye and which produce heat. Beyond the violet rays are the so-called ultra-violet rays, which are too short to be seen by the eye, and beyond these and still shorter are the X-rays and others.

Danger in Celluloid

Celluloid is very inflammable and can be ignited by hot steam pipes, etc. It should, therefore, be handled very carefully. Celluloid may begin to burn at temperatures not far above that of boiling water.

All Wiped Out

HOW TO KEEP WELL
DR. FREDERICK R. GREEN
Editor of "HEALTH"
(©, 1925, Western Newspaper Union.)
CANCER RESEARCH

SO MUCH has appeared in newspapers and magazines in the last few years about cancer that the general reader is much in doubt whether anything of much importance has been added to our knowledge in this field.

In an article in a recent issue of the American Journal of Public Health, Dr. Francis Carter Wood, director of the Institute for Cancer Research, of Columbia university, summarizes what has been done in cancer research since the war.

Ever since the discovery of radium by Madame Curie this strange substance has been recognized as of great value in treating certain forms of cancer, especially skin cancer and those located superficially. But the scarcity and high price of radium made it difficult for most surgeons and hospitals to get enough for use.

During the war, the great demand for all kinds of radium material stimulated production and led to the discovery of large radium deposits in Arizona, also to the development of better methods of treating low-grade radium ores. After the war was over, radium was much cheaper and more abundant, so that today many of our hospitals are provided with enough of this material for treatment, so our knowledge of the value of radium treatment in cancer is rapidly growing.

Another result of the war was that in Germany scientific men, being deprived of radium by the blockade, were forced to develop X-ray treatment and so greatly improve X-ray machines and methods in the treatment of cancer.

So the war greatly increased our knowledge of the treatment of cancer, both by radium and X-ray.

As far as knowledge of the cause of cancer is concerned, the most important advance is the work done by Gye and Barnard in London. Gye, a well-known microscopist, claimed to have found a very minute germ which he considers the cause of this disease. The nitty of the work is too long and technical to tell, but it can only be said that so far the work of Gye and Barnard is regarded by authorities as interesting, but not yet proven.

Senator Caraway as a Democratic leader would seem to be developing more "left" than even the poor old Donkey party can carry. It was Senator Caraway who before leaving for Europe broadcasted to a nervous democracy that wholly apart from his qualifications that Al Smith, governor of New York, was absolutely ineligible for the Presidency because he was a Catholic. Hardly had the northern Democrats recovered from this shock, and while they were still swallowing the timorous explanations of some of their national experts that Caraway was all right and really didn't mean it, before he launched himself again upon the scene.

Back from Europe he issued a call to the people of America to bring back their honored dead from France, charging that the French people were not only defacing the grave markers but were writing scurrilous messages on the memorials of the fallen. Caraway now admits that he did not visit any of the battlefield cemeteries, and that he did not see any of the defacements that he talked about, but that he was repeating what somebody had said in the United States Senate during a debate last spring. Yet the Senator is one of the high ranking democrats in the Senate to whom some of the misguided people of the nation wish to entrust the conduct of our nation.

Our country was never in a more prosperous condition than it is today—on a better or more solid financial foundation, with glowing prospects not only for next year but for years to come. There are naturally, individual and community cases of disappointment—where business and wages and employment are below the average—but such cases in no way hamper the general prosperity of the nation.

The people as a whole are better off today than they ever were, and are better off than the people of any other nation in the world, more labor-saving devices in the home, more and better clothing, set better tables, have more opportunities and more means of employ and enjoy the play better than they ever did. If the country were on the way to the demition bowsows such a condition could not exist.

Let's quit yammering and yowling about hard times—and shout everything else—and turn our thoughts to blessings that are given us in such abundance, and if we make the most of our blessings we will have provided ourselves with an armor that cannot even be dented by the prossesional calamity howler. And we'll enjoy life the better.—Hubbing, Minn., News.

WE SPENT MONEY

The allies spent money in America during the war but America spent a great deal in Europe too, and attention to the fact is called by Albert T. Laidlaw, in the National Republic in "An American View of World Events:"

"Much has been said by foreign newspapers and politicians and their supply echoes in the United States about the amount of money spent in the United States by France and others of the allies in the purchase of war supplies. What the United States spent in Europe during the war is never mentioned. The American government spent a billion dollars in France during the World War. It paid harbor charges on vessels which carried American troops to France; it paid the railroads for carrying them to the front. It paid for training fields where American soldiers were prepared for battle. It bot supplies liberally in France. Two million American soldiers spent millions of dollars in France. After the war the American government sold surplus supplies worth more than a billion dollars to the French government for $400,000,000, no part of which France is required to pay until 1928." The supplies brought, in fact, fifty a billion dollars after their purchase by speculators at a profit to the French government. The sale of these supplies by this government at a sacrifice was made necessary because the French government forbade their being thrown upon the market. On the other side of the ledger it may be noted that Germany has offered Belgium forty million dollars for two towns. At the rate the value in dollars of Alsace Lorraine to France is incalculable; yet there is never a thought of weighing the assets acquired by France as the result of the war against the liabilities, or taking into consideration what France might have lost by way of territory and indemnities except for the supplies sold by the United States to the allied armies before America got into the war, and the financial and military assistance during the war."

ON SEA TO STAY

Every real American will give a mental cheer for the patriotic statements made in the Chamber of Commerce by Chairman I. V. O'Connor, of the United States Shipping Board. Chairman O'Connor politely informed the representatives of European shipping interests that the American merchant marine is on the high seas to stay.

"Congress has declared for a permanent merchant marine, privately owned if possible, but a merchant marine anyhow," the chairman said. "The American people stand squarely behind that policy."

He further intimated that the United States does not expect to get all of the trans-oceanic shipping in the world but what we want is our fair share of it. His words were terse and well spoken, and American sentiment is with him. The United States has never asked for a monopoly on any of the world's business. But the American people feel that as a great maratime nation they are entitled to a share of the business of carrying the world's commerce. And they are going to see that they get it.

The time was when we had to depend on foreign shipping for our commerce but that was before the war and a great heal of water has gone over the dam since then. It will not be safe or just to permit Europe to get a monopoly of the shipping business again. The question is going to come up many times in the coming session of Congress and if patriotic citizens of America do their duty the questions will be settled right.

PHILIPPINE SENTIMENT

Internationalists who seem to feel that it is entirely improper for Uncle Sam to develop resources where the people of some chief land can do it equally *as* well will find additional cause for complaint in the experience of Carmi Thompson, the president's special messenger to the Philippines at the hand of the Moros. The formerly wild and warlike people have welcomed the official emmissary of the chief executive of the United States with ofen arms.

When Mr. Thompson visited Catobato, the capital of the province of the same name, he received a welcome which would have warmed almost any heart. The province is the southernmost on the island of Mindanao, and it is said to be the richest of all in industrial possibilities. Among other things it has a billion acres of land suitable for rubber cultivation and other tropical products, and it is as yet almost entirely undeveloped, with only five miles of improved roads and a very scattered farming population.

The natives at Cotabatao told Mr. Thompson that they want their rubber land developed by Americans. They are anxious to raise rubber and other products and want to get their land into a state of real civilization. They feel that this can best be done by Americans and they seem to be in grave doubt as to what might happen in the way of development were Uncle Sam suddenly to withdraw from the Philippines.

Incidentally Mr. Thompson, according to press dispatches, was confronted at Cotabato by no banners of independence. The people there are wholly loyal to the United States and it is stated that any Philippine propagandist for separation who dared to raise his voice they would soon be sorry that he spoke, if he were capable of feeling at all. It would seem therefore that the sentiment for immediate separation from the United States is not so unanimous in the islands as the professional native politicians and their American allies would have us believe.

But it is easy to imagine the anguish with which our own internationalists will receive this news of an offer to turn over to Uncle Sam a billion acres of good rubber land. They could hardly conceal their glee when the international rubber trust apparently had Uncle Sam by the throat, and raveled in blaming it on our own iniquitous tariff. The offer of a billion acres to the United States as an inducement to keep us in the Philippines—an offer made by inhabitants of the islands themselves—will be almost more than they can bear.

One of the most striking tributes was printed in the Milwaukee, Wisconsin, "Journal." It runs as follows:

"Recently 'The Journal' printed an interview with the President of the United States. It contained not a word of government policy, not a syllable of party propaganda, not a letter of self-promotion. Yet that interview will live when Coolidge policies are forgotten. In it, a man comes from behind a mask. Readers of that interview will know Calvin Coolidge as they never could hope to know "Mr. President."

"A man who has the companionship of a lively gracious woman enjoys the supreme blessing that life can give. And no citizen of the United States knows the truth of that statement better than I."

In these words Calvin Coolidge pays tribute to woman's aid in man's labors. But he does more. He shows that, beneath a frigid exterior, there beats a heart more warm than even his friends suspected.

Mr. Coolidge believes in the family as he believes in God, wholeheartedly. He believes that today opportunities are greater than ever before for men who are helped by family ties. And, in a moment of rare revelation, sitting with a friend, he has said so.

A laughing world, hushed at the glimpse of a soul, will be the better for it.

Political Washington is again buzzing feverishly. The Democratic National Committee officers, with their assistants and aids, have been holding "lodges of sorrow." Senator Bayard has decided the Republican prosperity issue is a bubble that, modifies this to the extent of saying that while prosperity has not vanished, it will soon.

Chairman Butler of the Republican National Committee, on the other hand, with Chairman Phipps chairman of the Senatorial Committee, Woods of the Congressional and Hodges, treasurer of the National Committee, while in Washington, have fairly radiated confidence as to the result. Public forecasts by officers of political committees are always discounted, and sometimes a little in advance of the facts. One would hardly expect a chairman of a political organization to inaugurate a campaign by predicting defeat or loss. But even after a certain amount of pepper and salt has been used to season the statements of Butler and Phipps, it is agreed that political conditions the country over have materially improved on the Republican side.

Strawberry States

States producing by far the most strawberries grown in the United States are North Carolina and Tennessee.

Registration Notice For General Election November 2nd, 1926

To the qualified electors of the City of Charlevoix:

Notice is hereby given that in conformity with the Michigan election Law, I, the undersigned City Clerk, will upon any day except Sunday and a legal holiday, receive for registration the name of any legal voter in said city, NOT already registered who may apply to me personally for such registration.

Provided, however, that I can receive no name for registration during the time intervening between the second Saturday before the election.

You are further notified that October 9th and 16th, 1926, from 8 o'clock a. m. to 8 o'clock p. m. I will be in my office to register the names of all qualified electors of the City of Charlevoix as shall properly apply therefor.

Saturday, October 23rd, 1926, last day for general registration for the election to election to be held November 2nd, 1926.

CHAS. H. LAMPHEAR,
D. S. PAYTON, City Clerk.
Deputy City Clerk.

And Long Distance Telephone service is NOT a luxury.

For instance, you can call Cleveland from your home or office, here in

CHARLEVOIX for $1.75

if you place an "Anyone" call during the day. Rates are still lower after 7 p.m., with further reduction between 8:30 p.m. and 4:30 a.m.

MICHIGAN BELL TELEPHONE CO.

PRINTERS' INK

HAS been responsible for thousands of business successes throughout the country. Everybody in town may know you but they don't know what you have to sell.

Advertising Will Help You

AS TO MAIL ORDER HOUSES

[From the Hibbing, Minn., Daily News]

The other day in Minnesota's highest publishing house, we learned of a million circulars being printed for just a single mailing from one of the mail order houses in St. Paul, and saw in the process of printing, huge catalogues, costing thousands of dollars and being printed by thousands there, for distribution all over the northwest, including our own little domain in the vicinity of Redwood Falls.

Last year the Montgomery Ward company did a business of $184,-005,989, while Sears, Roebuck & Company did a mere little $238,342,-236. Chicago and Twin Cities people did'nt buy goods from these firms—the St. Paul house for whom the catalogue work was being done doesn't include any Twin City people on its mailing list. It's all in the country towns. This is the sort of competition country merchants all over the northwest are facing—and they think they can compete with it without advertising. It doesn't make good sense does it? We'll tell the easy-going old world it doesn't make good sense, and the wonder is that there isn't an awakening.

There isn't a merchant in any of the smaller or larger towns of the northwest who isn't hit by a mail order house, and yet if they would carefully their story to the trade as the mail order houses do, consistently there would soon be apparent a great difference in favor of the home merchant.

Of course the mail order houses sell things cheap, but more often they sell cheap things The home merchant can do that too if you want that kind of merchandise, but the majority of the home merchants appear to be the only ones that know anything about it, seeming reluctant to take the community into their confidence.

You will notice that it is always the biggest advertiser that is the most prominent and prosperous merchant in every town, and there's a reason for it, of course.

THE THEATRE

Frank Lloyd's most recent epic "The Splendid Road" dealing with the trials and tribulations of the pioneers of the West, will be offered for the first time at the Palace theatre, Oct. 9-10.

Anna Q. Nilsson, Robert Frazer and Colonel Barrymore are the featured players in this brilliant picturization of Vingie E. Roe's widely read novel. The Sacramento River valley during the gold boom and famous flood of '40 provide background for the drama.

Miss Nilsson is said to assume her most impressive screen character in portraying Sandra de Hault who made her way in the rough, new country, playing a man's game in a man's way.

The versatility of Greta Nissen, beautiful Norse actress, is splendidly displayed in "The Lucky Lady," which Raoul Walsh directed for Paramount. In the picture, which comes to the Palace theatre, Oct. 12-13, Miss Nissen plays three different parts and her artistry is conspicuously evidenced in each characterization.

So that the man she is forced to become engaged to, will refuse to marry her, Miss Nisson presents herself in her most unlovely manner, dressing in costumed ludicrous to the extreme. Not content with this, she disguises herself as a beautiful Italian siren and lures him in this masquerade. In that way she causes him to fall in love with her as the coquette and despise her as the girl to whom he is engaged. Thus, in one picture, Miss Nissen plays the parts of an unlovely girl, a beautiful flirt and her real self. All 3 parts are entirely different in conception and require a tremendous amount of clever characterization.

Featured players in "The Lucky Lady" William Collier Jr., Miss Nissen, Lionel Barrymore and Marc McDermott.

Mesa Once Inhabited

Kinishiu, the celebrated mesa or table rock in New Mexico, rising almost 400 feet above the basin of the Arroito, was first settled in 1897 and remained in former occupation were found on it.

HERE'S TO THE MAN.

Here's to the man whose words are few,
But who's right on the job when there's work to do!

Here's to the man who doesn't bluff,
But always delivers the work while stuff!

Here's to the man who's as true as steel,
And always stands for an honest deal.

Here's to the man whose word you'll find
As good as a bond of the gilt edge kind!

Here's to the man who's sure to rise,
And who's going to win the highest prize!

Here's to the man who's bound to claim
Success and Honor and Lasting Fame!

And its part of life's Great Perfect Plan—
That we all of us can be just that man!

—Friendly Fellows.

"Red Tape" Carried to Extremes in Europe

The palace of justice in Paris, a portion of which will be set aside shortly as a museum of relics from the Revolution, has a curious old custom. Every night one of the main doors is left ajar in obedience to an order of March, 1618, when Louis XIII provided that it should remain open perpetually, "so that my subjects may be able to seek justice at all hours of the day and night." Through revolution, empire, kingdom and two republics this order has been scrupulously enforced out. But the meaning of the custom seems almost forgotten. "The Man With the Iron Mask," the penname of a reporter of a Parisian daily, presented himself at the door in the small hours of the night for admittance. He was promptly thrown out by the watchman and told to clear off if he did not want to enter by the prisoner's gate in the morning. M. Petrograd they had a similar incident in tsarist days. The Empress Elizabeth once saw a fine flower in her garden. As she was on the way to a social function she had no time to pick it, but ordered a soldier to stand guard over it. The empress forgot about the flower, but the sentinel placed regularly each hour of the night and day at the spot where the flower had been.—Pierre Van Paassen, in the Atlanta Constitution.

And That Was That

A famous London comedian who need not be named was invited to a dinner house during the festive season. After dinner he was reciting a few of his best yarns and in the midst of one of the choicest was interrupted by a guest, who said to him: "Excuse me, but your handkerchief is hanging half out of your pocket."

"Thank you very much," said the actor gravely, as he adjusted it. "You know the company so much better than I."—Sporting and Dramatic News.

His Share of Cupboards

He'd bought a house and it had been such a bargain to his idea that he could hardly wait till the furniture came.

"How many clothes' cupboards are there, John?" she demanded breathlessly.

"Six," said John proudly.

"Oh, but that's hardly enough."

"What! Do you want more than six cupboards merely to hang your clothes in?"

"Yes, dear," replied the fair one. "You see, you'll want part of one for your things, won't you?"

Cottage Rentals for the 1927 Season

This is a good time for summer visitors to arrange for Cottages for the Next Season; and by the same token it is the time for Owners who want tenants to list their cottages for next year

PERSONALS

Mr. and Mrs. Harry W. Widdifield motored to Grand Rapids last Sunday.

Miss Addie Holley is spending a few days in Detroit on business this week.

Mrs. Roy Pant left Tuesday morning for Toledo where she expects to spend the winter.

Mr. and Mrs. T. J. Brady were visitors at Harbor Springs and Cross Village last Sunday.

Mrs. Amos Webster, for ten days a visitor in Detroit, returned to Charlevoix last Monday.

Patrick Doud of Mackinac Island, was a business visitor in this city yesterday for a few hours.

Mr. M. B. Hooker spent a few days recently with friends in Evart; Mich., returning home Sunday night.

Mrs. Charles Hamlin left for Detroit last Tuesday where she will spend a short time on business affairs.

Frank A. Kenyon spent Tuesday night here on business returning to Mackinac Island the following morning.

Monday, October 11th is the date when Dr. J. Leahy, the Optometrist will be at the Hotel Charlevoix.

Mrs. Alton Smith went to Lansing early this week to visit her sister, Mrs. Wesley King, for a couple of weeks.

W. J. Gallagher made the trip from St. James to Charlevoix with Capt. Alers on the good ship Rambler Monday.

Mr. and Mrs. Joseph Howard left for Chicago last Tuesday with the intention of spending the winter in the big city.

Dr. and Mrs. A. Lawton Baxter and Mrs. J. H. Smith, of Central Lake, were Charlevoix visitors last Tuesday.

Mrs. Thomas LaLonde returned to Detroit last Tuesday following a business visit for about two weeks in this city.

Messrs. James Simmons and Henry Block left for Pontiac early this week on a business trip that will occupy their time for several days.

On account of so many school children needing glasses, Dr. J. Leahy, the Optometrist will be at the Hotel Charlevoix Monday, October 11th.

A Chicken Pie Supper will be served at the Baptist church on Wednesday, night, October 21st. The ladies of the Baptist society will be in charge.

Miss Maggie Colter made the trip to Detroit last Tuesday, taking advantage of the excursion rate to spend a fifteen day vacation in southern Michigan.

A. J. Winnick and son motored to Flint early this week and will remain in the south part of the state for about a month or more, according to present plans.

The Steamer Griffin, Captain James H. Gallagher, is making regular trips between Escanaba and this port with ore for delivery at the East Jordan furnace.

The postponed monthly meeting of the Congregational Ladies' Aid Society will be held next Wednesday, October 13th, with Mrs. Wm. Parmelee, 113 E. Upright.

Attorney and Mrs. R. L. Lewis were business visitors in Lansing early this week. They made the trip via the motor route returning to Charlevoix Tuesday morning.

If there is a young girl in this region who would like a home while attending the Charlevoix High school she can find an excellent opportunity by calling at the Sentinel office.

Miss Janet Miller, of Africa, will speak at the Congregational Church next Sunday morning. All who are interested in the people of other lands are invited to her hear.

Julius Moses, Chicago attorney, and for years a summer visitor to Charlevoix, has bought frontage on Round Lake from Lou See, where he intends to build a boathouse.

Mr. and Mrs. Robert Withers joined the excursionists on the southbound trip Tuesday and will spend a few days on business and with friends in Detroit before their return trip.

Ladies of the First M. E. church are arranging for a Rummage Sale on Oct. 15-16. As yet the place for holding the sale has not been decided. This will be announced next week.

Dr. John W. Toan of Portland, Mich., was a Charlevoix visitor yesterday. Dr. Toan is connected with the state board of health and spent some time here a short time ago doing clinical work.

Mrs. James Gaskin and Mrs. Lawrence Chase drove to Traverse City Tuesday. They left the Gaskin automobile in Traverse for repairs, and returned via Pere Marquette the same day.

Mr. and Mrs. George Sands and family will hereafter reside in Flint. A large moving van arrived here last Sunday and transferred their household effects from Charlevoix to their new home.

Sixty-six local citizens took advantage of the excursion rate last Tuesday and left for southern points over the Pere Marquette system, some going to Detroit, some to Chicago, with the large percentage of excursionists stopping at intermediate points.

The steamship Algomah, making regular trips between Mackinaw City and Mackinac Island during the summer season, has discontinued service for the year. Hereafter parties desirous of visiting Mackinac Island will be obliged to cross to St. Ignace and thence to their point of destination on the regular mail boat.

Manager A. L. Creamer, of the Inn, has concluded his stay in this city for the season and will spend a vacation by motoring to his old home town, Damarescotta, Maine, before going south for the winter. Mr. Creamer started out on his motoring trip last Tuesday. With his visit finished at Damarescotta he will motor to Southern Pines where he will spend the winter season.

Olaf Nordrum and son Ibsen spent the major part of last week in the northern part of the state, some part of the time in Sault Ste Marie, Canadian points and Manitoulin Island, in the interest of the Booth Fisheries Co. In making the trip they traveled by automobile about 550 miles and some considerable distance by water route.

Mrs. Morris Ackert was taken to the Charlevoix hospital yesterday suffering with a severe case of acute appendicitis where an operation was performed for removal of the offending member. Her condition at this time is all that can be expected following an operation of this nature and satisfactory to the surgeon in charge and hospital attendants.

While J. B. Redpath was in Grand Rapids on his recent trip to the southern part of the state, he called on Mr. Lee Bierce, well known to business men through this section as the secretary of the Grand Rapids Chamber of Commerce. Mr. Bierce told Mr. Redpath that a recent report of the United States Chamber of Commerce in that the State of Michigan now leads in industrial expansion in the nation.

Mr. and Mrs. Ellsworth Dutton and daughter Flora spent the week end with Mrs. Dutton's parents, Mr. and Mrs. Charles R. Bellinger and family, returning to their home, Bay City, last Monday. Prior to coming to Charlevoix they spent some days motoring through the south part of the state, attending the Realtors convention in Kalamazoo and visiting a sister of Mrs. Dutton's in Muskegon.

Mr. and Mrs. F. S. Myers, daughter Helen and Mr. B. A. Herman left for an extended motor trip Wednesday, with the intention of visiting various points in Canada as far East as Montreal, thence to Philadelphia where they will spend a few days at the Sesqui-Centennial Exposition, returning by Niagara Falls. Other interesting points will be visited on the trip which will probably be concluded in about one month.

Miss Mary Margaret Orlowski entertained her girl classmates with a theatre party at the Palace Wednesday evening. Following the theatre party the young people were entertained at the home of Mr. and Mrs. Louis S. Orlowski, parents of Miss Mary Margaret, delicious refreshments were served and a general good time was enjoyed, the event being given in honor of Miss Mary's 12th birthday anniversary.

Mr. and Mrs. F. D. Campbell drove to Ann Arbor early this week to see their niece Miss Henrietta Baldwin,who is a student at the University hospital ill and at present in the University hospital for treatment. Mr. Campbell returned from Ann Arbor Tuesday, Mrs. Campbell remaining with her niece and sister, Mrs. D. H. Wood, who has been with her daughter during the past two weeks.

The Woman's Missionary Society of the Congregational Church banquetted forty-eight members of the Sunday School who had been present ten or more Sundays during July, August and September. Special recognition in the form of a beautiful flower with inscribed card attached, was accorded to twenty-one of the number who have been present every Sunday during the period. A short program of songs, recitations, etc., completed a pleasant evening.

Contract has been entered into and work commenced on an addition to the Hotel Perry in Petoskey. When completed the hotel will have forty-eight additional sleeping rooms with connecting bath room, several other small rooms and a large banquet hall capable of seating comfortably four hundred guests. This project has been under consideration several months, but now in process of construction and to be fully completed prior to the opening of summer business in 1927.

Grover Genelc and family were visitors north of the straits Sunday and Monday, making the trip by motor. Manistee, Newberry and Sault Ste. Marie were the most important cities visited. The trip to Newberry and Munising to learn we not on the original schedule; that drive west was due to an error, in consequence of this Mr. Genelc can tell his friends how it happened that he drove approximately 208 miles out of his way to get to Sault Ste. Marie.

Dr. and Mrs. W. W. Mitchell and son "Billie" spent the early part of the week on a motor trip north of the straits, principally for the purpose of seeing the sights at Sault Ste. Marie. We learn from the Dr. that the party covered more territory than was their original intention when they left Charlevoix, visited several towns not on their itinerary before they arrived at their outgoing destination. Some of Dr. Mitchell's friends contemplate presenting him with a mariner's compass for use when making trips through territory with which he is not familiar.

Mrs. J. W. Harris, who for several months has been at the Harris summer place near Ironton,returns to Oak Park, Ill., Friday of this week.

A chicken pie supper will be served at the Baptist church Wednesday night, October 13th. Ladies of the Baptist society will be in charge.

Mrs. Mary Self and daughter returned to Winter Park, Florida today, following a visit of several weeks spent in this region, principally at St. James.

Dr. and Mrs. Herman Burns left for southern Michigan a few days ago and expect to spend about ten days at their farm home near Cassopolis, before returning to their Charlevoix home.

Miss Emma Roy, a recent citizen of Charlevoix, making her home at Hotel Charlevoix, was called to Jackson Sunday, on account of the serious illness of her mother, She made the trip by motor

Mr. and Mrs. J. B. Redpath, for upwards of two weeks tourists and business visitors in a large number of cities large and small in southern Michigan and Illinois, returned to Charlevoix last Saturday.

Mr. and Mrs. C. E. Sterritt will spend the major part of this week by taking a motor trip and visiting friends in southern Michigan. They started out on their journey last Monday and expect to return some time later in the week.

Mr. and Mrs. John Nasten moved from their farm home to this city last week and are now occupying their new home at 206 Antrim street, a recent purchase, formerly owned and occupied by Mr. and Mrs. O. D. Hammond and family.

L. P. Adams is spending several days away on a business trip. During his absence from Charlevoix he will visit Flint, Grand Rapids and other Michigan points and will also spend some time in Waukesha, Wisconsin with Mrs. Adams and other family members.

Mr. and Mrs. Eugene DeVincent and Mrs. Harry Kitchen, of Rogers City, spent part of the day here last Friday. Mrs. DeVincent continued her trip to St. James where she will visit relatives for a few days. Mrs. Kitchen and Mr. DeVincent returning to their home city.

Mr. and Mrs. R. C. Sterritt and family, of Sturgeon Bay, Wis., spent the week end with Mr. and Mrs. K. C. Sterritt in this city. They were accompanied by Mr. and Mrs. George Pitcher, of Twin Lakes, father and mother respectively of Mrs. R. C. Sterritt.

The Woman's Christian Temperance Union meets Friday afternoon at 2:30 with Mrs. Partridge on Park-av. Topic, "Primary Reform," leader Mrs. H. B. Brooks. Officers for 1927 will be elected and other important business transacted. Every member should try and be present.

Mrs. H. L. Iddings accompanied her daughter, Mrs. John Clark and family on their return to Toledo last Sunday, the trip being made over the motor route. Mrs. Iddings will spend the winter in Toledo and Cleveland with her daughters, Mesdames Clark and Van Kirk.

The store of L. P. Adams will remain open during the winter months with Prescott Adams in charge as proprietor. For several winters past this prominent store has been closed while Mr. Adams and family were spending the season in Florida. By a recent arrangement Prescott takes over the management and will continue the same as a permanent place of business.

Offers to Flip Coin for $5,000; Judge Stops Him

Milwaukee.—Michael Vasas wanted to flip a coin for $5,000 in court here, but the judge overruled him.

Vasas is being sued for divorce. Settlement of the estate was being considered. It was decided that Vasas was to get only $5,000 of the property, which is valued at $40,000.

"Make it $10,000 or nothing," he said, drawing a coin from his pocket.

"No gambling permitted in this court," the judge said. Vasas pocketed his coin and the $5,000 and went away. He spied his daughter in a corridor, bent to kiss her and broke into tears.

Trappers Use Autos

Seattle, Wash.—Another phase of fur-trapping romance is passing. For the first time Indian trappers in the broad valleys of British Columbia and Alaska have abandoned the snowshoe trail and canoe route. They are now at work in automobiles.

Golfers in Rhodesia Need to Carry Guns

Baliaway, British South Africa.—Wild animals from the jungles have been hindering golf in Rhodesia. Sharpshooters have been posted on some of the links with the view of shooting away the pesky beasts.

At the Winkle course a rhinoceros has been upsetting as a natural hazard, much to the discouragement of the players, while two lions have been seen frequently sunning about the links in Belre. One of these was afterward shot by the men on outpost duty.

Between Belre and Dondo two grown elephants and a baby elephant tramped onto the main railway line and nearly wrecked a train. One of the animals was killed, and the "elephant" caterer of the locomotive was smashed.

Style Gives Comfort

French scientists have been investigating to learn if women can stand more cold than men. The man bundles up in cold weather, but of recent years the woman has "unbundled." Sheer hose, light clothes, low shoes, low necks and all of the other fineries have caused many doleful prophecies by the men.

Now comes the Frenchman who says that the fibers of their muscles are finer and thus cover the nerves better. The blood vessels are larger and their heart action better, thus distributing the blood better. He gives another reason which is passed on in fear. He says that their bodies are covered with a layer of fat, sometimes very thin, it is true, and this helps them to resist the cold.

Whatever the scientist may say, he has overlooked the fact that a woman is only comfortable when she is in style. Did nature consider this when woman was developed, or has woman finallad it as the ages passed and taken advantage of the kind Mother Nature?—Anderson Herald.

Firemen's Coffee Stall

In London, England, the equipment of the firemen is usually followed-to a fire by a green wagon van. This is the London firemen's coffee stall. It attends all fires that are likely to prove "long jobs," and does invaluable work in supplying snack meals to the men, who would otherwise be forced to spend hours without food or drink. The van holds three twenty-gallon urns, two filled with boiling water and one containing cocoa. A large sign board on one side of the van contains numerous tins of biscuits and large mugs. The other side is on a hinge and can be supported to make a shelter for the men when they retreat themselves at the improvised counter. The road rides inside the van and is assisted by the driver in dispensing the food. The van, which started as a horse-drawn vehicle, will nearly celebrate its twenty-fifth birthday.

Prehistoric Workshop

A complete prehistoric workshop containing 17 heaps of flint tools and weapons numbering altogether 4,000 pieces was recently discovered by geologists at Frinsbury, Rochester, in the Valley of Medway, England.

The tools, according to reports of the find, include hand axes of large flint flakes, hammer stones of quartz, and large rounded pieces of flint.

The discovery was made in a queer sunken-shaped depression in a chalk cliff, and the relics are believed to date from the mid-pleistocene times—the age supposed to precede humankind, that of man.

"Lost Flower" Found

A species of flower which was discovered about the year 1750 and then lost for 125 years has been independently rediscovered by two scientists, Dr. F. T. Wherry of the United States bureau of chemistry and Dr. J. K. Small, president of the United States museum. This rare flower is known as the pink turtlehead. It was found near Marlboro, Md.

The pink turtlehead grows in wet ground, reaches a height of about three feet and has pink flowers resembling the neck of a turtle.

Racing Trophies Stored

Horseracing trophies that have been won in England this season have been sent to augment the wealth of gold and silver plate won on the turf that is stored away in the vaults of safe deposits and bonding London jewelers. Families who have had winning owners for generations own so many cups that they refuse the responsibility of anxiety of storing them in their own homes. In London vaults there are several collections numbering more than 100 pieces.

CHURCHES

Church of God

Rev. Paul L. June, Pastor

Services held at the Chapel, located on W. Hurlbut-av. three blocks from main part of town.

WHY STARS SHOOT

Opera Twinkler—Father detests the stage and offered me fifty thousand dollars not to become a singer.

Star—Three sixes, I suppose; you've been living on the income ever since?

Her Need

"I do so dislike arithmetic," says Mrs. Barnes-Clarke. "I think I shall have to get one of those adding machines to help me keep track of my bank account."

"No," replied her husband, gloomily. "What you want is a subtracting machine."

Life in Fort Mink

"Well, how are you getting along in those Mounted Police?" asked Toots of a young friend who has just ridden into Fort Mink.

"I am only a corporal."

"You have the wrong slant on life. You mean you have now advanced to this well earned position of corporal—Napoleon's rank."

NATURALLY

First Balloon (who has broken away)—"How do you feel?" Second Ditto—"Kinda up-in-the-air!"

Marketing

Newlywed—You say you want me to stop at a fruit stand and get some oranges?

His Wife—Yes, dear, and you might stop at a plumber's and get some plums.

Sure of His Pay

Two men were discussing the merits and demerits of a certain doctor, and the conversation turned to fees.

"Have you any idea how much he charges?" inquired one.

"I don't know," answered the other, "but he usually sends his bill to the executors."—Stray Stories.

Tail Enders

"What's the price of a ticket to this show?"

"Ten dollars for the fifth row, five for the twenty-first."

"How many more rows you got?"

Vienna Theatergoers Put Shakespeare First

A referendum of the 2,000 yearly subscribers to the State Drama (Burgtheatre) in Vienna, placed Shakespeare in the list of favorites of the serious theater-going public.

The plays voted for the next season were "A Midsummer Night's Dream," "The Merchant of Venice," "Macbeth," "Coriolanus," and "The Taming of the Shrew." Oscar Wilde was returned second, notably with his "Lady Windermere's Fan," while Schiller, Ibsen, Schnitzler, Rostand, Reichel and Grillparzer follow in the list.

Shakespeare and Wilde between them obtained 1,219 of the 2,000 votes cast.

DEMAND "BAYER" ASPIRIN

Take Tablets Without Fear If You See the Safety "Bayer Cross."

Warning! Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians for 26 years.

Say "Bayer" when you buy Aspirin. Imitations may prove dangerous.—Adv.

Why Is It—

That the evening you planned for a quiet one is usually a rip snorter?—that the day you go to the country it always rains?—that all plans made between 1 and 6 a. m. never materialize?—that every time you are taken to the theater you have seen the play before?—that after you have given the waiter the order, you always discover on the menu a far more appetizing dish?—that yesterday's newspaper seems ages old?—that you can never remember the singularly brilliant thought that struck you the other morning in the bath?—that whenever you are in a hurry every thoroughfare turns out to be a one-way street of the opposite direction?—that you can never tell what's going to happen to you next?—Kansas City Star.

Don't Forget Cuticura Talcum

When adding to your toilet requisites. An exquisite face, skin, baby and dusting powder and perfume, rendering other perfumes superfluous. You may rely on it because one of the Cuticura Trio (Soap, Ointment and Talcum), Do each every where.—Advertisement.

Lightning Protection

The world's ablest engineers have never found ways to prevent lightning from "striking," but they are able to prevent it from damaging a city's electric system. Power companies know how to protect their lines with heavy insulation and with lightning arresters of sufficient capacity to deflect a "stroke" to the ground before it has crushed any havoc along the wires. Also they sectionalize every system so that should a bolt strike any part of it, the remainder will be unaffected. These are the reasons why the electric light wires leading into a house are not a menace during a storm.

Language in Ireland

The native Irish speak in English or the Irish language. The Irish is a Celtic language, which is now being used by a greater percentage of the people of Ireland. The decline in use of Irish began in the Eighteenth century and the language was gradually superseded by English until 1901, when only 20,953, or 4.5 per cent, of the people could speak Irish. The number of pupils in schools learning Irish is still on the increase.

Flattery never deceives any but those who are anxious to be deceived.

Good luck is hard to catch, but bad luck is more apt to chase you.

THE KITCHEN CABINET

(c), 1926, Western Newspaper Union.)

It is not so much from any superior genius that one man possesses over another, but more from attention to study, and perseverance in the objects before them that some men rise to greater eminence than others.—John Dalton.

DIET FOR THE AGED

Diet for the aged is much neglected. To live long and to remain well and active is the object of every normal man or woman. As old age comes on, nature hones the furious lion for exercise, but unfortunately she does not lose her appetite in the same ratio. Our eating should adapt itself to our activities, and thus, by slenderizing living, we will do away with many of the diseases subject to old age. From twenty to forty the vital organs are young and respond to their demands without apparent difficulty, but at sixty the stomach and liver are beginning to resent overwork—the exercise, life in the open air, and the work of earlier years are missed, and the body feels the strain.

Walking and swimming are the best exercises, keeping the organs in fine working order. Walking will soon become a lost art, with the automobile at the door to save every step. Golfing is helping to keep active many who would otherwise take no exercise, but the proportion of golfers is still very small.

The result of overeating and underexercising develops fat, superfluous material which clogs the system and chokes the vital organs. This clogging tends to auto intoxication or self-poisoning which causes rheumatism, gout, neuritis, hardening of the arteries and various other troubles. Tissue-building foods should be partaken of sparingly, as their need is past, though they are needed in the diet to add variety.

Meat should be eaten very sparingly, not oftener than once a day.

The aged who are overweight should avoid fats, eating sparingly of root vegetables and scarcely any sweets.

A good diet for seventy and seventy-five should be made up of fruit, vegetables (mostly green), some fish, eggs, and very little meat, with simple cereals.

The more an aged person exercises, the more food he may eat and assimilate. When one has reached the age of sixty with no disease shadowing him, he should by right living show his gratitude, by refusing to become indolent and thus invite disaster.

Two quarts of water or more should be taken each day between meals. Water is one of the essentials to good health. It is needed to soften the food, so that the digestive juices may act upon it and thus nourish the tissues, and fatty as important, flush the system. Too little water is drunk by the great majority of adults.

Fruit juice is always a welcome breakfast dish served with butter and maple sirup.

Tea and coffee in moderate strength and reasonable amount are not injurious to those who have formed a taste for them.

Fresh Vegetables.

It is surprising how soon one will be satisfied with meat but once a week, after trying to serve vegetables and other foods to take its place.

Too much meat is unquestionably bad for the health, but a little occasionally is better than a restricted diet of vegetables unless under the doctor's orders.

Cabbage is such a wholesome vegetable and one may serve it in such a way that it is satisfying nourishing for a main dish.

Take a small hard head of cabbage and drop it into boiling water slightly salted to cook until tender. Drain and place on a hot deep plate. Prepare a rich white sauce, adding just at the last a cupful of finely chopped, rich cheese. Stir until well dissolved in the sauce, then pour over the cabbage, which has been cut into bite-shaped pieces.

Another nice way to serve cabbage is with milk. Cook until tender, dress with butter after being well drained and add enough rich milk and a few crackers well crumbled. Stir until well seasoned and serve hot. This is called Indian cabbage.

Stewed Lettuce.—As the leftover grits old and slightly tough, cook it in a little water uncovered, season with butter, salt and pepper and serve it with vinegar as greens.

Cucumbers are very palatable cooked and served with a drawn butter sauce, adding a little onion juice for flavor.

The tomato is delicious sliced when very ripe and served with cream as one does peaches. Sliced rather thick and fried they are liked by many. Serve as a garnish to a platter of meat.

Onions With Cheese Sauce.—Cook onions until tender, then place them in a baking dish with a layer of rich white sauce and a layer of good cheese finely cut. Bake covered with buttered crumbs and serve hot.

Nellie Maxwell

Practice of Horsehoeing

It is not recorded who shod the first horse. The practice of sailing from plains or run slopes to the hoofs of horses was introduced about the Second century B. C. The practice was not commonly known, however, until the close of the Fifth century A. D.

Rubbing with fine sandpaper or emery will remove the spots from ivory ornaments.

TOPCOATS FOR SCHOOLGIRLS; SCHOOL FROCKS OF JERSEY

IN THE realm of junior fashions, it costs tell a very different story from frocks for the coming months. In accordance with latest dictates the wraps young girls wear are quite conservative and sedate in appearance, while dresses are quite tossed up with all sorts of crafty handwork and gay trimmings.

If the little girl in the picture would let us catch a glimpse of the frock she is wearing, it would, very likely, be much be-trimmed and elaborated with all ways and byways of business this fall. This, because fashion insists that whether it be in study hour, playtime or any practical occasion, we must dress in gay woolens.

Just now there is a furore for wool jersey and not without reason, for of all materials none gives better service or makes up more satisfactorily. So jersey cloth it is, according to the decision of the mode, and that is pardon of irresistible attractiveness. Chiefest among the popular colorings for

A Natty Topcoat for School.

cunning detail, perhaps have a clever narrow belt with a cunning buckle to everything—but magi, the simplicity and styling of the coat. Of the superior quality kind is this coat. The material is of the best, being a handsome bolivia cloth. It may be navy, wine, French blue, brown or jungle green, for cloth is fashionable for fall and winter. One outstanding feature is the flare hemline, achieved by godets inset in a tailored way. Other interesting style highlights are its fur collar, broad turnback cuffs and single button fastening.

It is noteworthy fact that the new clothiers are unusually good-looking

School Frock Shows Artful Shirring.

and of finest texture. Favored weaves include stress, first and foremost, chinchilla cloth, emphasizing clannish color. French blue, navy, various reds and many shades of green, notably jungle green. There are also included tweeds of every coloring.

Very interesting linings of suede-finished fabrics complement coats of chinchilla. Thus warmth and attractiveness is combined in the school-girl's coat. One does not have to draw on imagination to sense the charm of a navy blue chinchilla lined with red.

Splashes of color will brighten school room and campus throughout the coming months, the high-practicel worsted frocks lire reds of every degree, especially clarets and the deep wine tones. Equally fascinating are the new greens, pleasing emphasis on jungle green, and as to blues, navy competes with truly lovely French blues, also royal. Cinnamon color jersey is as smart as smart can be, but no more so than are the handsome nasturtium colors which are now so much in evidence. Which all goes to prove that there will be no lack of color when it comes to dressing planned for practical every-day wear.

One of the enchanting qualities of wool jersey is that in its suppleness it yields most gracefully to any lines of design. Just now everything that can be is being shirred. As to wool jersey it puts forth its best appearance under this treatment. For proof of its eminently satisfactory adaptability to the shirring process, study the picture of a typical autumn 1926 schoolgirl frock. See how the necessary skirt fullness is unused so cleverly is the front by means of shirring. Then, too, see the shirred effect across the front shoulder seams. This model is developed in wine color with a beige crepe collar and tie.

JULIA ROTTOMLEY.

(©, 1926, Western Newspaper Union.)

Voile Frocks for Girls

Dainty little handmade frocks of voile for the younger girl have come from Paris. The colors are youthful and charming, including all the flower shades and several more vivid. Bits of drawnwork and handwork constitute the decoration. They are simple in line and beautifully made.

Black and Pink

Flimsy frocks of black chiffon and lace are worn over slips of pink satin or chiffon.

Black, Fall Favorite

Black is easily first among colors which make their appearance in the styles of the autumn and winter. On the backs of the fashion displays in Paris, Navy blue apparently will be second and a new shade of dark red third. Velvet, it is generally predicted, still be the favorite material, with satin second.

As White Is Worn

White is popular when worn with contrasting colors, never alone.

THE WORLD'S GREAT EVENTS

ALBERT PAYSON TERHUNE

(©, by Dodd, Mead & Company.)

The Crusades

A DWARF—misshapen, bearded, ugly—sat on a lean, shaggy donkey, in the midst of a shrieking multitude that brandished a huge crucifix above his head. His shouted exhortations were echoed and re-echoed by the crowd.

The dwarf was known as Peter the Hermit. He was preaching with his Eleventh-century audience to arouse the Holy land-from the grip of the Mahometan infidels. And so eloquently did the little priest urge his cause that he aroused a world-wide wave of enthusiasm and set afoot a mighty international agitation which endured for fourteries.

Mahomet's successors held the Holy Land. Christians on pious pilgrimages to the Savior's birthplace and tomb were robbed, insulted and even murdered by these Moslems. Sacred shrines were profaned or destroyed. These outrages aroused Peter the Hermit; and, in the latter part of the Eleventh century, he went, from country to country, urging all Christians to sweep the Holy Land, especially the Holy City, Jerusalem, clear of Mahometans and to avenge the injuries perpetrated on Christian pilgrims. Pope Urban II approved the plan and promised remission of sins to all who should enter on this holy war.

All Europe went mad with religious zeal. "Id Deus vult!" ("God wills it!") was their war cry. Thousands and hundreds of thousands donned the blood-red cross which was to be the badge of the nobleman.

Debtors, felons, servants, monks and other classes bound in one way or another were freed on promise to march against the infidels. An enormous international army was trained for the purpose, its chief commander being Godfrey du Bouillon, duke of Lorraine. But early in 1096, before the organized expedition could get under way, a disorganized mob of 200,000 men, women and children, under the personal leadership of Peter the Hermit, started across Europe for Jerusalem. They never reached their destination. Without discipline, food or sufficient arms, they straggled on eastward, their ranks daily thinning through desertion, disease and famine, until of all that vast motley horde a bare 7,000 reached the eastern banks of the Bosphorus. There they were set upon and literally cut to pieces by the Turks.

On August 15, 1096, Godfrey de Bouillon's host began its march to Palestine, reaching Constantinople on Christmas day. Wrangles of various sorts, disputes as to precedence in command, bad management and insufficient supplies hampered their movements from first to last. The expedition, which started with so lofty an aim, began to feel the influence of politics, corruption and personal ambition. Nevertheless, held together by Godfrey's genius, they defeated, one after another, the Mahometan armies sent against them, and at last laid siege to Jerusalem itself. The Holy City fell after about a month's defense, and the victorious crusaders put to death in horrible fashion every Mahometan defender. they could lay their hands on. Moslem men, women and even babies were slaughtered mercilessly by these upholders of the Gospel of Peace, and Godfrey was chosen king of Jerusalem.

A second crusade, urged on by St. Bernard and led by Louis VII of France, followed a few years later. An unsuccessful effort was made to capture Damascus, and, altogether, the venture was without any real result. For eighty-eight years the Christians held Jerusalem. Then the Moslems recaptured it.

In 1190 a third great crusade was begun, the prime movers in which were being King Richard I of England, surnamed Coeur de Lion (Lion Heart); Again the leaders' quarrels and jealousies themselves and swerved from the true purpose of their undoing. They won a few barren victories, but failed wholly to win Jerusalem.

Crusading enthusiast gradually grew weakening true success. At length the belief spread that the expeditions failed because of the sins and worldliness of the men who embarked upon them. Cruelsaden declared that the Holy Land could be snatched from the infidel by none but innocent hands. Whosoever then, as now, was not a common commodity among men of war, so it was decided to raise an army of little children and send them against the Moslems. The new venture was known as the Children's crusade. It was the saddest, most pitiful tragedy in all history.

Fifty thousand children. Some of them were bidden, set out for Palestine in 1212. They were spurred by their parents and by the priests, that thereby was the solemn privilege of restoring Palestine to Christianity. They set forth with high hopes. But they starved, fell ill, were lost in strange lands, died or were sold as slaves.

The crusades were the most glorious, sublime failures in the annals of the world. They constituted a mistake that can never wholly be condemned. They accomplished nothing permanent, yet they did much to Christianize, unite and teach the brotherhood of man to Europe's warring nations.

They remain forever a monument of the lifesacrifices—ingenious, if futile—that men have made and ever will make, for their faiths.

Just an Idea!

Yes, we know wives are overworked! Yes, we know you are a combination cook, chirrooman, confidential adviser, tractice, chiperon, prayer hanger, window cleaner, carpenter, seamstress, milne, doctor, gardener, baker, dishwasher, waitress, hostess and a few more little odd jobs! Big do you know of any other job you could do which would make you any more of a Hemp Big Cheese to the folks whose opinion really counts?—Exchange.

The Tea Party

Let the children have a tea party, and serve Monarch Cocoa and Monarch Teenie Weenie Peanut Butter sandwiches to their little friends. They will like this delicious, satisfying luncheon, and it is easy to prepare.

Ike (tactfully)—Er-yes. Lovely weather, isn't it?—Detroit Free Press.

President of Union No. 62 Quickly Restored to Health

Nervous Indigestion, Loss of Sleep and Run-down Condition, Causes Well-known Chicago Man Much Suffering. Says Tanlac Rescued Him

M. B. Philip, well-to-do property owner, perhaps better known as President of Carpenters Union No. 62, living at 6915 Stewart Avenue, Chicago, says: "When I began taking Tanlac I was always tired, and suffering from loss of sleep. My stomach was so upset that I couldn't eat without suffering from indigestion.

"I followed the advice of a friend, and began taking Tanlac. It lived up to its reputation and fulfilled all promises. Quickly my old strength returned. I began to have a great appetite and every night I sleep soundly. Tanlac certainly put me on my feet, and gave me better health and at every opportunity I recommend it to friends and members of my union."

Tanlac usually banishes pain, conquers ailments and builds up strength. It relieves the system of poison caused by constipation and sluggish liver. It is Nature's own remedy made from roots, barks and herbs according to the Tanlac formula.

Banish sickness from your life and enjoy the benefits of strength and golden health. Begin taking Tanlac. The first bottle brings results that still surprise you. Ask your druggist for Tanlac—today! More than 40 million bottles sold.

Notch for Every Lion

J. Bruce, the official state lion hunter of the state fish and game commission of California, has 250 notches, figuratively speaking, in his rifle, each notch representing a mountain lion bagged by him since his employment.

Generally speaking, opportunity knocks; it rarely to a woman it comes with a ring.

Elephants Plant Trees

Three circus elephants that were trained in nursery work in India a number of years ago recently helped to plant 100 large trees in Central park, New York. The trees, ranging from 35 to 45 feet, were planted close to the Memorial grove.

The world is sore in need of men who can do things.—Hubbard.

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

MANY STATES HAVE ACQUIRED NEW PARKS

New Areas Invite Vacationists This Summer.

Washington.—Within a few years state parks have become one of the major recreation resources of the United States and a survey just completed shows that new areas invite the vacationist this summer," says a bulletin from the Washington (D. C.) headquarters of the National Geographic society.

"The sixth national conference on state parks, at Hot Springs, Ark., June 14-16, will hear reports showing that during the short life time of this organization, formed in 1921, which coordinates the advance of such reserves, the number of states maintaining state parks has doubled. The survey shows that 43 of the 48 states now have State parks, state forests or both, many or less recreational use, or other preserves under state agencies of equivalent value and use.

"Hot Springs was chosen for this year's meeting, in recognition of the remarkable progress in the establishment of state parks and forests, or in legislative means for their acquisition, which has been made during the last few years by the states of the South and Southwest.

South Joins in Progress.

"When the conference is called to order by Chairman John Barton Payne, who is chairman of the American Red Cross, he will greet many new faces among the delegates, representatives of southern and southwestern states who have recently entered this field of public service. When the honor roll of the states is called, on the second day of the meeting, the recent achievements of southern states will be an interesting feature, because gains in the South have been especially notable.

"Since the last conference, Tennessee and Virginia have created conservation commissions with state powers. Florida has passed a state park law. Georgia and Mississippi have created forestry departments with recreational provisions. Alabama has acquired a state park, committee, Louisiana will add a state park bill to its next session commission. Arkansas is acquiring a comprehensive state park system; Oklahoma is working to the same end through its forestry and game commissioners; and Texas, which last year reported its record of 52 state parks also received by gift, is improving them for public recreation.

"Some state parks rival national parks in size and scenic beauty; Adirondack park in New York, with 850,000 acres owned by the state, is exceeded only by Yellowstone; Custer State park, in South Dakota, of 107,000 acres, and that in the Black Hills of 150,000 acres; the Allegheny, notable caves and gorges in southeastern Ohio by the state forestry department. Historic sites, which are preserved in many state parks, have been increased by recent additions.

"State parks and forests give an intermediate recreational resource between the city park, near at hand but limited, by its nature, in development, and the magnificent national parks of the West unsurpassed in attraction, but remote from many people. State preserves give spaces for camping, picnicking, hiking, climbing, bathing, boating, hunting, fishing, winter sports, nature study, within a few hours of large populations, often near numerous metropolitan centers, to which they are a great contributor to human happiness. As overnight stopping places for motor tourists along the great transcontinental highways of the country, in which one may find some new delight every morning, they are realizing the slogan of the national conference on state parks: 'A State Park Every Hundred Miles.' They are breathing spaces for congested industrial districts, sanctuaries for birds and animals and trees and flowers, fields for the study of nature unadorned; shrines of history and patriotism, and outlets for the pioneer spirit of adventure and out-of-door life."

Patriotic Action of Foreign-Born Citizens

Through the efforts of a naturalized Swiss, a naturalized German and a naturalized Frenchman, the United States government owns what saved from bankruptcy, writes Sydney Greenbie in Asia Magazine. It was during the War of 1812, a war so unpopular in many quarters that the government nearly attempt to negotiate a loan of $16,000,000 for its conduct brought in subscriptions of less than $6,000,000. New England refused to extend any aid, and some persons thought that the colonies were going back to the Mother Country.

The treasury was almost at the end of its rope, lacking both funds and credit, when John Jacob Astor, a native German, and Stephen Girard, a Frenchman, the two richest men in America, came to the rescue and, through Secretary Albert Gallatin of Madison's cabinet, a Swiss, took the remaining $10,000,000. Astor subscribed for $2,000,000, and Girard, through his bank, became responsible for $8,000,000.

Sign Told the Truth

The blind musician, led by a dog on a string, has not been so much in evidence during the last few years, but the other day one of the old team up a position on Girard avenue near Broad street.

He was fully equipped up to the old-time standard. His clothes were ragged, his tin cup was battered and the dog sat on as dull and sleepy an appearance as his master. Pausing before a store front he took a placard bearing the appeal: "Please help the blind."

A man in passing attempted to toss a quarter into the cup, but it struck the edge and rolled out over the pavement. The "blind" man promptly made a dive for it and as his hand closed over the coin the surprised business man who had given it exclaimed: "What do you mean? You're an old faker find not blind a bit."

"Never said I was, mister," was the prompt reply. "It's the dog that's blind."—Philadelphia Record.

Not Appreciated

"My dear fellow," said John Clayton, "I wrote to a man who had sent me an unusable play, and said, 'My dear sir, I have read your play. Oh! my very dear sir! Yours truly, John Clayton.'"

I told this story on many occasions with great success. At last I told it to one who did not laugh. He was my secretary. He seemed to me hard, indeed, that one's own secretary should not laugh at one's funny stories. He appeared on me that he had mistaken his vocation, and I said in a tone of some irritation, "You don't seem to think that funny." Said he, "No, I don't. It was to me Mr. Clayton wrote that letter?"—From "A Group Under Three Reigns," by Sir Johnston Forbes-Robertson.

Specific

The sweet young thing and her future life partner were making arrangements with the minister for the marriage ceremony.

"What is your name?" the clergyman asked.

"Mary Jones, sir." (Perhaps it was Smith.)

"And what is your age?" he continued.

"Nineteen, sir," answered Mary.

"Where were you born?"

"What did you say, sir?" inquired the bride hesitantly.

"I say where were you born?"

Taking two steps nearer the minister, she lowered her voice—

"At home, sir."

GOOD ROADS

ELEVATED FREIGHT HIGHWAYS NEEDED

Trains of tractors and trailers controlled by air brakes and operating on a regular dispatching service over special trunk highways built above the tracks on railroad rights of way were pictured as a development of the future by Maj. Ritha Church, transportation engineer of the port of New York, in an address which he delivered at a meeting of the Metropolitan section of the Society of Automotive Engineers in New York city recently.

"Those trunk highways will be toll roads, he said, and will be laid out with the same care as to grades and curves as the railroads. They will be lighted, will be provided with telephones at frequent intervals, and there will be a regular wrecking and repair service. Trailer trains and convoys of trucks will be dispatched on regular schedules, largely as the day of Montagues, on Page 113, on which mortgage there is claimed to be due army transport was handled in France during the war. Except where the roads enter cities on a second level above main railroads, they will pass around cities and towns at belt roads, so that the traffic on them will not pass through dense local traffic and they will be carried over or under trunkverse roads.

"The necessity for such roads will grow out of the increasing traffic congestion on the present highways and the inadequacy of the present highways to accommodate the light, fast passenger vehicles and the slow, cumbersome motor trucks at the same time.

Congestion on Manhattan island is causing a loss of $500,000 a day, and the horse is coming back, only Major Church. Seventy-three out of every hundred trucks in West Street are horse drawn, because units to haul and unload at steamship and rail terminals are too long. A motor truck costs six cents a minute, whether it is moving or standing, and a trucking company charges by the hour and not by the miles traveled. Owing to congestion, the average speed of motor trucks on the island is only four miles an hour, and the average running time in an eight-hour day is only three hours, the other five being spent in waiting, loading and unloading.

New York Made Record in State Road Building

State road building for the past year, set a new high record of highway construction accomplished and authorized according to a report made public by Arthur W. Hrandi, state highway commissioner of New York.

According to the report, 1025 contracts calling for the construction of 651.26 miles of pavement 18 feet or more in width were awarded, as compared with about 539.47 miles for the entire season of 1924. Contracts were awarded for 119.28 miles of grading, as compared with 29.82 miles for 1924, or a total increase of 112 miles.

A letting is now advertised for 55 miles of pavement and three miles of grading, the award of which will give a total of 721 miles for the season of 1925, as compared with about 750 miles for 1924.

Fast Freight Highways as Great National Need

Maj. Ellhu Church, traffic engineer of the port of New York, is authority for the statement that this country will soon be gridironed by a great system of motor truck line highways which will revolutionize present methods of transportation. He predicted that it is only a question of time when special roads must be built for the exclusive use of food and freight carriers.

Since this condition seems inevitable, engineers urge that a system of special motor truck highways, be planned at once.

Major Church also points out that such highways, when properly built, will shorten the distance between cities and hills leveled so that a speed of 25 miles an hour or more can be maintained for long distances.

Good Roads Facts

The United States is now credited with building the finest highways in the world.

The joint board on interstate highways has designated 75,881 miles of road as United States highways.

Order for Publication—Probate of Will

STATE OF MICHIGAN—The Probate Court for the County of Charlevoix.

At a session of said Court, held at the Probate Office in the City of Charlevoix, in said County, on the 23rd day of September A. D. 1926.

Present: Honorable Servetus A. Correll, Judge of Probate.

In the Matter of the Estate of Sarah Emrey deceased.

Madeline LaLonde having filed her petition praying that an instrument filed in said Court be admitted to Probate as the last will and testament of said deceased and that administration of said estate be granted to The Detroit Trust Company, or some other suitable person.

It is Ordered, That the 28th day of Oct. A.D. 1926, at ten o'clock in the forenoon, at said probate office, be and is hereby appointed for hearing said petition;

It is Further Ordered, That public notice thereof be given by publication of a copy of this order, once each week for three successive weeks previous to said day of hearing, in the Charlevoix Sentinel a newspaper printed and circulated in said county.

TEMPLES REVEAL BIBLE HISTORY

Excavations in Philistine City Confirm Old Testament Records.

Philadelphia.—"They put his arsenal in the house of their gods and fastened his head in the temple of Dagon." The tragedy of Saul, as related in the Book of Chronicles and also in Samuel, has received still further light from the excavations of the joint expedition of the museum of the University of Pennsylvania and the British museum, working at the ancient Philistine stronghold of Beth-Shan.

According to a report just received from Alan Rowe, field director of the expedition, the pagan temples an earthed originally were built by hireling Anatolic soldiers of Israel's ancient Egyptian suzerains and were dedicated to Egyptian deities modified by the Canaanitic local background. Mr. Rowe states that in all four Canaanitish temples were found at Beth-Shan.

Two Built by Ramesses II.

They were not erected during a period when Palestine was a conquered province of Egypt and before the coming of the Israelites, but after. Two of them were built by the pharaoh of the oppression, Ramesses II, and one during the short reign of his father, Seti I.

During the debâcle of the Nineteenth dynasty, and when a strong succession of weak monarchs held the throne, the Israelites broke away from their bondage, as related in Exodus, and during the same period the Philistines recovered their ancient city from the hands of the weakened garrison of non-Egyptian hired soldiers. They did not demolish the temples, however, but simply demolished the already half-Semitized deities in them with their own Baal, whom they called Dagon, and with Ashtoreth, the favorite Venus. Medals and gold coins were still worshiped in their two respective temples when the Israelitish irruption into the land occurred, and the long wars for the possession of the promised land began.

Baal Destroys Temples.

After David had succeeded to the throne he avenged his former host by heavily defeating the Philistines, expelling Bethshan and demolishing the temples. This occurred about 1,000 B. C.

Hereafter Israel must have established a sanctuary or a tabernacle to the God of Israel at Beth-Shan," says Mr. Rowe. "If first one, and then a second, and finally a third temple was built in succession to the pagan ones, it is very likely that the Israelites, who were always ready to adopt the religious practices of their neighbors, would have built a fourth temple, and that this would be the temple mentioned in the Book of Chronicles and also in Samuel, but received still further light from the excavations of the joint expedition of the museum of the University of Pennsylvania and the British museum, working at the ancient Philistine stronghold of Beth-Shan.

"The churches must guarantee fifty young people in order to finance the proposition at the low rate contemplated, $12, which would cover board, text books and tuition for one week. All the pastors were enthusiastic and a committee on cooperation appointed.

One of the most interesting features of the meeting was the talk of Rev. Abram Vanauken a retired pastor, on "How the Foundations were Laid." He recounted the hardships of early days in the wilderness of northern Michigan and paid loving tribute to the memory of Rev. Leroy Warren, for many years state superintendent and missionary, and who organized many of the churches in northern Michigan.

The association was organized 40 years ago at Manistee, and it was voted to hold the Jubilee meeting at the same place next fall.

Ancient Scholar

The writer who mentioned church bells for the first time was the venerable Bede, who lived from about 672 to 735. He was the most distinguished scholar of his time, and his writings, according to his own listing, included 37 titles.

CITIZENS ATTEND

Cheboygan Association of Congregational Churches

Rev. and Mrs. B. G. Matteson, Mrs. R. E. Cross, Mrs. Geo. Schoenherr, Mrs. B. Saltonstall of Charlevoix, Mrs. Cunningham, Mrs. Dean and Mrs. King of Ironton, attended the annual meeting of the Cheboygan Association of Congregational churches last week at Cheboygan. There was a large attendance, the reports from the churches encouraging and the addresses helpful and inspirational.

Rev. Carl Sinclair of Lansing, state director of Young People's Work and Religious Education, reported progress made in regard to a proposed Summer Young People's Conference at Crystal Lake, similar to one at Olivet. He was visited on the location and found it ideal. Mr. and Mrs. Matson offer their girl's camp and equipment for the use of the conference would be easy to reach from northern Michigan and the Upper Peninsula.

The churches must guarantee fifty young people in order to finance the proposition at the low rate contemplated, $12, which would cover board, text books and tuition for one week. All the pastors were enthusiastic and a committee on cooperation appointed.

One of the most interesting features of the meeting was the talk of Rev. Abram Vanauken a retired pastor, on "How the Foundations were Laid." NATIVE CLIMATE FOR MONKEY HOME

New Equipment at Institute to Aid in Study of Simians.

Paris.—A faintial concrete and glass establishment for monkeys that supplies every simian comfort possible in a chilly northern clime is a recent addition to the equipment of the Pasteur Institute.

Experimental work on the types of animals most rarely approaching man is a first requirement of nearly every piece of research that helps to find some new means of cutting down the toll of disease. Unfortunately monkeys transported from the tropics to an alien environment pick up so many intercurrent infections that precise and necessary medical work with them is exceedingly difficult.

Building Designed for Monkeys.

The new building in the grounds of the Pasteur Institute was built under the direction of Dr. Albert Calmette, whose tuberculosis vaccine has attracted wide attention in medical circles and is especially designed to overcome monkey susceptibilities to disease. Funds for its construction were donated by the Princess Marie of Greece in honor of her father, Prince Roland Bonaparte, himself a friend and patron of scientific endeavor.

Doctor Chalmette has done a close study of the animals' needs and believes in the midst of northern civilization their living condition should approximate as closely as possible their natural habitat. Peanuts and bananas are not the only things monkeys should eat, circuses and zoos notwithstanding, according to Doctor Chalmette.

Have Cook and Valet.

Two big blocks front central Africa, where the Pasteur monkeys were collected, act as cook and valet de chambre. One burly African in the main kitchen at one end of the glass-encased building prepares menus and, well balanced as any self-respecting chimpanzee would care for himself in the depths of the Congo.

Each one has a roomy chamber in; closed completely with glass or screen, with weather regulated by means of a small window in front. Radiators to-ward midday up the wall keep the atmosphere at Jungle temperature, while an elaborate ventilating system, sending water and a spray of perfumes and swings that would do credit to any pleasure palace, to make urban home life an attractive substitute for a precarious struggle for existence in central African wilds.

OCTOBER TERM CIRCUIT COURT

Session Convenes Oct. 25th —List of the Jurors Drawn

The regular October term of circuit court for this county is scheduled to open on the 25th inst. with Judge Parm C. Gilbert as presiding officer. Members of the jury recently drawn for attendance at the session are as follows:

William Gates, Boyne City, 3rd w
Phillip Towne, Boyne City, 4th w
Ed. O'Neill, Evangeline township
Robert Sloan, Sr., Charlevoix, 2nd w
Judson Mapston, Charlevoix, 3rd w
William Taylor, East Jordan, 1st w
James Williams, East Jordan, 2nd w
William Shepard, East Jordan, 3rd w
Ernest Priebe, Bay Township
Harry Denise, Boyne Valley tp
Oscar Fraley, Chanter township
Geo. W. Dennis, Charlevoix tp
R. H. Love, Evangeline township
W. F. Johnson, Eveline township
Walter Smith, Hayes township
Bert Woodard, Hudson township
Joseph Slowik, Marion township
Mable Masters, Melrose township
George Light, Norwood township
Daniel D. Boyle, Peaine township
Ralph Palmer, St. James township
Martin Rahling, South Arm tp
Eugene Raymond, Wilson township
Mrs. F. Almsbury, Boyne City, 1st w

PRINCESS PAT BAND

Two Performances in Petoskey Sunday

The Federation of Women's Clubs of Petoskey, is bringing the famous Princess Pat Band of thirty pieces, to Petoskey October 17, for two concerts at the high school at 2:30 and 8:30 p.m.

Director T. W. James, who conducted the band through the World War, is in charge. Katherine Baird, Canada's most talented soprano, will appear with the band. Tickets for adults 50c; children 25c.

$141,488,000 Spent in U. S. on Cosmetics

Washington.—If the American flapper has decided to discard her vanity case and depend upon Old Sol for a healthy complexion, governmental statistics do not show it.

A Commerce department report placed the value of perfumery, cosmetics and toilet preparations produced in 1925 at $141,488,000, an increase of nearly 10 per cent over the 1923 census figure of $129,237,000.

Last year's output was made up as follows: Creams and rouges, $34,178,000; dentifrices, $22,490,000; talcum and other toilet powders, $21,425,000; other cosmetics and toilet preparations, $30,684,000; perfumery and toilet waters, $20,544,000; hair tonics, $9,480,000; perfumed cosmetics and toilet preparations not reported by class or kind, $8,067,000, and hair dyes, $1,616,000.

STUDIES BIT OF PAPYRUS 2 YEARS

Said to Be Fragment of the First Bible.

Ann Arbor, Mich.—An ancient scholar, probably the leader of a church, was either an expert or the faithful fragment of the text of the Bible known to exist, believes Henry A. Sanders of the classical language department of the University of Michigan.

Doctor Sanders has passed two years working over the bit of browned papyrus, the sacred scroll, item of the large papyrus collection of the University of Michigan.

It is written in the Greek of the common people, says Doctor Sanders, thus distinguishing it from the "literary elite editions" of the complete Bibles of Aulocth, Alexandria and Cesarea, which are the more reasonably of the clerk or copyist was the observed characteristic. It has at the end of each phrase a little mark above the line. This Doctor Sanders considers to have been the direction of the readers in the church to show the phrasing. It is the only punctuation observed.

The date of writing of the fragment is placed in the third century or the century preceding the birth of the city editors have copied. The text is a part of Matthew, telling of the last supper and the betrayal of Jesus Christ. It is done into the possession of the university two years ago through the activities of its Near East research organization.

FOUR PRESIDENTS USED GOLD KEY

Electric Device Used at Washington to Open Great Expositions.

Washington.—Whenever a famous exposition or ceremony is opened at long range by the President of the United States he uses a gold electrical key studded with precious nuggets, the only instrument of its kind in the world.

Four Presidents—Taft, Wilson, Harding and Coolidge—and one first lady, have touched the key's handle to signal the commencement of expositions and other projects of national importance.

When not in use, the instrument is carefully guarded by its owner, Edward W. Smithers, chief telegrapher at the White House, who has been on duty there since the day after the bullet-ridden body was laid in state. It was given him by President Taft, who used it for the first time in 1909 to open the Alaska-Yukon-Pacific exposition in Seattle. The key was specially designed for that occasion, being mounted upon a slab of Alaskan marble, inset with Alaskan nuggets, and presented to Mr. Taft on the day by George W. Cormeus, discoverer of gold in Alaska.

Wilson Got New Year Thrill.

Probably the most unusual touch ever by the instrument was that which given at three o'clock on a New Year's morning, when Woodrow Wilson, clad in pajamas and bath robe, descended the stairs of the White House to signal from the east room the opening of the San Diego exposition. The year 1915 had come to the Pacific coast hours before, but the President's touch caught the year 1914 in San Diego in its last ditch, and caused much the big fair grounds to burst into a blaze of light as the old year passed out and the new year arrived.

Another big event, which the gold key was a part, occurred in 1915. And the key was pressed by President Taft on that occasion, the waters of the Pacific and the Atlantic met for the first time in the Panama canal. The electrical impulse sent out from the White House caused the explosion in the big waterway which blew away the Culebra cut, completing the connection between the two oceans.

President Coolidge used the key to put the machinery of the 377,000-ton Shingle hydroelectric plant in Seattle in motion, and Mrs. Coolidge used it on the occasion of the women's meetings far from Washington.

Smithers is extremely proud of his possession. He keeps it stored away at his home, but many sightseers who have heard of the unique historic relic insist upon adding it to the list of famous things in Washington they can tell of having seen with their own eyes.

"Just the other night," Smithers said, "four men from Oklahoma drove up to the house about midnight to see the key. They wouldn't leave me till I got up out of bed and showed it to them."

Kidnap Girl, 15, to Marry Her, Is Arrested

Augusta, Maine.—The Vermont "kidnaping" of eleven-year-old Lucille Chatterton from her hill home at Granville, that state, a year ago, by Earl Woodward, "The Hawk of Lost Nation Mountain," found a sirilar parallel in his city with the arrest of a "Gypsy" Jerry Blair of Belfast and Jennie May Cook, fifteen, also of Belfast.

Woodward's defense was that he took the Chatterton girl away from a home of sordid surroundings, chose and spoke to live in the open woods where she might have a better life. Blair's defense is the same, with the exception that he intends to marry Miss Cook. The Cook girl is of the same turn of mind.

The girl said that she had willingly left home with Blair, and that she wished to marry him. She is ready for her age, and would pass for twenty-one.

It was revealed that the girl's sister was married to one of Blair's brothers, but parental objections have blocked the wedding of Jennie and her suitor.

Calls Girls' Garb Too Scant to Hang Gems On

Philadelphia.—The modern girl does not wear enough clothing to hang jewelry on, William H. Cooper of Minneapolis told the National Wholesale Jewelers' association convention here. Mr. Cooper is president. "As a result," he said, "the women of today are taking to wearing expensive jewelry "out of sight of the mile glance, such as jeweled garter buckles and lingerie sets.

"I believe that the feminine love of jewelry is finding expression in this manner, for there is no smirkell falling off in sales."

With Reservations

A parson's little daughter came home from school in great concern.

"Isn't devil a horrible word to be in the Bible, daddy?" she said. "It was in my portion this afternoon, but I coughed when I came to it and wouldn't read it."

This reminds one of the curate who rendered a well-known passage: "He that believeth not shall be damned as it were."

Sisters Go Hungry, but Feed 48 Cats

Pittsburgh, Pa.—Residents of the block before the High sisters first complained to the police of mysterious odors in that vicinity, but efforts to locate the nuisance were futile for several months. Cause the record just spoil and can last determined, officers found, in the two terrifying rooms occupied by the sisters, 48 cats.

The sisters are heartbroken at the loss of the felines, which they had cared for and fed, even, deprived themselves of milk and food for the animal army.

Asked where they got so many cats, they said a friend who also had a warm heart for pets, sent them all the strays he found in the alleys.

New Cable Laid

New York.—The latest trans-atlantic cable has just been completed. It runs from Penzance, England, to New York and is expected to have a sending capacity of 2,500 letters a minute, eight times as fast as present cables.

WARDENS MISSING

For Some Time—Fear Entained Might Been Murdered

Two state game wardens Arvid Erickson and Ole Nelson, stationed north of the Straits have been missing for several days and thorough searches in the wilderness covering a wide area of territory in which the two men have been on duty in order to discover the wardens, have proven fruitless, no trace of them being found.

There is a pronounced belief in the upper peninsula, particularly in the northern region that the two men have been murdered and their bodies secreted by violators of the game laws. Fort Mandan, only a short distance south of the Canadian border. Their population then was only 1,050. It increased steadily to the point of disappearance.

The Mandans never buried their dead, but placed the bodies on scaffolds, out of the reach of human hands, wolves and dogs. They were then left to decay. When the scaffold decayed and fell to the ground, the relatives of the deceased buried all of the skeleton except the skull, which was bleached and purified and then placed with a circle of other skulls, all of them religiously protected and preserved as objects of veneration.

The Mandans had a theory of the flood which was surprising, considering their aloofness from civilization. Each year they celebrated with a ceremony when "the willow was in full leaf," for their tradition was that "the twig which the bird brought home was a willow bough, and had full-grown leaves on it." The bird which was sent out from the "big canoe" was a turtle dove. How this Mandan account of the Flood penetrated a race of Indians to such an extent that it was tradition with them, and had been so parently for centuries, is a mystery which may never be solved.

Selenium in Small Demand

Selenium is an element and not found native in visible quantity. It is obtained as a by-product in the electrolytic refining of copper. It is used in making red glass, electric resistances and cells for measuring light beams. Cells are particularly sensitive to light and many of them come under Swedish patents. The present supply of selenium is greater than the demand and it has no great commercial value.

TRACE INDIAN TRIBE TO WELSH EXPLORER

Mandans Believed Descendants of Madoc.

On the banks of the Missouri river, near the Canadian border of what is now North Dakota, there lived three-quarters of a century ago a rapidly dying tribe of blond Indians. Now, 75 years later, the Mandan tribe, which at one time caused bitter controversy among historians as to the discovery of America, is almost extinct. A few scattered remnants are left, says Arch W. Jurrell in the Wichita Beacon.

When the Mandans were found, with unfeminine marks of white blood in their veins, the old tradition of Madoc, the Welshman of the Twelfth century, was revived. And historians classed as they examined old documents in an effort to settle, once and for all, whether the story of Madoc had any basis of foundation.

Madoc, of Madoc, was said by Welsh tradition to have made two mysterious sea voyages, in the latter part of the Twelfth century, 300 years before Columbus in the boats Maria sailed from Hudea. On the return of the first voyage, leaving most of his crew in the land which he discovered in the westward. He sailed again and was never heard from. The poet Southey wrote of the story of Madoc for one of his most famous poems.

In an interesting old book found on a seldom-used shelf at the city library, Edward Everett Hale, in "Kansas and Nebraska," a history of the two territories, written in 1854 before there was a single white inhabitant other than soldiers, missionaries and traders, gone thoroughly into all the Indian tribes of the territories and devotes several pages to the Mandans.

The Mandans wasted away before the onslaughts of more savage Indians, and gradually were forced north until in 1805 Lewis and Clark found them in two villages near a point called Fort Mandan, only a short distance south of the Canadian border. Their population then was only 1,050. It increased steadily to the point of disappearance.

The Mandans never buried their dead, but placed the bodies on scaffolds, out of the reach of human hands, wolves and dogs. They were then left to decay. When the scaffold decayed and fell to the ground, the relatives of the deceased buried all of the skeleton except the skull, which was bleached and purified and then placed with a circle of other skulls, all of them religiously protected and preserved as objects of veneration.

The Mandans had a theory of the flood which was surprising, considering their aloofness from civilization. Each year they celebrated with a ceremony when "the willow was in full leaf," for their tradition was that "the twig which the bird brought home was a willow bough, and had full-grown leaves on it." The bird which was sent out from the "big canoe" was a turtle dove. How this Mandan account of the Flood penetrated a race of Indians to such an extent that it was tradition with them, and had been so parently for centuries, is a mystery which may never be solved.

No Appeal

A journalist, his wife and child, little Alice, were having lunch together.

"Om I have some more pudding, mother?" inquired the child.

"I think you have had enough," said the journalist; "it will make you ill."

His wife, as is the way of mothers, said, "Let her have a little more."

"It will make her ill," insisted father.

Little Alice looked from one to the other. Finally she sighed and said, "The editor's decision is final."

Title Float in Harvest Pageant Parade at Omaha

The grain-growing states of the Central West, the bread-basket of the nation, for the thirty-second successive year celebrated the close of the harvest season with an elaborate fall festival pageant at Omaha under the auspices of Ak-Sar-Ben. The big events were the electric parade on Wednesday night, September 29, and the great costume ball on Friday evening, October 1. That pictured above is the title float of the harvest pageant parade which was pictured in elaborate detail the agricultural resources of the central western states. The pageant is the occasion of one of the big annual gatherings of the states, of which Omaha is a central point.

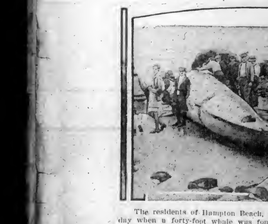
Girl Heroine Honored in Naming of This New Bridge

The Chicago & Northwestern railroad has just completed and dedicated this new steel bridge over the Des Moines river, between Boone and Ogden, Iowa. It has been christened the "Kate Shelley" bridge in memory of the heroine who, in 1881, then a girl of fifteen, risked her life by crossing the old long trestle structure to warn an approaching train that the bridge was about to go down. A violent storm was raging. Her daring deed gave her national fame and a rich reward. She died in 1912.

Showing Her Trophies From Jungle

Laden with approximately 2,000 trophies and specimens of Brazilian jungle life, Mrs. Marshall Field III returned to Chicago and declared that her three months in South America with the Field museum explorers equalled for thrills and fascination anything she had found in civilized life. Mrs. Field is the only American woman known to have shot a jaguar. She is seen above exhibiting some of her trophies.

Hampton Beach Gets a Big Whale



The residents of Hampton Beach, N. H., were greatly excited the other day when a forty-foot whale was found marooned on the rocks of Great Boar's Head. It was the first whale to go ashore there in twenty years. When discovered he was alive, but he died during the day, presumably of exposure and chagrin.

THINGS YOU MAY NOT KNOW

The scent of a flower is due to volatile oils in the plant.

A waterproof cigarette case for swimmers has been invented.

Traffic fatalities in this country now amount to 23,000 a year.

When a fly eats sugar it spits on it and sucks the sweet solution.

The hunting shotgun in Germany is held responsible for some natural disease.

Airplane pictures taken obliquely show the ground in perspective.

Potash now is cheaper in the United States than before the war.

In summer the Washington monument emanits five and one-half inches in height.

There are about 100 landing fields suitable for airplanes in the United States, which have gas and oil available and a caretaker present.

GRAND ARMY HEAD

Frank A. Walsh, retired manufacturer of Milwaukee, Wis., was elected the new commander in chief of the Grand Army of the Republic at the encampment in Des Moines, Iowa.

MRS. EMILY TOMPKINS

Mrs. Emily Tompkins of New York, who is the newly elected national president of the Ladies of the Grand Army of the Republic.

Author's Severe Handicap

When a young man, Francis Parkman spent a summer living a life of exposure and hardships among the Indians. This brought on a wasting illness, which permanently impaired his health. His sight was also seriously affected. At the best, the doctors allowed him but a brief working day. Sometimes he had but three or four isolated half-hours in which to work. At times months passed without his being able to continue study and dictation.

What Too Much Fire and Water Did to Steamer Galileo

The freighter Galileo, lying in the Hudson river at New York, had a fire in her hold, so the crew flooded her with water. This put out the flames but it also upset the steamer, which is shown above lying on her side.

Ancient Relics Found in Asine

Swedish Excavators Uncover Rare Objects in Peloponnesian City.

Stockholm.—Three hundred cases of art objects, including pottery, marbles, bronzes and jewelry, of relics, of skeletons, is one result of the Swedish archeological mission's four months' digging in Greece. Another result is the proof that Asine, where the excavations were made, is the most ancient city, the home of which has for years been held by the archeologist city of Argos, also in Argolis of the Peloponnesus.

The mission has returned to Stockholm, and, after its finds have been classified by savants, they will be placed on exhibition. After two years, however, all must be returned to Greece, for such is the arrangement entered into by Crown Prince Gustaf Adolf with the government at Athens five years ago, when he, as president of the Swedish Archeological society, personally obtained the concession. Since then every year, from April to July inclusive, the society's mission has delved on the site of where prehistoric Mycenaean and Pelasgic people once lived, worked, played and built.

This year the mission dug over an area of 50,000 square feet, and with the aid of fifty native workmen went down to bedrock, where the pre-Mycenaean remains were uncovered. The results are far more numerous and valuable than any before in particular features of which are being continuated to the cross purpose.

Advantages to Both Sides.

Before he left Stockholm he personally superintended the classifying and packing of the relics brought to Sweden in 1923 and 1924, and from these his ideas is that, aside from bringing Sweden into personal touch with the past of Hellas, both Greece and Sweden will profit by the arrangement in other ways. Greece will have her collections all duly sorted, classified and catalogued, which she probably could not otherwise obtain, while Swedish archeologists and anthropologists may study specimens at home with a constant view to new discoveries. Many of the most valuable finds of former excavations have only revealed their ultimate worth under the microscope in Stockholm. It is expected that the results of this year's work will not be an exception, particularly owing to the large number of articles brought away and the impossibility of giving them complete examination on the spot.

The excavations this year were principally confined to the extended, but upper and lower towns on the Barbouna hill and the necropolis, first discovered in 1922, which stretches from the lower town to the plain at the foot of the hill, on both the upper and the lower towns they dug down to bedrock, disclosing as they went the remains of successive cities. Near the top they found a valuable relic of Greco-Roman times, the Roman bath with its pools, cisterns and canals for hot and cold water, all in nearly a perfect state of preservation.

Farther down they came upon the walls of dwellings belonging to the Mycenaean and pre-Mycenaean ages, and found the cyclopean wall, six feet in breadth, and surrounding the first three cities at different successive elevations, for its foundations go down to bedrock, where it had been partially built over by Mycenaean structures of 1500 B. C.

Skeletons in the Necropolis.

One of the most interesting finds was in the necropolis, where in one tomb were uncovered the complete skeletons of a man and woman lying side by side with outstretched hands and bended knees. In the tombs, with other skeletons were discovered a quantity of jewelry and relics, many of which, of more ancient origin than the rest, have not yet been identified.

It is believed that among the jewelry, coins and bronzes, many unique specimens may be brought to light, for hitherto little has been known about the remains of the remote Pelasgic colonists, who antedate all others.

On the side of the Barbouna hill the excavators found that the tombs had been cut from the solid rock, dating like the remains of the strata of cities, from the pre-Mycenaean, the Mycenaean and Hellenic, up to the Graeco-Roman, only a few feet beneath the modern subsoil. In this subsoil were discovered early Christian remains.

In the necropolis of the earlier period 25 tombs were opened and investigated. The objects found in these are of the bronze age and are said to testify to the art and culture of prehistoric Asine, which beyond doubt, to one of the "sea cities" thrown up from the depths of the sea by the god Poseidon. The sketches found and taken away are expected to add considerably to the knowledge of the anthropology of ancient Hellas and settle disputed questions of ethnic origin.

Aside from its anthropological interest the Mycenaean necropolis was found valuable as checking up the (comparative) record of the upper and lower cities of Asine. The pottery was divided into two sections, easily distinguishable by the general outward structure, revealed with little trouble on account of the slope of the hill. The mission was surprised by the artistic arrangement of the tombs and the richness of the objects displayed in them.

In one section the tombs are cut to considerable depth and have passages leading into them and contain artistic pottery, statues, weapons and ornaments surrounding the skeletons, while in the other section the tombs are much simpler and contain only articles of food, chiefly pots of meat and primitive household utensils.

In the opinion of members of the Swedish mission these sections, however, belong to the same Mycenaean age, but were probably destined for two different classes of the population, one for the leaders, the mighty, and wealthy, the other for the populace.

The mission has abundant faith that when a thorough examination has been made of the relics, not only will articles of great intrinsic value be revealed, but there will also be identified relics which will throw a stronger light upon the hitherto legendary peoples of the Peloponnesus. The examination, it is expected, will not have been completed by the return of the crown prince in midwinter.

Otter, Freak Fisher, Spurns Cash Offers

New York.—An otter, an aquatic, tawny, fish-eating mammal, arrived at New York zoological park and already his keeper, Henry Landsman, finds himself unable to fill his engagements.

In South American countries the otter is used as an adjunct to fishing. The owner puts a collar on the neck of the otter, gives him a long line of rope and whispers: "Otter, do your stuff." The otter does. He chases the fish in the general direction of the boat and the fisherman gathers them in.

An old sea captain presented the otter to the Bronx institution. Friends of the administration were reported to have offered the keeper a liberal sum for the animal with a view toward presenting it to President Coolidge, but the otter himself refuses to go.

Landsman now has the otter named and wherever he goes, the flattened, short-legged, web-footed bewhiskered mammal follows. He stands seven inches above ground and is thirty-eight inches long, twenty-two inches of which is tail.

Baby's Heart on Right, but He's in Good Health

Omaha, Neb.—An examination is being made at a local hospital of the six-months-old son of Mr. and Mrs. A. A. Harris of McCook, Neb., who was born with his heart on the right side of his body. The physicians hope to determine what has caused the unusual location of the vital organ. The baby is apparently in good health, Dr. J. J. Keegan says, and, aside from the slight difficulty he experiences in breathing, there is no need for medical treatment.

Skin's Best Friend Dirt's Worst Enemy

Instant Lather in the Hardest Water

No longer is it necessary to save rain water for toilet purposes.

Here's a soap that lathers instantly in any water—the harder and colder the better.

Creamy lather that delights, gets all the dirt, kills germs and stimulates your skin. A BIG cake costs only 10c.

Compliment at Least Had Its Sugary Side

Some of the funniest things that happen on motion picture sets are utter surprises to all concerned and often throw the airtight-making efforts of the high-priced talent into the shade. At Hal Roach's recently, they had a colored couple working in one of the comedies and they were called upon to do a love scene.

"Just ad-lib it," said the director, "just make love the way you naturally would."

So they snuggled up together and Sam said: "Liza, you is exactly like brown sugar."

"How come I is like brown sugar?" demanded Liza belligerently.

"Sweet, but awful unrefined," was the unexpected answer.—Los Angeles Times.

DEMAND "BAYER" ASPIRIN

Aspirin Marked With "Bayer Cross" Has Been Proved Safe by Millions.

Warning! Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians for 26 years.

Say "Bayer" when you buy Aspirin. Imitations may prove dangerous.—Adv.

Before the Spasm

Farmer's Wife—Didn't you make a mistake in the label you put on this bottle, doctor? It reads: "Take well before shaking."

Doctor—No, that's correct, madam. It's your husband's agape medicine.

Truth shines the brighter clad in verse.—Pope.

He who laughs best doesn't have the laugh on him.

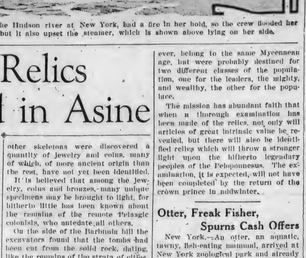
Chief of Finland and Daughter



Above are pictured Dr. Lauri Kristian Relander, the President of Finland, with his daughter, Miss Maja Lisa Relander, at their summer home on the island of Kultarauta, which means the "Golden Coast." Three months of every year the Finnish President resides at this summer palace, which is surrounded by beautiful gardens and is close to the sea.

CHURCH, BUILT IN 1734, RESTORED IN VIRGINIA

St. John's, in King William County, Has Its First Service in Scores of Years.

Richmond, Va.—A rare landmark of pre-revolutionary days, old St. John's church, situated in King William county, for the first time in scores of years, recently responded to sacred music by choir and congregation, and the modulated exhortations of the pastor in the rite of the Episcopal denomination.

The ancient structure, one of Virginia's priceless relics of colonial days, was used for a modern Episcopalian service, the congregation composed of visitors from adjacent churches and the choir, the singers from St. John's church at West Point. The Right Rev. William Cabell Brown of the diocese of eastern Virginia occupied the pulpit.

The church was erected in 1734, nearly half a century prior to the War of the Revolution. At the time of its beginning, when the Church of England was fostered by the Colonial government, it was the popular place for King William county pioneers to gather for worship.

There followed a period of discontinuance and restlessness. St. John's was treated no better than other churches of the denomination. Years passed, and it fell into decay. Shortly before the outbreak of the war between the states it was revived and repairs made. Until 1885 the record shows it was used regularly as a place of worship.

Then again it fell into decay and was in danger of being ordered torn down. Capt. Robert E. Lee and Dr. B. Richards, in 1892, saved it from this fate. They purchased the property with the announced intention of holding it until such time as the Episcopal church should be able to renovate it and utilize it as a regular house of worship.

Shortly after the death of Captain Lee the property was deeded by title in trust to trustees appointed by the diocese of Virginia. Within recent years a new roof was put on, new floors placed and sanitary methods used to assure its complete renovation.

Safety Rules for Radio Installations Issued

Washington.—Safety rules for radio installations have just been issued by the bureau of standards in the form of a handbook supplementing the National Electrical Safety code.

The work provides the rules for the installation of transmitting stations, electrical supply stations, etc., and the construction of antennas. These rules were formulated and approved by a sectional committee organized according to the rules of procedure of the American Engineering Standards committees.

The KITCHEN CABINET

All hail to good health! you never can buy it,
Though many by using a vegetable diet;
Have lived a long life, with nerves steady and quiet;
Then listen to wisdom, ye people, and try it.

DISHES FOR THE SICK

We must now and then remember those who are ill with a tasty dish of some sort which will appeal to the taste.

A small cake made from a thick slice of bread, hollowing it out like a box, then toasting it, dip in egg white on the rim and then in parsley and fill carefully with any creamed food that is allowed. The appearance of a dish will often cause a finicky appetite to respond. Chicken, fish, sweetbreads, custards and various other dishes may be served in these small crustdishes.

Egg baked in cream is a most appetizing dish for one who is ill. Place a tablespoonful of cream in a ramekin and drop in an egg, season with salt, pepper and bits of butter and put to bake in a moderate oven. Set the ramekin in water while baking.

Beat the white of an egg until stiff, season with salt and drop the yolk carefully into it after placing the white on a piece of buttered toast. Put into the oven after seasoning well and cook until the egg is set.

Cream Toast.—Take two slices of dry bread and trim with the following sauce: Three-fourths of a cupful of thin cream added to two tablespoonfuls of cold milk, a bit of salt and a tablespoonful of flour. Dip the toast into boiling water and butter lightly before pouring over the sauce.

Hamburg Steak.—Make well-seasoned hamburg steak into small balls. Broil in a hot pan or over coals. Serve on a narrow strip of toast and garnish with parsley.

Fish Souffle.—Force cooked fish through a strainer. There should be a fourth of a cupful. Cook one-fourth of a cupful of bread crumbs in one-third of a cupful of milk five minutes, then add salt and paprika to taste, and one-half tablespoonful of butter. Beat the white of an egg and add to the mixture. Turn into a buttered mold or two and set into water. Bake in a moderate oven until firm. Serve with a white sauce.

Salads.

A rather unusual way of serving cucumbers is to peel and slice them in quarter-inch slices, then with a sharp knife peel round and round each slice, making ribbons. Heap these in lettuce, sprinkle with a little finely minced onion and serve with French dressing.

Pineapples and pecan meats make a fine mixture for stuffing tomatoes; serve with a highly seasoned mayonnaise or boiled dressing. Garnish the top with squares cut from the lid of the tomato cup.

Asparagus after being marinated in French dressing, may be put through a ring of red or green pepper or even a ring of lemon or orange, and looks well, using three or four stalks. Lay on lettuce and serve with a generous spoonful of mayonnaise.

A most attractive salad is one served in the leaves of head lettuce, each leaf holding a kind of vegetable, such as asparagus tips, sections of small tomatoes and celery and the last, finely minced apple with nuts. These are all marinated with French dressing and served with a spoonful of any good boiled dressing. Arrange on a clop plate with fresh radishes and green onions.

Lemon jelly, accompanied by stuffed figs is a good combination. Prepare the lemon jelly and unmold on a large plate. Arrange the figs around the jelly, each stuffed with cream cheese mixed with a little of the sirup of the figs and chill.

Ginger ale added to gelatin to make a jelly and molded makes another delightful combination. Mixed or whole kumquats may be molded in it or other fruit in season. Serve on lettuce with mayonnaise.

Tomato Salad.—Cut small round tomatoes in halves, remove some of the seeds and fill with chopped green onion and fresh, finely diced cucumber. Sprinkle generously with chopped parsley with French dressing.

The proportion for French dressing so well liked by the majority is five of oil to two of vinegar. Another salad which never seems to wane in popularity is the following: Cut celery fine and take an equal amount of seeded and skinned white grapes, a handful of walnut meats and serve on lettuce with any good dressing.

Chiffonade Dressing.—Mix two tablespoonfuls each of red pepper and parsley chopped, one teaspoonful of chopped green onion, two hard-cooked eggs, whites and yolks chopped separately; pepper and salt and five tablespoonfuls of oil with two of vinegar. Put into a jar and let stand an hour or two on ice, then shake well before using. Serve on head lettuce or any green salad.

Nellie Maxwell

JULIA BOTTOMLEY.

MODISH BLACK SATIN FROCKS; CROWNS GO HIGHER AND HIGHER

SATIN FROCK WITH TINSEL STITCHERY

GROUP OF STYLISH HATS

SATIN to the right of us, satin to the left of us, everywhere flourisheth the satin frock. Black or colorful, just so it's satin, pleads the mode.

If it is black satin you are choosing, it must perforce be enlivened, and fashion has a fascinating way of so doing by means of colorful embroidery interspersed with much gold and silver. One could not possibly consider a black satin frock to be somber if it had a vestee and sleeve insert of contrasting gay suede cloth, as the model in the picture so stylishly reveals. And as if furthermore to "drive dull care away," there is a glittering panel of embroidery at the front opening which uses oriental color, much silver tinsel and an array of shining nailheads in its patterning.

Perhaps it would not be polite to call sleeves "giddy," but they are, to say the least, very spectacular. In fact, most of the creativeness of the dress concentrates at the sleeve these days. If a sleeve fails to show elaborate rats below-the-elbow treatment, then it is almost sure to be of the low armhole type carried to the extreme of looking like bat wings or dolman effects. Seems as if satin afternoon frocks in particular are adopting as part of themselves every new trick-sleeve which fashion is capable of devising. Very often the dress itself is very simply styled, until it comes to the sleeve, when, presto! all is elaborateness and novel effect.

The black satin frock with trimming touches of fine fur, georgette is a charming theme. The newest interpretation is for the deep, circle cape collar of pink crepe, tied simply at the neck with a ribbon or caught with a link fastening. A pink gardenia worn at the shoulder adds to its attractiveness.

Colorful satin frocks trimmed with like-colored velvet are very modish for daytime wear. The most popular combos are the wine tones, dark green and rust. These dresses often have uneven hemlines and wide gypsy sashes.

Hints are entering upon an era of high crowns. To what heights the new crowns will ascend, only the future will tell. To those who would refuse the objection, "high crowns are not becoming to me," listen to this: most of the crowns are pill-stic. You touch them with a wee pinch here and a slight crease there, then pose them "just so" on the head, a few more deft adjustments and bravo! becoming is the reward. Of course one would not want to destroy the symmetry of the new-style tall crowned sailor shown first in this picture. Its perfection in its profile—and anyway it takes a certain type to wear those smart-looking sailors which, it must be admitted, have "lots of style," even if they are not becoming to everyone.

But when it comes to the graceful wide-brimmed felt pictured to the right, ah; that's a different story. It is the kind that yields to the touch. It has a velvet band and brim binding, which is in accord with fashion's idea.

Referring again to the first tall-crowned sailor, it has several illuminating style points as to the trend of fashion. For instance, its stovepipe crown is of tucked bottery plush; its brim is exceedingly narrow; then, again, it is bunded with wide cadre grosgrain ribbon and grosgrain ribbon is one of the big trimming items of the season.

The supple crowned hat in the center is entirely made of wide velvet ribbon in two contrasting shades, negre brown, with cardinal.

Of more than ordinary importance is the tall draped black velvet turban. It is one of the newest shapes, deriving its inspiration from the picturesque negro headdress—a mode which is a leading theme among Paris modistes just now.

The last hat is of velvet, which goes to show that velvet is regarded with unusual interest by the milliners this season. Again we see grosgrain ribbon used to trim. In this instance it is bound low slowly downed, based on the charter's principles.

To the courage and manhood of her barons and plain people England owes her love for freedom. But for them she might for centuries longer have wallowed in the slough of despotism and oppression.

Old Indian Cemetery

Mounds of old Indian burial grounds around Victoria harbor were stirred with the finding of two skulls and parts of other human remains in a pocket of soil on the crest of Corbin island, connected by a footbridge with the land. The aborigines adopted the system of burying in trees as well as in shallow earth mounds, the latter fenced in. Among burying grounds of the kind was that of Dead Man Island, completely burned over in 1860.

Ancient Ideas Wrong

The old speculations as to the great difference of levels between the Mediterranean and the Red sea, and on the two sides of the isthmus of Panama, have been proved by modern leveling of high precision to be totally erroneous.

Suggestion, at Least

"It isn't altogether improbable," writes in L. G. S. "that the jelly fish gets its jelly from the ocean current."—Christian Science Monitor.

Smart Costume Jewelry

For evening wear a set of earrings made of round balls of brilliants sewing from pearl chains is a most effective choice. They are matched by a string of pearls with a ball pendant attached to each end.

Wide-Brimmed Hats

Among the hats which will be prominent this fall are wide-brimmed models of black velvet, simply trimmed. While small hats with highly draped crowns are among the new imports from Paris, American women, especially those in the misses' class, will undoubtedly cling to large hats for dress wear for fall. Boyish felt shapes continue to rule for sports wear.

Brilliant Blue Called Valencia

A brilliant shade of blue called valencia is much in evidence in the costumes worn by the smartest women at resorts.

THE WORLD'S GREAT EVENTS

ALBERT PAYSON TERHUNE

(©, by Dodd, Mead & Company.)

The Magna Charta

A MAN lay writhing among the rushes and straw that covered the floor of his palace on the night of June 15, 1215. He was foaming at the mouth, biting the rushes to fragments and filling the spacious apartment with blasphemy and lamentation.

The man was John, king of England. He had that day been forced to sign a document that cut down his own tyrannical powers and granted certain just rights to his people. How unwillingly he had affixed his signature was proven by the ballpish rage he gave way to as soon as he reached his own abode.

Nearly a century and a half had passed since the Norman conquest. Norman and Saxon were becoming blended into one consolidated English race. It needed but a uniting grievance to make that blend complete. And the grievance was at hand.

Richard, the "Lion Heart," descendant of the Conqueror and John's predecessor as king of England, had passed most of his life in France. His courage and rough integrity had made him a popular monarch, although he knew no word of English. He had done brilliant, if ineffective, work in the Crusades, and, on his way home, had been captured and thrown into an Austrian prison. John, his brother, had taken advantage of his absence to make an effort to seize the English crown. Richard was the typical knightly errant, the highest type of chivalry. John, on the contrary, was a coward and an all-around scoundrel. The nation raised money for Richard's ransom and he returned home, only to be killed in battle soon after.

Richard died without leaving any children. The natural heir to the throne was John Prince Arthur, son of Richard's next younger brother, Geoffrey. But John threw Arthur into prison, had his eyes put out with hot irons and at last murdered him, thus securing the crown for himself. Having done so, he launched out on a career of tyranny and oppression and misrule worthy of Nero. But the people of Anglo-Saxon liberty, and was in a way the basis of many of our most important laws. Among other things it put an end to unjust punishment and provided that every prisoner receive a fair trial by a jury of his peers. It also authorized resistance to arbitrary royal power and the law was the will of the people ahead of the mere dictates of the king.

Naturally John refused point-blank to sign a document that would cut his power by half and hand that half to the plain people, whom he despised. But the barons were prepared for such a refusal. They rose in arms and intimidated the cowardly sovereign into granting to the people their rights, and demanded that he sign the document.

On June 15, 1215, John and the barons met at Runnymede, a little island in the middle of a river. There the Magna Charta was read aloud to the king, while a circle of stern men, armed to the teeth and in no mood to listen to a re-read, stood threateningly about him. The scared monarch signed the charter under this force and then rushed home in a paroxysm of impotent fury.

Becoming his senses, he cast about like a cornered rat, for some way to undo what he had done. A brilliant idea came to him. Some time before, being frightened by a papal threat, he had become formally a liege servant to the pope. He now sent to the Vatican, explaining his ill-luck and begging for aid. In reply the Pope at once issued a decree declaring the Magna Charta null and void and excommunicating all who should seek to uphold it.

But the barons and people of England were too thoroughly aroused to be affected by even this command. They stood by the Magna Charta and prepared to defend their rights to the death. With a vast army of foreign mercenaries, John ravaged his own kingdom in a last effort to secure supreme rule by tyranny. In retaliation the barons declared he was no longer their king, and invited Louis, king of France, to come and reign over them.

The deadlock was broken by John's death. His infant son, Henry III, succeeded to the throne, and a new era of honest law slowly dawned, based on the charter's principles.

To the courage and manhood of her barons and plain people England owes her love for freedom. But for them she might for centuries longer have wallowed in the slough of despotism and oppression.

Harvesting Soy Beans Now Easy

Harvester-Thresher Unit Is Found to Be Practical and Cheap.

Although the large combined harvester-threshers of the West have never been considered practical for use in Midwest grain fields, because of the heavier rainfall in this section, these combines this past year made a place for themselves with the Illinois soy-bean grower and also have shown to good advantage in the harvesting of small grains, according to I. P. Blauser of the farm mechanics department, college of agriculture, University of Illinois. It is estimated that the cost of harvesting has been reduced about a third through the substitution of the combine for the ordinary method.

The combine harvester was first used in Illinois in October, 1924, by Garwood brothers of Stonington to harvest soy beans. Credit must be given to these brothers for pioneering the combine in this state. After being turned down by two companies, they succeeded in getting the third company to sell them a combine so that they might give it a trial in harvesting soy beans. Incidentally, the harvesting of soy beans has been the most difficult problem in growing and handling this crop.

First Machine Used.

This first machine was used to harvest 212 acres of soy beans, 60 acres being a weedy tract Garwood brothers said they could not have saved them by any other method. By June, 1925, there were seven combines of the same make in Illinois waiting to be given a trial in harvesting small grains. Just one year after the first machine was introduced.

It is quite commonly agreed by those who have used the combine that it is nice to stay if for no other crop than the soy bean. As one farmer said, "We cannot get along without the combine for harvesting soy beans."

This past season the combine has been used to harvest wheat, oats, sweet clover, red clover and timothy, in addition to soy beans. One combine in Champaign county harvested this past season, 80 acres, including: 230 acres of wheat, 40 acres of oats, 30 acres of red clover, 10 acres of timothy, 10 acres of sweet clover, and 220 acres of soy beans. This acreage was divided between two farms located 11 miles apart. Other unofficial records also have similar records.

Determine Total Loss.

The farm mechanics' department of the agricultural college has made a number of tests to determine total loss in harvesting with the combine. These tests were made both in wheat and in soy beans. The total loss for 53 threshing machines tested was a little more than 8 per cent. The average total loss for 14 tests made with the combine in wheat was a little under 6 per cent.

In the case of soy beans, the saving in harvesting with the combine is much greater than by any other method of harvesting and threshing, even though the total loss is considerably higher than the loss in harvesting wheat. The same combine that had been used to harvest wheat, oats, sweet clover, red clover and timothy, gave an average total loss of 10.62 per cent for 11 tests in harvesting soy beans. For harvesting soy beans the cylinder speed was reduced, special sieves were put on the cutter bar permitting the machine to cut lower, and the small grain riddles were replaced with soy bean riddles.

Sweet Clover Not Ideal Hay Crop by Any Means

Sweet clover is not an ideal hay crop by any means, but more or less of it is cut for that purpose in different sections every year. Those who have had experience with it are not to cut the second-year crop too close to the ground and then kill the plants outright. Sweet clover, being a biennial, starts to grow from the root crown only once—in the spring of the second year. Second growth in that year comes from buds on the crown. If cut too close to the ground there will be no buds left from which growth can start. Leave the stubble from seven to eight inches long.

Steel Corn Cribs Favored

Leading corn growers of Ohio, Indiana, and other states have found from experience that the steel cribs save them large sums on corn held over from one bumper season to the next to get higher prices. They are ventilated to provide proper drying, they prevent bleaching from the sun, and they do not harbor rats, mice, and similar rodents that carry off large amounts of feed. Most of these are made of sheet steel and can be set up easily by two men.

LIQUID VENEER

Household bookkeeping helps; though it may be like the death's head at a feast.

In choosing among men, which would you: The hard-boiled or the half-baked?

A capable man is so often not a do-itable man. His knowing power is strong, his driving power is weak.

Roosevelt Says That Elephants Are "Fussy"

The ungainly elephant is as fussy as a prima donna about his toilet, according to Theodore Roosevelt, who writes about his recent hunting trip in an article in Liberty. Colonel Roosevelt tells about the tame elephants from the backs of which his party did their shooting, and says:

"The elephant, if he is to be kept in top condition, should have plenty of time for his toilet in the morning. First, he is driven out by the mahout and gathers his own breakfast—branches, leaves, etc. These he brings back to camp with him.

"After breakfast, he is taken to the river—if there is one nearby—and washed. His mahout rides him into the shallows and makes him lie down on his side. The mahout then scrubs and pounds him while the elephant shines himself with water from his trunk until he shows up like a fishy glistening black rock in the stream."

GENERAL MOTORS

"A car for every purse and purpose"

CHEVROLET · PONTIAC · OLDSMOBILE
OAKLAND · BUICK · CADILLAC
GMC TRUCKS
YELLOW CABS, BUSES AND TRUCKS

FRIGIDAIRE—*The Electric Refrigerator*

General Motors cars and trucks are sold and serviced in 104 countries. The export shipments in 1925 amounted to 119,632 motor vehicles; and the overseas assembly plants and warehouses of General Motors now number 19. This vigorous development of the world-wide market for a complete line of quality cars is important to the car buyer. It is not only a contribution to international prosperity and progress, but it also helps to maintain the *continuous* production program at the factories, on which low prices depend.

WORLD-WIDE sales of quality cars and trucks

FARM FACTS

Feed live stock regularly; it pays.

* * *

Every farm should have at least a small woodlot.

* * *

The unsuccessful farmer is the "off-again on-again" fellow.

* * *

Plenty of water and salt are necessary in all feeding practices.

* * *

This is the season when hens go on strike—many will be found "guilty" of nonproduction.

* * *

Many hens' eggs will stand 20-pounds pressure on the shell. The average is about 14 or 15 pounds.

* * *

Pick pears that are to be used at home while they are hard, and put them in a cool place to ripen. If they ripen on the tree they may rot at the core.

Wrinkles and Bad Complexion

The bane of every woman. Remove wrinkles, small pits in surface of your face, hands, etc. Why pay $100 to $200 for this work? My service will cost you but $10. Write for booklet. Dr. Lillian Hall, Licensed Physician and Maker of Beautiful Faces, 624 West 103rd St., Los Angeles, California.

SOVIET PROMISES

Sherwood Eddy, New York editor and publicist and a group of Americans just returned from Russia, including Charles P. Merrison, editor of the Christian Century, and a few other ministers, educators and laymen, have written a letter to President Coolidge urging the resumption of negotiations for recognition of the present Soviet government of Russia.

These gentlemen advise that the negotiations be made on the basis of a mutually satisfactory adjustment of existing debts and claims, and a guarantee against the carrying on of a revolutionary propaganda by the Soviet government in the United States.

It would seem to a bystander that any government which had to be required to give a guarantee that it would not seek to undermine a government with which it was resuming relations, was a government without much reputation or probity, and that its guarantee wouldn't amount to much anyhow. It is to be wondered whether these distinguished gentlemen have heard anything about the assurances which Soviet Russia gave to Great Britain along the line from refraining from propaganda and what subsequently happened when Russia was recognized by the British. They might find, if they sought to investigate, that Great Britain was subject to one of the most intensive bits of propagandizing in the history of the world, a program which reached its height in the general strike in England which was frustrated by the inherit solid sense of the British people.

Any guarantee which the Soviets would give us would be worth no more than the one given Britain and probably not so much as we are naturally a more sentimental and innocent people in a diplomatic sense than the English people.

Undoubtedly this group of American gentlemen are of the sentimental and innocent sort. In visiting Russia they were of course taken charge of by the wily gentlemen at the head of the government who saw to it that these strangers in a strange land would see nothing that was not good for them to see—that is, good for them to see from the Soviet standpoint.

It is the sentiment of ninety-five per cent of the American people that we have no dealings with the Russians until they get a government of probity and it is fortunate indeed that this is the viewpoint of the national administration.

WORKERS AND THE TARIFF

That the workingmen of America appreciate the benefits they derive from the protective tariff principle and are not going to vote for men of any party who desire to return to the old free trade idea, can be seen from many indications. Of special interest in this regard is a letter recently sent to the President by Geo. W. Guthrie, a labor leader of Trenton, New Jersey. After calling attention to the fourth anniversary of the present tariff law, he said:

"It is needless for me to call your attention to the distressing conditions which existed in this country in 1920 and 1921, when foreign-made goods were driving American products from our American markets. Every one remembers the hard ships suffered by the millions of men and women who vainly sought employment at that time. The enactment of the Fordney-McCumber act in 1922 resulted in an immediate improvement in conditions, and now after four years under protection the country is enjoying a period of unusual prosperity."

Mr. Guthrie then recalls his experiences as a youth in the days of the free trade law of 1893 and says that ever since that time low tariff has been associated in his mind with hardship and distress. He declares further that the American workers, of whom he it one, are the best paid wage earners in the world. He then continues:

"This state of affairs which it is so important to maintain can be continued only by means of a protective tariff like such as the Fordney-McComber act. If foreign-made goods are allowed to enter the United States freely and compete with American-made and produced articles, one of two things must happen. Either American manufacturers and producers will be driven out of business or they will be forced to reduce wages to the world standard. If a reduction in the American wage standard meant merely a reduction in the cost of living, which could also result from such a policy, no great harm would be caused in the end although even such a change would require a period of reorganization in the course of which great hardships would be caused. It would not mean merely this, however, because the placing of the United States on a free trade or tariff for revenue only basis would mean a much greater reduction in buying power of the American workmen's wages than the reduction which would result in the cost of living. There are many important national questions before the public today, but it seems to me that the matter of greatest importance is the continuance of those high standards of living which have made the United States the greatest country in the world in which to live and work."

This workingman writes from experience. The fine spun theories of the free trade political economists mean nothing to him when compared with hard facts.

Shoes in Stone Age

Did Stone age men wear shoes, is an interesting question. The Stone age men hunted or tamed animals. They used the flesh of those animals for food, the furs for clothing and the leather often for sandals just as much as we do nowadays; and they made them out of leather, as we do. Only the shape was very much cruder. —Exchange.

Hard to Overwork Brain

By habitual study you may overtax your physical endurance; you may damage your bodies if you neglect to exercise them, but you certainly will not damage your brain. You will never succeed in using your brain up to its full capacity. There is no greater nonsense talked than that brain-work may bring on "brain-fever."—Sir Arthur Keith.

Registration Notice For General Election November 2nd, 1926

To the qualified electors of the City of Charlevoix:

Notice is hereby given that in conformity with the Michigan Election Law, I, the undersigned City Clerk, will upon any day except Sunday and a legal holiday, receive for registration the name of any legal voter in said city, NOT already registered who may apply to me personally for such registration.

Provided, however, that I can receive no name for registration during the time intervening between the second Saturday before the election.

You are further notified that October 9th and 16th, 1926, from 8 o'clock a. m. to 8 o'clock p. m. I will be in my office to register the names of all qualified electors of the City of Charlevoix as shall properly apply therefor.

Saturday, October 23rd, 1926, last day for general registration for the election to election to be held November 2nd, 1926.

CHAS. H. LAMPHEAR,
D. S. PAYTON, City Clerk.
Deputy City Clerk.

SENATOR GEORGE

New portrait of Senator Walter George, Democrat, who was renominated for the United States senatorship in the Georgia primaries.

WHAT THEY SAY

Slandering Youth—A Philadelphia clergyman said on Wednesday "It has been proved sixty-four per cent of the young people of America are dishonest." He gave as authority for this indictment "tests made by clerks in different stores." Sixty-four per cent? Why not seventy-one? The latter figure would be no more loose and reckless than the former.'

Many are basing appraisals of youth on ephemeral fashions and habits. Every age has its own. 'Censors find confirmation in authors whose output deals with "framing youth," any one of whose typewriters given a few of the obvious features of present-day life—country clubs, independent dress, short hair and motor cars—could today almost do the job itself. But the picture is not true. For every boy or girl whose exuberances attract attention there are a dozen going their ways with real purposes in life, with ambition, with determination. They seldom figure, however, in popular fiction, or are they often themes for utterances from pulpits.

Nine millions of women and girls are working in this country; the great majority from necessity, of course, but their ranks contain hundreds of thousands who are working simply because they wish to "do something." The great summer schools never have had more students than they have today. Our great industrial activities never have had more keen, ambitious youngsters, "willing to begin at the bottom."—New York Times.

Our Foreign Trade—In a recent speech at Chicago Secretary Hoover said "We are the only combatant in the World War whose foreign trade is greater than it was before the war. One of the great powers of Europe now has a delegation on the way to America to see how we did it. Our foreign trade is 43 per cent larger than it was in 1914."

Secretary Hoover may take some pride in the figures as the Department of Commerce, under his administration, has co-

RATES
reduced

The rate is now only 2.10 from CHARLEVOIX for three minutes' conversation to Cincinnati, if you place an "Anyone" call before 7 p.m. It costastill less if you call after that time, with further reduction between 8:30 p.m. and 4:30 a.m.

Tell the Long Distance operator you wish to make an "Anyone" call, give her the telephone number in Cincinnati, or details which will enable her to determine the number.

MICHIGAN BELL TELEPHONE CO.

operated efficiently and effectively to help in increasing our foreign trade.

It is to be noted also that our foreign trade is increasing in spite of the international pessimists who declared that because of our protected tariff, because of our refusal to cancel the foreign debts, and of our failure to enter the proposed international brotherhood by joining the League of Nations, we would be boycotted by the rest of the world and our foreign trade would decline and shrivel up. As is often the case the pessimists have gubbsed wrong. It still pays to follow American policies and stand up for American rights.

Asking Too Much—The sentimentalist, who in this case would have had the United States cancel the French debts with an eloquent gesture, is always a difficult party to deal with. The trouble with his point of view is that it puts the United States in the position of paying for the war—or a large part of it.

We did not wish for the war, tried in every possible way to bring it to a conclusion and tried in every possible way to keep out of it. Then why should we pay the bills? For the two million soldiers sent to France and for the billions spent for war preparation and the maintenance of naval and military forces, we are paying gladly and freely. But to pay for the war otherwise, is almost too much to ask. —Minneapolis Journal.

BEAVER ISLAND

Miss Irene Boyle visited friends in Charlevoix this week.

Frank Beer is here this week on business for Grinnell Bros.

Clarence Farmer left for Detroit early this week to visit friends.

Ed R. Greene spent the first of the week on business in Charlevoix.

Wilbur Martin spent some time at Boyne City on business this week.

Patrick Bonner and son John were business visitors in Petoskey Tuesday.

Mrs. Dennis Boyle and niece Bernadine went to Charlevoix Monday on business.

Hugh D. Boyle was a business visitor in Charlevoix last Monday and Tuesday.

James D. O'Donnell visited friends in Charlevoix during the early part of the week.

W. J. Gallagher is attending a meeting of the board of supervisors in Charlevoix this week.

John Peiffer of Lake Linden, has been here several days attending to business interests.

Ralph Smart who has been working in Milwaukee for some time past returned home a few days ago.

Erwin Belfy is a Charlevoix business visitor this week, making the trip from St. James last Tuesday.

John Leonard returned to his Chicago home Monday, after spending a month here at the Leonard cottage.

Otul Nordrum, representing the Booth Fisheries Company of Charlevoix, was a business visitor here yesterday.

Barney Martin and son Leonard made a trip to Charlevoix this week to have some work done on their gas boat.

Supervisor John W. Greene of Peaine township, is in Charlevoix this week attending a meeting of the board of supervisors.

Prosecuting Attorney A. L. Fitch of Charlevoix, was here last week on business connected with his official duties.

Mac Gallagher returned to Chicago last Monday, following a visit with her parents here, Mr. and Mrs. W. J. Gallagher.

Mrs. Tim Sweet left for her cottage last week and returned to Chicago a few days ago, following a stay of six weeks.

Mr. and Mrs. Henry Mosher of Chicago, are spending with the former's mother, Mrs. Mosher's mother, Mrs. Hannah T. Gallagher.

W. Hegery, of the Robbins Fish Co., spent some time here last week in the interest of his company, returning to Charlevoix' Saturday.

Miss Sarah Gallagher returned from Chicago a few days ago and is spending a short vacation with her mother, Mrs. Hannah T. Gallagher.

John C. Gallagher of Green Bay, Wis., administrator of the estate of Fredore Proctor, spent some time here recently on business connected with the estate.

Ed. Duel, deputy game warden, spent a short time here last week investigating the feasibility of some parties to place a herd of red deer on the island at some favorable point.

William Gibson was called to St. James Tuesday by the illness of his wife, at the home of her parents, Mr. and Mrs. John O'Brien. Mrs. Gibson came over from Charlevoix a few days earlier and is now suffering from ulcers of the stomach.

Sugar From Artichokes

Experts of the government bureau of standards have discovered a process by which sugar may be extracted from artichokes. It is one and one-half times as sweet as the cane and beet varieties and the rolling frost-limit is so simple that the manufacturing cost can be greatly reduced. The artichoke gives a heavy yield in comparison and the expense of cultivation is low.

Where We Get "Cobwebs"

Cobwebs are webs spun by spiders de nieres of certain insects. "Cobweb" is derived from an old English word meaning spider. Most of the cobwebs which hang from the ceilings of houses are made by very small spiders which are seldom seen by those living in the houses.—Pathfinder Magazine.

DR. G. STRESEMANN

Dr. Gustav Stresemann, German foreign minister, headed Germany's delegation when that republic was admitted to membership in the League of Nations.

THE THEATRE

The New Klondike—Thomas Meighan's latest Paramount production which comes to the Palace theatre Oct. 16-17, is a story which brings in the atmosphere of the Florida real estate boom, with that of a baseball training camp. Scenes are laid around a small Florida town where the team is parked, and the hectic excitement of the boom resorts.

Meighan is a baseball player who, on reporting for training, is told that he has outlived his usefulness so far as baseball is concerned. He quickly recovers from the shock and stumbles into a real estate deal. Turning over several pieces of property, he skyrockets to prosperity.

The other players hear of his good fortune and get him to invest for them. The sudden wealth wrecks the team—they all want to become realtors. There's plenty of comedy and action as their fortunes touch the peaks and depths. Finally a point arrives at which they all walk out on Tom and return to seek reinstatement on their team. He it left holding the bag on a big venture. There are a lot of hectic moments before he finally succeeds.

The Perfect Wife—That is the title that John M. Stahl, has applied to Eleanor Boardman, famed screen star. Stahl's best production, "Memory Lane," featuring Miss Boardman, Conrad Nagel, and William Haines, is coming to the Palace theatre Oct. 19-20. In this picture, the star enacts the role of the wife of a small town New England merchant.

"Aside from being one of the most sensative actresses I have ever directed," declares Stahl, "Eleanor Boardman seems to understrand better than any other star the psychology of the average American woman. This is the type she knows how to mirror on the screen.

No Man's Land—You who have been in "No Man's Land" and you who boast of the danger you experience passing thru traffic-jammed streets, turn your eyes to the isle of Samoa.

Robert J. Flaherty, the man who made "Nanook of the North," and whose latest picture, "Moana" is to be shown at the Palace Oct. 21st, avers that each time he ventured out for a walk during his twenty month sojourn, he was taking a big chance with his much-valued life.

One of the greatest menaces to the health of the native in Samoa in the falling cocoanut. In the small village of 400 souls where "Moana" was made, men and women could easily recall the death of four of their fellows, caused by the fall of the hard fruit on unprotected heads.

The cocoanut trees grow very high, often reaching as high as one hundred and fifty feet. And so, when a nut falls from that distance, it is easily understood that instant death awaits whoever walks below. As they fall, at all times, without needing a slight breeze, the Samoans are constantly wary of destruction.

But as the film shows these people laughing, singing and dancing, it seems that their imminent peril casts no blight on their innate happy nature.

Coming—"Winds of Chance," by Rex Beach.

W.C.T.U. MEETING

The Women's Christian Temperance Union met last Friday at the home of Mrs. Frank Partridge with about twenty five present. After devotionals and routine business, several ladies related their experiences as delegates to the republican county convention.

A change in the constitution was recommended and to be acted on at the next meeting. This would create the office of vice president at large.

Officers were elected as follows: President, Mrs. B. J. Saltonstall; cor. secretary, Mrs. A. S. Usher; rec. secretary, Mrs. S. D. Rife; treasurer, Mrs. L. E. Benton.

Vice presidents for 1927 were appointed as follows: Acting, Mrs. Jno. Burns; Baptist church, Mrs Wm. S. Kibbe; Christian Science, Mrs. Cassie Hart; Church of God, Mrs. S. D. Turner; Congregational, Mrs. Geo. Kelderhouse; Episcopal, Mrs. H. B. Jacobs; Methodist, Mrs. E. A. Stewart.

Mrs. H. B. Jacobs presented the topic, "The Direct Primary" and an interesting discussion followed. The hostess served delicious refreshments and the Union adjourned to meet in November with Mrs. Stores.

W. C. T. U. NOTES

The State convention will be held at Owosso, Nov. 9-12.

Mrs. Stella B. Robin, state vice president and president in state politics, advises us to vote "No" on the question of calling a Constitutional Constitution to revise the state constitution. The Michigan constitution contains a provision prohibiting the manufacture and sale, etc., of intoxicating liquors. If the amendment should pass a great effort would be made to elect wet delegates who would omit our present dry provision from the proposed new constitution. "The Direct Primary is good perfect, but let's use it and improve it; let's refuse to go back to the old way of nomination by the few."

The National League of Women Voters have passed and reaffirmed this resolution: "Resolved, That the utmost resistance of the league be exerted in opposition to any attempted repeal of the state primary law, and that support be given to proposed amendments which tend to make nomina-

—PERSONALS—

Merley Plumm was visitor in Bellaire last Saturday and Sunday.

H. W. Garret t of Grand Rapids, is a business visitor here today.

Olaf Nordrum made a business trip to St. James on the Idler on Wednesday

Mr. and Mrs. Charles Fehr of Grayling, visited friends in Charlevoix last Sunday.

Mrs. Archibald Butters is visiting with her nephew's family at Pelston, prior to making the journey to her future home in California.

Mr. and Mrs. Nathan Kaplan returned to their Chicago home early this week, after spending several months here as summer residents.

Mrs. Euretta Palmer, son Laton, daughter Erma and Lloyd Riebel, all of Royal Oak, were guests at the Coulter farm several days this week.

John C. Gallagher of St. James, spent some time here this week in connection with the estate of the late Pendore Proctor of whom Mr. Gallagher is administrator.

Wm. M. Harnes of Forti and, Mich., spent several days recently with his daughter, Mrs. Milo B. Todd and family—at their farm home just south of Charlevoix.

Hon. Thomas Reed of Oceana county, former Lieutenant Governor and candidate for State Senator in the twenty-sixth district, was a Charlevoix visitor last Thursday.

Mr. Ernest G. Loeb will make the trip to Chicago Friday. Business and for the purpose of visiting relatives being the prime motive for making the trip at this season.

Mrs. Robert Stuart returned to her home Chicago, last Tuesday following a residence of several months at her business place on the grounds of the Chicago Club in this city.

Sunday night, October 17th, E. E. Page and son will give lectures and messages at the L. O. O. M. hall at eight o'clock. Everyone interested in Spiritualism will be welcome at the meeting.

Mr. and Mrs. Fred S. Myers, daughter Heidi and R. A. Herman, for some days past on a motor trip to Toronto, Niagara Falls and other points of interest in the east, returned to Charlevoix Wednesday.

Mrs. Henry G. Sherrard of Detroit, state president of the League of Women Voter, was announced to speak to the women of Charlevoix county at 2 p. m. Wednesday afternoon at the Congregational church.

The light frost that visited this region less than one week ago, the first of the season locally, brought out the colorings and Autumn tints on foliage, all making for a gorgeous scene throut the entire region.

Kenneth Kralik and Miss Nellie Ward were married at the Methodist parsonage last Saturday. Rev. C. E. Pollock performed the service, using the ring ceremony. The happy couple will make their home in Charlevoix.

Mr. and Mrs. M. Roy Brady start out on a long motor trip Friday, with Houston, Texas as their destination. Their plans at this time include spending the winter months in Houston, returning to Charlevoix about April 1st, 1927.

Remember the Hotel Charlevoix is making a special effort to satisfy patrons at all times but their service at Sunday dinners is out of the ordinary and is for the benefit of individuals, couples, parties and families.—Adv.

Mr. and Mrs. W. H. Francis will motor to Grand Rapids Friday of this week where they will spend a short time with friends. Later they will continue their motor trip to Pierson, Florida, where they will continue during the winter season.

The Missionary society of the Congregational church will meet Wednesday afternoon, Oct. 20, at Mrs. L. Comforth, 402 Dixon avenue. Election of officers will take place at this meeting. Mrs. Carrier will have charge of the program. Topic, "Tie Hands that Toil"

Local Oddfellows will hold another social session at the I. O. O. F. Temple Friday night in which dancing will form the principal feature. Miss Betty Ross will direct the Highland Fling for pupils father, Andrew Ross, furnishing the violin music for this part of the entertainment.

Mrs. Charles Woodruff, president of the Federation of Women's Clubs of Petoskey, and Mrs. Ethel Rowan Fargusole, chairman of publicity, were in Charlevoix and nearby towns a few days ago, placing advertising for the Petoskey Pal Rad that appears in Petoskey next Sunday.

Local nimrods are making preparations for enjoying the shooting season in the big woods. Several hunting parties are being organized and the members are anxiously awaiting the day when they can legally shoulder their favorite big game rifle, tramp through the wilderness and enjoy camp life for a few days.

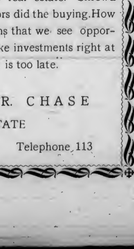
Mr. and Mrs. James McGeagh will spend the next few months at points further south. Today they are in Cadillac. A little later they will visit friends at Flint and Detroit; thence to Hamilton and Toronto, Ontario. With their visit concluded in the Dominion they will motor south possibly to Florida, before returning to Charlevoix.

Does Distance Make Investments Good?

Charlevoix County has received hundreds of thousands, within a year, for resort real estate. Shrewd outside investors did the buying. How often it happens that we see opportunities to make investments right at home—after it is too late.

LAWRENCE R. CHASE
REAL ESTATE
230 Bridge Street. Telephone 113

DR. E. C. TANDY



Dr. Elizabeth C. Tandy has been appointed director of the statistical division of the children's bureau. United States Department of Labor. Dr. Tandy is a native of Indiana and holds degrees from the University of Chicago, Columbia university and Johns Hopkins. She also studied medicine at Cornell and the University of Wisconsin. At one time she was field representative for the American Red Cross.

Old Southern Stamps Bring Small Fortune

New York.—Rare old stamps of the South are in much demand in New York. A 5-cent stamp issued at Tuscumbia, Alabama, in 1856 recently sold for $250, while a 2-cent semi official Charleston (S. C.) stamp issued in 1851-8 brought $100. Philatelists paid $165 each for Confederate States of America provisional issues, a Macon Georgia 5-cent yellow stamp and a Memphis (Texas.) 5-cent red on orange stamp.

Calls European Pagans Worse Than the African

London—Missionaries to combat "the paganism of Europe" are as urgently needed as for converting the heathen, declared G. P. Byron, general treasurer of the Wesleyan Missionary society, at a church conference in York.

"The paganism of Western Europe is worse than anything in Africa, and the anti-Christian feeling in Eastern Europe is the worst in the world," he asserted.

Members of the board of supervisors are holding their annual meeting this week at the court house.

The Honor Class of the Congregational Sunday school resumed their monthly meetings last Monday evening. Officers and committees were chosen for the next three months and some definite activities planned. Following are the officers elected: President, Billy Novak; vice president, George Bergman; secretary, Jos. Smith; treasurer, Richard McCann.

Mr. A. C. Clement, who has been at his summer home on the grounds of the Belvedere Club for several months, returned to Joliet, Ill., Wednesday. A little later in the season he goes to his winter home Daytona, Florida, but in accordance with his annual custom that dates back over a long term of years, will be one of the first of our summer residents to appear on the scene for the 1927 season.

The ladies of the First M. E. church have decided to hold their rummage sale in the sales room adjoining the Dunkley repair shop, opposite Hotel Charlevoix, Friday and Saturday. A large mahogany chair—rocker—will be one of the especially good pieces of furniture offered at this sale. Better look it over if you are interested in this class of furniture. Some one will want it at the price asked.

Mr. and Mrs. L. S. Rupert closed their summer home early this week and returned to Bloomington, Ill., last Tuesday. On return trip being made by automobile. They were accompanied to Chicago by Mrs. George T. Warner and Miss Caroline Smith. All Charlevoix summer residents who for a long term of years have been with the first to arrive here at the opening of the season and also remaining until late fall before returning to their home cities.

Alonzo Powers of the Sanitary Engineering Co., was awarded the contract for installing a heating plant for the Antrim County Old People's Home, a building that was recently destroyed by fire recently. Contracts for the new structure were let to several parties last week, with the heating plant award going to the Charlevoix company. The new building will be a fire proof structure that will cost about $40,000. About $6,000 of which will be for the heating plant.

Miss Jeanette Miller, a missionary stationed at Balimdo, West Central Africa, was here over Sunday and spoke at the Congregational church and Sunday school here and at Ironton. She has had many interesting and thrilling experiences and her stories of the wild life, the animals, the witch doctor, the mission children, the famine and strange customs and conditions were most entertaining. Miss Miller is home on her year's furlough but is spending most of the time traveling and telling of the work she is doing in that work. She is a Michigan girl and supported by the Congregational women of Michigan.

Find History Reading in U. S. on Decrease

New York.—History is read less in this country today than it was forty years ago, says Jean Jules Jusserand, who for years was French ambassador to the United States, and John Spencer Bassett, professor of history at Smith college.

M. Jusserand is not dismayed, however. "In the fun and relish of human tastes and dispositions this is probably but a temporary phase," he says, "and it will be shortened if would-be historians and those who teach them remember the fundamental principles of the genre."

Despite vastly greater opportunity, made possible by "a brilliant advance" in teaching in schools and colleges, history is not in a better position with the men and women of this country than ever before, Professor Bassett believes. He asks:

"Since more of them have studied it in school, ought one not to expect that a very large part of our people should be interested in reading history and that a powerful group of historians should be writing many histories to meet this demand?

"But," he asserts, "no such conditions exist."

Use Gas Flame to Teach Deaf-and-Dumb Children

London.—Deaf-and-dumb children are taught to speak perfectly by means of a gas flame.

This method, used by a suburban teacher with a large class of boys and girls, is to show each pupil how he can make a gas flame jump to varying heights and at a varying rate by sounds. It requires about three months for a pupil to learn the sounds of the alphabet by this method.

Miss Ida Thomson, who sponsors the system, says "a deaf mute has perfectly normal vocal organs and is only mute because he is deaf. He makes sounds but is unconscious of them, and they convey no meaning to others."

Rubber to Be Produced From Euphorbia Trees

London.—A Cape Town dispatch to the Exchange Telegraph says a method has been discovered by which rubber can be produced from the latex (milky fluid) of the African euphorbia tree. The rubber is said to be of a quality comparable with that produced in the Para district of Brazil.

A South African company is preparing to exploit the yield of 60,000,000 trees in the East London district. Chemical tests are said to have shown a yield of three pounds per tree. Vulcanizing appears satisfactory with the product of the tree. The correspondent says the trees are plentiful, labor in the district is cheap, and the country is free from fever.

No Mundane Thoughts for the Sabbath Day

The gloomy and repressive observance of the Sabbath that remained long from the days of the Puritans has largely died out in America. People no longer believe that happiness on Sunday is a sin. In parts of Scotland, however, the stricter view still holds.

William Mart'almire lived with his family on a farm several miles from the village. On Sunday he was wont to stride with his long-legged son, James, over the four miles of road to the kirk. The rest of the family followed in the cart.

One Sunday—an unusually fine Sunday, when the air was filled with the strength of the hill breezes—William and James were swinging gayely along on their way to the kirk. For three miles their mouths were shut in solemn silence.

Finally the delight of living got the better of the souls devoted to the said sobriety, stifling the air. "'Tis a fine day."

His father turned on him in righteous offense: "Is then a day to be talkin' o' dese?"—Kansas City Star.

Popularity of Prince Boosts Archery in Japan

Tokyo.—Popularity of Prince Asaki, fourth son of the emperor, is credited with having revived archery as a sport in Japan.

Since the ten-year-old boy was designated champion archer of his class in the "peers" school his instructors say he has an excellent chance of becoming the most proficient archer in the empire.

More than 700 years ago archery was the principal military art. Relics of the old Nipponese weapons of bows so long and strong that the present-day Japanese marvels at the brawn of his forefathers.

After the Japanese-Russian war Japs and wrestling attained unsettled and more lately baseball has helped make archery forgotten. About a year ago an effort to revive the sport and the bow and arrow uncovered the fact that there were still many amateur archers in Japan. Now it is taught in most of the schools.

Premier Wakatsuki practices daily with the bow and Marchioness Nabeshima is the leader of woman archers.

Magic Healing Virtues Laid to Jaffa Orange

Jaffa, Palestine.—The delicious taste and unique fragrance of the Jaffa orange has caused it to become more and more popular in Europe, but the belief that it is possessed of almost magic virtues as a preventive against infectious diseases is held to be mainly responsible for its ever growing vogue.

The home of citrus fruit is southern Asia, from whence it was propagated in the slopes of the Himalayan mountains. Some three years ago travelers brought the "first gold apples" from India to Palestine, however. Mesopotamia and toward the South century the Jews returning from the Babylonian captivity imported them to Palestine.

Man Goes to Jail to Retain $50 of His Vacation Fund

New York.—Paul Gmelin is spending the last two days of his vacation in jail in New York city, but he is saving $50.

Convicted of speeding, Paul was given the choice of paying a fine or going to jail for ten days.

Paul refused out the $50 and then deliberately put in his ten days in jail.

"I've got ten days left of my vacation, that's all," he said. "I'll just save this $50."

Christian Science Society

Sunday service, 10:45 a.m., Subject, "Are Sin, Disease and Death Real?" Sunday School 12 o'clock.

Wednesday evening service 7:45. Reading room, Tuesdays and Saturdays, 3 to 5 p. m.

The public is cordially invited to attend our services and use our reading room.

St. Mary's Catholic Church

Sundays 8:00 a. m., and 10:00 a. m.
Mondays and Tuesdays 8:00 a. m.
Saturday 7:00 a. m.
Rev. Fr. Odelo.

CHURCHES

Church of God

Rev Paul L. June, Pastor

Services held at the Chapel:
Sunday School 10 o'clock.
Morning service, preaching, 11 o'clock
Young Peoples meeting 6 o'clock.
Evening service 7:30 o'clock.
Prayer Meeting, Wednesday evening at 7:30 o'clock.

We are expecting to have a revival soon. Get "tuned in", for a good time —winter is coming on, snow will be here blowin' and scurrying around the corners. Come now when you can enjoy yourself. An invitation is extended to all.

Subjects for next Sunday: "Our Integrity." "Blessings and Benefits."

Congregational Church

Rev. B.G. Mattson, D.D., Minister

At the morning service, ten thirty o'clocks the autumn communion will be observed, preceded by a sermon by the pastor on "The Fruits of the Spirit."

The Sunday School meets at twelve o'clock.

Young Peoples meetings, senior and junior, at 6:30.

The evening service at 7:30. Dr. Mattson will continue the story of the Christian Conflict with' Heathenism. He will tell the story of Nero, the Rome and the accusations against the Christians. These brief chapters from history are full of vivid pictures which should help us to appreciate at what price has been handed down to us the great treasure of the Christian religion. Young and old will find them interesting and helpful. This informal, friendly service is for all who are interested enough to come.

Service at the Ironton church at 2:30.

Methodist Church.

C. E. Pollock, Pastor.

Junior church meets at, 10:30 a. m. each Sunday. At the time of the singing of the second hymn the juniors will march to the junior room for an additional lesson following the pastor's ten minute talk to them.

The fourth sermon in the series "The Particula of Christianity" will be preached at 10:30 next Sunday morning. Growing interest is evidenced in these very important theme.

Song and sermon will lead the worship at 7:30 p. m. next Sunday.

6:30 p. m. is Epworthian hour, Miss Hilda Cook leads next Sunday, topic, "The League of Youth."

Concerning Cats

A reader writes us follows: "I noticed that from time to time you make complaint about the racket kicked up on your back fence by yowling, spitting, fighting cats.

"Well, don't you know what is the matter with the cats? I guess you would yowl and spit and fight, too, if you had to go around in a thick fur coat with the mercury marking 90 in the shade. The trouble with the cats is that they are fat, fevered and ugly on account of wearing so much fur."

All of which may be true, but they yowl and spit and fight in the winter just the same. Probably this is on account of their having cold feet.—Brooklyn Standard Union.

Prince's Nickname

The prince of Wales, it is disclosed, has among his numerous titles one which does not appear in the official lists. He is known to the Oxford undergraduates as "the Pragga Wagga," and has been so known ever since his Oxford days. Nobody knows the origin of the nickname, except that it is just plain slang.

A Word With the Old Folks

Elderly People Are Learning Importance of Good Elimination.

IN the later years of life there is apt to be a slowing up of the bodily functions. Good elimination, however, is just as essential to the old as to the young. Many old folks have learned the value of Doan's Pills when a stimulant diuretic to the kidneys is required. Scanty or painful passages of kidney secretions are often signs of improper kidney function. In most every community are scores of users and endorsers who will claim the merit of Doan's. Ask your neighbor!

CHAPTER XV—Continued

The price was moderate—too moderate, Caleb thought, rich with unspent salary and the possession of a thousand shares of Crystal Springs stock, preferred issue. Still, that was the artist's business, to price his own wares. While he waited for the groom about the painter to dissolve, some one entered the gallery door by him and came swiftly up behind him with light steps. He turned to greet Mrs. Carquines, her face slight with welcome greeting, her jade eyes surveying him with their perpetual appraisal.

"This is fine!" she exclaimed. "How do you know, we have been talking about you all the afternoon? Or nearly all. I have lots of news for you," she added, the jade eyes full of promises.

"Curky has sold three pictures and we are going to celebrate!" she went on. "We exist between sales, you know."

Caleb had a vision of a noisy studio gathering. He was not in the humor for such a celebration, not even for the news that the artist's wife suggested would be his reward.

"You shall be," he commented slowly. She broke in.

"There is nothing to be afraid of," she laughed. "It isn't that kind of a celebration. You and I and Curky will go back to the studio and have a nice, cozy little dinner. Curky will furnish the delicatessen things, I will furnish the rest, and you will furnish the wine. Curky won't drink anything but champagne, and I loathe it. Is it a bargain?"

Caleb had a vision of a noisy studio gathering. He was not in the humor for such a celebration, not even for the news that the artist's wife suggested would be his reward.

"You shall be," she commented slowly. She broke in.

Curky will furnish the delicatessen things, I will furnish the rest, and you will furnish the wine. Curky won't drink anything but champagne, and I loathe it. Is it a bargain?"

Caleb had a vision of Curky's wife, her face flushed with wine, her eyes bold, her tongue loosened and her self-control relaxed. He had seen her in that state before, and he knew that Curky would be in the same condition. He had no desire to be a witness to the scene that would follow.

"I'm sorry," he began, but she broke in.

"Then you don't like champagne? Curky will furnish that, I'll see to it. Or you can bring it yourself. Only you must not refuse. I'll not have it. Curky will be so disappointed. He has been talking about you all the afternoon? Or nearly all. I have lots of news for you," she added, the jade eyes full of promises.

"Curky has sold three pictures and we are going to celebrate!" she went on. "We exist between sales, you know."

SLIVER CROSSING

Increase of Freight via Panama Route, Largely Due to Oil Shipments, Indicates Rise of United States to Leadership of World's Commerce.

By JUDSON C. WELLIVER

One of the striking evidences of America's rapid rise toward commercial and industrial leadership of the world, is the Panama Canal; will almost certainly handle more freight in 1926 than will Suez. For several years the two canals have been in a neck and neck competition whose implications are the more interesting because the Panama ditch is owned by the American Government, and that at Suez by the British Government.

Of course both Canals are open to the ships of all nations; and the competition between them is not only between the United States and Britain, but in a larger and even more significant view it is competition between old world and new world.

When the Panama Canal was opened in 1915, Suez was already transiting about 25,000,000 tons of freight annually. Almost nobody believed Panama could ever attract anything approaching such a volume. But during the war four of German submarines in the Mediterranean caused many vessels to take the Panama route between the far east and European or American ports. This gave Panama its introduction, and it has not only held but greatly increased its business since the war. In 1923 Panama transited 5037 vessels, against 4605 for Suez; Panama handled 25,160,000 cargo tons against 21,770,000 for Suez. This was the first year of Panama's lead.

A Close Race

The following year Suez barely exceeded Panama's tonnage; and in 1925 comfortably held its lead. But reports for 1926 to date indicate that Suez is losing, owing to Britain's industrial depression, while Panama is doing better and is pretty certain to resume the lead.

The present "Suez Canal has been in operation nearly sixty years. Panama only eleven. Although few people except antiquarians know it, the first canal at Suez was built more than 3,000 years ago. It was in operation as early as B. C. 1318; how long before, is mere conjecture. Before the Christian era began the ditch had been built, destroyed, rebuilt; silted up and built up again, time after time. When Alexander the Great conquered Egypt the Canal was one of the oldest of engineering works.

Between 1904 and 1915 the present Panama Canal was constructed, at a cost about $400,000,000. Suez about one-fourth that sum. But Suez is a simple, sea-level ditch across a sandy plain; while Panama is a lock canal, the greater part of its length lying above sea level, so that most of the distance from ocean to ocean is through an artificial freshwater lake.

Early Profits Unexpected

When Roosevelt started building at Panama, hether he nor any other prophet of optimism would have dared suggest that within its first decade the Canal would earn a profits ebtedjustification concerned the national defense, and the establishment of competition with the transcontinental railroads.

Although both Canals are open to shipping of all nations, British vessels constitute the majority of those using Suez (55.8 per cent), while American vessels are 54.8 per cent of those using Panama.

1924, ships of 21 nations used the Suez route, while 24 nations were represented in the maritime caravan at Panama.

The World War was not the only unexpected factor in bringing Panama so quickly to equality with Suez, for the most important. The enormous increase in Panama traffic in 1923 was represented almost entirely by petroleum and its products, moving from California to the east coast and Europe. In the year ended June 30, 1924, tolls aggregating $24,290,000 were collected, of which $9,071,000 was from tankers carrying petroleum. An even more striking statement of the hasting is that for the same year exactly 50 per cent of all tonnage through the Canal was between the two ocean fronts of the United States; that is, 13,500,000 tons; and of this considerably over 5,000,000 tons, or more than two-thirds was petroleum. It was of course chiefly from California, en route to eastern refineries. In the succeeding year this petroleum movement fell off heavily; but for 1926 it is again increasing and the increase is likely to continue for many years. But for the petroleum traffic, the Canal would have shown a deficit in every year of its operation.

The enormous petroleum business has been in other ways advantageous to Panama. A constantly increasing proportion of maritime shipping now-adays uses oil fuel. Oil-burning ships seek routes on which they can most cheaply buy oil; and because California oil can be put so cheaply into the bunkers of vessels passing through the Panama ditch, there is a substantial inducement to prefer this route. This will increasingly favor Panama and militate against Suez, as the number of oil burners increases. Moreover, Panama's advantage will still further increase, as the enormous oil resources of Venezuela, Columbia, and other South American countries are developed.

Great Service of Panama

If cheap petroleum has thus served Panama so well, Panama in turn has equally served the American motorist, who consumes most of the world's petroleum products. For Panama has brought the Pacific Coast petroleum to the eastern market at costs which, but for the Canal, would be vastly greater. Thus the Canal has given the United States the cheapest petroleum products in the world, and has helped build the automobile industry and our modern highway system.

This mutually helpful relationship between the Canal and the petroleum users is the more impressive when one realizes that it was not even remotely anticipated at the time President Roosevelt started building the Canal. So late, indeed, as 1910, when Admiral Evans wrote his articles about the Canal and decided that it could not be profitable for several decades at least, he based all his calculations on the probable cost of coal for bunkering ships. He did not dream that merchant marines were on the verge of the revolutionary change from coal to oil. So he figured that, as there is practically no bunker coal in the countries bordering on the Pacific, that ocean could not compete, by way of Panama, for a greatly increased share of shipping. The oil development overturned the prophecies of Admiral Evans, and of all others who had foreseen that just problems would make Panama unprofitable.

MORTGAGE SALE

Default having been made in the conditions of a certain mortgage executed by Guy Pearl and wife, Marion Pearl, of Charlevoix, Michigan, unto Charlevoix State Savings Bank, a Michigan Corporation of Charlevoix, Michigan, dated May 21st, 1924, and recorded in the office of the Register of Deeds for Charlevoix county, Michigan, May 22nd, 1924, in Liber 64 of Mortgages on Page 113, on which mortgage there is claimed to be due at the date of this notice the sum of $5344.22, including the principal sum due with interest, together with an attorney fee as provided by statute and no suit or proceedings at law having been instituted to recover the money secured by said mortgage, or any part thereof, and whereas, the taxes required by the statute to be paid on said mortgage were duly paid for by the recording thereof;

Now Therefore, Notice is given that by virtue of the power of sale contained in said mortgage and of the statutes made and provided, and mortgage will be foreclosed by sale of the premises, therein described, or so much thereof as may be necessary to satisfy the amount then due thereon together with the costs and expenses of the foreclosure, including the attorney fee provided by statute, at public auction, to the highest bidder therefor, at the front door of the Court House in the City of Charlevoix, Charlevoix county, Michigan (that being the place where the Circuit Court for the County of Charlevoix is held), on Saturday the 18th day of December, A.D. 1926, at eleven o'clock in the forenoon on that date.

The premises described in said mortgage being the land and premises and property situated in the City of Charlevoix, County of Charlevoix and State of Michigan, viz: Lots seven and eight except the north fifty feet of Lot seven of J. Milo Eaton's addition to the Village (now city) of Charlevoix, Michigan, according to the recorded plat thereof.

Dated September 9, 1926.

Present: Honorable Servetus A. Correll, Judge of Probate.

In the Matter of the Estate of Sarah Emrey deceased.

Madeline LaLonde having filed her petition praying that an instrument filed in said Court be admitted to Probate as the last will and testament of said deceased and that administration of said estate be granted to The Detroit Trust Company or some other suitable person.

It is Ordered, That the 28th day of Oct. A.D. 1926, at ten o'clock in the forenoon, at said probate office, be and is hereby appointed for hearing said petition;

It is Further Ordered, That public notice thereof be given by publication of a copy of this order, once each week for three successive weeks previous to said day of hearing, in the Charlevoix Sentinel a newspaper printed and circulated in said county.

SERVETUS A. CORRELL,

24-3t Judge of Probate.

MORTGAGE SALE

Notice is hereby given that a certain mortgage dated May fifth, one thousand nine hundred and twenty five, given by Oliver G. Davenport by K. G. Davenport, attorney in fact, and Rowena G. Davenport, wife of Oliver G. Davenport, in her own and dower right, to Alfred B. Hans. The said mortgage was recorded May fourteenth A.D. 1925, in liber sixty-eight of mortgages, on page seven, in the office of the Register of Deeds for the county of Charlevoix, Michigan. Which said mortgage was duly assigned by Alfred B. Hans to Mrs. Verona J. Vincent, Sept. eighth, 1926, and recorded September 14th, A.D. 1926, in liber fifty three of mortgages, on page 530 in the office of the Register of Deeds for the county of Charlevoix, Michigan. The said mortgage containing a clause, wherein it is expressly agreed that should any default be made in the payment of interest, or any part thereof, on any day whereon the same is made payable, and should the same remain unpaid and in arrears for the space of ten days, that after the lapse of the said ten days, so much of the principal sum as remain unpaid, with all arrearages of interest thereon, shall, at the option of said party of the second part, or his assigns become and be due and payable immediately thereafter, although the period limited for the payment thereof may not have expired, anything hereinbefore or in the note contained to the contrary thereof in anywise notwithstanding. Powers also being granted to the second party to effect insurance, pay the premiums thereof, to pay taxes that are in default, to be added to the principal and accrued interest. Therefore the said assignee of the second party having paid insurance premiums and taxes thereon said premises, elects that the whole sum of principal becomes due, upon which there is now due and unpaid on said mortgage, interest, insurance premiums and taxes in the sum of Three thousand eight hundred sixteen and 64-100 dollars. That the said mortgage will be foreclosed by a statutory sale of the premises therein described. That certain piece or parcel of land situate and being in the village of Walloon, in the county of Charlevoix and State of Michigan, and described as follows, to-wit: Commencing at a point twenty five feet south of the center of the old G. R. & I. railroad right of way, said point being in the Grey and Springvale State road, thence south thirty feet, thence northeasterly measuring along the center of said old railroad right of way, to the place of beginning, being part of the southwest quarter of the southwest quarter of Section nine, township thirty three north, range five west. At the front door of the court house in the city of Charlevoix, that being the place of holding the circuit court for the county of Charlevoix, at ten o'clock in the forenoon of the 25th day of April A.D. 1927.

Dated this 14th day of October A.D. 1926

MRS. VERONA J. VINCENT,

Assignee of Mortgagee

WILLIAM G. MCCUNE,

Attorney for the Assignee,

Office at Petoskey, Michigan. 25-13t

MORTGAGE SALE

Default having been made in the conditions of a certain mortgage made by Irene E. Young, of Charlevoix, Michigan to Sara Jane Myers, of Charlevoix, Michigan, dated the 28th day of November A. D. 1922, and recorded in the office of the Register of Deeds for the county of Charlevoix and State of Michigan, on the 29th day of November A.D. 1922, in Liber 53 of Mortgages, on page 465, whereby the power of sale contained in said mortgage has become operative, on which mortgage there is claimed to be due at the date of this notice the sum of One Thousand Twenty Three Dollars, for principal and interest and taxes paid by the mortgagee thereof to the State by the Auditor General under the provisions of Section 127 of Act 126 of the Public Acts of 1893, has been withdrawn from homestead entry by the Auditor General and the Commission of Conservation, acting jointly, as provided by Act 141 of the Public Acts of 1901, examined and appraised and will be placed on the market by offering the same at a Public Auction to be held at the Office of the Department of Conservation, in the State Office Building in the City of Lansing, on Tuesday the 19th day of October, 1926, at ten o'clock in the forenoon, Eastern Standard time, at which time it will become subject to purchase in the manner provided by statute.

"Just Blokes Dancing"

There is a lot of posing and make-believe about art and it is rarely that the artist, and never the really great artist, can be guilty of it. He leaves that sort of thing to the half-educated and halfmere "admirer" of art, who is always trying to see in painting or sculpture something esoteric, something more than the attempt to create grace and beauty on canvas or in stone or bronze.

In his life of the late John S. Sargent, Mr. William Howe Downes tells how, also, great painter took the wind out of one bulbted person of that sort, an ecstatic lady who was admiring in the artist's presence one of his pictures which represented several classical figures frisking about in a green glade.

"Oh, Mr. Sargent," she giggled, "tell me, what does it mean?"

"Just blokes dancing," replied Sargent gravely.—Youth's Companion.

The Artist's Alibi

The teacher had spent nearly an hour on the drawing lesson that morning. Explaining the reason for every line, she had painstakingly drawn a dog on the black board. Then, after talking with the children about dogs they had seen, they were told to draw one.

The little folks got busy with their pencils at once, and the teacher began to walk around the room examining the work. She stopped beside a little boy whose drawing resembled anything but a dog, and she said: "Albert, what is that? It looks like a boy. I asked you to draw a dog."

"Well," replied the boy, "that's the Boss. He's calling Rusks, but he hasn't come yet."

TOLEDO GOVERNS WORLD'S MARKETS IN CLOVER SEED

Practice of Dealing in Futures Makes the Market an All-Year-Round Proposition.

Toledo, Ohio.—Toledo's is clover, deeper than any city of the world. Toledo plunged into clover sixty years ago and there she has remained.

Lying in the midst of the great clover-growing area of the Mid-West, where, this time of year, the air over the farm lands is heavy with the fragrance of clover blossoms, Toledo has become the world's annual clover center.

Clover prices of the world are fixed on the Toledo trading floor, and it is the only market where trading in futures in clover seed is done on a large scale.

Wallace Applegate, president of the Toledo Chamber of Commerce, traced Toledo's rise to its pinnacle as a clover seed market.

Otto, Indiana, Michigan, Illinois and Wisconsin are the great clover-growing states of the country. Applegate said, and it is because Toledo is situated in the midst of these that it became the center of the trade.

Trading in seeds began in Toledo in the early '90s, and sixty years ago the Toledo Produce Exchange was established. The present exchange was incorporated fifty years ago.

Clover is raised in many parts of the world, in England, France and Canada, but nowhere else has it become an all these look to Toledo as the center of the trade.

Many services to dealers have been developed with the growth of the trade. The exchange maintains an efficient inspection department, a seed laboratory, where seed is tested for germination and purity, and a committee of experts which attends to the interests of the market.

Trading in clover seed is done in bushels, sixty pounds to the bushel. The seed is put up in bags, two and a half bushels to the bag. Future contracts on seed are in lots of fifty, or multiples of fifty, with a minimum shrinkage of 200 bags.

The practice of dealing in futures on clover seed has made the Toledo market an all-year-round proposition, with October, December and March the biggest trading months. The first new crop trading is for October delivery.

Post war conditions have left their mark on the Toledo clover market, and therefore upon the market of the world. Argentine seed, eaten in the clover belt, have reduced the amount of clover they raise, and French clover, which is of good grade, but cheaper than American clover, now figures in the contest to see which can produce the cheapest seed. Toledo's standard of thoroughness, however, has always been the standard in finest cabinet construction. They will never stick or jam. Think of it! For one week you can buy this amazing bargain at our extraordinary price on the easiest terms imaginable. Use the cabinet while you pay for it. Kill drudgery in your kitchen by installing this great modern convenience now.

"Evil Eye" Charge Brought Against Woman in Ireland

Dundalk, Ireland.—"The evil eye," a superstition which dates many years in the Orient, has been dragged into court here by Mrs. J. McDonald. She charged Mrs. Mary Morrin with having cast "the evil eye" upon her child and doomed it to a life of ill luck.

As witness testified that a third woman cut the fringe from Mrs. Martin's shawl and burned it under the child's nose in the belief that the spell cast upon the infant would disappear with the smoke.

The magistrate refused to take the case seriously.

Like Their Jobs

Washington. — The three women members of congress like their first session so well that they expect to run for re-election indefinitely. Mrs. Kahn, Mrs. Norton and Mrs. Rogers will have nought to do with the senate campaign pinas, either. They are to make strenuous fights of their own dwelling.

EXTENSIVE IMPROVEMENTS

Under Way—D. T. McHugh Local Contractor in Charge.

Extensive new and improvement work in the way of concrete driveways, new boat house and enlargement of the dining room at the Club House on the grounds of the Chicago Club will be carried on during the fall and winter months according to the present program recently adopted by officers and club members, the decision being unanimous and final by an action taken in Chicago last week.

Contractor Don T. McHugh was awarded contracts for the new construction work, which in part consists of a boat house, in style and appearance to conform with the one built two or three years ago, the new part to be an extension to the present boat house, an addition of 150 feet. The plans for this extension calls for an extensive job of dredging and removing of a sand bar between the boat house and the "Old River" of sufficient depth for the navigating of motor boats freely and safely.

Roe Brothers of Harbor Springs will carry on this part of the work and also that part of the work where their pile driving outfit will be essential. An addition of considerable proportion will be constructed, connecting with the present dining room thereby relieving a more or less congested condition that has prevailed during the 1926 and several earlier seasons.

New concrete driveways will be laid from the main street, at all driveway approaches to the grounds and the entire system of fencing will be reconstructed and placed in new condition.

These with many other improvements of a minor nature to be completed prior to the opening of the 1927 season. Mr. McHugh spent several days with officers of the Club in Chicago last week, attended some of their conferences relative to the program and returned, last Friday, with the plans drawn and this week has the work started.

PUBLIC SCHOOLS CLOSED TWO DAYS

Convention 5th District for Teachers at Petoskey

Today and Friday teachers, educators and students of the 5th district of the Michigan Educational Society are interested in a general convention now on at Petoskey for a two days session.

Fourteen counties in the west and northwest part of the state, south of the Straits of Mackinaw, are included in the Fifth District and the makeup of the convention is drawn largely from this territory.

The public schools in the main are closed during the convention period, so all teachers are interested in the meeting and are supposed to be present at the several sessions scheduled.

It is expected that fully fifteen hundred persons interested in educational work will attend the meeting.

BUILDINGS ON ODD-SIZED LOTS ARE QUEERLY SHAPED

New York Has Many Curious Structures Which Were Not Planned as Freaks.

New York.—Some of the most curiously shaped buildings in the world are located in New York without one of them being planned as a freak.

This condition arises from their having been planned according to streets which originally were laid along tentative roads or Indian trails. The Flatiron building is the best known, with its knife edge facing north while the southern exposure is widened in the space between converging streets. Broadway has a similarly shaped building every few blocks up to Times square.

Broadway bisects Manhattan island from the southeast corner to the northwest. The remainder of the main streets are laid out in rectangular squares, which causes the odd-shaped lots to appear at each intersection.

Times square itself is formed by a section of this sort, and is anything but square, being rather more the shape of a diamond, as Broadway and Seventh avenue meet there from the east and then turns north.

An apartment house located at Riverside drive and Seventy-second and Sixteenth street is built inside of a curve of the latter street, and makes the building a triangle with one side "ballooned" outward. The building across One Hundred and Sixteenth street, a conundrum to this one, is built with the curve inward. If the street could be removed and the two buildings joined they would downlift the new building. The conforming with the building laws, also have created a skyline which in the case of each building is beautiful but seldom noticed from the street.

The buildings above the sixteenth or twentieth stories are pyramided to allow as much light as possible on the street, but the stories are so narrow that no proper perspective can be obtained to view the upper portions.

One of the few buildings not so hidden is the American Radiator building, south of the Public library group. This structure is done in orange and black stone, each insert of the pyramid marked so that when the tower is illuminated at night it has the appearance of a great pile of coals.

MR. CLARENCE C. TUXBURY PASSES

Spent Summers for Years in Charlevoix — Seventy Five

Mr. C. C. Tuxbury passed away suddenly at the family home, 726 Morris Ave. S.E., Grand Rapids, last Saturday night. For upwards of forty years Mr. Tuxbury was engaged in the lumber and real estate business throughout western and northern Michigan and in comparatively recent years a familiar, well-known figure in this region where he was a frequent visitor on his business trips.

In more recent years he devoted more of his time and energy in handling real estate transactions, mainly tracts of timber land but occasionally some city and village property.

For the past seven seasons he has spent the summer months in Charlevoix with his family. This he did during the season just closed, returning to his home in Grand Rapids two weeks ago, after occupying the Grover Geneit cottage, 209 Burns street, with his family consisting of himself, wife, daughter Mrs. Era F. Kutsche and grandson William Tuxbury Kutsche, for the summer season.

Mr. Tuxbury was about seventy-five years of age and at the time of his return to Grand Rapids two weeks ago was in his usual state of health—which was good for a man of his age.

His business affairs were conducted over a large range of territory and his business transactions were many and of a varied nature all carried on with a multitude of people all of whom found him upright and honest in his business dealings and ready to extend not only business courtesy to those with whom he had business relations, but ready and willing to...help them carry their financial burdens should occasion require for his so doing.

Selenium in Small Demand

Selenium is an element and not found native in visible quantity. It is obtained as a by-product in the electrolytic refining of copper. It is used in making red glass, electric resistances and cells for measuring light. These cells are particularly sensitive to light and many of them come under Swedish patents. The present supply of selenium is greater than the demand and it has no great commercial value.

Left-Handed Virtue

Don't hold that a mistake is necessarily serious. Many a man has done a good deed by mistake.

LIGHTNING DAMAGES HOME

J. R. Guild Residence, Marion Township Last Saturday

Mr. Joseph R. Guild narrowly escaped instant death last Saturday morning at an early hour, when a bolt of lightning struck his farm residence in Marion township entered the room used by him as a sleeping apartment ripping of lath and plaster, smashing three windows, doing more or less damage to the exterior of the farm home and scattered a miscellaneous assortment of debris about the room and farm yard.

Mr. Guild was occupying the bed at the time and this was literally covered with wreckage but regardless of this and his close proximity to the dangerous fluid he escaped without even a minor injury or ill effect from his close contact with the unwelcome visitor. Some years ago Mr. Guild went to considerable expense to protect his buildings on his farm from accidents of this nature, placing lightning rods on the farm residence and barn, the same being furnished and the placing of rods by a well known company who lacked the work and material with a liberal and substantial guarantee as to efficiency as protective devices against damage from lightning.

ESSAY CONTEST FOR STUDENTS

"How I Would Grow and Grade Potatoes for Quality."

The essay contest held in connection with the Top O'Michigan Potato & Apple Show, to create interest among the teachers and children of the rural districts of northern Michigan. The Bloom Co. of Detroit, a commission firm, is offering $40.00 in cash prizes, ranging from $15 for 1st place to $5 for 5th place to the winners in this contest.

The subject of the essay is "How I would Grow and Grade Potatoes (or apples) for Quality." This contest is open to all pupils in the grades up to and including 10th eighth grade, age taken into consideration. Prizes will be awarded to the teachers whose students are winners. Engraved medals and large American flags will be awarded the winners in each state.

To enter the contest it is only necessary for the student to send the name, home address, age, name and class of school they attend, when particulars will be furnished by the National Republic, 425 10th St. N.W., Washington, D. C.

MANSIONS OF OLD VIRGINIA MARKED BY SIMPLE DIGNITY

Spacious Manors of Prerevolutionary Days Mute Evidence of Simplicity of Pioneers.

Norfolk, Va.—Old Virginia homesteads in which were born and reared the makers of Virginia and the United States stand today, mute evidences of the simplicity and genteel dignity which surrounded those men and women pioneers.

Just as the cradle of America has often been said to have been at Jamestown, so the oldest mansions in Virginia are to be found there. And extending slowly, as did those early settlers over Virginia and the rest of the country, these palatial homes dotted the state. Naturally, the expanding movement followed the rivers, and so most of Virginia's colonial residence are to be found close by the banks of the York, James, the Potomac and Rappahannock rivers.

Included among the several hundred colonial residences of historic interest are scores whose histories predate revolutionary days and the Declaration of Independence, the one hundred fiftieth anniversary of which is being celebrated this year. Many of these are sumptuous affairs.

Monticello, Arlington, Mount Vernon, Kenmore—symbols of Thomas Jefferson, the Custises and Lees, George Washington, and the Lesbies and Washingtons—have been and have been dedicated to the nation. Many others representing many distinct types of architectural beauty, these colonial mansions would be famous for their house alone.

Brandon, Westover, Berkeley, Shirley, gardens spare along the James, were homes of the Harrisons, Byrds, and Carters, all prominent in the early life of Virginia and the United States. Around Williamsburg are the homes of Presidents Tyler and many others who helped make history, while few sections of Virginia cannot claim one or more of these palatial residences of colonial times.

In this advanced civilization which crowds upon almost every hand, as no other, these picturesque, spacious mansions, free of gaudy ornaments and serene in their large settings, serve to recall the simple, wholesome environment which made for the firm foundation of the United States.

LAKE CHARLEVOIX

"Pine Lake" no Longer the Official Name of Inland Water

Department rulings made by government officials in Washington changes the name of the local body of water, even limits the territory of the county from Pine Lake to Lake Charlevoix by which it will be officially known in the future and in recognition of this change the name of Lake Charlevoix after will appear in government charts and maps will hereafter appear under the title designated as Lake Charlevoix.

In this change the name "Pine Lake" locally becomes past history and at the same time eliminates some confusion in so much as there are numerous bodies of water in Michigan by the same name. At school last year the pupils of the Loomis district school commissioner, then the county school commissioner, then he will forward the best three to the premium committee of the show which will select the best one to represent the county.

Three candidates from each county will be the guests of the Potato Show on Friday, Nov. 5th. Candidates must be present on that date to win the prizes. Winners will be announced at a dinner in honor of the school children Friday noon. Essays must be in the hands of the school commissioner by Oct. 28th and in the hands of the committee by Nov. 3. They must be written in ink on regular office paper.

For further information address A. C. Lytle, secretary, Top O'Michigan Potato & Apple Show, Gaylord, Mich.

ONE THOUSAND DOLLARS IN PRIZES GIVEN

The National Republic of Washington, D. C., announces a student essay contest on the subject "The American Constitution," open to all students in high schools with grand prizes aggregating $1,000.

Any student is eligible to enter, and no subscription to the magazine or other consideration is necessary. Five hundred dollars will be awarded to the high school student submitting the best essay, $500 will be awarded to the student in the grades up to and including 10th eighth grade, age taken into consideration. Prizes will be awarded to the teachers whose students are winners. Engraved medals and large American flags will be awarded the winners in each state.

To enter the contest it is only necessary for the student to send the name, home address, age, name and class of school they attend, when particulars will be furnished by the National Republic, 425 10th St. N.W., Washington, D. C.

CITY BAND IS REORGANIZED

Elect Officers Last Thursday —Hubert Bearss Leader

Reorganization work of the Charlevoix City Band that has been under consideration for some time with the result satisfactory to the present organization its officers and members as a whole. With the reorganization work adjusted the members are now ready and in shape to continue their regular meetings, take up their study and practice and should occasion demand give a musical concert or entertainment.

In recent weeks several members of the similar organization whose their support this in the main being due to the fact that they were taking up a temporary or permanent residence elsewhere. At a meeting held last Thursday night with a majority of the old members in attendance, the new organization was perfected and due to removals, necessarily, with a smaller membership than before. This will probably be increased as several not in the former band have signified their intention of taking up the work with the new company, all making for a bigger and better combination than in the past.

Officers elected last Thursday night and who will be in active charge of the band and work are: President, Archie L. Livingston; secretary, Will C. Bellinger; treasurer, Merritt Miller; leader, Hubert Bearss. The latter comes highly recommended. He is well known to members of the band organization, many of our local citizens, proficient in his profession and will make a special effort to promote harmony and make a name for the new musical combination by placing it on the highest plane as a leader of band organizations in this region.

COUNTY LEAGUE WOMEN VOTERS

Hold Two Meetings in the County—Complete Organization

Mrs. Henry Sherrard, state president of the League, held two meetings in the county helping to complete the organization which was undertaken two years ago but never functioned.

Thirty ladies attended the meeting in Charlevoix (Oct. 15), and about the same number at Boyne City on the 15th, when there were representatives of the three big townes present and officers were elected as follows:

President, Mrs. Jas. F. Secord, East Jordan; first vice president, Mrs. Russel Barden, Boyne City; second vice president, Mrs. James Simmons, Charlevoix; third vice president, Miss Agnes Porter, East Jordan; secretary, Mrs. J. R. Furman, Boyne City; treasurer, Mrs R. B. Armstrong, Charlevoix Board Members at Large—Mrs. W. S. Shaw, Boyne City; Mrs. S. Saltonstall, Charlevoix; Mrs. A. Hoyt, East Jordan.

The various vice presidents are to be chairmen of the local units. Dues are 50c per annum. Three meetings a year are planned.

TO PHOTOGRAPH ROBBERS WITH CONCEALED CAMERA

Burglars Will Set Machine in Motion by Entering Building at Night.

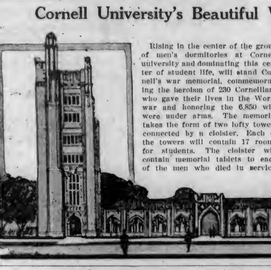
Rochester, N. Y.—A new camera film developed for use by the air service and which has the power to penetrate the land haze which has made it difficult to obtain detail in aerial photographs, may be used also in a newly developed camera designed to photograph burglars and hold-up men, it was learned.

The camera, which is the invention of John E. Seabolt of La Salle, Ill., may be concealed anywhere in a bank, post office or office building for the purpose of photographing hold-up men by day or burglars operating at night. In the daytime the camera may be worked by the presence of one of many buttons conveniently located. At night it operates automatically when intruders come in contact with triggers attached to the door-knobs, safe doors, drawer pulls or other objects of revealing stored property or money.

The camera, built into a steel case and hidden away in the wall, desk, filing cabinets or other convenient place desired, employs a flashlight for night work. Once the intruders touch the concealed triggers the steel case opens to permit the photographing of the lens, the flashlight is fired and the picture of the intruder is recorded on a film.

The camera is loaded with 100-foot steel rune and concealment out of sight and out of the way of destructive tools.

Cornell University's Beautiful War Memorial



Rising in the center of the group of men's dormitories at Cornell university and dominating this center of student life, will stand Cornell's war memorial, commemorating the heroism of 220 Cornellians who gave their lives in the World war and honoring the 6,850 who were under arms. The memorial takes the form of two lofty towers connected by a cloister. Each of the towers will contain 17 rooms for students. The cloister will contain memorial tablets to each of the men who died in service.

California Airmen to Help Catch Bandits

Bandits and other criminals of Los Angeles county, California, who seek to escape through flight in automobiles henceforth will find they have more than speedy automobiles and shotgun squads to contend with from the sheriff's office. Sheriff Traeger recently swore in five aviators as deputy sheriffs. The picture shows Sheriff Traeger, Walter Hamilton, Lloyd Wiley, Harold Edwards, Jack Frye and Paul Richter.

King Ak-Sar-Ben XXXII and His Queen

Left to right, Miss Ivy Ellison, winner, and Misses Ada Phillips and Norinnna Ross, runners-up in the contest held to determine the most beautiful girl in the British isles. Miss Ellison will come to America to compete for the world's crown against Miss Hazel Forbes and Mlle. Jacqueline Schalley of France.

CHAMPION ALPINIST

LITTLE CHARLIE

England's Three Prettiest Girls

Miss Dorothy Pilley, champion woman mountain climber, besides having ultra trails for mountain climbing parties in Glacier National park this summer, has devoted some time to scaling glaciers. Our photograph shows her coming down Blackfoot glacier.

FROM THE FOUR QUARTERS

A spider of tropical Asia glows like a firefly when alarmed.

A kind of Indian corn is grown in Missouri because the large cobs make good corncob pipes.

There are no polar bears, or any other animals, in the south polar regions, according to Stefansson.

Before the Civil war, cotton seed was not regarded as being of any value and was burned by the ton.

Glaciers, like rivers, flow faster in the middle than at the edges.

An oil lamp, invented by Cesar Brumler, a Belgian scientist, will burn for weeks under water.

A pocket pencil that will write in any of five colors is a new convenience for the office worker.

Value of mineral production in British Columbia in 1925 set a record, when the output totaled $61,602,242.

HOW TO KEEP WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, 1926, Western Newspaper Union.)

WHAT KILLED VALENTINO?

THE illness and death of Rudolph Valentino probably aroused more general interest and newspaper comment than that of any other person in recent years. Probably the only events that can be compared to it in general interest are the deaths of our own martyred Presidents—Lincoln, Garfield and McKinley.

It is just twenty-five years ago since McKinley died in Buffalo. In many ways, there is a close parallel between the two cases from a surgical standpoint. McKinley was shot through the abdomen, the bullet carrying with it the infecting material. Valentino had a perforating ulcer of the stomach, which caused a general peritonitis. Both were operated on, both acted fine for a long time after the first few days, showed marked improvement. It was fully expected that they would both recover. Then after the immediate effects of the operation had passed, a sudden turn for the worse occurred and death resulting in a few days. What happened?

From the standpoint of the Valentine's surgeons, it appeared that the patient had suffered for a long time with vague symptoms of indigestion, pain and "gas on the stomach." He had done nothing for many months except do, taken various preparations recommended for "dyspepsia," among them soda, peppermint, and other popular remedies for "indigestion." He had been overworking, possibly overeating, neglecting his health and probably making no effort to find out exactly what was the matter with him. Then he finally broke down, went to a surgeon who sent him at once to the hospital where it was found he had a serious abdominal condition.

Operation showed two perforated ulcers, both of them leaking infected matter into the peritoneal cavity, also an inflamed appendix, just ready to rupture. The ulcers were cut out and the stomach sewed up. Also the inflamed appendix was removed, the peritoneal cavity cleaned as thoroughly as possible and the patient put to bed. Evidently, he stood the shock of the operation well and began to feel improved. But some infection lingered in the abdominal cavity, a general peritonitis developed, then a pleurisy. The poison overcame the patient's ability to resist and he died of septic poisoning.

If Valentino, at the first appearance of anything wrong, had had a careful examination and proper treatment at that time he would be alive today.

As to "indigestion" or "dyspepsia," there "ain't no such thing." A stomach that doesn't work right has something wrong with it. Find out what it is before it is too late.

SKIN DISEASE AMONG PAINTERS

EVERY line of work has its own peculiar advantages and disadvantages. Many occupations have special diseases or afflictions that are, in many ways, connected with the occupation, yet it is often hard to tell just what is the cause or how they are connected with special lines of work. It has long been known that painters were subject to lead poisoning. As this condition causes pain in the stomach, it has been generally called "painter's colic." As another result of lead poisoning is a peculiar paralysis of the muscles of the wrist. This has been called "painter's paralysis" or "painter's wrist drop." This form of poisoning is common in painting shops, especially automobile factories and other shops where large quantities of lead paints are used. It has been proved that it is caused largely by painters getting lead into their mouths, by eating lunch with corn fed steers, but with a higher cost of gain.

A comparison of corn and barley as a supplement to alfalfa in finishing cake and alfalfa hay for fattening baby beeves was made by the Colorado experiment station.

The two lots of calves gained practically the same, as the average gain per head for 200 days was only two pounds greater in the barley fed lot. The cost, however, that cheaper gains were put on by the calves in the barley fed lot. In the production of each 100 pounds of gain, one lot of barley replaced 1,394.4 pounds of corn, 0.8 pounds of corn silage and 324.1 pounds of alfalfa hay. In this test corn was worth 95.2 per cent the value of barley.

The barley fed calves outsold the corn fed calves on the Denver market.—R. W. Fairbanks, Extension Live Stock Specialist, Colorado Agricultural College.

Crop Rotation Most Valuable

Increases Productivity of Soils as Effectively as Fertilizers.

(Prepared by the United States Department of Agriculture.)

Crop rotation is a farm practice which may be used by the farmer to increase the productivity of his soils as effectively as the use of manure or commercial fertilizers, says the United States Department of Agriculture. Furthermore, crop rotation as ordinarily practiced does not entail any extra cost. The extra yield due to this practice is therefore a profit that may be credited to the farmer's managerial ability.

Rotation Effective.

A study of the long-continued soil-fertility experiments of this country and of England, made by the department, has brought out some important facts about crop rotation in its relation to soil productivity. These are discussed in Farmers' Bulletin 1475-F, just issued. In general, crop rotation has been found to be practically 50 per cent as effective as farm manure or complete fertilizers in maintaining the yields of wheat, corn and oats, and about 90 per cent as effective as these fertilizers in increasing the yields of time and other major crops. The beneficial effects of crop rotation are due in part to the benefits derived from the use of fertilizers; so that when these two farm practices are combined the one practice adds to the benefits of the other.

For example, corn at the Missouri experiment station yielded 22.4 bushels per acre from cultivation alone. When corn was manured the yield was increased by 14.7 bushels, or to 37.1 bushels per acre; when it was grown in rotation with other crops the yield was increased by 15.1 bushels, or to 37.5 bushels per acre. However, when both manuring and rotation were practiced, the acre yield was increased by 33.2 or to a total of 47.7 bushels per acre.

Trials at Urbana.

Even more striking results than the above were recorded in trials at Urbana, Ill. In these experiments the use of fertilizers consisting of pulverized limestone, farm manure and phosphate, was compared with a rotation of corn, oats and clover. The average yield of corn obtained without the use of either rotation or fertilizers on this particular prairie soil in Illinois, was 23.4 bushels per acre. The gain effected by rotation alone was practically three times that obtained from the use of fertilizers and lime, or 22.5 bushels due to rotation, and only 9.2 due to the fertilizers. The total increase from the use of both fertilizers and rotation was 44.2 bushels per acre, or 7.2 bushels greater than the sum of the separate increases.

While rotations in different sections in a given locality, or even on a single farm may differ, there are certain fundamental principles of crop rotation which will have general application. These must be understood by the farmer if he is to put himself in a position to utilize the results that have been worked out by state experiment stations for his locality. The purpose of this bulletin is to acquaint the farmer with the basic principles of crop rotation and to stress the importance of the practice, in relation to farming. A copy of the bulletin may be obtained free by writing to the publications for this locality. The purpose of this bulletin is to acquaint the farmer with the basic principles of crop rotation and to stress the importance of the practice, in relation to farming. A copy of the bulletin may be obtained free by writing to the publications for this locality.

Barley Found Cheapest Feed for Beef Cattle

Once I visited a cattle feeder, who said: "I have found barley to be a better feed for beef cattle than corn." The statement caused questioning, as the average middle western feeder was confident that a ten-cent-per-bushel steers night gain as rapidly as corn fed steers, but with a higher cost of gain.

A comparison of corn and barley in fattening lambs showed linseed meal cake and alfalfa hay for fattening baby beeves was made by the Colorado experiment station.

The two lots of calves gained practically the same, as the average gain per head for 200 days was only two pounds greater in the barley fed lot. The cost, however, that cheaper gains were put on by the calves in the barley fed lot. In the production of each 100 pounds of gain, one lot of barley replaced 1,394.4 pounds of corn, 0.8 pounds of corn silage and 324.1 pounds of alfalfa hay. In this test corn was worth 95.2 per cent the value of barley.

The barley fed calves outsold the corn fed calves on the Denver market.—R. W. Fairbanks, Extension Live Stock Specialist, Colorado Agricultural College.

Kill Out Quack Grass

Small patches of quack grass can be killed by covering it with tar paper, building paper or other material which will exclude all light, according to Prof. A. G. Hall of the University of Maine. He states that Fred Dannes of Lake county, Ind., completely eradicated a patch of quick grass by covering it with tar paper for three months. Sweet clover used as pasture is most effective and has been used successfully in Du Page county, Ill., to kill quack.

Feed Young Stock Well

The young growing animal makes gain in weight cheaper than the mature animal. It usually pays to provide plenty of feed for the young stock even though it is necessary to feed grain when pasture is short. Much young stock is stunted, especially after weaning, because it doesn't get enough feed to maintain the normal growth. Rapid growth is possible only when young animals are supplied with plenty of feed to build bone and muscle.

THE WORLD'S GREAT EVENTS

ALBERT PAYSON TERHUNE

(©, by Dodd, Mead & Company.)

Barbarossa

A GERMAN lad—nearly eight hundred dred years ago—made Charlemagne his model in life, and resolved to duplicate the French king's feats and win the same power and glory. Like many another blue-eyed redentity, the German youth was red-haired. From this fact his Italian enemies later nicknamed him "Barbarossa" (Red-Beard). His Christian name was Frederick and he was nephew of Conrad, emperor of Germany.

Charlemagne had one early advantage over Barbarossa, for he was direct heir to the throne, while Conrad had a son of his own. Yet so cleverly did the young Barbarossa arrange matters that he, and not this rightful heir, was chosen by Conrad as his successor. The people ratified the choice, and on Conrad's death in 1152 Barbarossa, then twenty-nine years old, came to the throne.

He found Germany in no enviable condition. Disputes had arisen among the petty principalities of the country, and, under Conrad's easy rule, habits of allegiance had weakened. Moreover, Germany's claims to sovereignty in Italy and other lands had been allowed to lapse. Altogether, Barbarossa had a very poor start in the task of rivaling Charlemagne's greatness.

In no way discouraged at the gloomy prospect, the young king set to work at once reconciling the differences among the home princelings and in devising ways to make Germany a more warlike nation. He was also a shrewd diplomat and an adept in the art of cajoling when coercion failed. In this way he proceeded to strengthen and consolidate Germany into a compact, contented nation. He then made magnificent and civic reforms, promoted the cause of education and culture and started Germany once more upon the path of progress.

Having accomplished these treasendous tasks, Barbarossa turned his attention to the Italians who had shaken off Germany's yoke. The Milanese, who ruled much of the northern part of Italy, had maltreated German subjects. Barbarossa, at the head of an army, marched against these rebels, conquered them and laid waste northern Italy. Having thus avenged his subjects' real or fancied wrongs, he marched over the Apennines upon Rome, and there, on June 18, 1155, he was crowned "Holy Roman Emperor," the resemblance to Charlemagne being thus far carried out, he hurried back to Germany, whence tidings had come of robber knights and barons who, taking advantage of their emperor's absence, had set out on a high-handed course of misrule.

Barbarossa wasted little time in crushing these oppressors. He then resumed his plans of conquest. By diplomacy more than by force he won the allegiance of Poland, of Hungary, of Bohemia and the powerful French province of Burgundy. He then went back to Italy and besieged and captured Milan.

The pope, noting this rapid acquisition of power, demanded that Barbarossa become a papal vassal. Barbarossa coolly refused and showed himself able and ready to enforce his refusal. The pope for the time withdrew his demands. But it was not after this that Barbarossa scandalized Christendom by practically declaring war on the Nation.

The dispute was purely political and—next to reflection on the emperor's religious faith. Alexander III was pope. Barbarossa favored an anti-papal claim. Alexander promptly excommunicated him. Barbarossa, in retaliation, stirred Rome and other cities of the Campania. Italy lived its breath at such carrilage. But even while the world looked on, spellbound, a pestilence swept the German army at Rome (sent, as Alexander declared, by punishment for the emperor's blasphemous conduct), and of all that mighty host a shattered remnant returned sive to Germany.

At sight of this weakening of their dreaded master's forces the cities of Lombardy, Italy, formed a confederation against Barbarossa, utterly routing him in battle at Lignano. The emperor was crushed under his falling horse—and left on the field for dead. But within three days he reappeared —unfrauduently, it was thought—at the head of his surviving troops at Pavia.

His plans were defeated, his great power apparently gone. Another man would have despaired. But Barbarossa merely exchanged war once more for diplomacy. He acknowledged Alexander as the true pope and by various crafty maneuvers of wire-pulling and statesmanship regained political control of Italy. Not content with this, he set forth to capture the Holy Land from the Turks. He won two decisive victories in Asia Minor, but before he could reach Palestine itself he was drowned, in 1190, while trying to cross a river—an ingloreous death for the hero who had conquered and ruled the greater part of the continent of Europe.

Barbarossa's achievements in behalf of his native land marked a distinct epoch in history. He helped in the cause of the people by granting rights and franchises to cities, and set a world example of model and progressive government. Civilization and the arts throve under his wise reign.

Advantages of Latin

Latin is the best second language for English-speaking children. It is concise, graphic, graceful. Its vocabulary is large; its spelling is practically phonetic, and its roots have unchanging significance. It forms the philological basis of the group of languages spoken by the present number of people the world over, including English, French, Italian, Spanish and Portuguese. English literature was developed in close contact with Latin literature.—The Commonweal.

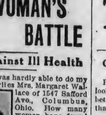
THIS WOMAN'S BATTLE

Wins Against Ill Health



"At times I was hardly able to do my housework," writes Mrs. Margaret Wallace of 1547 Bedford Ave., Columbus, Ohio. How many women have found themselves in this same condition! How many women have fought bravely on day after day, cooking, washing, ironing, doing the dishes, and keeping the house clean, when they were in a weakened condition and had not sufficient strength to perform these duties easily and properly!

When Mrs. Wallace was experiencing great difficulty in carrying on the daily tasks, a friend advised her to take Lydia E. Pinkham's Vegetable Compound and she gave it a fair trial. "I just can't give enough thanks to it," she writes. "Now I can eat anything at all and I am feeling better than I have for years. I shall never be without your medicine again."

A woman who is fighting for her health and her family's happiness is a valiant soldier. She wages her battle in her own kitchen. She has no thrilling bugles to cheer her on, no waving banners.

Many other women tell us, as Mrs. Wallace did, that Lydia E. Pinkham's Vegetable Compound has helped them materially in the struggle for better health.

CHAPTER XVI—Continued

He saw her eyes widen suddenly, looking beyond him, through the gap between him and Cox, at something that riveted her attention. A touch on his elbow distracted him from the incident. Burns, the superintendent of cement construction, whispered anxiously.

"Feely has just come through Number One flow conduit," he said. "Reports a crack in the roof."

Caleb slid out of his seat and drew the superintendent to one side. This was startling news. Caleb had prepared all the specifications for the tunnels. The responsibility for their efficiency was all his. If the weight of the fifty feet of gravel thrust upon the roof of the conduit any disaster, even a temporary delay for repair, would mar the demonstration. It might be kept private but the stigma would rest on Caleb professionally.

"I'll look at it myself," he said. "It may be only superficial. If it seems dangerous, we'll shore with timber immediately and close the conduit. Number Two will have to supply the water. Where's Feely now?"

"Gone to inspect Number Two."

"Good. Wait for my report," Burns. Feely may be an slarulist, though he was perfectly right to report. Go back to your seat. I'll be here again as soon as I can."

He hurried down the road to the gatehouse as fast as he could go afoot. The cars were parked and he did not want to draw attention to his sudden disappearance, by taking one. If his absence was noticed he wished to make it as inconspicuous as possible. Hinckley was talking as he left the bower.

Anxiety deepened as he went, impatience widened. The problem that rapidly went over the details of reinforcement and the building of the forms. The hiring of the cement. He had followed Hinckley's ancient example and had practically inspected every inch of the bend of the tube, impressing rigidly on all hands the necessity for prime materials and absolute following of the formula. He felt certain his figures, his computations of stress and thrust and resistance were correct, allowing ample margins, but—if the tunnel gave way, the glory of his achievement was tarnished.

He did not wait for sticker or rubber boots but went swiftly down the ladders, an electric torch in his pocket. Burns had told him the crack was midway between the lifter-gallery pile and the forebay pit. With the beam of the torch boring into the black tunnel he fairly ran through the "flats" of the lower conduit, his splashing footfalls resounding in the confined space, his head bowed to avoid the roof, counting his strides to calculate the distance. Three hundred yards to he began to spray the roof with light, going more slowly. Highly yards further and he slid between the crack. It extended halfway across the level summit of the top of the conduit and a little way down one of the slopes. At first glimpse it seemed confusingly, a blurr split across the gray circle illumined on the cement.

Caleb thrust the tips of his fingers into it, probing. And sighed with sudden relief. It was shallow and there was no sign of any bulge about it. It was a superficial crack to which any cement face is subject. In the hurry of the preparations, when the form boards had been stripped, it had not been noticed, might not have actually developed until later, for the terior surface of the tunnel had not been faced, the grain of the form boards still showed. A board insufficiently soaked before pouring, or with knotted holes, might have drawn the water, might have clung to the cement. There might have been a chance be a small streak with too much sand. In that one spot the tamping might have been insufficient. It was nothing to nothing as regards the stability of the structure.

But he stayed to make certain, waiting to be satisfied that the rush of water would not widen the crack. Later he would have it filled but, for today, he needed both conduits to make the display complete.

Suddenly, while he probed, he became aware of water welling about his ankles, of a hissing noise that rose swiftly to a roar, re-echoing from wall to roof in the narrow confines. Instinctively above his shoes in a savage rush that lapped and lifted, that threatened his purchase on the slippery floor.

Some one had opened the watergate from the filter-gallery! Against all orders. And he was trapped. By the boulders, a quarter of a mile away, he dim light slifting down the shaft showed the gray loop of the em-four cascade pounting into the conduit, the push of half-a-mile of solid water held in the six-foot gallery back of it.

The floor was slightly inclined to facilitate the flow. When the gate was fully open the flood would sweep down the conduit with velocity and power sufficient to tear away all obstructions. His only hope lay in reaching the broken section. Then, four hundred yards back, was the forebay.

Against the increasing tide Caleb made his way, stooping, for it was useless but determined to battle for his chance. The water boiled to his knees, sucking at him, clutching at his feet, the tunnel resounding with the magnified churnings. A foot slipped and he thrust both hands sodden into the angles of the floor and flopping his palms to the cement, dropping the torch of necessity. Save for the gray light at the bottom of the shaft, lessening as the gate lifted and the water rose in turmoil, he was in darkness. It was the same and a swirling tunge almost flung him down. Once engulfed it would be all over with him. He could not dream of holding his own for a moment in the torrent which would tumble him, filling his lungs, and hurl him into the forebay pit, perhaps carry him on, a sodden corpse, to the intake; drowned, battered, slain in his own contrivance!

The details of his fate, the helpless-

Vetra.

He Took Her in His Arms and Raised Her, Limp and Pitiable.

crooked into the little crack, he resisted with all the strength he knew must prove inadequate. His arm was set, his muscles rigid. He snarled in the blackness, forced to lean backward against the force of the mounting flood.

"Well, here I go," he muttered. There was no philosophy in the statement, no bravado, only the submission of a brave man who accepts the inevitable.

One foot slipped again, was sucked down, and he fell to his knees. He got it down, battling to the last spark of his vitality, every remnant of energy centered upon that tiny crack. It was a matter of collapse. Seconds passed that were centuries. He was drowning like a mad dog. I fancied I knew him great, motionless figure, somewhere where. I knew the memory was in some way shielder—. It may have been heredity. Or it possessed me. So I slipped from my seat while Mr. Hinckley was speaking and went to where I could watch the road. You were nearly at the gatehouse, almost running. And then—how—how—I was running, too, not on the road but among the trees and I was flying and as if he was drunk, trying did not be seen, following you. A figure of evil. And I suddenly pieced him. I knew it was Baxter! And I was sure he must harm to you!"

"I should have used my hend' better," she confessed, color coming back to her cheeks slowly spreading over face and neck under Caleb's gaze. "At least I should have called Inis, but I only thought one thing at a time, you. I think that even then I guessed what was going to happen. That you were going into the tunnel—and Baxter . . . ."

(TO BE CONTINUED.)

Raven Not Altogether Deserving of Bad Name

Two ravens, one which has taken our continental name, American, and the other which has taken the more specific geographic name of the northern raven, are both interesting and not altogether unbeautiful, for in certain lights their plumage is lustrous. The American raven is smaller than its more northern cousin. It is a resident of the far western United States, it is a mountain dweller, although it disdains not to descend to the cylleys if man is absent therefrom. The raven does not like man and the reason is not far to seek. Man does not like the raven, holding it with the crow its cousin once or twice removed, as being a bird that is better dead.

The diet of the American raven, according to Florence Merriam Bailey, who knows the western bird well, consists "principally of carrion, dead fish and frogs, varied with rodents, mice, grasshoppers large black crickets and worms." This collection of food is not altogether a delectable one from the human appetite standpoint, but the raven deserves well of man for making its diet what it is.

Odd Collection

One of the most unusual hobbies is the collecting of tortures instruments. A certain American surgeon has as his specialty the most complete private assortment of them extant—including such sanctions as the rack, the squeezers, and the iron virgin, which the perverted ingenuity of man devised chiefly for use in inducing witnesses to give evidence in legal proceedings. These instruments were employed in legal proceedings by ancient and modern Europe. Their use was recognized by the law of most countries (to which England, Aragon and Sweden were exceptions) up to comparatively recent times.

Hornsby Real Boss of Cardinals

Rogers Hornsby, Manager of the St. Louis Cardinals.

Manager Rogers Hornsby is boss of the St. Louis Cardinals. There has never been any doubt of it since the slugging keystone sacker took over the reins of the team in June, 1925.

Hornsby's method of managing the team is simple. There are no rules, except that the players deliver winning baseball on the diamond, and obey his orders quickly and absolutely. He has changed the system of the clubhouse meetings, has advised the pitcher of the day how, to pitch to each batter, has done away with as many signs as possible, does not believe in post-mortems of yesterday's game, and is open to suggestions from catchers and players.

"The Walter Hagen of the baseball world" is one of the terms that has been applied to Hornsby. He has the motto of looking toward tomorrow and forgetting the defeat of yesterday. This does not mean, however, that a player can make numerous mistakes and go unreprimanded. Such action never brings dependable or "trusting."

The reaction of the players on this system is the interesting part of the whole procedure. Ask them and they do not like it—but they like to play where they worked for."

Joe Boley Is Sold

Word flashed from an Allentown (Pa.) baseball fan to Philadelphia inflamed that Connie Mack had paid $150,000 for Shortstop Joe Boley, and that the veteran Baltimore star was to be delivered to the fall.

Longest Grid Run Made on Lardner's Kick-Off

There always has been some dispute as to the longest run ever made in a football game.

The longest run ever made in a football game was reeled off by East, halfback on the Niles high school team of Michigan, late in 1901.

In that game East ran back a kick-off delivered by Ring Lardner, of the high school veterans' team, just 130 yards. Impossible? Here is evidence from the Niles Daily Sun of 22 years ago, presented in a story of the game:

"Summary of the game was East's long run for a touchdown, and stonewall defense which followed. Lardner's kick-off was a beauty, and the ball went down the field like a meteor. East received it on the 10 yard line, and then commenced his run. Through the entire team he went, and dodging and squirming like a snake, he crossed the goal line. Lardner ran back the ball 130 yards in a straight line."

The field in those days was 110 yards in length, so the added 20 yards were scored while dodging would never be broken.

Bull Ring Gives Way to Boxing Game in Mexico

Blood and sand are fast giving way to canvas and resin in the Republic of Mexico with the sports element of the South slumming the arena of bull fights for the squared ring of boxing.

Just a few steps over the International boundary line at Nogales, Ariz., is a bull ring erected several years ago on an auspicious occasion when Juan Silveti, ace of Mexican "toreadors," visited there and fought. The ring saw its debut and made on the soft-sand day, for with the exception of the Silveti appearance no further bull fights have been given.

Then came boxing, a general rebuilding and a new sport. Within the arena there appeared tiers of seats, a ring and hundreds of followers of the padded fist. Bull fighting gave unchontested supremacy to fistiana.

The applause and plaudits of the public, once directed at famed toreadors, are now for the slugger and puncher.

Long Winning Streak

One of the greatest winning streaks of recent seasons was hung up by "Bunny" Vance, famous Brooklyn pitcher, in 1924. Vance copped 15 in a row. He started his sensational string July 11 against the Cubs. He continued it until September 20, when the Pirates whipped him in 11 frames. Vance's run of successes kept the Dodgers right on the heels of the pace-setting Giants, the Robinson entourage finishing but a game and a half behind.

Plenty Seats Available for Football This Fall

About 400,000 seats will be available for western conference football fans each Saturday during the campaign this year. And there will be 120,000 extra seats for overflow crowds. The new stand at Chicago is responsible for most of the extra seats. About 15,000 more fans will see the Maroons play than best season. Northwestern's new stadium will seat about 40,000 now, and near 60,000 when completed. Chicago will seat 70,000 when present plans are realized. Ohio State has the largest stadium in the Big Ten, with a capacity of 63,000, and 20,000 more when occasion demands. Illinois can seat about 55,000 with extra space for 12,000. Indiana has a nice little memorial stadium, and it seats about 22,000. The Big Ten is gradually coming around to the big stadium idea, and before many years the six schools will all have large new arenas.

Sporting Squibs

Gertrude Eberle surely is one girl who doesn't lung her clothes on a hickory limb, etc.

* * *

Prompter Pyle says this fall he will have more professional teams stars lined up than you can shake a stick at." . . . And he will get them, obviously, by shaking a check at them.

STATUS OF THE LEAGUE

Although a barage is constantly kept in action by internationalists in the United States which tends to conceal the real situation, there is little doubt in the minds of the discerning reader of world affairs that the happenings of the past few months have done little to enhance the value of the League of Nations in the eyes of the world.

The Franco-German agreement was made outside the league and there are evidences of other agreements by world powers, yet to come. The action of Brazil and Spain in withdrawing from the league was a blow to its prestige, and the disagreement which has risen over the Geneva meeting to thresh out our World Court reservations, a disagreement which bids fair to keep America out of the court altogether has seriously affected the prestige of the international body at Geneva.

There are evidences too that Europeans as well as Americans are beginning to see the trend of events although it is only fair to Europeans to say that most of them have not had the good opinion of the League's value as a peacemaker that they are supposed to have had. In an editorial the London Daily Express recently said:

"The reported decision of the United States to withdraw from the Permanent Court of International Justice is the last of a number of severe blows at the prestige of the League of Nations. It is urged by many of the apologists for the League that the loss of Spain and Brazil was offset, or even outweighed, by the accession of Germany. It must be now clear that the American loss completely cancels the German claim.

"It is not expected that this development may be taken to imply America's final rejection of Geneva. It proceeds from the healthy nationalism of the American people. The forces of nationalism are gaining ground, as is only natural in the league they are at work under the dangerous camouflage of cooperation. No impartial observer could deny that during the last year the league has changed for the worse. The league was conceived in a spirit of exalted idealism, but its energies are now vitiated by the groups and counter groups that have formed within it. It is no longer a league for potential war. Great Britain in the unfortunate position of belonging to two international bodies—the League of Nations and the British Empire. The interests of the two growing more and more irreconcilable. Inevitably the country will one day make its choice between them."

In America it can be said in truth that sound nationalism has been changing ground since the days of the heroic anti-League of Nations fight in the United States Senate. Americans wish the league of Nations well as a European institution, but they are increasing and ideals have not been subordinated to its decisions.

THE MIDDLEBROW

He used to be "the man in the street." Now he is "the middlebrow." He doesn't double his negatives nor eat with his knife, but neither does he care much for Ibsen or such from his business to spend the hour before dinner in the Metropolitan Museum. He creates a demand for best sellers by buying and reading them and asking when the next one will be out. He is not a snappy dresser nor a slovenly one. He wears "what they are wearing" and pays good money for it.

Now and then a politician probes his innermost thoughts and gets

PRINTERS' INK

HAS been responsible for thousands of business successes throughout the country. Everybody in town may know you but they don't know what you have to sell:

Advertising Will Help You

elected four or five times hand-running in consequence. Once or twice in a season a theatrical manager gives him what he wants and the ticket speculators do a thriving business for a year or so afterward. Outspoken enough as an individual, he is singularly inarticulate in the mass. You must poll a million or two of him before you can find out what he really thinks about legislation or religion or the Volstead act, and then he may be dissembling.

His claim to his title is not based on education nor heredity. He may have begun as a newsboy and progressed by keeping his eyes and ears open. He may be a college graduate. He may have a mortgage on his own house or a far bigger one on somebody else's house. He is not to be distinguished by his speech nor by his appearance, save that his neck is not abraided and that he pronounces no words with a broad "a." If he has any rule of life it is expressed in the phrase, "I'll try anything once."

He is the customer of the merchant, the patron of the politician, the director of the destinies of the nation. Occasionally he is wrong but he is quick to set himself right again. The car of liberty will never go far off the road while he is at the steering wheel.—New York Herald-Tribune.

NOT MEASURED IN DOLLARS

Success cannot be measured by money, hundreds according to John Hays Hammond, celebrated American engineer who writes entertainingly in the National Republic under the caption "Success in America—What Is It?" A man may have a very successful business career without amassing a big fortune, he declares, and continues:

"This is so because they have rendered great service in their life's work—service to the community in which they have lived—service to their fellow beings in general—and such service is now almost universally regarded as the criterion of a successful career.

"To this class belong teachers, clergymen, and others who devote their time to the intellectual, moral and social well-being of their fellowmen. It is fortunate that this conception of success so generally obtains. It is a most incentive, a noble inspiration. Bernard Shaw says:

"This is the true joy of life. To be used by a purpose recognized by yourself as a mighty one; to be thoroughly worn out before you are thrown on the scrapheap; to be a force of nature instead of feverish, selfish little clod of ailments and grievances complaining that life will not devote itself to making you happy.'

No purpose is so mighty as service to one's fellowmen. First of all, I would place among the essentials of a successful career the possession of character. An honest, clean-cut, straightforward, conscientious ambitious and last, but not least, level-headed young man or woman, would in my opinion, possess seventy-five per cent to the essentials of success, while in relative importance I would not attach more than twenty-five per cent to the possession of a higher education, and I say this without in any way depreciating the importance of education, for I realize as Dr. Frank Crane says in one of his four-minute essays, 'from your chin down you are worth but a couple dollars a day, from your chin up you are worth anything—there's no limit to your worth'"

TARIFF AND THE FARM

Evidently the tariff on products from the farm and any proposed increase of the same are not entirely popular with all those persons and organizations which pretend to have a deep sympathy with the farmer.

Benjamin C. Marsh, executive secretary of the People's Reconstruction League, an organization which is always hostile to the protection of American industries, recently issued a broadside in which, among other things, he said:

"Tariff on wheat, oats, corn and also on wool, sugar and butter is a subsidy to owners of farm lands, paid by the consumers of America, which injures the actual producing farmer almost as much as it does the consumer. It tends to another orgy of speculation in farm lands, like that of 1916 or 1920."

It is a little difficult to follow Mr. Marsh in all his statements, but he evidently fears that an increased tariff on farm products will induce another era of "speculation in farm lands." Just now farm lands are not selling very easily. Now if we are to have speculation and a rising tide in the value of farming lands it will be necessary first for the farmers to get higher prices for their products and to make more money. For it is profitable farming above all else which tends to increase the value of farm land. And if, as he states, the tariff on farm products tends to increase the price of land it will do this of course for the reason that the farmers are making money. He pretty well proves the case of the protectionists without going any further.

What the farmers want is higher prices and more profits on their products, with the subsequent stiffening in the price of land. They prefer this to any theoretical program which promises to do something for the "producing farmer" but fails to find anywhere. What is hurting the farmer more than all else is the depressed price of farm lands, which has reduced his credit and prevents those who have borrowed too heavily from selling off some of their land and thus making their financial position safe. Farmers will not surely view with alarm" his prediction of rising land prices as a result of the protective tariff.

Mr. Marsh deplores the fact that a third of the farms are operated by tenant farmers, and if he will interview a few of them he will find that the owners of tenant farms during the past few years have been just as sorry about it as he can possibly be, since they have been holding these farms without much profit to themselves. If there has been any increase in land tenancy it has not been due to the tariff but to the fact that every year a new supply of farmers moves to town.

YOU can save MONEY Talking

For instance, you can telephone from CHARLEVOIX to Kalamazoo for $1.25 during the day; for less after 7 p.m. and still less between 8:30 p.m. and 4:30 a.m., if you place an "Any-one" call.

Just give the operator the telephone number in the distant city or details that will enable her to determine that number and tell her you wish to make an "Any-one" call.

It costs more if the operator must locate a particular person for you.

MICHIGAN BELL TELEPHONE CO.

Great Years in the Nation's History

Interesting things have happened in 1926. Commander Byrd in a Fokker airplane, circled the North Pole. Photographs taken in Europe were transmitted by radio waves to America, and published in newspapers a few hours later. Gertrude Ederle, daughter of a New York butcher, swam the English Channel one hour faster than any of the five men who had swam it before her.

Is anything interesting going to happen in 1927. For one thing, the Youth's Companion on April 15, will celebrate its one century of successful life. Consider what you get for $2.00. 52 issues, containing 9 book length serials, 260 short stories by the most popular authors, more than 100 special articles, a weekly section for ingenious Boys, called the "Y. C. Lads," a thorough girl's department, and 52 pages for children. Also a full set of 12 extensive survey of current events, making it easy for you to follow the history of this busy world. What is the Telephone Company?

How many people realize the amount of work and study necessary to keep a telephone system going? You go to your telephone and make a call. The operator and the system do the rest.

No matter how much machinery is required to operate a telephone system, or how scientifically it may be handled, what makes it worth while to the public is the human intelligence that keeps it going.

Back of the operator there is an organization whose business is to see that there is some one always on hand to keep the service going in spite of accident, flood, epidemic, storm, war—any one of a hundred emergencies.

The telephone company is a large group of earnest men and women who are striving to serve the public in an intelligent and very valuable sort of way.

Your telephone service is reliable because the people back of it consider their work a public duty — not just a job.—Copper Herald, Hancock, Mich.

THE THEATRE

"She rides like a Texas cowboy." That was the relieved expression of the entire George Fitzmaurice company while on location filming Fox hunt scenes for "The Dark Angel," a picturization of the famous stage play by H. B. Trevelyn, which First National will offer at the Palace theatre next Saturday and Sunday.

Vilma Banky, the beautiful Budapest star recently imported by Samuel Goldwyn, plays the leading role opposite Ronald Colman. The scenario, as prepared by Frances Marion, required some skillful riding at the hunt on the part of Miss Banky—not only sensational hedge and water jumps but a dangerous fall as well.

Miss Banky's ability as a rider was entirely an unknown quantity to her director. She had been told of the impending hunt and appeared nonchalant regarding its hazards. Fitzmaurice admits that he had some misgivings on the subject.

When the time came for her performance, however, she surprised the entire assemblage, which included the pick of Southern California's expert riders. Sitting a fractious mount which reared dangerously with her, she brought him to his feet gracefully without losing her pretty smile. The dangerous jumps and, finally the falls, she negotiated with all the sang froid of Miss Mix himself.

She was questioned regarding her amazing ability as a horsewoman and explained that riding is practically the only outdoor recreation indulged in by Hungarian ladies and that she has ever been perfectly at home in the saddle.

"Death to trespassers. Keep off—Spook Ranch." When this sign greeted Bill Bangs and his colored valet their varied emotions and the way they reacted formed the basis of an amusing and highly colorful motion pictures in which Hoot Gibson had done some of his best work for the Universal Jewel production, which will be shown at the Palace theatre on Tuesday and Wednesday.

Playing the part of Bill Bangs, a Texas cowboy adrift in the Mojave desert, Hoot steps into a haunted ranch and into an amazing complicated plot full of laughs and thrills and a half dozen ruffins who are trying to wrest the secret of a valuable hidden mine from the owner of the ranch and his daughter, who are being held in the building as prisoners.

With Hoot is his superstitious valet whose imagination builds up terrors greater than reality. His antics under the ghostly conditions around the deserted ranch are right form much of the comedy in "Spook Ranch."

When "A Trip to Chinatown," Fox Films version of Charl s A. Hoyt's uproarious comedy, opens at the Palace theatre next Thursday for a one day run, local theatre-goers will have an opportunity of viewing one of the funniest five-reel farces ever brought to the silversheet. It was directed by Robert P. Kerr, under supervision of George E. Marshall, and the cast includes some of the best artists in America.

The list includes beautiful Margaret Livingston, billed as Alicia Guyer, the audacious widow, and Earle Foxe, cast as Welland Strong, the unhappy young man who is sure he has an explosive lung. The part of the gay old SanFrancisco uncle was assigned J. Farrell MacDonald, who immortalized the role of Corporal Casey in "Tre Iron Horse."

Rich English Coal Field

The mined coal fields of England are being depleted, but recently one of the richest fields in the world was discovered near Hull. It is a continuation of an exhausted vein, from which it was separated by an eighteen mile gap, and is estimated to contain 22,000,000,000 tons of coal, sufficient to provide Great Britain's needs at the present rate of consumption for 400 years.

Where We Get "Cobwebs"

Cobwebs are webs spun by spiders or larvæ of certain insects. "Cob" is derived from the old English word meaning spider. Most of the cobwebs which hang from the ceilings of houses are made by very small spiders which are seldom seen by those living in the houses.—Pathfinder Magazine.

ATTRACTIONS FOR THE WEEK

Saturday-Sunday, Oct. 23-24

"The Dark Angel" with Ronald Colman and Vilma Banky. See the big society Fox hunt—thrilling spills and daring riding. A love revelation to plumb the depths of your soul—greatest in realistic romance; thrilling in its moments of inspired beauty and drama. A pageant of splendor and style against a background of war and gallantry.

NOTE—Vilma Banky, the beautiful Hungarian actress played the leading feminine role opposite Rudolph Valentino in "The Son of a Sheik."
Also a good comedy, "Home Cured."

Tuesday-Sunday, Oct. 26-27

Hoot Gibson in "Spook Ranch." Hoot Gibson says: "Folks, I've been in a lot of Westerns, but Spook Ranch has 'em all topped. I never worked with a livelier, peppier outfit in my life than this cast. And the bronks—how they could buck and rare! The boys sure had to do some tall ridin' to stick to those horses. Everything in the picture was filled with fire and snap. The gun-play, the punch scenes, the lickety-split ridin', and the spook stuff that gave it an entirely new twist. They all say it is a whale of a picture, the best yet, so naturally I want all my fan friends to see it." Also Felix the Cat and a good comedy.

Thursday Only—

"Trip to Chinatown," Fox Films farce, is made at at big expense. Never in the history of the history of the cinema has a funnier comedy been produced than "A Trip to Chinatown." Miss Livingston, who wears thirty-six different gowns specially designed for this production, makes one of the most striking figures ever projected on the screen. Also Fox News

COMING—"Winds of Chance."
COMING—"The Lost World." A super-production.

PERSONALS

Bert Adams, of Vanderbilt, was a Charlevoix visitor last Sunday.

Frank W. Wilson, of Traverse City, was a Charlevoix visitor early this week.

Attorney Lisle Shanahan was a business visitor at St. James Tuesday and Wednesday.

Are you registered? If not, remember that Saturday is the last day for you to do so.

Mrs. Ed. Edwards has been entertaining her mother, Mrs. Morrison, of Menominee, for several days.

Attorney J. M. Harris of Boyne City, was in Charlevoix Wednesday attending to professional business.

Mrs. F. C. Ogden recently spent a few days at Hale, with relatives, she returned home early this week.

Monday, November first, is the date when Dr. J. Leahy, the optometrist, will be at the Hotel Charlevoix.

Judge S. A. Correll spent a little time in the south part of the state this week, returning to Charlevoix Tuesday.

Mrs. Bert Beaudoin left for Detroit last Saturday, where she will visit relatives and friends for two weeks.

Mrs. Albon Smith, for the past two weeks with her sister, Mrs. Wesley King, in Lansing, returned Tuesday.

Miss Maud Hooper, of Alma, spent the week-end with her sister, Mrs. W. W. Mitchell and family, 110 Park-av.

Miss Maggie Colter, who went to Detroit on the excursion two weeks ago, returned to Charlevoix early this week.

Charles Hampton, of Detroit, spent the first four days in this city on business recently, returning to Detroit early this week.

Eddie O'Neill and family are now residents of the down town district, occupying the residence located at 224 Antrim st.

If troubled with headache or in need of glasses, consult Dr. J. Leahy, the optometrist, when he comes Monday, November first.

Miss Adeline Holley is back in her place of business following a vacation of two weeks, some part of which was spent in Detroit.

Mrs. C. J. Winder, manager of the Hotel Charlevoix, is spending a few days at her old home, Eaton Rapids and other southern points.

Mr. Alfred Thompson, of Detroit, arin this city last Friday and is spending a few days with his sister, Mrs. Wm. Taylor, 403 Dixon-av.

Mrs. James Nowland, a former Charlevoix resident, now living in Pennsylvania, is spending a vacation with relatives and old time friends in this city.

Rev. C. E. Pollock will speak in Boyne City next Tuesday at the Grand Traverse District Lay and Ministerial meeting on "What to Read and How to Study."

Mrs. Emma Crocker who has been here since early spring attending to business interests, started on her return trip to Los Angeles, Cali., last Monday.

The ladies of the First Methodist church have decided to continue their "Rummage Sale" next Saturday at the same location in which they held the sale last week.

Mrs. Margaret Washburn will spend the winter months at Anaheim, Cali. She starts on her trip west today and will be accompanied to Chicago by her son Ralph N. Washburn.

The Charlevoix Sunday Schools have been invited to attend a union Sunday School rally veeper service at the Congregational church on October 31st, World Temperance Sunday.

Mrs. Thomas LaLonde came up from Detroit last Friday and will remain here some time looking after business matters in connection with the estate of her mother, Mrs. Sarah Emrey.

Peter Neilson and family are now occupying their new home in Charlevoix, 405 Dixon-av., recently purchased of Eddie O'Neill. They came over from Garden Island early this week.

Mr. and Mrs. A. Salem Musselam and two sons left for Chicago a day or two ago where they will make a short visit before going to their winter home at St. Augustine, Florida, for the season

Mr. Philip Tibbits and Marie Amstutz, both of Petoskey, were married at the Methodist parsonage Sunday afternoon at four o'clock by Rev. C. E. Pollock. The new home will be in Petoskey.

Wild Geese are making their flights south. Several flocks have been seen by local people during the past few days. One specially large band was observed passing over this city last Sunday.

L. P. Adams, who spent several days recently at Waukesha, Wisconsin, and points in southern Michigan, returned to Charlevoix last Sunday. Mrs. Adams accompanied him on the return trip from Waukesha.

Mrs. R. B. Armstrong left for Saginaw early this week for a short visit with relatives. With this visit concluded she will go to Ann Arbor and visit her son R. B., Jr., and daughter Miss Phila, students at the U. of M.

Mrs. Earl Miller is entertaining her father, Francis Donlevy of St. James, this week. Following his visit here Mr. Donlevy will go to Chicago, where he will spend the winter.

Robert Bridge contemplates taking in the big foot-ball game at Ann Arbor this week. He goes to Lansing Friday and from this point will be accompanied by Mrs. Bridge who, for the past week has been visiting relatives in central Michigan.

Sheriff Novak was called to Boyne Falls last Tuesday to investigate a reported case of suicide. The victim was Peter Biano about 75 years of age who was found hanging at the farm home of Golouki Brothers, located three miles east of Boyne Falls.

Dr. and Mrs. W. W. Mitchell are leaving for Alma today. Later in the week they will continue their motor trip to Ann Arbor where they will witness the Michigan-Illinois foot-ball game scheduled for Saturday afternoon in the University City.

Charles McCarty left for his old home, Brockton, Mass., last Saturday, where he will visit relatives and friends for about two weeks. He was accompanied as far as Grand Rapids by Mrs. McCarty, who will visit friends during her husband's stay in the east.

Miss Isabelle U. Mitchell is spending a few days with friends in the south part of the state. She will attend a family reunion to be held in Almont next week and will also visit friends in Muskegon, Grand Rapids and Flint before making her return trip.

George Beaman and Gerald Richardson took a hunting trip early this week and brought down a few ducks as evidence of their success during their short vacation. They report having seen several varieties and large numbers of wild ducks in the vicinity of Conway where they did their shooting.

Theodore Graveiin who has been motoring for some weeks returned to Charlevoix a few days ago. During the trip he motored through the New England states, visited Niagara Falls, Washington, D.C., took in the Sesqui-Centenial at Philadelphia, all making for a most enjoyable vacation.

E. V. Madison, formerly engaged in business in this city, but for the past three years living near Monroe, Canada, returned to Charlevoix last Thursday. He will remain in this locality for an indefinite period, probably through the winter months before returning to his Canadian home.

The local members of the League of Women Voters are asked to be present at the session of a "Constitution Convention in 1927" will wish to listen in at 6:30 p.m. Friday, October 22nd, when the state league has arranged for Miss Sweeney to broadcast a speech on the subject from station WEX Detroit.

There will be a stereoptican entertainment showing "The Scout Trail" pictures at the Congregational church next Monday at 7:15 p. m., under the auspices of the Honor Standard Scout Class. Admission 10c. These pictures and the descriptions are officially approved by the Boy Scout National Council.

A meeting of the local unit of the Charlevoix County League of Woman Voters will be held at 2 p.m. Monday at Mrs. Henry Jacobs, 208 Clinton-st., to study the State Constitution and transact any business which may be suggested. Some of the women from Boyne City and East Jordan plan to be present. Any woman interested will be welcome at the meeting and as a member.

Knights Templar from throughout the north were guests of Ivanhoe Commandery, Petoskey, last Tuesday, a day that was featured by the Plumed Knights by music, parades, drill formations, etc., by organizations from Cheboygan, Alpena, Sault Ste. Marie and the local Knights. Hon. William E. Davidson, Grand Commander of the Grand Commandery of Michigan, Sault Ste. Marie, was in attendance and acted as reviewing officer. Many other illustrious Nobles made the journey from the several homes to be present at the annual field day and Commandery event.

During the balance of this year it will be necessary for all parties requiring new automobile plates to make application for the same direct to the Secretary of State, due to the fact that such plates are no longer available at the office of the county clerk. Secretary of State, Charles J. DeLand has called in all unused plates from the several county clerks throughout the state in order that a complete check-up on this feature of departmental business can be made preparatory to turning the official business over to his successor January 1st, 1927. Blanks can be had for making application at the office of the county clerk and Mr. Emrey can supply same to interested parties.

Hereafter members of the real estate dealers association, now nearing the completition of an organization embracing three counties, Charlevoix, Emmet and Antrim, will according to present plans hold monthly meetings at stated periods with such meetings held at places to be decided upon at their regular meetings. The members met at Petoskey last Friday evening with about fifty members in attendance, at this time several points were up for discussion of interest to the association and public, particularly true representation of real estate, its condition, location and value, the idea being to eliminate a class of individuals who have adopted other than honorable methods in real estate transactions.

Sprint for Diamonds

Johannesburg.—When it becomes too cold for swimming north of the equator perhaps some bipedite athletic talent will be useful if there's another diamond rush. In the latest sprint to a new district in the Transvaal were 15,000 persons, including 120 women in running togs or bathing suits.

1812 Note Found

Belfast, Maine.—A "conspicuous note, one hundred fourteen years old, which pledges nine bundles of corn and nine bushels of rye in three years, was found by E. J. Hills on an old farm. The note was signed by William Swett. The date was December 8, 1812.

Invents New Airplane Harder to Crumple Up

Dayton, Ohio.—An airplane that will be harder to "crack up" than most of the ships now flying has been developed by Lt. E. Dunlap, aeronautical engineer, and soon will be ready for test flights.

Two of the fruitful causes of true fatalities in airplane mishaps are the drive are the propeller and heavy power plant, which often are forced back upon the pilot, injuring or killing him.

Dunlap's ships will have two motors placed between the wings and at the sides and back of the pilot and his companion. They are "pushers" with the propellers in the rear. This eliminates dipt from the engine and the terrific noise and gives passengers a clear view directly ahead.

Of more importance, it permits the ship to be built with a blunt nose. When it comes down on its nose, it will simply "nose over," Dunlap says.

The ship will be amphibian, with both land and water landing gears, which in later models will be arranged so that they may be switched by the pilot from his cockpit while flying. The landing gear also will be equipped with a brake and will be able to haul and take off in twice its own length.

Does Distance Make Investments Good?

Charlevoix County has received hundreds of thousands, within a year, for resort real estate. Shrewd outside investors did the buying. How often it happens that we see opportunities to make investments right at home—after it is too late.

CROOKED BANKRUPTCIES TAKE $250,000,000 FROM FIRMS

Legitimate Business Concerns Are Defrauded of Immense Sums Every Year.

New York.—The New York World says that legitimate business concerns in the United States are defrauded each year of $250,000,000 by a new scheme of crooked bankruptcies.

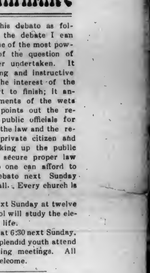
"The crooked bust," as it is known in police parlance, has its center in New York, but is being copied throughout the country, and the law cannot aid the creditors, the paper says. The author of the way it is the most popular "racket" ever known to commercial sharps.

While there are many ramifications of the scheme, the paper says, the essence of the plan is essentially the same:

"The 'racketeers' with money from 'angels'—men who put up the small capital needed—set up a business. A man in charge, known as 'a front,' purchases on credit huge amounts of merchandise, sells it to cash buyers or 'fences' at from 30 to 50 per cent of its value, then hides the cash and calmly goes into bankruptcy. Little of the loot is ever recovered.

During the past year United States Attorney Buckner and the National Association of Credit Men have been concentrating on the plan in an effort to beat it.

Some Steak Needed to Match Giant Mushroom



It would take a pretty good sized steak to form a base for this giant mushroom found on the farm of Charles Hutton, near St. Paul, Minn. The mushroom weighs 5 pounds and measures 5 feet in circumference. Raymond Hutton is shown with the mushroom.

Pillar of "Fire" Tops World War Memorial

Kansas City, Mo.—A pillar of cloud by day and of fire by night, three hundred and sixty feet tall, built of stone, now will be a living reminder of the sacrifices of Kansas City's soldier dead of the World war.

Experts in color effects have labored for weeks to produce the correct effect of fire at night, and at last have succeeded. Steam and electric lights are used. On the cloud of steam, swaying gently in the night breeze, is reflected through holes of the proper color the light from electric lamps. The effect is that of a cone-shaped pillar of fire. In the day time the effect is that of a pillar of smoke.

The steam floats from a great bowl borne aloft by a gray stone shaft 217 feet high. The bowl is supported by the outstretched wings of carven angels. The shaft rises from a wall more than 400 feet long flanked by large buildings. The massive liberty memorial is located on a hill directly south of the Union station.

50 of His 65 Years Passed Behind Bars

Boston—Jessie Harding Pomeroy, state prison's oldest "lifer," today rounded out fifty years behind the bars, forty-one of them a span of "living death" in solitary confinement. Sixty-five years old and still hopeful of ultimate freedom, Pomeroy is believed to have set a record for prison endurance.

The prison doors closed behind him in 1876 as a fifteen-year-old boy. Convicted of first-degree murder and sentenced to be hanged, his extreme youth won commutation to life imprisonment and solitary confinement.

In such state he grew through young manhood to middle age, and nine years ago came into the comparative freedom of the prison building, an old man. Annually his mother carried her fight for a pardon to the board of pardons but was refused, and since her death Pomeroy has continued the unsuccessful fight alone.

Warns Women Smokers

Atlantic City, N. J.—Woman smokers, beware! You are losing your sweet simplicity, to say nothing of your voice becoming harsh, instead of soft and sweet, in the opinion of Dr. Frank Friend, Australian specialist, who is visiting this place where bathing girls do considerable puffing.

Vocal Power General

A living thing is rarely found that has no way of expressing itself by way of sound. All birds and mammals have vocal power of some kind, and even insects, when voiceless, can call attention to their presence by means of vibrations.

Abolish the Poorhouse, Fraternities Are Urged

Hoffuto, N. Y.—An appeal to fraternalists to exercise all their power to move the poorhouse over the hill and into oblivion was made here by Harry C. Evans of Des Moines, Ia. an address before the National Fraternal congress. Mr. Evans presented to the congress the report of the committee on conservation of child life which has directed a survey of American poor farms.

The report showed that "intelligent men and women, whose only offense is that they are poor, are compelled to live, eat and sleep with the insane, the criminal and the diseased."

The speaker reported that the committee has found that courts sentenced criminals to serve terms of imprisonment at poor farms. As a remedy he suggested that the various communities that have but few paupers sell their farms and the system be abolished.

Electricity Aids Chicks, Says Poultry Expert

Newport, England.—Chickens which go home to roost do not get as much sleep as they did before ultra-violet rays became a fad in poultry raising circles here. Young chicks have been made to grow twice as fast by the use of electricity, says Prof. Horlsaw Matthews, a poultry expert. Experiments have proven, he says, that young birds treated for nine weeks with the ultra-violet rays at intervals during the day and night become twice as heavy as those not so treated.

Professor Matthews advises poultry farmers either to give chickens electric treatment or one as provided in London underground railways or to bathe them with electrically radiated light, electric wires over the perches at night. If this is done, Professor Matthews contends the yield in eggs ought to be increased by nearly 50 per cent.

Mah-Jongg Old Game

One explanation of the name "Mah-Jongg" is that Mah was the name of a distinguished Chinese military commander who lived centuries ago. The word merely means general. General Mah Commanded troops guarding the remote frontiers of the empire. He invented the game to give his idle soldiers something to do to keep them out of mischief. Since his time it has been elaborated somewhat, notably by a Chinese lawyer of Ningpo, who added more pieces, making the present total of 136.

Posters Warn Blasphemers

Rome, Pilsen City.—Thousand posters admonishing against blasphemy and profanity have been posted in railway stations and trains. The step taken by the minister of communication is in connection with the work of the National Anti-Blasphemy league.

CHURCHES

Methodist Church.

C. E. Pollock, Pastor.

"Printer's Ink," sermon Sunday at 10:30 a. m. Hear about a family of fifteen, all preachers, who preach everywhere.

"Can The Law Be Enforced?" Sunday evening forum, 7:30 A great debate on the above question between Rev. R. N. Holcapie, superintendent of the Anti-Saloon League of Michigan and Walter A. Rice, the League's attorney. This will be a union service of all the churches of the city, and every citizen is invited. W. V. Waltman, of Detroit, writes of this debate as follows: "Concerning the debate I can only say that it is one of the most powerful presentations of the question of law enforcement ever undertaken. It is a gripping, thrilling and instructive drama which holds the interest of the audience from start to finish; it answers all the arguments of the wets against prohibition, points out the responsibility of the public officials for the enforcement of the law and the responsibility of the private citizen and the need of his backing up the public official in order to secure proper law enforcement." No one can afford to miss this great debate next Sunday evening. Free to all. Every church is urged to attend.

Sunday School next Sunday at twelve o'clock. The School will study the elements of success in life.

Epworth League at 6:30 next Sunday. A great crowd of splendid youth attend these Sunday evening meetings. All young people are welcome.

Congregational Church

Rev. B.G. Mattson, D.D., Minister.

The pastor will preach a sermon at the morning service, 10:30, on the subject "He That Receiveth."

Sunday School follows the morning service. An adult bible class has been re-organized and the attendance of the school is steadily growing.

The church is invited to attend a union meeting at 7:30 at the Methodist church to hear the Tabernacle choir on the Eighteenth Amendment to the Constitution, presented by two trained debaters, Rev. R. N. Holcapie, superintendent of the Anti-Saloon League of Michigan and Walter A. Rice the League's attorney. This dramatic debate is a powerful and interesting discussion of the question. "Can The Law Be Enforced?" and has been presented in many parts of the country with the deepest interest. It is a dramatic and novel way of handling the subject and should be heard by all our citizens as well as those who are to be the citizens of the future.

Church of God

Rev. Paul L. June, Pastor

Services held at the Chapel:
Sunday School 10 o'clock.
Morning service, preaching, 11 o'clock
Young Peoples meeting 6 o'clock.
Evening service 7:30 o'clock.
Prayer Meeting, Wednesday evening at 7:30 o'clock.

The Sewing Circle Ladies will meet with Mrs. Emily Sandale, 305 May-st., Thursday afternoon at 1:30. We appreciate the help of the members and desire all to come who can join our circle and push the work forward for the Lord.

We extend an invitation to all to come to these services and worship with us for Great is the Lord, and greatly to be praised in the city of our God, in the mountain of his holiness.

Christian Science Society

Sunday service, 10:45 a.m., Subject, "Probation After Death."
Sunday School 12 o'clock.
Wednesday evening service 7:45.
Reading room, Tuesdays and Saturdays, 2 to 5 p. m.
The public is cordially invited to attend our services and use our reading room.

St. Mary's Catholic Church

Sundays 8:00 a. m., and 10:00 a. m.
Mondays and Tuesdays 8:00 a. m.
Saturday 7:00 a. m.

Rev. Fr. Odelo.

FELT HAT STAGES COMEBACK; PARIS THINKS WELL OF PLAID

LIKE certain favorite players who perennially announce a "positively last appearance" the felt hat is successfully staging another "farewell performance." But is it "farewell"? Not from present indications. Rather is the felt hat enamoring itself to its audience even to a greater degree than heretofore, in that it is presenting an entirely new and varied program in which artful creased crowns and cunning rippling brims are playing leading roles.

Of course when it comes to dressy millinery for dressy occasions, the mode is very explicit in that regard, insisting on a more ornate and elaborate styling than we have been accustomed to for many seasons past.

If in Paris do as Parisians do, that is, choose any sort of material just so it is gay plaid. This vogue for plaid is sweeping through the entire realm of fashion's realm.

The picture portrays two unlike yet equally handsome versions of the plaid mode. Plaid worsted is given flattering treatment in the Parisomode two-piece frock to the right. In this instance the darker side of the plaid cloth is used for the skirt, the reverse giving a varied trimming for the blouse, which itself is made of beige kasha matched to the predominating tone in the plaid.

None other than a French stylist could contrive so intricate a fabric handling as is evidenced in the winsome plaid silk frock shown here to the left. Manipulation of material is an outstanding bright light in the newer apparel creations. Elaborately styled yet simple in appearance to the eye, is a sentiment which prevails throughout all dress design.

The latest smart combination registers leather and plaided woolen, using the latter for the skirt, lining the gay leather coatee with the plaid where it also gives an enlivening contrast in collar and cuffs to match.

Very popular is the fashion for skirt of plaid, either silk or wool, topped with a velvet jacket. Also one sees the black or navy velvet skirt designed in scalloped shape, with which is worn a tunic or blouse of plaid taffeta.

Perfectly stunning velvet plaid two-piece frocks are appearing on avenue and boulevard with which are worn velvet hats in mad coloring, shirred, corded or stitched, the ensemble enhanced by a handsome fur neckpiece.

Costume ensembles are of the latest which fuse plaid for the one-piece dress and for the lining of the top coat which itself is developed of either solid-colored velvet or cloth.

Black and white plaid woolens are especially featured in smart costings. These are often seen with trimmings of furs blended to the color effect of the cloth. Often the plaid presents a multi-jumper effect over its surface.

Ombre plaid is the very newest fabric sensation. It is especially effective in the heavy worsted materials. For instance a brown, green and beige plaid will be very dark at one edge of the cloth, grading into pale coloring at the other. The climax of elegance in these ombre plaids is reached with the interweaving of gold and silver thread.

Variety in Felt Hats.

For practical wear, youthful, novel and becoming types, such as the picture shows, are quite the proper thing.

There are points of outstanding interest in each of these models so carefully selected as representative of the mode. An evolution of the old-time cloche, but in softer effect, describes in a measure the first little hat. There is the inevitable crease in the soft crown and there is also the stylish trim of grosgrain ribbon.

Perforated felt gives us something new to think about. An effective patterning is worked out on the tall model

Two Handsome Versions of Plaid Mode.

ish crown of the fine velours shape shown to the left of this group.

Some crowns show the crease from right to left as instanced in the little hat shown to the right. Note that it is a very fine velours, and it is this quality-kind which is in demand this season.

Exploiting the latest slant-back draped crown is the girlish felt hat shown in the center. It is in Lanvin green with a grosgrain banding in the now-so-much-inked-of jungle green.

Again the soft brim is apparent in the model to the left below, and it is ribbon bound, this being a feature of so many of the fashionable felts.

One of the whims of fashion is for the hatband carried out in two or three tones. Felt hats often match shoes and handbags in their coloring.

Tiered Frocks

The smartest frocks for immediate wear are made of printed chiffon and have four plaited tiers applied in a diagonal line on the skirt. Sleeves are long and there is a narrow scarf collar.

Blue for Autumn

New hats for autumn are fashioned of velvet in rich tones of blue, shading from a light French blue to deep sapphire tones and navy.

Madras Suiting Frocks

Sports frocks of striped madras satins are generally worn by women at the smart resorts. This material is also used for children's frocks in two-piece style.

New Sweaters

New sweaters which are very smart in pastel colors are knitted in an openwork mesh and have the round mesh and round neckline that distinguish them from last season's models.

THE KITCHEN CABINET

(©, 1928, Western Newspaper Union.)

"A good conscience, a good table, good digestion and a good wife—what better have thou to thy store, O heaven!

CASSEROLE DISHES

The nice thing about casserole is it may be as pretty as one can afford to buy and may be used in countless ways as a serving and baking dish and then be an ornament to the table when you are ready to serve.

Buttered Apples en Casserole.—Pare, core and cut into eighths ten good flavored apples, arranging in the casserole. Add one-half cupful of sugar, or honey, and one teaspoonful of vanilla if the apple flavor is not pronounced, or a grating of lemon peel. Cover the top with bits of butter, cover and bake until the apples are tender. Decorate with marshmallows and brown. Serve with cream.

Chicken en Casserole.—Cut two chickens as for frying, remove the meat from the bones and put the bones into a kettle with one quart of cold water with salt and pepper to season, adding a clove of garlic and a stalk of celery. Simmer until reduced to half the amount. Fry the chicken and arrange in a casserole; over this put one cupful of cooked rice, pour in the stock and cook an hour and one-half.

Duck en Casserole.—Cut one cooked duck into pieces. Mix two tablespoonfuls of butter and fry the duck in it. Sprinkle with one tablespoonful of flour and brown. Add two cupfuls of stock, one chopped onion, a little parsley, a bayleaf, one teaspoonful of lemon juice, the same of meat extract and currant jelly, with a few drops of kitchen bouquet.

Cauliflower au Gratin.—Cook a large cauliflower until tender in boiling salted water, then drain. Divide in flowerets and place in a well buttered casserole. Cover with well seasoned white sauce, sprinkle with one-half cupful of bread crumbs and one-half cupful of grated cheese well mixed and brown in the oven.

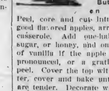
Greek Stew.—Take one cupful of lamb cut into small pieces, one chopped onion and four tablespoonfuls of fat; cook all together until the meat is partly brown; then add three cupfuls of string beans, two cupfuls of canned tomato, and two cupfuls of sliced potatoes. Cover in a casserole and cook 45 minutes.

Kidneys and Vermicelli.—Split and skin eight or ten sheep's kidneys and cut into slices, saving a few uncut for the top. Cook a few minutes in butter, add two sliced onions and fry. Add a tablespoonful of stock or water, salt and pepper to taste and put to stew in a casserole until tender. Place cooked vermicelli over the top of the dish, garnish with whole kidneys, reheat and serve very hot from the casserole.

Prune Butter.—Take one pound of washed prunes, soak overnight in water to cover, then cook slowly in the same water until tender. Remove the pits and mash through a colander, add one cupful of brown sugar, one teaspoonful of salt, one teaspoonful of cinnamon and a little grated orange peel. Cook until thick. Put into glasses and cover with paraffin.

Hints Worth Noting.

Nuts in the shell, which have become too brittle to crack without breaking, if treated to a bath of boiling water, will crack and seem like fresh nuts.



Keep the smallest bits of candle ends and put into a muslin bag. Use to polish the irons or keep the kitchen range bright.

If leaving an iron stove for any length of time grease it well all over with unsalted fat, to keep it from rusting.

A broom which is badly worn may be made to serve much longer if the stitching is ripped out below the top row. Trim the bottom and soak in soap suds, then dry thoroughly.

A bit of ginger added to doughnuts is said to keep them from soaking fat, but all other conditions for good doughnuts should be met. Fat-soaked doughnuts are wasteful of fat and indigestible to eat.

The amount of bacon to be used for seasoning may be lessened if it is put through the meat grinder before adding to the dish. It is thus more evenly mixed through the dish in this way.

Stale bread put through the meat grinder, then browned in the oven, makes a fine breakfast cereal with milk. This is especially good for an invalid.

A run in silk hose, if not too long, may be taken back with a crochet hook. Old stockings cut round and round make fine rugs for crocheted pillow tops. The silk hose with various colors are most attractive. The white ones may be dyed to get desired shades.

When making mayonnaise, if it curdles, beat another egg and drop the curdled mixture drop by drop into it, beating all the time; it will, if carefully done, blend well, then proceed to finish with more oil and lemon juice.

Lemons placed in the oven and heated hot will render their juice more freely.

Nellie Maxwell

Perseverance Wins

If you with success in life make perseverance your bosom friend, experience your wise counselor, caution your other brother, and faith your guardian genius, 'tis done; you will avail yourself of the wisdom of the ages, the only road to success.—Grit.

The First Cure

Children Cry for Fletcher's CASTORIA

MOTHER— Fletcher's Castoria is especially prepared to relieve Infants in arms and Children all ages of Constipation, Flatulency, Wind Colic and Diarrhea; allaying Feverishness arising therefrom, and, by regulating the Stomach and Bowels, aids the assimilation of Food; giving natural sleep.

To avoid imitations, always look for the signature of Chas. H. Fletcher. Absolutely Harmless—No Opiates. Physicians everywhere recommend it.

Nigerian Cookery

The method of cooking a dinner for a family of Nigerian natives has continued unchanged since time immemorial. The natives's kitchen is any convenient spot in the open and his method is to make a fire and, while it is getting well started, cut a number of skewers, on which strips of meat are impaled, according to the Wide World Magazine.

These skewers are stuck in the earth in a circle around the fire. When one side of the piece of meat is "done" in the opinion of the native chef, the skewer is given a twist so as to expose a fresh surface to the flames. The circumference of the circle of skewers varies with the number of persons to be fed.

Trust not too much to an enchanting face.—Virgil.

Tanlac Responds to Call For Relief From Pain

Amazing Improvement in Miss Haberbush's Health Surprises Friends. Boils and Other Troubles Caused by Nervousness and Upset Stomach Relieved. Gains 15 Pounds

Thousands of Illinois men and women suffering from nervousness and run-down condition may discover the surest way to get quick relief in the experience of Miss Mary Haberbush, 2621 Prairie Avenue, Chicago, whose marvelous recovery from a long siege of suffering surprised everyone.

If you are tired and fagged-out; if your stomach rebels at taking food and you spend miserable hours doubled up with pain caused by indigestion; if you do not sleep soundly and dizzy spells attack you when you stoop over; if you are losing weight and feel ok!—watch out!

"Three years ago I was in a run-down weakened condition," says Miss Haberbush. "Suffering from indigestion, being unable to sleep and getting up in the morning after a long night of tossing and turning, tired, zapped my strength. Poisons swept through my system and boil blood caused boils that pained terribly and compelled me to carry my arm in a sling.

"I sought relief but failed. Then a friend told me of Tanlac. The first bottle gave me an appetite. Indigestion and boils gradually disappeared. I began to sleep better and arise refreshed. Soon my nerves calmed down. I took on weight. Thanks to Tanlac. It restored my health."

Thousands have found happy relief from pain and gained new strength by taking Tanlac. It usually builds up the body, wipes out causes of poison. Heed their advice. Keep well, keep youth and health—take Tanlac.

Get your first bottle of Tanlac from your druggist today! Over 40 million bottles sold.

Public-Spirited Australian

Melbourne, Australia, has the world's only king. His name is Marlborough, and he said to be the richest man in the South seas, his fortune being placed close to $50,000,000. He has 17 large candy manufacturing plants and in his office there are models of all of them. He never tires studying his plants and planning ways and means to better the working conditions of his 2,500 employees. Their average wage is $1,000 annually. For many years he has set aside a certain proportion of the profits from his business for charity, and every organized body in Australia gets a share of it yearly.

No fool is so fearless as he who has some wit.

Gasoline Whaleboats

One of a 45-mile-an-hour speedboat with a 700-pound aluminum gasoline engine to chase whales has been reported to the United States Commerce department from New Zealand. Competition forces the South sea whalers to abandon their picturesque wooden vessels, the report from Consul General Lowrie of Wellington said.

LETTUCE ENTERS RANKS OF F.F.V.

Now in Fourth Place Among Millionaire Vegetable Crops of U. S.

Washington, — The rise of lettuce to fourth place among the millionaire vegetable crops of the United States, announced by the Department of Agriculture, reads like a Horatio Alger story. Lettuce, which in United States crop worth $24,767,000 in 1925, four times its value in 1919 and came close to the leaders, potatoes, sweet potatoes and tomatoes.

"There are many other Alger stories in the vegetable world," says a bulletin of the National Geographic society from its headquarters in Washington, D. C.

"Fresh vegetables as a class are successful upstarts in American markets. Not so many years ago it was necessary to distinguish between growers and frozen growers, omitting the staples, potatoes and sweet potatoes, the business in 17 vegetables came to $230,000,000 in 1925.

"What would a modern dietitian think of the Pilgrims' first Thanksgiving dinner? Although there is no recorded bill of fare, they probably ate; Venison, partridge, turkey, fish, oysters, duck, geese, barley, Indian corn bread, pumpkins, squash and wild grapes.

"'Terrible,' would be the dietitian's verdict. 'Too much protein, important vitamins neglected. There ought to be four or five vegetables. Where is the salad course?'

"'Pioneering, it seems, demands a red-meat diet. While the Pilgrims were living on meat, it was not necessarily the custom in the homeland. By 1600 vegetables were widely used in England and were even served, we are told, on the continent. Man has many needs, but one of herbs since the days of Adam.

The Pharaoh's Grocery Bill.

"On a stone of the Great Pyramid in ancient times was an inscription which showed that even Egyptians lilled a dash of statistics now and then and that the laborers lilled vegetables. For radishes, onions and garlic for the workmen, the inscription recorded, 'the sum of 1,600 talents.' If we use the Hebrew gold talent mentioned in the Bible as the standard rate of exchange that sum would work out to approximately $51,200,000 for radishes, onions and garlic. The Assyrian radish and onion crop for two and a half years could be purchased for the settlement of the pharaoh's green grocery bill.

"America has looked to Europe for vegetables, as well as population, to stock its country. Of 19 vegetables in which the trade is more than a million dollars a year, only six, Irish potatoes, sweet potatoes, tomatoes, sweet corn, green beans and peppers, are native to the Americas.

"Ancestors of practically all fresh vegetables are living on their native heaths or may, for those that are missing. A striking illustration of evolution as applied to plants can be given by preparing a dinner using these ancestors of the modern vegetables. Most of them are not difficult to obtain. They grow wild in America, can fields and bauble American fevers. Most everyone is familiar with wild lettuce as a field weed. This Chiricella weed has the same coat-of-arms as crisp, sweet Iceberg head lettuce.

When Vegetables Were Medicine.

"Under some Queen Anne's lace for the evolution menu. That white wild summer spray is the flower of the wild carrot. Dig it up and see the laughably thin wedge of its root. The grandfather of all beets has a root about as big as a baby's little finger. Wild onions grow widely in America, ancestors of some imported ones.

"But the bitter natives of the grandparents of our modern vegetables was their original recommendation to the human race. Back in the ad-so-long people put great trust in herbs as sovereign remedies for all sorts of ills. Innocent celery, a European dietetic for example, was listed in the 'Herbals' as an important drug. The phrase 'cut and dried' is a product of that period. When the famous wont out herbs became a 'drug on the market.' But trade in weeds as drugs had brought about their cultivation in gardens where they became larger and less bitter. People who had used common weeds as medicine began to buy them for food and when people insisted on sweeter and bigger weeds the weeds became vegetables.

"Bringing up the vegetables to suit public preference is now a task for the expert. A dominant public preference in America is for red vegetables.

"Prejudice may mold and color our vegetables, but to science and invention go the credit for their present honored position on the American table. Science found that mysterious substance called vitamines were vital to the nourishment of man. Then they found that vegetables were rich in vitamines. Home economics workers broadcast this news. They permeated the housewives that man could not live by meat and wheat alone. Inventors created the refrigerator car which lengthened the season of most vegetables from one month to twelve. Now a chicken housewife can market in the Imperial valley, California, for lettuce in February; in May, she turns to Carolina; she buys at home in June; relies upon northern New York in September; and in December her market basket is filled by Florida."

European Always Man of Standing in East

Talking with Europeans who live and work in the East, I find that, if they love the East (which they mostly do), it is always for the same reason, Aldous Huxley writes, in the Bookman. In the East, they say, a man is somebody; he has authority and is looked up to; he knows all the people who matter, and is known. At home he is lost in the crowd; he does not count; he is nobody. Life in the East satisfies the profoundest and most powerful of all the instincts—that of self-asserting. The young man who goes out from a London suburb to take up a clerkship in India finds himself a member of a small ruling community; he has slavish servants to order about, dark-skinned subordinates to whom it is right and proper to be rude.

Three hundred and twenty million Indians surround him; he feels incomparably superior to them all from the coolie in the streets, from the untouchable to the thoroughbred Brahman, from the illiterate peasant to the holder of half a dozen European degrees. He may be ill-bred, stupid, uneducated; no matter. His skin is white. Superiority in India is a question of epidermis. No wonder if he loves the East.

Jimmie Didn't Quite Qualify for "Raise"

Jimmie was the office boy, Mr. Bailey was his boss. Jimmie had worked for Mr. Bailey nearly two years and worked hard. Never had the office been kept in better order. The mail was always on time.

But Jimmie had "itching" fingers. Pencils, postage stamps, rubber bands and other little things were wont to suddenly disappear. Jimmie felt himself honest. He wouldn't actually steal anything but Mr. Bailey has so many postage stamps, so very many pencils, that one or two wouldn't be missed.

One day Jimmie went to Mr. Bailey and asked him for an increase in salary. Said Mr. Bailey: "Jimmie, your customers are satisfied with our product. They are glad to pay our price. Now, I am buying your product —service. I am not altogether satisfied with it. But I will be, and I will be glad to pay your price when your service has the same stamp in it that characterizes our product."

"What is that thing?" asked Jimmie. "Honor and integrity," replied Mr. Bailey.—New York Commercial.

Alphabetic Pill Cure

A city of London druggist has simplified illness enormously. He prepares what he calls an emergency medicine case in which each bottle or pille is distinguished by a letter of the alphabet.

All that the purchaser has to do—whether he travels or merely stays at home to be ill—is to diagnose his symptoms, run a finger raidily up and down the list of 26 ailments supplied until he finds his own, and cast his glazed eye saintly to the letter.

There he will discover the letter of the alphabet which is marked on the bottle that contains the pill that will make him again the man he was—respected by his family and loved by his friends. If, for example, he is racked by buy fever he will take "none B every hour; sure S every hour."

Food for Thought

Three meals a day, or possibly even two, are all that a brain worker should indulge in, according to Mr. Charles B. Hecht, secretary of the British Food Education society.

Mr. Hecht delivered a lecture on the diet of executionists recently, in which he said that the commonest error of the individual teacher was indulgence in "those abominations, sweet and sloppy milk puddings," and in bread and bulk. Milk was food for babies and not for men.

One point Mr. Heebt emphasized. He said that a man who was working hard mentally still should take less food rather than more, and that if he were permitted it might be advisable to skip a meal.

Legal Wisdom

Lawyers have some odd expenses. A good citizen died. The last request he made of his wife was not to let the undertaker twist his lips to be would appear to be smiling. "I've not had a very good time in life," said he, "still I don't want it to appear I am tickled to go." But when the undertaker got through with him there was a trace of a smile on the man's face and the widow wasted the lawyer to tell her what to do. The answer depended upon wisdom rather than on precedent. The lawyer said: "Do nothing. What your dead husband doesn't know won't hurt him."—Capper's Weekly.

Artificial Emerald

A crude method of making an emerald is to cut two pieces of crystal with many facets and leave a small flat cavity between them. This cavity is then filled with a green liquid. The two crystals are sealed together and the liquid sealed in between them. The effect is brilliancy and deep color. Either imitation, however, can be detected at a glance by submerging them in a certain oil and holding them against the light. All synthetic stones, no matter how excellent, have telltale marks. The modern apparatus for testing the more deceptive specimens is complicated but reliable.

COMMUNICATION HUB OF ATLANTIC

Fayal Island, Scene of Recent Earthquake, Is an Interesting Place.

Washington.—"For most matters of importance to the world, Fayal Island, scene of the recent earthquake, is the Azores," says a bulletin from the Washington headquarters of the National Geographic society.

"That San Miguel is larger there is no disputing. That Angra, the capital, is a better port Ponta Horta, may also be true.

"But Fayal," continues the bulletin, "is the communication hub of the Atlantic, with spokes reaching out to Europe, the two Americas and Africa. On Fayal island there are four cable companies, two American, one English and one German. There are more than 150 young 'news junkers,' as the dispatching operators are called, and each group has its own mess.

"Arriving at Fayal in the daytime one saw a ribbon of road around the island, and the whitewashed villages with a church for a pendant among the ivory bits that are strung along the 35-mile circular tour. Out near some detached rocks near the west end there is a lighthouse which appears at first to be a minaret. From there to Horta, the town, is a steep declivity several hundred feet high so that the road has to sweep up to avoid washing itself to death in the glistening surf.

"Amid smiling seas the Azores, from November to March, usually wear a cloud blanket so that the first cone of Pico, which sounds like Orange Pekoe, simply means 'peak,' is hidden as an approaching ship swings to the north. Pico has a separate island to itself and does Pico is an active volcano this is as it should be.

The "Fairy Town of Horta."

"Twilight had fallen when the writer's vessel finally came alongside the fairy town of Horta, now made up of white blotches against a dark hillside with electric lights hiding the details like the sun's candles during the change of scene in 'The Miracle.' Horta is not really a port, since it lacks a green light to complement the red one on the end of the single breakwater. So passengers land in a launch which tosses up and down in the swell and gives the folks a thrill for their money.

"A portuguese, with wide-brimmed straw hat, black white sweater and sidewhiskers, ran the launch. He took a shine to us and showed us around the town which, like a certain flower, has folded itself up with the setting of the sun.

"Horta's chief claim to fame seems to be that Mark Twain and the cable companies have honored it with their attention. Mark said something about

MORTGAGE SALE

Default having been made in the conditions of a certain mortgage executed by Guy Peart and wife, Marion Peirt, of Charlevoix, Michigan, unto Charlevoix State Savings Bank, a Michigan Corporation of Charlevoix, Michigan, dated March 29th, 1926, and recorded in the office of the Register of Deeds for Charlevoix county, Michigan, May 22nd, 1926, in Liber 64 of Mortgages, on Page 193, on which mortgage there is claimed to be due at the date hereof the sum of $5,024.22 including the principal sum due with interest, together with an attorney fee provided by statute and no suit or proceedings at law having been instituted to recover the money secured by said mortgage, or any part thereof, and whereas the taxes required by the statute to be paid on said mortgage have been paid prior to the recording thereof;

Now Therefore, Notice is given that by virtue of the power of sale contained in said mortgage and of the statutes made and provided, said mortgage will be foreclosed by sale of the premises therein described, at public auction to the highest bidder at the front door of the Court House in the City of Charlevoix, Charlevoix county, Michigan (that being the place where the Circuit Court for the County of Charlevoix is held), on Saturday the 12th day of December, A.D. 1926, at eleven o'clock in the forenoon of the said day.

The premises described in said mortgage being the land and premises and property situated in the City of Charlevoix, County of Charlevoix and State of Michigan, viz: Lots seven and eight excepting the north fifty feet of Lot seven of J. Milo Eaton's additions to the Village (now city) of Charlevoix, Michigan, according to the recorded plat thereof.

Dated September 9, 1926.

MORTGAGE SALE

Default having been made in the conditions of a certain mortgage made by Irene E. Young, of Charlevoix, Michigan to Sarah Jane Myers, of Charlevoix, Michigan, dated the 23th day of December A. D. 1922, and recorded in the office of the Register of Deeds for the County of Charlevoix and State of Michigan, on the 28th day of December A. D. 1922, in Liber 51 of Mortgages, on page 465, whereby the said party of the first part mortgaged to said mortgagee the premises hereinafter described, to secure the payment of the sum of Two Thousand Twenty Three Dollars, for principal and interest and taxes paid by the mortgagee to protect his security, and an attorney fee of Twenty-five dollars, provided for in said mortgage, and no suit or proceedings at law having been instituted to recover the moneys secured by said mortgage, or any part thereof;

Now, Therefore, By virtue of the power of sale contained in said mortgage, and the statute in such case made and provided, notice is hereby given that on Friday the 24th day of December A.D. 1926, at ten o'clock in the forenoon, I shall sell at Public Auction to the highest bidder, at the east front door of the Court House in the City of Charlevoix, in the County of Charlevoix, State of Michigan, (that being the place where the Circuit Court for said County of Charlevoix is held), the premises described in said mortgage, or so much thereof as may be necessary to pay the amount due on said mortgage, with seven per cent interest, and all legal costs, together with an attorney's fee of Twenty five Dollars, as provided by law and as covenanted for therein, the premises being described in said mortgage as follows, to-wit:

Lands and premises situate in the Township of Hayes, County of Charlevoix and State of Michigan, viz: East Half of the Northeast Quarter of Section Two, Township Thirty three North, Range Seven east containing Eighty acres of land according to the United States Surveyor General's survey.

Dated, September 29th, 1926.

Embroidered Kneecaps Added to Shorter Skirts

Paris.—Skirts now end above the knees, that authority on women's wear, A. G. I. F., or Art, Gout, Ingenie (Art, Taste and Beauty), records, and they have scalloped edges when make them still more abbreviated.

This has brought kneecaps into vogue. They are embroidered, beaded, laced and made to match the hem of the dress. They look rather like the frills of the knickers that were worn in 1830, and they help to limit the revelations of a very short skirt.

Fur be being worn more and more. The latest notion is to trest squirrel, fox and rabbit with green tints, give them the fashionable blood tint. A woman who dresses well will have a selection of colors, white, pale-yellow and silver, and a summer ermine coat for motoring. The natural summer color of ermine is golden blond, which turns white in winter.

Tourists Throng Russia; Hotels Taxed to Capacity

Leningrad.—Not since prewar days have there been as many tourists in Russia as there are now. The hotels in Moscow and Leningrad have been taxed beyond their capacity and the local authorities have been forced to provide accommodations for travelers in private houses. Nearly 400 South American tourists, mostly Argentines, have arrived here, bringing the number from North and South America alone to almost 600.

New Type, Latest Style Faces

Advice to Women Voters.

The local unit of the County League of Woman Voters after makking a careful study of the Michigan State Constitution and many opinions in regard to its revision, advises the women of Charlevoix to vote NO on the question of calling a constitutional convention in 1927.

The cost of such a convention would be enormous and in the end the new constitution might be rejected by the people. The present State Constitution is generally conceded to be a very excellent document. It is not excessively long; it is well drafted and comparatively easy to amend.

Any changes desired can be brought about by amendments and made more safely and with far less expense. People in general have more opportunity to study single amendments than a whole constitution.

The League also advises a careful study of the four amendments to be voted on next Tuesday. It is better not to vote on them at all than to vote without a knowledge of their full meaning. COMMITTEE.

TWO things in this world never come back—the spent Dollar, and the wasted moment.

Ants Hold Converse Over the Telephone

A scientist claims to have discovered that ants are able to talk to each other on the telephone.

Professor Bohler of the psychological institution, Berlin, placed two ants, a male and a female, at each end of a telephone, and the female instantly responded to the call of the male.

The experiment was made to discover the auditory power of ants, particularly affectionate pair were chosen, the male being taken to a house five miles from the professor's laboratory.

One of Doctor Bohler's assistants placed the male ant near the telephone, while the female at the other end of the line was left free to wander about at will. When the call from the male came through, the female immediately responded, and the excited male was prevented with difficulty from pressing his ear in a way that would have endangered his life. Evidently he imagined that the object of his solicitude was in reach, within the mechanism of the telephone.

Darwin declared that the brain of an ant is one of the most marvelous things in nature. He has been known to have more marvelous than the brain cells, or any part thereof, and weighs and see light, for which the ears and eyes of man are not fitted, and they have wonderful powers of communicating with one another.

Krupp Has Made Last Gun, Says Heir to Big Business

Essen.—Herr Gustav Krupp, Germany's famous Krupp works at Essen probably will never manufacture arms again, in the opinion of Baron G. Frederick E. von Krupp, son of the present head of the plant. The young nobleman, who recently completed his second year at Harvard, said his father was educating him eventually to take charge of the works. When he no longer control, he added, "we won't make guns, for I don't believe in war." The plant now manufactures steel.

Literal Truth

The familiar sign, "Wires Repaired While You Wait," lured Norman Kerry into a little Hollywood shop.

"I can't do them till Wednesday," said the cobbler as Norman laid down his package.

"But the sign says, 'repaired while you wait,'" protested Kerry.

"Sure," was the cheerful reply. "And you'll have to wait until Wednesday."—Los Angeles Times.

Social Event at the Farm Home of Mrs. E. N. Coulter, Oct. 22

A very pleasant social event occured on Friday, October 22nd, at the home of Mrs. E. N. Coulter, when fourteen friends of Mrs. Chester Denton, for many years a resident of Charlevoix, but for several years a resident of Harbor Springs, gave a dinner party in her honor, at noon, at the Coulter farm. The occasion was one which occurs annually, or each time Mrs. Denton visits her old friends here; but the function last Friday was distinguished from those previously given in that it happened to fall upon Mrs. Denton's birthday anniversary, so it proved that both ladies were guests of honor upon this occasion, a beautiful birthday cake and several gifts being bestowed upon the "birthday girl"—as the cake bore only four candles.

Mrs. Denton has been the guest the past week of Mrs. B. L. Herrington.

MEANS OF COMBATING CORN BORER

Plow Under Cornstalks and Other Plant Debris a Necessity

Recent field experiments conducted by the United States Department of Agriculture have demonstrated the value and necessity of plowing under cornstalks and corn refuse and other plant debris as a means of corn-borer control. This method leaves the borers without adequate winter quarters, with the result that most of them perish, either being killed by being eaten by birds, beetles, or ants, or killed by various native parasites or by exposure to the weather.

The use of plows with wide bottoms and a chain or wire to aid in burying all debris is an important help in doing a clean job. It is important that the material are not under not be dragged up by later cultivation.

In his experiments, where the stalks were poled down and plowed under, as high as 97 per cent of the borers were killed. The disking of cornfields gave very unsatisfactory results. This practice, says the department, will have to be discontinued if effective control of the corn borer is to be achieved.

Miscellaneous Circular 84-M, "How to Fight the European Corn Borer," contains regulations promulgated by the department in states in Lake Erie region together with suggestions for control of the corn borer. A copy of the new publication may be obtained free, as long as the supply lasts, upon application to the United States Department of Agriculture, Washington.

First Book in English

The oldest book in the English language is alleged to be "De Propertatibus Rerum," by Bathlomew de Glanville, who wrote in the Fourteenth century. It was translated into English by Trevisa, after it had been printed in Cebu from by Caxton in 1480, and probably the translation was made from the Caxton folio. The translation was published by Wynkin de Worde in 1507.

I.O.O.F. GAME HUNT SUNDAY

Followed by a Game Dinner at Their Temple—Losers Are to Serve

Members of Round Lake Lodge No. 260, I.O.O.F., will engage in a game hunt next Sunday at which time a large percentage of local members will join the hunt, range the fields and woodlands in quest of wild game, the later to be turned over to a committee, Sunday evening, who will have charge, prepare and serve a game dinner at the local Temple to members of the fraternal order.

Following the custom adopted in past years two squads of hunters will engage in the hunt, one captained by Harry Gregory and one by Grover Genein, each of whom have made their selection of hunters, taking the same from the membership of the local order. At the close of the contest, hunters will turn their game over to the authorized committees at the I. O. O. F. Temple where individual score will be recorded, tabulations made and totals for each side announced, showing which side has made the high score and determine which of the two squads is to be guests of honor and which to act as host at the game dinner.

If present plans are carried out, and no doubt they will be as hunters are enthusiastic over the event, upwards of seventy-five hunters will range the county side during the continuance of the hunt, some ranging in nearby territory with a goodly number confining their operations at distant points all with the same object in view, that of making the highest percent score, thereby assisting the associates in making a score of sufficient magnitude to place the team representing them in the winning class. Whether the losers will participate having an enjoyable day's outing in the big open spaces together with a real appetite, when the game dinner is served.

The hunters chosen to engage in the hunt follows:

Have Whales Two Wives? Scientists Seek Answer

Hull, England.—The question of the spinsters' quota, first raised by William Somerby, titled out in Hull for the British association, is to see whether whales have two wives. A laboratory in the city scientists will arrange Hull spinsterhood to the cover whether whales are responsible the birth rate of which is fifty cent. billion of life, how to the spinsters from house, and their diet. Then the answers will be tied together with a view to taking steps to stop the diminishing of the number of whales and the threatened extinction of the species.

In order to obtain the information identify dicks are provided. From a special consignment to the ship, a small dart will be fired at every whale seen. This dart will enter painlessly into the blubber, bearing a three-pad ed identification disk which will be attached to the dart before firing.

Fishermen catching these whales will be asked to forward the disks with full particulars to the crown agent. In this way many data about the habits of whales will be obtained which it is hoped will be of scientific and eventually of commercial value. The expedition is expected to last about two and a half years. Captain Scott's old ship, the Discovery, will also take part in the expedition.

GREEN UNCHANGED

Editor Charges Comstock with Effort to Mislead Votes

Under the caption, "Mr. Comstock stuffs his toe," the Detroit News of Tuesday has the following:

"Between Mr. Comstock, the democratic nominee for governor, and Mr. Green, the republican nominee, a new issue has been raised—the issue of political honesty. It has been raised by Mr. Comstock, who says of his political opponent before a Kalamazoo audience:

"The people, when they voted for Mr. Green as against Governor Groesbeck, registered a protest against one-man government, and if they are broad enough to see that before Nov. 2, they will not vote again for Mr. Green. It is right that we should discuss issues in the manner of handling that issue, and it has been conveyed since the manner by the way he has lodged on the question."

Mr. Green's original pronouncement on this question when announcing his candidacy for the Republican nomination was given at Ionia in this language: "As an administrative head elected by the people, with its members assigned to the different departments of state, such as treasury, highway, law, schools, auditing, etc., with the governor as presiding officer holding a veto power which requires a two thirds vote of the board to overrule could be made to serve the people efficiently and well."

As recently as last Saturday Mr. Green said at Cassopolis: "I would not abolish the administrative board, but I would give it the power to override the governor's veto by a two-thirds vote. That would preserve all the benefits of a centralized executive department and also remove the possibility of one-man government." Under the primary Mr. Green never once referred to the administrative board without stating precisely the same policy, and he has referred to it frequently. Mr. Comstock is inexcusably in error."

ROMANCE OF THE BEAVER HAT

How many people know that the beaver hat was responsible for several wars and kept the politicos of Europe and the American Colonies stirred up for the greater part of two centuries? It is true, for demand for that plc turesque piece of headgear was the chief factor in the trade, and it was a desire on the part of both nations to control that trade that produced the great struggles between England and France, various wars and minor conflicts with the Indians, and in reality laid one of the corner stones of the American Revolution. It is all told very charmingly, along with a fascinating love story and a great narrative of exciting adventures in the historical romance, "The Doom Trail," by Arthur D. Howden Smith, which is to appear as a serial in The Sentinel. Don't miss it. First installment will appear in The Sentinel issue Novem ber 4th.

Vocal Power General

A living thing is rarely found that has no way of expressing itself by way of sound. All birds and mammals have vocal power of some kind, and even insects, when voiceless, can call attention to their presence by means of vibrations.

Facts Most Important

Much discussion is based wholly on opinion, and argument soon becomes tain. Unanswerable argument is backed up with facts, hence the necessity for facts. Today more than ever before, cold facts are what thinking people want.—Grit.

The coast and geodetic survey of the United States will be represented at the Pan-Pacific Science conference at Tokyo, Japan, October 30 to November 7, by Commander N. H. Heck.

NATURE'S BOUNTY

To be Shown at Chicago in Union Stock Yards Nov. 27th

Agriculture in all her glory will hold court at the world's farm capital the week following Thanksgiving when the International Live Stock Exposition will celebrate its 27th anniversary at the Chicago Union Stock-Yards, Nov. 27 to Dec. 4. According to the secretary, the approaching session will be the most completely balanced exhibition ever staged in its illustrious history.

For months the foremost breeders have been grooming their finest beef cattle, horses, sheep and hogs for the supreme test of the year at this acknowledged court of last resort. Champions from every large stock show on the continent will meet to decide the final honors of the season, many of them here for the first time. The best representative of the 48 generations of breeding will be gathering together in one great dazzling display of animal perfection.

The master feeders also have been devoting all their skill to the fitting of finishing touches of fat and live stock for the classic contests of the International. One of the tensest moments of the Exposition will proceed the awarding the fat bullock grand championship by Judge George Gordon Davis. In the pens of the adjoining stock yards will be assembled in competition over 200 carloads of prime slaughter steers, affording a stupendous spectacle to be witnessed no other place on the globe. More than 10,000 head of live stock will be entered in the 100 classes of the exposition for $100,000 in prizes and numerous trophies.

The International Grain and Hay Show will include around 5,000 samples of grain, small seeds and hay selected from the choicest crops of the United States and Canada. Practically every state and province will be represented in this department.

An army of 1200 farm youths, picked from 600,000 Boys' and Girls' Club members, will attend the 8th National Club Congress, compete in contests and give demonstration in their own building on the Exposition grounds.

FIRST NUMBER ON LECTURE COURSE

At Palace Theatre, November 12, at 8 o'Clock

Certain critics, who have heard the most famous monologists, have ventured the strong assertion that Miss Selma Lenhart is unsurpassed in the matter of differentiating her characters. She has the dignity necessary for the lavalee parts and at the same time is surprisingly competent in simulating lighter characters. It is possible for her to draw such a marked distinction between seven or eight members of a cast that an audience can easily follow the entire play without a line of explanation.

Since her fourteenth year Miss Lenhart has been doing dramatic and recommonplace dramatics, but dra-

Selma Lenhart

matics of a type stamping her as unique in her profession. She studied with several seasons to directing and taking leads in plays in her home city of Pittsburgh. At the same time she was equipping herself through private study and training at the King School of Dramatic Art. Her first work on the Redpath Bureau was done in 1920 when she appeared on courses which have booked such notables as Kathrine Ridgeway, Gay MacLaren and Strickland Gillilan.

Fact Golf

Rhodesian golfers are said sometimes to encounter lions, elephants or a stray rhinoceros on their courses. It may be very irksome to go out after birdies and land nothing but a rhinoceros.—Detroit News.

Sloan Lyons Construction Co. Take on Big Contract

Monday of this week the Sloan, Lyons Construction Company commenced active operations on a contract awarded them last week for the construction of a dam about two miles east of Hart on the Pentwater river, the building of a new power house and equipping the same with hydroelectric machinery, the job to be complete and ready for service May 1, 1927.

This job is of considerable magnitude calling for the construction of a concrete dam five hundred feet in length and of sufficient height to maintain a thirty two foot head of water and will when completed develop three thousand horse power.

With the award of the contract for the work at Hart the Sloan, Lyons Construction company has now gone towards one million dollars in contract work that under time limits, must be completed by December 31, 1927. This for a practically new company is out of the ordinary making for a fine showing for the construction firm.

CHANGE IN OWNERSHIP

See What Advertising Did

Advertising succeeded a Philadelphia woman who held 13 spades in a bridge game led to seven offers of matrimony. They probably thought they could get her hand in marriage.—Arkansas Gazette.

First "Movie"

The first movie picture commercially shown was that of a serpentine dancer produced in Koster & Bial's music hall in New York city, April 27, 1896.

THE WORLD'S GREAT EVENTS

ALBERT PAYSON TERHUNE

(by arrangement with Harper's Magazine & Company.)

Robert Bruce

ROBERT BRUCE, of Scotland—a name without a home, a king without a throne, a ruler without subjects—lay hidden in a tumble-down hut one day early in the fourteenth century, while the soldiers of King Edward I of England scoured the surrounding country under orders to capture the fugitive monarch dead or alive. As the luckless Bruce gazed idly about him he noticed a spider swinging from a strand of web that it was trying to affix to the opposite wall. Six times the spider swung and failed. The king grew interested. He had been half minded to give up his own useless struggle against England's mighty power. But, noting the insect's perseverance, he took heart. He resolved that if the spider should win in its task of fixing the web to the opposite wall, he himself would once more try his fortune against the English invasion. On the seventh trial the spider succeeded; and Bruce, true to his pledge, set forth to renew his own hopeless warfare.

North Britain, the country later known as Scotland, had never wholly been conquered in the Danish invasion. Its inhabitants, savages known as Picts and Scots, had for centuries resisted all attempts to crush them as other savage tribes had been crushed. But at last Scotland fell under the Anglo-English influence and had become a mere adjunct of England's kingdom.

A question arose in 1292 as to succession to the throne. Edward I, king of England, was asked to decide the matter; and, through his influence, a puppet of his, John Baliol, was chosen. This strengthened England's power in Scotland, and the unhappy northern kingdom was already ground under the English yoke. Baliol, urged on by numerous Scots, made alliance with France and took up arms against England, but Edward speedily captured him, marched north and took Edinburgh and other Scotch strongholds.

Then, in the hour of Scotland's sorest need, when all her nobles were cringing at Edward's feet, there appeared—a man of the people, William Wallace. Wallace raised a rabble of peasants and townsfolk, and, turning into a well-trained, organized band, met in 1297 captured Stirling after two from the English. The nobles held aloof from him, but the common people followed him devotedly. Edward sent a strong army to put Wallace down, deeming the revolt no more than his own personal attention. Wallace, with a force many thousands inferior to the invaders, met this English army near Stirling.

Wallace's men were light-armed and ill-equipped and had less than 200 horses in all. The well-mounted English, in their heavy armor, looked for an easy victory. But after a fierce battle, Wallace's men got them to flight. It was the first time in history that a disciplined feudal army was routed by a force recruited from the plain people. It was the beginning of the end.

Having repulsed the English, Wallace set to work reorganizing Scotland and reviving her shattered conquered.

Pressing his conquests he even invaded the north of England, thus carrying the war into the enemy's country. But, alarmed at the extent of the revolution, Edward sent a new army of twice the English host. The nobles refused to help Wallace and his resources were cut off so that he himself could muster. Yet he won two battles against the stronger invader before the end came. Betrayed, captured and crushed his little army, Wallace was captured, tried for treason and, after a mock trial, the gallant patriot was hanged as a traitor.

Edward, as if unable to future revolutionists, devastated Scotland, including terrible penalty for England's former defeats. But the result was exactly opposite to what he had planned. Instead of crushing out the flame (or Robert Bruce) revolted, drawing about him the Scottish nobility. He was crowned king of Scotland in 1306. Edward at once attacked him, driving him from the throne, and again ravaging the stricken country. It was during this period that Bruce took his life lesson from the spider in the hut whither he had fled for refuge.

Almost at once, upon Bruce's resolve to try once more to save Scotland the rule of Edward ceased. Edward I died and was succeeded by his weak-minded son, Edward II. Not to take advantage of the latter's indolence, Bruce raised a strong army, and, by 1313 had won back nearly all of Scotland. The next year the last and most decisive battle of the war was fought at Bannockburn (Bannock Creek). Bruce, by better knowledge of the marshy, uneven ground and by superior generalship, won the day. His Scottish spearmen fought in four in a circular formation somewhat like the modern military "square," and through this circle of steel the English knights could not break. Again it was proven that the flower of chivalry could make no headway against the well-disciplined private soldiers. The English were utterly routed.

Never again, though many other conflicts were, did England wholly subdue Scotland.

At last, in 1603, the two nations became one, under James I of England, who chanced to be natural heir to both thrones.

Little Water on Mars

According to the Astrophysical Journal of the University of Chicago, a recent spectrum study of Mars shows that the planet abounds in desert conditions. It was found that the quantity of water vapor in the atmosphere of Mars was only 9 per cent of that in the atmosphere over Mount Wilson at the time. This scientists say, indicates that the headphone of Mars facing the earth is as dry as the Sahara desert.—New York Herald Tribune.

Dark Types of Wheat Are Best

Hard, Vitreous Kernels Have Superior Qualities for Bread.

(Prepared by the United States Department of Agriculture.)

That hard, vitreous kernels of wheat have superior qualities for bread making when compared with the starchy grains of the same class of wheat is indicated in a series of tests recently made by J. H. Shollenberger and D. A. Coleman of the Department of Agriculture. Wheats of certain classes containing a high percentage of such kernels usually command a premium over the price paid for the yellower and more starchy appearing wheats of the same class, because it is believed generally that the hard, vitreous kernels have superior milling qualities. This belief was recognized when the official United States grain standards were promulgated and the percentage of hard and vitreous kernels was taken as the basis for establishing subclasses for the hard red spring, hard red winter, durum, and white wheat classes.

Types of Kernels.

To establish definitely what relationship exists between the kernel texture and such important factors as test weight per bushel, flour yield, loaf volume of bread, water absorbing capacity of flour, and protein content, special studies were undertaken. Samples of hard red spring, hard red winter and durum wheats were separated into three types of kernels: dark, hard, vitreous or amber; speckled or mottled; and yellow or starchy. Each was milled and tested for the factors mentioned.

The results showed that of the three types of kernels tested, namely, the dark type, for each class of wheat, was consistently highest in specific density, usually highest in flour yield and color of loaf, decidedly superior in water absorption, weight of loaf and crude protein content, and slightly higher in ash, crude fiber, and fat. In the hard red spring and hard red winter wheats, but not in the durum, the dark type of kernel was also slightly highest in loaf volume and texture of bread.

Starchy Type Inferior.

The starchy kernel type was slightly superior in average test weight per bushel and in flour yield for all three classes of wheat tested, and in the durums wheat samples produced bread of the greatest volume and of best texture, in almost all the important milling and bread quality factors the starchy kernels, except of the durum wheat, were inferior to the other types.

Judged from the standpoint of these averages, it would appear that the dark kernels are decidedly superior to the other types of kernels and that the starchy kernels are just as decidedly inferior. Complete details concerning the tests and results are given in Department Bulletin No. 1029-D, "Retention of Kernel Texture to the Physical Characteristics, Milling and Baking Qualities, and Chemical Composition of Wheat," copies of which may be obtained as long as the supply lasts, by writing the Department of Agriculture, Washington, D. C.

Swine Tuberculosis Not Considered as Serious

Owing to the comparatively short life of swine the spread of tuberculosis from hog to hog is not common; because the disease, being slow in its development, often fails to cause the breathing down of the affected tissues before the animal is slaughtered, writes Dr. L. Van Es in Capper's Farmer. Only in older tuberculous swine, such as breeding animals, may here be bacilli given off by the mouth or body discharges. More commonly the infection acquired from other animals and more particularly from the affected cattle and poultry. The germs entered swine in yards by the droppings of tuberculous animals are readily taken up by swine in the pursuit of food. The material contained in the lungs of slaughter house offal, also, is eaten, and may help to boost their infection. Milk and dairy products derived from tuberculous cows always have played an important part in the transmission of the disease to swine. These are the principal facts that must be given consideration in the protection of swine against tuberculosis.

Oil for Lousy Pigs

Experiments at the experimental farm college show that it requires considerably more feed to produce gain on lousy hogs than on swine free from lice. Crowd the hogs in a small shed and sprinkle crude oil or crankcase drainings on them with a sprinkling can or with an old broom dipped in the oil. Leave the pigs in the pen until they have rubbed against each other and their bodies are covered with the oil.

Decrease in Scabby Sheep

A noticeable decline in the prevalence of sheep scab, a parasitic disease especially troublesome in range flocks, is reported by the bureau of animal industry. During the last fiscal year the number of sheep dipped found by federal inspectors was approximately 15 per cent less than for the preceding year. The inspectors, working in co-operation with state officials, inspected approximately 25,000,000 sheep and supervised the dipping of more than 4,000,000.

Feed Supply for Stock

There are few classes of live stock that can pay returns for purchased feeds. This is particularly true if the purchased feeds are roughages or feeds that can be readily grown in the community. The late summer months reveal the probable supplies of feed for the coming winter. A little thought may indicate ways in which adequate supplies of rough feeds can be secured for all classes of live stock that are to be wintered.

Around Orchard

DAMAGE IS DONE BY TREE HOPPER

One of the interesting and unusual life histories sometimes found among insects is furnished by the insect known as the buffalo tree hopper. Though the eggs of this insect are laid in the bark of the fruit tree by the adult, no feeding is done on the tree, according to J. H. Bilger, assistant entomologist of the Illinois state natural history survey, which is co-operating with the college of agriculture, University of Illinois, in insect control work. When the eggs hatch, the young drop to the ground and feed on the grass and weeds by sucking the sap from them. Neither the young nor the adults feed on the apple tree.

The damage by this insect is done by the adult which lays her eggs in the cuts in the bark and the twigs and branches, making for this purpose two crescent shaped cuts opposite each other and close together so that they look like parentheses around a small section of the bark. The cuts extend through the cambium layer of the bark and cut off the flow of sap, thereby causing starvation of the tree when the cuts are numerous.

During the past few years, the buffalo tree hopper has done very serious damage in this way to young fruit trees in Illinois, according to Bilger. Especially is this true in western Illinois, where in some orchards some of the trees have been so weakened that it was necessary to pull them out.

However, it is an efficient spraying practice which can be followed to control the insect, and experiments unusual life history. There is no spray which will reach and kill the eggs without also damaging the fruit trees, and spraying the grass and weeds with a contact insecticide is not economical. It is recommended that where this insect is doing damage to the trees, the grass and weeds be plowed up and the soil kept clean for at least one, and preferably two, seasons, during the spring and early summer months. This will starve out the young of the buffalo tree hopper when they hatch and free the orchard of the pest, after which, with a strong growth, the tree will be able to recuperate in most cases.

Any grower who is uncertain as to whether his trees are being damaged by this insect may obtain more information on this point by writing and sending specimens to the Natural History Survey, Urbana, Ill.

His Apple Profits Came as Orchard Pests Left

A remarkable example of the influence of care on an apple orchard has been brought to light by Cornell University, Newsweek.

Back in 1923, Charles Van Stone of Silver Creek was getting practically no first-class fruit from his orchard of 100 trees. Insects and diseases were causing fruit to be knotty, knurled and scabby. Finally deciding that the trees should either bear the best or be torn down, Mr. Stone got in touch with Douglas A. Evans, Cornell's agricultural agent, to find out what could be done to reduce the disease and insect pests. At the same time Mr. Evans saw that pruning and spraying were imperative needs and, accordingly, suggested this to Mr. Stone.

Upsetts were realized the very first year. By keeping a careful record of all expenses and receipts in connection with the orchard Mr. Stone found that the improved practices resulted in a profit of $467 that year.

The following year saw a continuation of the pruning and spraying and, besides, the use of a small quantity of fertilizer. The real effects of careful orchard management then began to show themselves, for in that second year (1925) the 100 trees returned a clear profit of $1,400. This profit came because of the increased quantity of large, excellently colored, free-from-blemish fruit.

Much More Attention to Pruning Is Great Need

If the quality of Illinois fruits is to be improved, much more attention must be paid to pruning than is now customary, W. A. Ruth of the economy division, college of agriculture, University of Illinois, says. Intelligent pruning not only improves the size and color of the fruit, but also aids in removing insect and fungous injury by making it easier to spray the trees. The best type of pruning throughout the entire life of the tree consists almost altogether in the removal of excess branches. Heading back should be practiced sparingly and only under special conditions which definitely call for it.

Plow Under Cherry Leaves

Plow under the cherry leaves as a means of controlling the leaf spot disease, advises the New York experiment stations. Dispose of the fallen leaves before next spring and then spray the trees with a lime-sulphur mixture next spring just as the petals fall, with a second spraying two weeks later. One gallon of lime-sulphur to 40 gallons of water is the proper mixture to use on sour cherries and 1 gallon lime-sulphur to 50 gallons of water is right for sweet cherries.

Damage by Field Mice

Field mice do a lot of damage to young orchard trees. In addition to setting wire cloth guards around the trees and scraping away any trash that may have collected about the trunks, a fruit grower should poison those pests. A little of the poisoned grain is put by each tree and then covered with a shingle or board sprinkled down. If one edge is propped up the mice will find the bait but the birds and chickens will not be able to get at it.

You Never Used Such a Soap!

Millions are Discarding Old Favorites for it

Try a cake of this amazing toilet soap and we'll wager you'll use it always.

Women are wild about the way it lathers in hard water—a bubbly lather that whisks away dirt, kills germs and tones up skin and hair.

They also like its clean, inviting odor and assorted purity. A generous cake costs 10c.

CHAPTER XVI—Continued

—2—

"When I got here he was at the wheel. I was sure then. . . . I shouted at him and he paid no attention. I could hear the water pounding down into the tunnel and I tried to drag him away. I did once and tried to twist back the wheel but he jumped at me and we fought. He was too strong for me and he flung me off at last. He was crazy, beside himself, a madman. It wasn't just the liquor. 'I'm going to drown him,' he said. 'Drown him like a rat.' And he cursed at me first and then—threatened me.

"I was desperate. I saw a wrench on the wall and I struck him with it on the back of his head. He went down, staggering—and I got to the wheel. When the roar of the water ended I knew you were safe. I supposed I had killed you. You came. . . ."

For the pair of them, for the moment, as their eyes met, there was no one else in the gatehouse. Burns stooped to the floor and picked up a flask.

"There's blood on the wrench," he said, under his breath to Cox. "Hey, where's the Mexican going?"

"It must have been Baxter I glimpsed as I came out of the shaft," Caleb was saying. "He had just come to, I suppose, and . . ."

He broke off at Burns' exclamation. The superintendent pointed to where Padilla was running over the plain toward the foothills, head low, eyes searching the ground, like a hound on trail. Something glittered in his hand.

"He's after Baxter," cried Caleb. "He'll kill him. I've got to stop that. Mrs. Carquines, you'll go with Miss Clinton and Maria to El Nido. I'll get there first. Cox, you go ahead without me."

He sprang through the door, listless, his wet clothes clinging to limb and body, starting out to run down Padilla before the avenging Mexican closed with his quarry. That the Mexican would be implacable, deaf and dumb and blind to all but his vengeance against the man who had injured is sefioritis, Caleb knew. Nevertheless Padilla must be stopped from crime and the penalty. He thought more of this than of Baxter as he followed the dusty trail across the plain that led straight toward a wooded ridge.

Padilla was nearly halfway to the foothills before Caleb started after him, gradually overhauled the Mexican. He was furious enough, remembering Betty's white skin with the bruises on it, her sure gorgeousness, to beat him down with the wrench, was glorious to him in proportion to his rage. The only thing that curbed his own anger from the Mexican's intent to kill was, perhaps, the sight of the knife in Padilla's hand, the sudden knowledge of what penalty the Mexican would have to pay for murder of Maria and Betty's sorrow. But he was not going to let Baxter escape if he got at him. Only the one thought beat against the wrath that exulted already at the idea of being free to deal with the hawk-nosed man, the remembrance that punishment always did overtake the evil-doer. There his New England sanity leaped for restraint. He had won Betty—he must not lose her.

A little stream sometimes babbled down the steep where Padilla, a hundred yards ahead of Caleb still, disappeared in a jungle of buckeye and manzanita. Footprints of men both were plain in the still moist earth for a few paces and then abruptly disappeared. Baxter had taken to the sidehill and the thicket concealed him. Caleb halted perplexed. He had little breath left for the call to Padilla. he felt it was useless before he uttered it.

He stood alert, listening. To his right, and then behind, there sounded a sharp crack of dry twigs and he started off again, buffeting his way through low boughs and brambles.

He was certain that Baxter could not elude Padilla. For years the Mexican had guarded his senorita under the vow taken by him and Maria, that had held back their own happiness and added fuel to a slowly growing hate that, now the time had come, would give deep knife wounds in exchange for the lashes of his master. Unless Caleb could come up with him Baxter was as good as dead.

A shrill cry of agony sounded from the dense growth of the arroyo, not far away, toward the head of the cleft.

For a second Caleb stood still, chilled by the unyelling horror of that shriek, the cry of a coward facing death. It was not repeated. There was no sound at all in the hot quiet where no leaf stirred.

Then he heard an exclamation in Spanish—"Reina Sanctissima!"—and plunged ahead through the tangle to come out in a tiny clearing.

A live oak grew by a slab of gray rock on which, on an ooze savage stint, lay Baxter, the sunlight drifting down through the snarled boughs of the tree and gilding a face the color of clay. a dropped jaw that showed the white teeth amid the untrimmed beard, eyes rolled up, already glazing, the face in a smirl, inhuman. Bending above him, shrieking back a little with his knife upraised, stood Padilla. He seemed to have recoiled from his deed, while ready to deliver a second blow.

Caleb leaped and caught the wrist of the hand that held the blade. Padilla turned to him a face that was hard to read. There was discomfitment in it, slow-dying fury—and awe.

"Senor," he said. "I did not touch heem! See, my knife is clean. There is no blood upon eet. I did not touch heem! Senora di Criso, he hear me comin', he run weeth his head on his shoulder sir, all of a sudden he put his haa' to his side, he cry out, 'twas roun' an' fall like you see. When I see he's been he is muerto! Dead! Because he is too much afraid."

Caleb loosened Baxter's collar and shirt, slipped his hand in over the heart.

"He is dead, senor—I mean to keel him myself. But eet is the judgment of God."

Caleb knew that it was the "champagne heart" of Baxter, too long abused, the overtaxed engine of a fine used machine, that had given way at last. . . Fright had helped, no doubt, the wild pounding, pasting run with the knowledge of Padilla swift and relentless upon him with lifted and glittering knife. Baxter had burned out. But he did not attempt to mock the Mexican's statement. He put his own handkerchief over the face. It was horrible—terrible! There was none of the oft-quoted "peace of death" upon it. The eyes stared, glassy and wild. The livid lips were drawn back to show the teeth and the snarl that made the features so frightfully bestial. It was as if the soul of Baxter had departed utterly when he had turned the wheel of the water-gallery with murder in his heart and now, under the brute that dwelled in the subconscious was revealed—in full. A dead, mad face. Doctor Fielde had used awful testimony here.

All hate died out in Caleb. Here was a mad dog—dead. An atavism, self-produced and self-annihilated.

"I suppose I'd like to keel him," said Padilla. "An' you, senor, would you hav' only talk to heem? I was very hard to resist. Now—now back—Perhaps you weel better send the sheriff an' see is something to tell her that the man who hurt her is muerte. It is better I wait here for the sheriff. Also . . ."

He pointed upwards. High in the blue, swinging in circles that gradually narrowed above the arroyo, soared a buzzard. Even while they looked another appeared—another.

"They are queek," said Padilla. "Soon there weel be more. The sheriff must not find heem disturi'."

The Mexican crossed himself.

"You saw his face, senor," he said in a low voice—as if the dead could hear. "Senore di Criso! Just is the face of a devil—el aspecto del demonio."

CHAPTER XVII

Dios Bendiga a Vd.

A week later Caleb sat with Betty in the twilight, on the broad mission bench in the patio at El Nido. In the big room Stella Carquines was at the piano, playing softly. Carquines himself had been forced to go to Ventura to discuss a commission. Their child had gone to bed. Maria was softly crooning a lullaby at the far end of the patio garden, putting Mary Morgan's baby—of which she had not been ashamed—to sleep.

Caleb and Betty were silent. He was trying to find words for what he wanted to tell her in fitting language, and finding it difficult. His emotions confounded him in this supreme instant. The nearness of her, the consciousness that to gain her was everything, to lose her meant all the joy taken out of success and life, now and to come, set his heart pounding till he thought that she must surely hear it, sapped his confidence.

"Betty," he said at last, "you saved my life. What do you want to do with it?"

She did not affect to misunderstand him. He had known she would not do that. There was something of embellished between them, a bond that had made their silence filled with magnetism. Caleb hoped that it was love, with her, as it was with him. As he sat, hands on knees, leaning toward her in the dusk, trying to read her face, he felt his fingers trembling. Every atom of him longed for her, reached out for her in an ardor that seemed to belong to another Caleb Warner, lately created. . . .

"What do you want me to do with it?" she asked.

"Share it, Betty. All ways and always."

"All ways?" She had risen, standing by one of the posts of the pergola, jasmine wreathed. Now he stood opposite to her, close and looking down at her unsmiling face. The curves of her mouth maddened him. He clenched his hands until his nails stung his palms, banging on to himself, restraining a desire to woo her only with kisses. His reason fought with his passion. He knew Betty Clinton was not to be won that way alone. Something ran riot in his veins, inflaming his being. There was no congested brain, no fear of the effect of failure. And it affected the girl. He could see her sway a little and he suddenly caught her in his arms.

"Yes, all ways, Betty. Lover and wife and partner in everything. You are the other half of me. To share in all things, joy and sorrow, love and work. I love Betty, Betty, and then we'll go on together with the work that will be ours, planned together, done together—and so to love again."

She had not resisted him. Her head had lain against his shoulder. She lifted it, searching his face. Then, even in the dusk, he saw here become softly radiant, as, satisfied, she raised her lips to his, her body, soft and lufted to harmon, clinging close to his. And, for a time, he knew that she was not lacking in the passion that had possessed him.

"We shall go on together," she said softly—after quite a while—"arm in arm and on. Caleb. Bringing water to thirsty places and to thirsty people? Blending work with love to make all perfect? Anything else would only mean starvation in the end."

"I am the Water-Bearer," he said—he was a little inclined to vaunt in his triumph. "You remember the sign of Aquarius?"

"You must give me mine back again."

"I shall. The two fishes, joined together with a ribbon. Water-creatures, Betty. You and I, in the same element, bound by love."

The music within became louder, ended in a crash of chords. Stella Carquines came to the patio entrance.

"What are you two doing? Mooning in the dark?" she queried. "Oh!" she added softly, "Honeymooning! I am so glad—my dears. Where are you going, Betty?"

"I am going to tell Maria," she said as she swiftly passed them. Caleb saw a tear on her face as she went through the door. He knew they were tears of happiness.

"You are lucky, but tardy," Mrs. Carquines said to Caleb. "I don't know that you deserve her. You disappointed me last month, at our little celebration."

"I wanted to finish my work," said Caleb simply.

Stella Carquines laughed softly.

"Yiios! Once a Yankee always a Yankee! But you've succeeded. Maria—here she comes with Maria, after all."

"Senor," said Maria, stately for all her weight, "it is very well. You will make my senorita happy an' she, ah senor, the good God is very kind to you! An' now I am to make Luis happy, my senorita says. He needs some one to look after heem, for he is only a great child. We shall throw away those two rugs of the puma skeen. My knees have worn off the hair. But we shall still pray—for two now—perhaps, nunsans, for more. Quien sabe? Now she has' some one to protect, I," she broke off into a torrent of Spanish, stooped, caught both their hands and kissed them, vanished into the garden.

"She sets an excellent example," said Mrs. Carquines. "Adios y buenos noches! Dios bendiga a Vd." she added softly at the door.

But they did not hear her benediction. They were quite absorbed in Elsie Carquines had left the room.

[THE END]

Reduce by Breathing, Says French Doctor

Bed rest instead of physical exercise and deep breathing from the lungs, in addition to the usual nonfattening diet, are prescribed as a cure for obesity by Dr. G. Leven, general secretary of the Therapeutic society of Paris.

Doctor Leven teaches his patients to breathe out so hard that they bend the flame of a candle and to inhale only very slightly. The breathing can be done lying in bed, sitting up or standing erect. Series of five exhalations are repeated every half hour fifteen to twenty times a day. One patient lost fifteen pounds in twenty days and another sixty pounds in the course of eight months.

When a person overeats, Doctor Leven believes, the solar plexus is irritated and this disturbs the functioning of those cerebral centers that regulate the destruction of fat. Other conditions may also cause this disturbance. The course of treatment prescribed is claimed to counteract the effect.

Where She Ranked

"Am I the only woman you ever loved?"

"Oh, no," he answered, promptly; "you are the sixth."

"The sixth!" she exclaimed, suddenly retiring his shoulder of the weight of her head.

"Yes," he said, coldly, "there were five before you—my mother, an aunt, and three sisters."

And thereafter she endeavored to be more specific when she asked questions.

HOW TO KEEP WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

BREAD AND WATER

AN EARNEST and conscientious judge out in Nebraska, determined to enforce the Volstead act, has sentenced several violators of the law to jail and added to the confinement an order that the culprits, while serving their sentences, should be kept on a bread-and-water diet.

At once the newspapers took up an unlimited discussion as to whether such an order was not equivalent to a death sentence. As some of the papers put it, in flaming headlines, the real question was "Can men live on bread and water"?

To ask such a question shows a slaughter disregard of history and also of the condition under which millions of human beings are living today. One need go no farther than the lessons he learned in Sunday school in his childhood.

In the nineteenth chapter of Second Kings is told a dramatic incident in the life of Elijah, one of the most fearless warriors that the Jewish nation ever produced. Fleeing from the wrath of Queen Jezabel, 750 of whose heathen prophets he had slain, Elijah "for his life" a day's journey into the wilderness. Worn out and hungry he lay down and slept under a juniper tree. When he awoke, an angel of the Lord said unto him "Arise and eat." And he looked and, behold, there was a cake bakes on the coals and a cruse of water. And he arose and ate and drank and went in the strength of that food forty days and forty nights unto Horeb, the mount of God."

Wild eastern legend, says the rationalist. Very well, let's have some modern witness.

Lowell Thomas, before the war a Chicago and New York newspaper man, was sent by his paper to Egypt to meet Col. T. H. Lawrence, a British army officer who had organized and was leading the Arabs against the Turks. In his recent book, "With Lawrence in Arabia," he tells some remarkable stories. Lawrence was a young Englishman, five feet three inches tall and so delicate that when he first offered to enlist the British recruiting officer told him to go home and grow. Young Lawrence organized the most efficient camel corps the world has ever seen and drove the Turks out of Arabia. Wells in the desert are three days' journey, often 250 miles apart. Lawrence and his men broke all records, even those records of the legendary Arabs in desert travel, averaging 1,500 miles a month.

What was their food equipment for a six weeks' trip across the desert? A forty-five pound bag of flour. Each man lived on unleavened cakes baked on coals and carried a glut of water which had to last for three days.

Can men live on bread and water? Ask Lawrence and his Arabian warriors.

TAKING A SICKNESS CENSUS

HOW much sickness is there in any average town in a year? Not how many deaths, that can easily be determined. But, beside the sicknesses that result fatally, how many people are ill with a fever, or how much time is lost through unnecessary and avoidable sicknesses?

Health officers have been trying for some time to answer some of these questions. In a recent issue of the Public Health Reports is an article by Edgar Sydenstricker of the United States public health service, giving figures of an extended survey of 1,815 families in the town of Hagerstown, Md., for 28 months. In these 1,815 households were 8,587 persons. Not all of them, of course, were under observation for the entire 28 months, but the total number amounted to what Doctor Sydenstricker calls 10,347 years which would be equal to a town of 10,347 persons for one year.

Of these 8,001 were men, and 8,346 were women. So the proportion of women was more equally divided than would be found in the average town. The survey covered the time from December 1, 1921, to March 31, 1924, 28 months embracing all the seasons.

In this group and during this time there were 17,347 definite and separate cases of illness—a little more than an average of one per year per person. Of these, 10,844, or over 60 per cent were diseases of the respiratory tract. This included influenza or grippe, all forms of pneumonia, pleurisy, bronchitis, croup, hay fever, asthma, tuberculosis and all troubles with the throat and lungs.

Of all forms of epidemic disease there were 1,448 cases, or 8 per cent. This includes typhoid, measles, whooping cough, scarlet fever, diphtheria, and all other epidemics.

General diseases, such as cancer, rheumatism, diabetes, etc., caused 259 illnesses, or 2 per cent. Diseases of the nervous system caused 728 illnesses, or 4 per cent, while eye and ear diseases totaled 203, or 1.6 per cent. In spite of all we hear about the increase of heart disease, and high blood pressure, illnesses due to diseases of the heart and blood vessels, only amounted to 303, the same as eye and ear troubles. Digestive troubles formed a large group, 1,594, or 8 per cent.

Youngsters Use Tobacco

Capt. Frederick Marshall of the steamer Arabian Prince reports finding Patagonian children walking around in the snow barefooted and happy. Youngsters barely three years old often are seen smoking cigarets. The Patagonians dress mostly in animal skins.

Advantage in Toil

A man may become weary of daily toil, but it does not produce as much depression as daily idleness.

TO SEARCH SAHARA FOR CITY OF BRASS

French Archeologists Think It May Be Found.

The report that a French expedition was being sent out to search the Sahara from Tegiurt to Tlahuktu for the City of Brass will raise a vision in the mind's eye of every lover of the Arabian Nights, and he will wish he could join the archeologists in the hope of getting a glimpse of the two tall towers of Ambiahnda brass, gleaming in the sunshine like twin beacon fires.

They would expect to find the city just as it was seen last by the expedition sent by the caliph to Morocco for bottled jinn. (Printer and proofreader, leave this word alone, the Commander of the Faithful was a prohibitionist). He would expect to find intact the walls so vast that it took a caravel two days to ride round them, and when he had forced his entrance into one of the 25 visible portals, he would make his way through the deserted streets and bazaars, past the dried and shriveled bodies of the soldiers and salesmen, and their unguarded stores of all sorts of jewels and wares, everything exept food, on up to the palace where, under the alabaster cupola supported by golden pillars, the fair damsel lay seemingly asleep on a couch beneath the canopy.

He would recognize her as Tadmuin, daughter of the king of the Amalekites, but he would not attempt to wake her, as Ilrunlilda and the Sleeping Beauty were awakened, for he remembers what the copper statues of the two slaves stationed at the bedside did to the Waziz.

In all this but the glittering dream of a Bagdad teller of tales? Or was there once a city in the heart of Mauritania where a seven-year drought starved the people to the midst of their wealth, and the poor little rich girl could not barter her pearls for poor wheat, grain for grain?

The Arabs still tell of such a lost city, and Sir Richard Burton believed them. So apparently do the French, enough to undertake a journey of over 2,000 miles across the desert on such a quest.

Even if they do not find the fabled City of Brass, they are sure to discover many another lost city that has been entered out and buried in the rising tide of sand.

These old legends when sifted, often turn out to have a grain of truth in them. They used to be thought a mere myth.

But we saw know that Troy was. We can today explore the labyrinth of the Minotaur without the thread of Ariadne.

And most recently "the Nameless City" of the Syrian desert, forgotten for 1,500 years, has been visited for one day by archeologists of the University of Chicago and its wonderful wall paintings photographed—just in time to preserve the record, for they were obliterated by the Arabs as soon as the British troops withdrew.—Edwin R. Sloason, Director of Science Service, in Collier's.

Broad Here, Narrow There

Dr. John Roach, Stratton has been defeated in his fight to exclude from membership in the Baptist church all who have not been baptized by total immersion, and a New York Baptist was talking about him the other day. He said:

"Stratton is narrow in theory and very broad in practice. He is always the first hand to be held out to the sinner.

"A sinner of the secret kind came a cropper one day. The scandal was terrific. Everybody was hard on the man, but Stratton only shook his head and sighed:

"'Aren't all our reputations built up on what isn't found out about us?'"

Keyless Lock

Something new in the way of locks is the keyless style, as described in Popular Science Magazine. This invention works with a combination like that of a safe and thus can be the carrying of a bulky key. The combination is controlled by a series of ten rings along the edge of the lock, capable of 1,024 combinations, of which only one may take its choice. Since it is worked by touch the owner can, after a little practice, open it in the dark. No remedy is suggested in case the owner forgets the combination.

His Speech a Solo

Einstein, despite his lectures about his famous and complicated theory of relativity, is a poor impromptu speaker and he list

Vote for Republican State Candidates on November 2

For GOVERNOR

Fred W. GREEN

For LIEUT. GOVERNOR

Luren D. DICKINSON

They Understand State Problems

A vote for Republican candidates is a vote for progress—Roads, Conservation, Sound Government.

Republican State officers can best serve Michigan because they are affiliated with the party that is in national power.

Fred W. Green typifies the ideals which the people of the State desire to find in a Governor—he is the man the people want.

The affairs of the State in all departments including administrative, legislative, and judicial are assured intelligent, conscientious, vigorous attention by the election of the Republican nominees of 1926.

REPUBLICAN STATE CENTRAL COMMITTEE

For Attorney General: WM. W. POTTER

For State Secretary: JOHN S. HAGGERTY

For Supreme Justice: ERNEST A. SNOW

For State Treasurer: FRANK D. McKAY

For Auditor General: ORAMEL B. FULLER

MOLLIE PITCHER, HEROINE.

America's war heroine is known to readers of Revolutionary history as Molly Pitcher, and yet her real name was Mary Ludwig Hayes, according to Henry Olney who contributes an interesting story of this unusual woman in the National Republic. Despite assertions to the contrary, Mary, or Molly as she is popularly known was not a myth but a real flesh and blood person, as real as Washington himself. Her maiden name was Mary Ludwig and she was a native of New Jersey of German stock. She went to Carlisle, Pa., as a "hired girl" and there met and married John Hayes who worked in the local barber shop.

When the revolution broke out Hayes enlisted as a gunner in the Continental army and was one of the heroes who wintered at Valley Forge. In the meantime Molly returned to New Jersey. On June 28, 1778 the Battle of Monmouth was fought and it was here that the woman won undying fame. The heat was intense and many soldiers fainted from it. In commenting on it Mr. Olney says:

"Mary grabbed a pitcher and began carrying water to the boys from a nearby well. Her constant rushing back and forth with a pitcher in her hand, gave her the nickname of 'Molly Pitcher,' which has become a famous name in American history.

The water-carrying episode, despite it bravery and importance, was not the accomplishment that made Mary Hayes our greatest war heroine. While scurrying from the well with a pitcher of water she was horrified to see her husband fall to the ground. There was no one left to load the cannon to which he was assigned, the officer in command ordered its removal. But it was not removed. Mary cast her pitcher aside and took her husbands place. She knew how to load a cannon as well as any in the army. With sweat streaming down her rosy cheeks, she ram-rodded that cannon until the battle was won."

LENDING TO EUROPE

Said Mr. Gerrard Winston, undersecretary of the Treasury in a recent address:

"American financiers must be careful of the soundness of foreign loans. The risk of such investments is estimated at one-third greater than for domestic investments. Loans to foreign municipalities and corporations should be for the purpose of increasing productivity, and loans to municipalities and governments are not sure of being used for such purposes. In Europe there have been too many American bond men trying to persuade them to issue bonds for public works that might better be delayed."

Mr. Winston recently returned from Europe and he knows whereof he speaks. The warning is a timely one and should be heeded by American investors. During the last twenty months, he says, America has loaned a billion dollars to Europe in addition to the money advanced to Germany under the Dawes plan. The amount which European countries now owe to the United States government and to private American investors is staggering. And it is not to be forgotten that some of these countries are now declaring themselves unable to pay what they owe our government and the interest thereon. If these obligations cannot be paid, what assurance is there that our private loans to Europe will finally be liquidated?

Some of our international bankers declare that Europe will pay us in goods and that for this reason our tariffs should be lowered. But how much would it benefit America to collect its debts at the price of ruining our national industrial prosperity, closing our factories and taking the jobs away from our workers? The question is a complicated one and will bear much thought. For this reason the warning of Mr. Winston is especially appropriate at this time. As the Chicago Tribune puts it:

"American investors have been asked to send their money abroad to the countries which at the same time are protesting their inability to pay even the interest on what they now owe our government. When these nations come here to negotiate payment of their debts, they produce reports to prove they are bankrupt; within a few weeks, American bankers publish the most glowing prospectuses regarding the solvency of the same nations whose bonds they are seeking to float. The bankers' loans abroad have been estimated at some $11,000,000,000, practically the sum of the debt European countries owe our treasury; the annual charge on the private debt is much greater because the interest rates are far higher. The bankers cannot have both ways. If there are insuperable obstacles to Europe's paying the treasury, there are also insuperable obstacles to Europe's repaying private investors in this country."

SMITH-McADOO AGAIN

Unless all signs fail the nation within a very few months will witness the opening gun in a Democratic battle which promises to be fully as severe as the one in 1924. As was the case two years ago, the leading opponents are to be William G. McAdoo of California and Governor Al Smith of New York.

In the East, Smith is strongly intrenched in the party councils but in the West and South there is a different story. McAdoo's ambitions form one of the big issues in the present campaign in California, and President Wilson's son-in-law wants, according to the political wiseacres, to keep control of the dry and so-called progressive wing of the Democratic party. According to the staff correspondent of the New York Times, who has been in California:

"Mr. McAdoo is in Los Angeles. He appears in stronger health than for many years. He is taking an interest in the fight here (California), and in other sections of the country by the wet and dry wings of his party, but he is determined to remain silent on the national issues involved, at least until the state senatorial campaigns are under full headway. Then it is his intention to get out and make some speeches which will be of national importance."

In certain states in the eastern part of the country there has been apparently at least, a split in the Republican ranks this year on the wet and dry question. This news from California warrants the prediction that before 1928 rolls around the Democratic party will have its difficulties with the liquor question.

EXPENSIVE RUBBER

According to figures submitted by the United States chamber of Commerce the advance in the price of crude rubber last winter and spring cost the manufacturers of rubber goods the sizable sum of $160,000,000. This extra burden,in compliance with the law of supply and demand, was passed on to the consumer, principally the automobile user.

The responsibility for the increase take his chances in putting forth any objection to the submission of a question to the World Court.

Then, if a question involving immigration or the Monroe Doctrine came up, the United States could be taken into court against its will if a majority of the other nations so decired. And as all European nations would be on the other side of immigration and questions affecting the Monroe Doctrine it would be easy to get a majority against us.

Of course the European diplomats said nothing about this phase of the question in their discussions, and passed their little reservation, so they declared, for the purpose of giving us "equal rights" with the members of the league council.

But it we accepted the reservation to the fifth reservation there is little doubt what would happen in case our interests clashed with the interests of Europe. It is gratifying therefore to know that the American government in its executive and legislative branches, sees through this wily little European game and will not be drawn into the position of hanging on the end of a limb.

TOWARD A NEW BALANCE OF POWER

Dispatches from Europe leave small doubt that a new balance of power is in the making if it has not already been achieved. Some thirteen months ago, according to reliable, information obtained in Paris, the Italians were seeking to effect an alliance between Germany, Russian, and Italy. Premier Mussolini, the most active figure in the European scene, attempted to bring that about but failed.

Meanwhile a Franco-German alliance has been foreshadowed in the Locarno agreements; the outline has been filled in, in part, by the agreement reached between the steel producers of France and Germany and their satellites in Belgium and Luxemburg to divide the world market and conquer. This threat has been answered, in turn, by negotiations looking toward an alliance between Britain and Italy and perhaps Russia as well. The negotiations are still as secret as negotiations conducted by Mussolini can be. The relationships between the great powers are probably still in process of crystallization.

The league of nations was supposed to supplant to pre-war system of alliances for the control of Europe, but we see small reason to suppose that this league has succeeded in its purpose. Considerations of security, economic growth, and colonial expansion are leading the powers of Europe to divide into two rival camps just as they did before the war. As soon as the alliances are definitely formed we may expect a repetition of the old story of lesser encroachments, of rivalry in armaments, of crises which just fail to lead to war, leading eventually to the crisis which does lead to war. We hope for the best, but we cannot bind ourselves to the clear implication of today's events.

The last war came as a surprise to most Americans because as a nation we had refused to admit that the European system of balances must result in war. We have had our education at a cost to this country of more than 100,000 lives and some twenty-five billions of dollars. Some of our people who understood Washington's argument against entanglements in Europe did not need the lesson and they have now been reinforced by thousands of others who have learned by experience. There remain many otherwise intelligent persons who for one reason or another cannot or will not learn. They are constantly urging us into fresh entanglements. We tried to avoid participating in the last war and succeeded for more than two years. If the leaguists, world courters and hands-across-the-sea advocates have their way, we shall be found to get into the next one the day the first shot is fired.—Chicago Tribune.

THE THEATRE

Rex Beach's thrilling novel of the Alaskan gold rush has finally been brought to screen. Frank Lloyd, who gave us "The Sea Hawk" and other fine screen dramatics, was the producer as well as director, with First National sponsoring the production. It will open at the Palace Theatre, Saturday and Sunday, October 29-30.

Dealing with the romance and the struggle that was the gold rush to the Yukon in 1897 and 1898, "Winds of Chance" presents the first accurate and big conception of the event that brought thousands of eager men and women into the Arctic to face untold hardships their lust for the precious ore.

Beach has long held first position among the fictionists of Alaska's frontier days and in "Wind of Chance" his best known characters are brought together in a closely woven adventure in the process of the transition to Dawson City and the gold country.

In giving life to the Beach epic, Lloyd has provided not only the most pretentious out-of-doors screen play of the past decade but the most truthful picturization of Alaska, during the four seasons of the year, ever brought to the screen, and his production merits every right to be considered one of the supreme efforts of the screen.

Starting at Dyea, where the prospectors landed after the slow boat trip from Seattle, "Winds of Chance" follows the trail of the sourdoughs over the treacherous Chilkoot Pass to the Summit, then Sheep Camp, Lake Linderman, White Horse, Miles Canyon and on up the Yukon to the mountain-walled boom city of Yukon and the various creeks which glitered with virgin ore.

Scenes have been made in frozen river beds and atop a mountain range at an elevation of 9,800 feet and the scenic backgrounds for the exterior action are of unusual splendor.

As an inventor Lewis Stone is a great actor.

See him in his latest screen opus,"What Fools Men," at the Palace Theatre, Wednesday and Thursday, Nov. 3-4, and be convinced.

Stone, in his histrionic guise as a man of science, has contributed vastly to the benefit of mankind—theoretically.

Among other things he has invented—

A long-distance naval gun.

A new iridescent peach-blown vase.

A telescope that penetrates new astral lanes.

A flax separator, making possible the manufacture of fine linen from waste straw.

The first three scientific achievements for call them histrionic triumpes, if you willy were scored by Stone, in order, as the naval officer in "Via Wireless," the pottery manufacturer in "The Middleman" and the astronomer in "The Masqueraders."

The final and greatest invention (and his finest impersonation of a visionary of mechanical bent) is the flax separator. People seeing the film simply can't help being convinced that the lingerie shops and haberdashers soon will be offering them wearing apparel of finest linen for the price of cheapest cheese-cloth.

"I have studied the species at close range," said Stone in discussing his new role of Joseph Greer in the new First National offering. "I have found these men geniuses at ferriting out scientific truths, wizards at devising mechanical contrivances, wholly at sea when faced with the problem of making their inventions commercially profitable. That is why the inventor is so often 'gypped' and has come to be looked upon as a figure of tragedy by the public."

"What Fools Men" is an adaptation from Henry Kitchell Webster's great novel, "Joseph Greer and His Daughter."

The Golden Age Fallacy

Why may not even a foolish idealist realize that there is no Golden Age in the future? The race will always be as it is now, except that it will gain a little in some things and possibly lose in some others. I think it possible greater buildidnuls will develop, but, so far as its success are concerned, we will never have a greater age than the present.—E. W. Howe's Monthly.

Small Railroad Cars

The smallest type of railway car is probably the push car. It is made with two pairs of wheels and a slight deck, and is used by track workers, who ride on the deck of the car. It is worked with a hand lever and can be operated at almost train speed by a few men. An inspection car having a gasoline engine for working the lever is a new form of hand car.

EUROPEAN DIPLOMACY

We have heard so many things about the snares and pitfalls of European diplomacy that some of us have come to regard this as a joke. But there are occasions when the fact is brought home to us that it is not a joke.

One of these occasions was the recent jar we got from Geneva about a reservation having been tacked on to our fifth reservation to the World Court adherence of the United States This reservation is so plain that any ordinary mind ought to be able to grasp it. It provides among other things that the court shall not, without the consent of the United States, entertain any request for an advisory opinion touching any dispute in which the United States has or claims an interest.

These are almost the exact words used and they are certainly open to but one interpretation. Yet the skilled and understanding diplomats at Genava were unable to comprehend it. After carefully considering the situation they decided that what the United States really wanted was a veto power equal to that of the other powers, and they adopted a little reservation of their own to such effect. Under this arrangement if the question of submission is decided by a majority of the council Uncle Sam would have to of course lies with the British export restricting plan. The British are able to control the markets and they have made us pay more for our rubber.

According to the internationalists we ought always to buy in the cheapest market. But in the case of rubber there is no cheapest market. The United States has been unable or unwilling to produce rubber and for that reason the supply could be cornered by foreign capitalists. The cheapest market that therefore become the only market, and a very dear one at that.

The Cuban sugar interests are unable to corner the world's sugar market. If they could do so they might easily force the American housewife to pay war prices for her sugar. But the plan is impractible. The reason it is impracticble lies in the fact that America has its own sugar production facilities. The tariff on sugar as put the American farmer into the game and he acts as a check

TARIFF CONFUSION?

We hear a lot about the tariff being the cause of high prices. But this idea is simply ridiculous on the face of it.

If butter in this country was selling at 20 cents a pound, we would not need a tariff to protect the American farmer from foreign competition.

It is high prices caused by high wages and a high standard of living which makes it necessary to protect American agriculture and industries from products produced in foreign countries at lower wages and under a lower standard of living.

With American butter selling at 50 and 60 cents a pound, we have a 12-cents a pound tariff to give it an even break with lower cost foreign production.

Canada has recently established a countervailing tariff against Australian butter, on red fruit and apricots which were being "dumped" on the Canadian market. If the tariff was considered as a business, rather than a political issue, it could be made as flexible as interest rates, and used for the purpose of stabilizing both foreign and domestic commerce, instead of disrupting them as is too often the case at prese.nt.

Winter is destructive to

ROOFS

Use ASBESTOLINE

On Your Iron or Composition ROOFS

The very best waterproof and weatherproof Asphalt of high elasticity thoroughly fabricated with ASBESTOS fibre constitutes its ingredients and perfects a product that meets every climatic requirement or change—a substance that neither expanding heat or contracting cold can effect

The application of ASBESTOLINE requires no experienced help or any elaborate money outlay for tools. A common stiff floor hand brush is all that is needed and one coat of ASBESTOLINE will save that worn-out, no-more good roof," and keep it as tight as the proverbial drum for many years.

ATTRACTIONS FOR THE WEEK

Saturday-Sunday, Oct. 30-31

"Winds of Chance." Laure, queen of an Alaskan dance hall, in whose blood there raged a veritable tempest—who wrecked men's hearts, with the toss of her saucy head and alluring smile, or threw them into the discard, broken, with the stamp of her tiny silver slipper, only at the end to fall herself a victim to unrequitted love. Most this strange and fascinating woman in Rex Beach's glowing romance of the Alaskan gold rush, with Anna Q. Nilsson, Viola Dana, Ben Lyon and Victor McLaglen.

Alko a Pathe comedy, "Mama Behave."

Wednesday-Thursday, Nov. 3-4

"What Fools Men" with Lewis Stone, Shirley Mason, David Torrence and Barbara Bedford. The 1926 Love Special. See the daring airplane elopement; 16-year old flappers; 30-year old vamps; each with a style of her own—and poor man whether he's six or sixty he falls sooner or later. He can't get away when love has a hold—and sometimes girlies will make a fool of him until the right one comes along. A picture for men who think they know their women—and for women who tease their men. Also Fox News and "The Hodge Podge."

Coming Soon—

"The Lost World," a super special.

"Born to the West."

Colleen Moore in "We Moderns."

Richard Dix in "The Quarter Hack."

Bebe Daniels in "The Campus Flirt."

Shoes in Stone Age

Did Stone age men wear shoes, is an interesting question. The Stone age men hunted or tamed animals, They used the flesh of those animals for food, the furs for clothing and the leather often for sandals just as much as we do nowadays; and they made them out of leather, as we do. Only the shape was very much cruder. —Exchnage.

Selenium in Small Demand

Selenium is an element and not found native in visible quantity. It is obtained as a by-product in the electrolytic refining of copper. It is used in making red glass, electric resistances and cells for measuring light. These cells are particularly sensitive to light and many of them come under Swedish patents. The present supply of selenium is greater than the demand and it has no great commercial value.

Unprofitable Knowledge

How many things there are concerning which we might well deliberate whether we had better know them. Routine, conventionality, manners, etc.—how beautiful an undue attention to these disciplines, and hypocrisy, the mind, rubs it of its simplicity and strength, emasculates it!—Thoreau.

Club Discussions

In every club the simpler the organization, the less work involved and the greater the chance for success. Discussion and the presentation of opinions has its value but in every club, but if care is not taken, committees will soon every informed to any organization. It was a club man who said: "Well, wife, this is club night, I must go and contribute a bit."

Great Years in the Nation's History

Interesting things have happened in 1926. Commander Byrd in a Fokker airplane, circled the North Pole. Photographs taken in Europe were transmitted by radio waves to America, and published in newspapers a few hours later. Gertrude Ederle; daugeter of a New York butcher, swam the English Channel one hour faster than any of the five men who had swam it before her.

Is anything interesting going to happen in 1927. For one thing, the Youth's Companion on April 16, will celebrate its one HUNDRETH BIRTHDAY. During 1927, the Companion will contain more interesting reading than ever before during its century of successful life. Consider what you will get for $2.00, 52 issues, containing 9 book length serials, 250 short stories by the most popular authors, more than 100 special articles, a weekly section for ingenious boys, called the "Y. C. Lab," a thorough girl's department, and 52 pages for children. And in each issue, an extensive survey of current events, making it easy for you to follow the affairs of this busy world. Don't miss the greatest year of a great magazine. Subscribe and receive

1 The Youth's Companion—52 issues in 1927, and
2 The remaining issues of 1927. All for only $2.
3 Or include McCalls's Magazine, the monthly authority on fashions. Both publications, only $2.50.

The Doom Trail

A. D. Howden Smith
Author of "Porto Bello Gold," etc.

Read in the fascinating vein of romance of those thrilling events which preceded and made possible the achievements of General Wolfe and, afterwards, of George Washington and his associated patriots. Read also a pleasant love story and a splendid tale of adventure which has all the elements of frontier life when that life was at its newest in America. Read "The Doom Trail."

—PERSONALS—

The Congregational ladies will serve a public supper Nov. 10th.

Wm. J. Hogart was a business visitor in Chicago early this week.

Gustav Mielke, of St. James, is here for a few days on business.

George W. Hawthorne, of Bay City, was a business visitor in Charlevoix last Tuesday.

Patrick O'Donnell, of Grand Rapids, spent a few hours with friends here last Tuesday.

Mr. D. H. Hinkley of Petoskey, was a business visitor in Charlevoix during the first of the week.

R. N. Washburn was one of the spectators at the Michigan-Illinois game in Ann Arbor last Saturday.

Eugene DeVincent, of Rogers City, clerk of Presque Isle County, was a business visitor in Charlevoix Saturday.

Dr. and Mrs. Lawson Baxter and daughters Alice and Charlotte of Central Lake, were Charlevoix visitors last Friday.

Mayor Bergeon is driving a new Pontiac car, a purchase recently made through the local agency of Simmons & Hlock.

R. F. Sloan spent two or three days here early this week attending to local business interests, returning to Muskegon later.

If troubled with headache or in need of glasses, consult Dr. J. Leaky, the optometrist, when he comes Monday, November first.

Frank A. Kenyon returned to Mackinac Island this morning, following a day or two spent here looking after business interests.

Mesdames F. E. Cartier and Joseph Foster, visitors at points in southern Michigan for several days, returned to Charlevoix last Monday.

Mr. B. A. Wicking of Detroit, representative of the Detroit Trust company, is in Charlevoix today on business connected with the probate court.

Mrs. James Cook, of Marion township contemplates spending two weeks vacation with her brother Hyron Bowdish in Flint, and will leave for that place Saturday.

The Congregational Ladies Aid Society will hold the regular monthly meeting on Wednesday, Nov. 3, at 3:30 p.m. at the home of Mrs. Robert MacDonald, Dixon avenue.

Mr. and Mrs. Olaf Nordrum and son Ilmer, motored to Detroit last week where they spent several days with Everez Nordrum and family, returning to their home here last Monday.

The League of Women Voters (local unit) has elected officers as follows: Chairman, Mrs. James Simmons; Vice Chairman, Mrs. H. Saltonstall; Secretary-Treasurer, Mrs. H. H. Jacobs.

Jud A. Markham is acting as city mail carrier on the route covered by Dan McSaub, the latter being away on a vacation which he is spending somewhere in the north on a hunting and visiting trip.

Mrs. Frank A. Kenyon came down from Mackinac Island early this week and anticipates spending a month or more with her sister, Mrs. Flora M. Lewis, 223 Clinton street, and other relatives and friends.

Mrs. R. H. Armstrong, who attended a meeting of the State Federation of Women's Clubs, as representative of the Charlevoix Shakespeare club, held at Ann Arbor last week, returned from the southern trip Tuesday.

Mr. and Mrs. Elbert Goddard and Mrs. Nellie Wood motored in from Lincoln, New Hampshire, last Wednesday, and will remain in Charlevoix for a time at least to visit friends and attend to local business interests.

The Ray Whitley home located in the southwest part of the city, damaged to some extent last Thursday. The fire originated from an oil stove in the kitchen where practically all damage to the property was confined.

Mrs. Rose Anderson and Dean Serogie were married by Rev. C. E. Pollock Wednesday afternoon at five o'clock, at the parsonage. Both are residents of Bay Shore and will continue to make their home there.

Mr. and Mrs. Clarence N. Bride are spending a short vacation by taking a motor trip to points in southern Michigan. They left for Grand Rapids last Friday and may include Detroit in the cities visited before returning.

Professor and Mrs. B. L. D'Ooge of Ypsilanti, were visitors in the north part of the state last week and took advantage of the opportunity to spend the week end at their cottage located on the grounds of the Belvedere Club.

Judge Guy E. Smith of Gladwin, presided over a very short term of circuit court—the regular October session, early this week. Court opened Monday and closed Tuesday, making for an abbreviated session in this branch of county business.

Charles H. Emrey has vacated the office formerly occupied by him in his real estate operations in the K. of P. building and is now "carrying on" with offices in the salesroom of the building owned by Adeline Holly, formerly occupied by the Polly Kay Shop.

O. R. Barber, for some years past engaged in mercantile business at Central Lake, has met with heavy financial reverses such as prevents him from meeting his obligations, as a result his place of business is closed and creditors have attached some of his holdings in an effort to enforce collection of their claims.

Mr. and Mrs. L. P. Adams and two daughters Misses Nellie and Mary, according to present plans start for the South Saturday of this week with Miami, Florida, as their point of destination. The trip will be made as in former seasons, by automobile with frequent stops at interesting points for sight-seeing and pleasure.

The Ironton Congregational church will hold an important business meeting Tuesday evening at 7:30, at the home of Mr. and Mrs. Geo. McMullen. All members of the church and congregation are urged to be present to hear the report of the pastor and treasurer on the progress of the building enterprise and to make plans for the future.

Two thousand five hundred thirty-five bushels of potatoes harvested from a single field containing eight acres is the reported crop on the farm of W. H. White Company in the eastern part of this county. Of these there were 1562 bushels of certified seed; 580 bushels table stock; 300 bushels selected seed and 68 bushels No. 2 stocks, making for a record crop even in this potato growing section.

Raking of autumn leaves is a pastime irksome to a few persons, a pleasure to others, that is being indulged in by the majority of home owners in this city at the present time. Due to recent frosts a large number of shade trees in this region have dropped their foliage, this being particularly true of maple and beech but the staunch oak seems to be more hardy, many of the later trees showing but little change in either foliage or colorings.

High wind and heavy seas kept the S S. James E. Sanford in port one or two days during the past week. The blow last Monday was exceptionally strong and steady for hours and at times approached near the hurricane stage and Monday night for an hour or more was particularly fierce. Tuesday was more moderate and under these conditions the Sanford left St. James soon after the noon hour for Charlevoix, making the trip in her usual time.

Mr. and Mrs. L. W. VanDusen of Lansing are spending the week with relatives and friends in this locality. At the same time Mr. VanDusen is enjoying the shooting in this region and has had the pleasure of picking, if some ringneck pheasants, a few partridge and rabbits; enough to make the sport worthwhile, especially to a business man whose work keeps him in an office the major part of the time.

Mr. and Mrs. L. VanDusen and family are spending the week-end in this locality.

Birds are not plentiful in this region according to reports made by local sportsmen who have been in the woods including in their favorite recreation since the opening of the season for legal shooting early this week. The theory is advanced that the scarcity of game birds is largely due to hunters who disregard the closed season and the closer to the season the more shooting has prevailed for some weeks prior to the opening of the season. There are not a few individuals that the hunters theory is not without foundation.

John Webster narrowly escaped a most serious injury last Monday when one of his feet came in contact with a rapidly moving circular saw that he was operating in sawing wood at his farm home. A pile of sawdust had accumulated under the machine and it was when Mr. Webster was removing this obstruction that his foot came in contact with saw, which clipped off the ends of his toes and to some extent mangled the foot. Surgical attention was at once given to the injury with prospects at this time being decidedly favorable for quick healing of the wound

The business property occupied by the Emrey Clothing House, for some time past owned by Hugh B. Parry of Detroit, again changed ownership last Saturday when it was taken over by J. M. Foster and Charles Hamlin, local business men. In the deal just closed Messrs. Foster and Hamlin transfer title to property owned by them near Norwood, consisting of a tract of land with an an acreage of 97½ on the shore of Lake Michigan with about one half mile of shore line frontage. The business block taken over by Messrs. Foster and Hamlin is desirably located for mercantile purposes while the property given in exchange is considered very desirable for resort promotion purposes; comparing in this regard favorably with other shore properties in this region

Automobiles from distant points, many of them from other states, are seen in this section daily regardless of inclement weather, and no small proportion of the whole number are carrying a considerable quantity of camping equipment, suitable for use during long trips either in the woods or open country, comfortably for those enjoying trips of this character. In the machines traveling through the country they are about evenly divided as to route taken north or south. That vacationists making trips of this nature miss some of the comforts of home life is no doubt true, at the same time they probably meet with exciting and unusual experiences, pleasant or otherwise, that for the time at least enables them to get a full measure of enjoyment out of their trip, otherwise the tourist camper would not pass this way even in moderate numbers.

The nice residence property located on Dixon avenue, for some years past owned by Mrs. R. W. Paddock, changed ownership last Saturday and Mr. O. D. Hammond holds title to this desirable reedence property. There are two cottages on the lot—Nestor and Newplace, either of which are suitable for a permanent home or rental purposes.

Mr. and Mrs. P. A. June accompanied by Mrs. Detweiler of Petoskey, motored to Flint last Monday to attend a ministerial convention now in session in that city. They will return some time this week in order that the pastor of the Church of God can be with his congregation at the usual Sunday service.

The Congregational Woman's Missionary Society recently elected the following officers for 1927: President, Mrs. E. E. Cross; 1st Vice President, Mrs. John Burns; 2nd Vice President, Mrs. Fred Cartier; Secretary, Mrs. A. F. Bridge; Asst. Secretary, Mrs. H. D Dean; Treasurer, Mrs. E. L. Dawson

Hard to Overwork Brain

By habitual study you may overtax your physical endurance; you may damage your bodies if you neglect to exercise them, but you certainly will not damage your brain. You will never succeed in using your brain up to its full capacity. There is no greater nonsense talked than that brain work may bring on "brain-fever."—Sir Arthur Keith.

Where We Get "Cobwebs"

Cobwebs are webs spun by spiders or larva of certain insects. "Cobb" is derived from an old English word meaning spider. Most of the cobwebs which hang from the ceilings of houses are made by very small spiders which are seldom seen by those living in the houses.—Pathfinder Magazine.

Birds' Boarding House

Bird boarding is a commercialized department of one New York pet shop where as many as two birds are kept during the summer season at a charge of $1 a week.

W. R. C. CONVENTION

The Twelfth District Convention of W. R. C. auxiliary of the Grand Army of the Republic, was held in Charlevoix on the 20th and 21st days of October, 1926, and was very well attended by visitors and delegates from eight cities of the district, namely: Petoskey, Harbor Springs, Wolverine, Boyne City, Traverse City, Honor, Cheboygan and Charlevoix.

The Convention was called to order by the District President, Susie Beebe, of Harbor Springs, on Wednesday morning in the L. O. O. M. hall.

A very fine dinner was served at noon to about fifty-six guests and was very much enjoyed. The meeting was again called to order for the afternoon session by the District President at two o'clock. Business meeting resumed, followed by the election of officers for the coming year which are as follows:

District President, Catherine Wagner, Traverse City; District Senior Vice President, Rose Kibbe, Charlevoix; District Junior Vice President, Martha Wheaton, Cheboygan; District Treasurer, Ella Montgomery, Petoskey; District Chaplain Martha Straley, Cheboygan; National Delegate, Susie Beebe, Harbor Springs; Alternate, Sadie Mallory, Cheboygan; Assistant District Officers are: District Secretary, Louis Powers, Harbor Springs; District Conductor, Jessie Van Tyren, Traverse City; Assistant Conductor, Sadie Olson, Traverse City; Color Bearers, No. 1, Eva Norton; No. 2, Minnie Pinch; No. 3, Louise Nichols; No. 4, Sybil Scott, all of Wolverine; District Guard, Adeline Hollinger; Assistant Guard, Charlotte Wakefield, both of Charlevoix; Musicins a nd Press Correspondent, Grace Trautman, Petoskey. Meeting adjourned until following day.

A delightful supper was served after which the Convention went to the Methodist church where the Campfire was held and a very pleasing program was enjoyed. It opened with a prayer by Rev. Mattson of the Congregational church, followed by solos and recitations. A greeting by Attorney Rollo L. Lewis and a fine speech by Rev. C. E. Pollock was especially enjoyed by the ladies, for when they are called Queens they surely know how to appreciate it. The Campfire closed with prayer by Rev. B. G. Mattson, and the entire program was greatly enjoyed.

Thursday morning, Oct. 21st, the Convention was called to order by the District President at 10:30, and at 11:00 o'clock there was a very welcome interuption by the belated arrival of the Department President of Michigan, Mrs. Elizabeth Stephens of Port Huron. Owing to business and the change in the train schedule she was unable to get here at the beginning of the convention, but as that was impossible we were very glad to have her with us for even one day, and she was very welcome.

The Department President was asked by the convention to install the newly elected officers and the 12th District Convention is the only Convention that has been honored, thus far, by her doing so, and we appreciate it.

After she installed the officers there were questions of importance that were answered by her, and were very interesting and instructive.

The Department President went to Traverse City to inspect the Corps there before returning to her home in Port Huron.

The Convention closed with sincere thinks to Baxter Corps and with appreciation of their hospitality and all present are sincere in their hopes of meeting again next year in Traverse City, the place of the next convention.

GRACE TRAUTMAN,
Press Correspondent.

Government Scientists Locate Mystery of Sea

Washington.—Government scientists, mapping the Pacific coast with the aid of newest development in delicate sound-recording instruments, have stumbled upon a mystery of the sea—apparently the bulk of an unknown ship, reaching on the bottom of the ocean.

Lieutenant Commander T. J. Maher, directing the coast and geodetic survey's recharting of the coast north of the Columbia river in Washington, reported the find to the Commerce department.

To determine the important question of how deep the ocean was, sounds were dropped from Maher's ship, the Guide, which exploded on reaching the bottom. The noise was recorded on shore by a delicate instrument called the hydrophone, with a delicate noise receiver located in a buoy out in the deep water, designed to eliminate the noise of the breakers on the shore. The exact position of the ship and the depth of the bottom was established with the records at hand.

"Joker" in Law Makes Checks Under $1 Illegal

Washington.—Any person in the United States who writes a check for less than one dollar, intending it to circulate as money or to be used in lieu of lawful money, faces a heavy fine, a jail sentence or both.

The revised statutes contain this "joker" which is avoided every day by citizens and government officials alike. Uncle Sam's big law book reads as follows:

"No person shall make, issue, circulate or pay out any note, check, memorandum, token or other obligation for a less sum than one dollar, intended to circulate as money or to be received or used in lieu of lawful money of the United States; and every person so offending shall be fined not more than $500 or imprisoned not more than six months, or both, at the discretion of the court."

Treasury officials said several different views of the law can be taken and if the usual interpretation is given it is seldom violated. Frank White, United States treasurer, has signed thousands of checks from 1 cent to 99 cents, it was admitted.

CHURCHES

Church of God

Rev. Paul L. June, Pastor

Services held at the Church of God chapel on W. Hurlbut ave. We have changed the time of the services beginning Nov. 7th. Will go back to the time preaching first then Sunday school at the above date. We have made the change for the convenience of members living in the country and for those who may have children.

Next Sunday Oct. 31, regular Services as we have had them:

Sunday School 10 o'clock.
Morning service, preaching, 11 o'clock
Young Peoples meeting 6:30 o'clock.
Prayer Meeting, Wednesday evening at 7:30 o'clock.

The janitor and the preacher are going to have a good meeting. Come and see for yourself.

On Nov. 11-12-13, there will be held at the chapel an assembly meeting. This is for the benefit of all who may be interested. A number of ministers will be present. Various topics will be discussed.

Nov. 14, the regular fall revival will start and continue indefinitely. J. C. and Edith Millspaugh from Sullivan, Ill. will be the evangelists. They have had 14 years experience in revival and pastoral work. They have traveled over most of the Southern and Midwestern states including Michigan and Canada. The Singing Evangelists will be here. There will be lectures given from two biblical charts 15 feet long. It will be real interesting to hear these lectures. Come, for you will be well satisfied.

The Sewing Circle will meet Thursday afternoon with Mrs. Emily Sandol, 305 May street.

Methodist Church.

C. E. Pollock, Pastor.

Junior and Senior church with sermon and worship at 10:30 a. m.

Preaching by the pastor at Greensky Hill Methodist Episcopal church at 2:30 p. m.

A particularly significant feature service at 7:30 p. m. It will feature some of the splendid work done by the Boy Scouts in their regular test lessons. Parents of the boys have a special invitation to attend. The pastor's sermon will have for its subject, "An Old Testament Scout."

The Epworth League will meet for its hour of study at 6:30 next Sunday.

The change of evening service hours will occur the first Sunday in November.

Congregational Church

Rev. B.G. Mattson, D.D., Minister

The pastor will preach at the morning service, 10:30, on "The Cost of Sincerity." Sunday School follows the morning service. The Young People's meeting at six thirty and evening service at seven thirty at which the pastor will resume the story of Christianity's Struggle with Heathenism. The subject of the address will be "The Christians Facing the Roman Tribunal."

Mid-week service is held every Thursday evening at 7:30.

Christian Science Society

Sunday service, 10:45 a.m., Subject, "Everlasting Punishment."
Sunday School 12 o'clock.
Wednesday evening service

GIVING SOMETHING

His Wife—I've joined the Lucy Stone league. Would you mind if I dropped your name and resumed my maiden name?

Mr. Longwed—Not at all. I'd be tickled to death to have something exclusively my own.

Leftovers

"What should a bride do with leftover meats?"

"Make fash."

"And with the left-over hash?"

"Croquettes."

"And then what?"—Louisville Courier-Journal.

Plain Cook Wanted

Mrs. Neighbor—I advertised for a plain cook last week, but didn't receive a single reply.

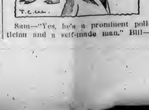
Mrs. Nextdoor—Take my advice and advertise for a good-looking kitchen fairy, and you'll be overrun with applications.

Girls

"You take Dolly with you when you buy a new hat?"

"Yes. If she likes one I never buy it."

MACHINE MADE



Sure—Yes, he's a prominent politician and a self-made man." Bill—"I always thought he had been made by the machine."

An Irish Pessimist

"I tell ye, Pat, hope is a great blessing."

"Well, I dunno. If it wasn't for hope none of us would iver be disappointed."

Modern Efficiency

"How was that lecturer who was to speak on 'Self-Management?'"

"He didn't come. His manager canceled the date."—Oil Weekly.

On the Station Platform

"I've waited four hours for this train."

"Trains must be late sometimes," said the station agent.

"Yes, and it wouldn't wait four minutes for me."

Scarcity

"One has very few friends in this life," said the misanthrope.

"Yes," answered Miss Cayenne, "I suppose that is one reason why a friend is so likely to be overworked."

Calls Tanlac Wonderful

Mother Recovers from Serious Condition Caused by Nervousness, Gastritis, Fainting Spells. Strength and Health Restored by Tanlac.

Many women endure pain and suffering needlessly. As Mrs. Mary J. Bauer, man, 376 E. North St., Galesburg, Ill., mother of 2 children, recently said: "I was badly in need of relief when Tanlac came to the rescue.

"I was so nervous I couldn't sleep. I

Choking and dizzy spells with a depressed and sluggish feeling all of the time made life almost unbearable. Often I ached from head to foot, and hardly cared whether school kept or not.

"I read of what Tanlac had done for so many people and began taking it. This wonderful tonic cleaned out my system. I now eat everything without a sign of trouble and sleep like a child, and can do my work without tiring. Thanks to Tanlac."

Tanlac, nature's own remedy made from roots, barks and herbs according to the famous Tanlac formula, is sold by your druggist. Get your first bottle today—and enjoy strength and good health! Over 40 million bottles sold.

From the big-headed man's viewpoint this is a tiny world.

The strongest principle of growth lies in human choice.—George Eliot.

When You Catch Cold Rub On Musterole

Musterole is easy to apply and works right away. It may prevent a cold from turning into "flu" or pneumonia. It does all the good work of grandmother's mustard plaster.

Musterole is a clean, white ointment, made of oil of mustard and other home simples. It is recommended by many doctors and nurses. Try Musterole for sore throat, cold on the chest, rheumatism, lumbago, pleurisy, stiff neck, bronchitis, asthma, neuralgia, congestion, pains and aches of the back and joints, sprains, sore muscles, bruises, chilblains, frosted feet—colds of all sorts.

To Mothers: Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

Pretty Things that are Made at Home

THE KITCHEN CABINET

(©, 1926, Western Newspaper Union.)

WHAT satisfaction there is to the hostess who knows that everybody is having a good time at her party. And what fun to listen to the ohs and ahs of the guests as they smile merry over the cunning party favors, for favors have so much to do with the success of one's party.

Now that the fall and winter party season is just beginning, it is high time for those who plan to entertain to get busy at making up a collection of pretty favors. Here's a new idea—harmonica favors for the men and rose pincushions for the ladies. Try it and see how beautifully it will work out. For the harmonica, cover little boxes with white crepe paper, painting on it a face with water colors. Make wire arms, black feet cut out of mat stock, dress in emerald green tissue. Study the little figure shown just in this group as to just how it should look. When each male guest starts to play on the little harmonica, he found in the box, no question as to the fun and din which will follow.

The rose pincushion takes form of a dainty little basket filled with flowers, just as you can see at the top to the right in the picture. Make seven little tissue paper rosebuds with soft cushionlike centers. Shape these into bouquet and set them in a paper muffin cup, attaching a paper-wound wire handle. Into the hearts of the roses stick a few pins just as a suggestion to the recipient as to the use of this little flower basket.

It is always more difficult to think of favors for men than for women. The fantastic beetle which is pictured second at the top is exceedingly clever, especially if laid flat with its wire legs sprawling out in every direction. Its body is really a cigar held in place by coils of wire or rings of pasteboard if preferred.

In this group is also a cigarette favor. A comedian face is painted on an oval piece of cardboard. The ruffle of tissue pasted around it is one and a half inches wide. A green feather trims the hat.

The Japanese lady carries some chosen article back of her parasol. There is also a halloween figure shown here dressed in pumpkin-yellow paper.

For our hats, our wraps, our frocks, our table linens, also belts. With this is interworked for blouse and lining gorgeous silks and metal cloths.

As a trimming for crepe and satin dresses self-colored velvet is a most popular scheme. The velvet spouts in tiers and horderings.

Quite the latest and most charming dress style note is the chiffon velvet evening frock in lively colorings. A very beautiful Agnes model is shown in the picture. Melon pink chiffon velvet is the medium for this exquisite creation. The V-neck and the profuse skirring are outstanding features. The panels are embroidered in pearls.

Very effective is the sleeveless low round-neck black velvet frock. Such a dress will prove at once a luxury and an economy, in that with change of accessories it can be transformed in appearance and thus do duty for many a social occasion. A deep lace or flesh-colored georgette cape-collar is suggested. It would be well also to have made to order a pair of detachable pink crepe sleeves. Removable and gayly embroidered peasant sleeves would prove effective also—or without any accessories, except costume jewelry and a shoulder bouquet, the sleeveless black velvet gown is a happy possession.

The last word in fashion is the pastel-colored chiffon velvet two-piece frock for sports wear. It is styled similar to the crepe jumper-and-skirt models so popular during the summer. Plaid velvet tunics are registered for smart daytime wear. Brocaded chiffon velvet is also fashionable for the dressier afternoon frock.

JULIA BOTTOMLEY.

(©, 1926, Western Newspaper Union.)

Some Pretty Favors.

Chiffon Velvet Evening Gown.

Silver and Mist

For the young girl, a dance dress of silver lace and white tulle is a suitable expression of her youth and innocence. The simple round neck line and bouffant skirt is a strictly feminine style in this type of frock.

Caracul Retains Its Favor

Caracul is again stated for a decided vogue this winter. It is especially smart in cocoa brown, shades, although gray is also much in evidence.

High Crowns

Hats are high of crown and wild of brim. Most of the crowns are soft cased by a draped or tucked surface. The brims droop more than in the old-fashioned sailor.

Red and Blue for Youth

Smarty costumes for the younger girl exploit the vogue of navy blue, brightened with touches of red. Almost invariably the hat repeats this combination of colors.

THE KITCHEN CABINET

Nothing is easier than fault-finding, no talent, no self-denial, no brains, no character are required to set up in the grumbling business.

GOOD THINGS WE LIKE

We in America are coming to know more about the value of mutton and

are learning how to appreciate and prepare it. In England it is one of the favorite meats; Scotland has long known its value.

One of the first essentials to good-flavored mutton is of course well-fed and cared for animals, then the next to careful butchering. The butcher who skins the animal must see care that his hands which have touched the wool and become oily never touch the meat.

If the cook, when the meat comes from the market to her, will carefully remove all the skin it will take with it every trace of the often objectionable woolly flavor.

Saddle of Mutton.—Wipe the meat carefully, sprinkle with salt and pepper and place on a rack in a dripping pan; dredge the meat and the bottom of the pan with flour. Bake in a hot oven one and one-fourth hours, basting every fifteen minutes. When carving, cut thin slices parallel with the back bone, then slip the knife under and and separate the slices from the ribs. Serve with:

Currant Mint Sauce.—Separate into small pieces two-thirds of a glass of currant jelly, but do not beat it. Add one and one-half tablespoonfuls of finely chopped mint leaves and the shavings from the rind of one-fourth of an orange.

Russian Salad.—Arrange a bed of lettuce in a salad bowl. Pour four to six tablespoonfuls of olive oil over the lettuce and toss lightly with a fork. Add one and one-half tablespoonfuls of finely chopped mint leaves and the shavings from the rind of one-fourth of an orange.

Almond Bread.—Make a sponge at night with one quart each of water and gluten flour, add a yeast cake dissolved in a little water and let rise over night. In the morning add two teaspoonfuls of salt, one cupful of blanched almonds, finely chopped and enough gluten flour to mold. Knead well, mold into loaves and bake when light. This makes two loaves. Graham flour may be used most acceptably by those who are not obliged to use it in their diet.

Practical Good Things.

We are coming to the season when a hot drink after a cool ride will be welcome.

Grape Juice and Marshmallow—Add the juice of a lemon to a pint of grape juice and let it come to a boil, adding a stick of cinnamon and half a dozen cloves. Strain into glasses and add two marshmallows to each glass, cut into quarters. If the grape juice is rich a cupful of water may be added. This is a nice drink for skaters as it can be taken in thermos bottles and kept piping hot.

In spite of the decision which the good old bread pudding has to endure, it is still a favorite in many homes.

Bread Pudding.—Take one and one-half cupfuls of milk, one-half cupful of sugar, two slices of bread buttered and one egg. Beat the egg and add the sugar; when well mixed add the milk slowly, beating all the time. Place the buttered bread in a baking dish, pour over the milk and egg; the bread will rise to the top of the pudding dish, making a crust. Allow it to stand one hour, then bake in a hot oven long enough to set the custard. Serve with cream and sugar or a hard sauce.

Ice Box Rolls.—Take a cake of dry yeast, cover with a cupful of lukewarm water and soak until well softened, then add four tablespoonfuls of flour and mix well. Let stand over night in a warm place. In the morning add another cupful of water, a cupful of sugar and a cupful of shortening—lard is best as it keeps sweet better than other shortening. Mix with enough flour to knead; do not add as much flour as for bread, but enough to handle well. Now place in a bowl and set at once into the ice box. The next morning take out a part of the dough and mold into rolls or buns, as many as are needed. Set to rise in the room temperature and by night they will be ready to bake for the evening meal. If wanted at noon set near the heat to force the rising. There will be enough raw mixture for several bakings and if kept on ice the last will be as light as the first.

Old-Fashioned Vegetable Soup.—Get a veal knuckle and have it cracked so that all the marrow will be exposed. Treat a good beef shank in the same way. Place all the bones and meat in a large kettle, cover with cold water and bring to a simmer and let simmer for two or three hours. Now add a carrot diced, a piece of celery root finely minced, an onion or two, a small turnip cut into dice and a half cupful of chopped cabbage, then add a few diced potatoes. Cook with a tomato or two cut into bits until all the vegetables are tender, then serve piping hot.

Nellie Maxwell

World Must Be "Shown"

The world does not want to know what you think you can do; it waits for you to show it what you can do. It is achievement that counts. It is even chary of taking the will for the deed—though good intentions may come in the sight of Heaven.—Exchange.

Noise Costs Big Sum

Blowing whistles on railroad locomotives costs $5,000,000 a year in fuel, water and energy.

TWO FAMOUS WOMEN BORN IN SAME YEAR

Queen Victoria and Lydia E. Pinkham

MRS. ANNA MCHENNY.
1003 E. PLUM STREET, MARSHALL, ILLINOIS

Marshall, Illinois.—"After my second child was born, I never saw a well day for five years. My father was selling his druggist about my condition, and the druggist insisted that father take a bottle of Lydia E. Pinkham's Vegetable Compound and have me try it, as it had helped his wife. I had given up, but to please father and mother, I commenced taking your medicine and in a week I had begun to feel better. When I passed through the Change of Life, I was taking the Vegetable Compound and had no trouble of any kind."—Mrs. Anna McHenny, 1003 E. Plum St., Marshall, Illinois.

Another Woman Helped

Philadelphia, Penna.—Mrs. Caroline Nagy, of 2717 Sears St., in a recent letter to the Lydia E. Pinkham Medicine Co., says that after her child was born she was in a very weak condition. She could not seem to regain her health and went to her mother for advice. She told her to try Lydia E. Pinkham's Vegetable Compound, as it had helped her when in like condition, and it has helped her mother also. So Mrs. Nagy started taking it. She felt better after taking the first bottle,—after taking six bottles her weakness and other troubles disappeared, and she is never done praising the Compound.

In some families the fourth generation is learning the merit of Lydia E. Pinkham's Vegetable Compound.

Jazz Age Is Thrifty

Bankers at Portland, Ore., have come to the conclusion that, regardless of the jazz age and the tendency to installment buying of luxuries now considered necessities, there is a steady gain in thrift habits. Bank deposits for the first six months of the year gained $9,000,000, of which more than two-thirds, or $6,000,000, was a gain in savings.

Stomach Disorders

are decidedly unpleasant.

THE DOOM TRAIL

by ARTHUR D. HOWDEN SMITH

AUTHOR of PORTO BELLO GOLD ETC.

WNU SERVICE COPYRIGHT by BRENTANO'S

LIKE living in the present and watching a vivid reconstruction of the past, is this stirring tale of the early settlement of northern New York and the Great Lakes region. A romance of the fur trade and its effects upon England, France and the American colonies. Presents such picturesque and powerful personalities as Governor Burnet, Cadwalader Colden and the great chiefs of the Senecas, Mohawks, Onondagas and other tribes, and fictionally, the sinister Andrew Murray in the days before the author made him a pirate and celebrated him in that other thrilling story, "Porto Bello Gold."

* * * *

This Splendid Historical Romance will be carried as a Serial in

The Charlevoix Sentinel

Beginning Next Week. Read It.

"We Serve Michigan"

This Railroad Plant of Ours and What it Means to You

AMERICAN railroads are hauling more freight than at any time in their history.

They have averaged over a million loaded cars per week during the current year.

This service consists in moving commodities from the point of production to the one of consumption.

It is a tremendous work that has been done and it establishes a new high transportation record for the world.

That service has been performed with regularity, uniformity and dispatch.

Through these, the business of the country has been given added impetus.

It has been estimated that through the improved service a saving of one and a half billions of dollars per annum has accrued to the people of the United States over the service that obtained in 1920.

This sum represents the advantages gained through the orderly manner in which our railroads are now functioning.

Our railroads have attained the highest record for the average daily movement of freight cars ever reached, and, likewise the best performance in use of fuel.

So much for the new record of the railroads of the United States.

THE plant, which comprises the railroads that serve Michigan's varied industries, has contributed its share in this proud national achievement, and in the saving of one and a half billions of dollars, through lessened inventories carried by our business institutions and made possible by the accelerated service. This has been achieved, too, while facilitating the even flow of production as well as the orderly diffusion of commodities.

Michigan has received great tangible benefits, since it is now a veritable beehive of industrial activity.

Michigan will continue to progress only so long as it's railroads continue to enjoy the undivided support of the communities they serve.

Michigan people, as a whole, farmer and manufacturer, preacher and teacher, office employee and laborer, are cashing in through this new outlook on transportation, so vital to the public weal and welfare. Our people will continue to cash in only so long as this understanding is maintained.

We have much to gain — the people and the railroads alike — in prolonging this understanding.

We can keep Michigan in the vanguard of economic importance only through the continued expansion of our industries and by keeping our railroads just ahead of the country's transportation needs.

MICHIGAN RAILROAD ASSOCIATION

ROAD BUILDING

SOUTHERN STATES SPEED ROAD WORK

That the southern states are rapidly forging to the front in the construction of new paved motor roads is indicated in reports from the state highway departments of the sixteen states of the South which show that under their direction a total of $170,000,000 is available for new roads this year.

Including the construction work already under way by counties and townships the sums being spent in the South this year for road improvements will aggregate approximately $400,000,000. In the new construction the bituminous types of pavement predominated and construction this year will outstrip any year heretofore.

In Texas last year $3,800,000 was expended for actual maintenance and $500,000 worth of equipment was purchased. Kentucky built 400 miles of improved highways last year at a cost of $10,000,000 and will expend $7,000,000 this year. South Carolina's last year's program involved the expenditure of $5,000,000 for maintenance and new construction. Approximately $7,000,000 is available for 1926. More than $30,000,000 in road projects are under contract in Missouri and $20,000,000 worth of contracts have been completed.

West Virginia completed last year 658 miles of roads and 24 bridges at a cost of $15,800,000 and carried over uncompleted projects luvolving $9,500,000 into this year. Arkansas expended $9,000,000 for new roads last year. Approximately $10,000,000 will be available this year. A 5,000-mile system is maintained by Georgia. Florida in 1924 awarded contracts totaling $4,400,000 and constructed 350 miles of roads. Expenditures for highways last year in Mississippi aggregated $4,550,000.

Contracts awarded in Tennessee last year aggregated $10,500,000 and plans adopted provide for the continuation of construction. Louisiana expended $7,000,000 and completed 600 miles of all-weather highways. This year $8,000,000 is available. North Carolina is steadily advancing its big highway program. In Alabama a total of $13,000,000 of $25,000,000 worth of road bonds have been sold and the remaining $12,000,000 will be put into roads in the year 1926. The Oklahoma state highway department in the first year of its reorganization shows construction under way valued at $10,000,000.

Wisdom of Federal Aid Policy of Government

In view of the question raised in some quarters as to the wisdom of the federal aid policy of the government, here are a few figures that will enable the situation to be viewed from a new angle.

Since 1918 motorists as a class have paid the federal government in the form of excise taxes on automobiles and parts the sum total of $779,585,-339. Since the beginning of federal aid in 1917 the government has actually expended $276,940,407 as its share for the construction of federal aid highway projects, according to figures compiled by the Lincoln Highway association.

This means that the government has expended less than 36 per cent of the amount of motor vehicle revenue paid by the motorists as a class into the coffers of the Treasury department. At this rate the government still owes the motorists some $503,070,032. With this balance sheet there can be little doubt that they will line up 17,000,000 strong for confirmation of the federal aid policy.

They have already footed the bill.

Types of Road Surfaces

In the commonwealth of Australia and also in France, other trade of various types of road surfaces have been made, asphaltic and bituminous forms of road construction have been adopted. It is a curious feature of asphalt that the bitumen, no essential ingredient, is obtained from crude petroleum from which also is obtained the motor spirit used by the very vehicles whose wheels play a large part in the wear and tear of the roads.

Good Roads Hints

The government gave the states $111,000,000 to buy build 11,200 miles of new roads. This is a record. An additional 12,500 miles is being completed.

* * *

The mileage of surface roads in the United States is nearly the 500,000-mile mark. In addition to surfaced roads, a considerable mileage has been graded and drained according to engineering standards.

* * *

More than half the roads of Brazil are suitable to automobile traffic.

* * *

The state highway department plans on eliminating the so-called "dead mile" in Gratiot county. This is located about four miles from Greensburg, Pa., where seven persons have been killed and many injured.

* * *

A census taken by the state highway department shows that the average traffic over the Lincoln highway in Wyoming during the present year was 474 vehicles per day.

* * *

Requires Good Looks to Teach in Frisco

San Francisco.—Good looks, personality—plus the cultivated mind, are requirements that must be present in every teacher of today, or the whole purpose of her work will be defeated, and of the first two, the greatest is personality, according to Joseph Marr Gwinn, superintendent of public schools. "Personality is more influential in shaping the character of a child than the words of the teacher," he said.

"We have given our children beautiful school buildings, with choice paintings on their walls, and pleasing surroundings.

"The teacher is the most important piece of furniture in the schoolroom—the object on which the eyes of the children are most often fixed. Why should she not be pleasing to look upon?

"Little children are like unadvanced adults—they see the externals first, and form of estimate on automobiles and parts the sum total of $779,585,-339. Since the beginning of federal aid in 1917 the government has actually expended $276,940,407 as its share for the construction of federal aid highway projects, according to figures compiled by the Lincoln Highway association.

Charleston Ban Decreed in Mexican Dance Halls

Mexico City.—The department of health has issued orders forbidding the dancing of the charleston in public dance halls. The ground taken is that it constitutes such violent exercise that it is likely to cause hemrt failure.

The department order adds that the dance is ugly and ungraceful, that it consists of contortions and the loosening of joints, which are prejudicial to health, and that it is antagonistic to all artistic appearances.

The department's control is only over dance halls to which admission is charged. It has, however, appealed to cafes and canteens of all kinds and halls to abandon the charleston for the specific reasons.

Uncomplimentary

Little Dolly knew all about the hand organ and its accompanying monkey, for she had been amused by them frequently in the street.

When she heard a church organ for the first time she watched the organist long and earnestly. Finally the absorbing sight of the blower, who was pumping up and down in the background.

"Mother!" she exclaimed, "that's the biggest monkey I ever did see!"

LEGAL NOTICES

Order for Publication—Appointment of Administrator

STATE OF MICHIGAN—The Probate Court for the County of Charlevoix.

At a session of said Court, held at the Probate Office in the City of Charlevoix, in said County, on the 25th day of October A.D. 1926.

Present: Hon. Servetus A. Correll, Judge of Probate.

In the Matter of the Estate of Anna Monington, deceased.

Margaret Widdifield having filed in said court her petition praying that the administration of said estate be granted to petitioner or to some other suitable person.

It is Ordered, That the 18th day of November A.D. 1926, at ten o'clock in the forenoon, at said Probate office, be and is hereby appointed for hearing said petition;

It is Further Ordered, That public notice thereof be given by publication of a copy of this order, for three successive weeks previous to said day of hearing, in the Charlevoix Sentinel a newspaper printed and circulated in said county.

SERVETUS A. CORRELL,
Judge of Probate.

27-3t.

MORTGAGE SALE

Default having been made in the conditions of a certain mortgage executed by Guy Pearl and wife, Marion Pearl, of Charlevoix, Michigan, unto Charlevoix State Savings Bank, a Michigan Corporation of Charlevoix, Michigan, dated May 21st, 1924, and recorded in the office of the Register of Deeds for Charlevoix county, Michigan, May 22nd, 1924, in Liber 64 of Mortages, on Page 113, on which mortgage there is claimed to be due at the date of this notice the sum of $534.22, including the principal sum due with interest, together with an attorney fee as provided by statute and no suit or proceedings at law having been instituted to recover the money secured by said mortgage, or any part thereof, and whereas, the taxes required by the statute to be paid on said mortgage were duly paid prior to the recording thereof.

Now Therefore, Notice is given that by virtue of the power of sale contained in said mortgage and of the statutes made and provided, said mortgage will be foreclosed by sale of the premises therein described, or so much thereof as may be necessary to satisfy the amount then due thereon together with the costs and expenses of the foreclosure, including the attorney fee provided by statute, at public auction, to the highest bidder therefor, at the front door of the Court House in the City of Charlevoix, Charlevoix county, Michigan (that being the place where the Circuit Court for the County of Charlevoix is held), on Saturday the 18th day of December A.D. 1926, at eleven o'clock in the forenoon on that date.

The premises described in said mortgage being the land and premises and property situated in the City of Charlevoix, County of Charlevoix and State of Michigan, viz: Lots seven and eight excepting the north fifty feet of Lot seven of J. Milo Eaton's addition to the Village (now city) of Charlevoix, Michigan, according to the recorded plat thereof.

Dated September 15th, 1926.

MORTGAGE SALE

Default having been made in the conditions of a certain mortgage made by Irene E. Young, of Charlevoix, Michigan to Sarah Jane Myers, of Charlevoix, Michigan, dated the 28th day of November A.D. 1922, and recorded in the office of the Register of Deeds for the County of Charlevoix and State of Michigan, on the 29th day of November A.D. 1922, in Liber 51 of Mortgages, on page 465, whereby the power of sale contained in said mortgage has become operative, on which mortgage there is claimed to be due at the date of this notice the sum of One Thousand Twenty Three Dollars, for principal and interest and taxes paid by the mortgagee to protect his security, and an attorney fee of Twenty-five dollars, provided for in said mortgage, and no suit or proceedings at law having been instituted to recover the moneys secured by said mortgage or any part thereof;

Now, Therefore, By virtue of the power of sale contained in said mortgage, and the statute in such case made and provided, notice is hereby given that on Friday the 24th day of December A.D. 1926, at ten o'clock in the forenoon, I shall sell at Public Auction to the highest bidder at the east front door of the Court House in the City of Charlevoix, in the County of Charlevoix, State of Michigan, (that being the place where the Circuit Court for said County of Charlevoix is held), the premises described in said mortgage, or so much thereof as may be necessary to pay the amount due on said mortgage, with seven per cent interest, and all legal costs, together with an attorney's fee of Twenty five Dollars, as provided by law and as covenanted in the herein, the premises being described in said mortgage as follows, to-wit:

Lands and premises situate in the Township of Hayes, County of Charlevoix and State of Michigan, viz: East Half of the Northeast Quarter of Section Two, Township Thirty- three North, Range Seven west containing Eighty acres of land according to the return of the Surveyor General.

Dated, September 29th, 1926.

HIGH SCHOOL BAND

John Ter Wee, the Music Instructor, Highly Recommended

With twenty five high school students, as members of a musical organization is in process of development and under favorable condition will in the not distant future be ready to entertain with a regular band with musicians from the Charlevoix high school.

John TerWee who received his musical instruction in Holland and a graduate of Leyden will have full charge as instructor of the orchestra organization, comes with high testimonials, satisfactory to the school faculty and will proceed to drill his student aggregation to a degree of proficiency that will at least equal that of other high school bands in this region.

It is quite probable that the present membership will be increased in the near future as several students have signified their desire and intention to join the new musical organization. Thus far the students taking the musical course under Mr. TerWee are enthusiastic and in this regard they will be more and more pronounced as they make progress in their new work.

Several high schools in this region have turned out some excellent bands, not a few members of which attained a high degree of proficiency and notoriety in the musical world and with proper instruction and strict application that their new work is altogether likely that some members of this class will reach a high state of perfection and attain prominence as masters of music.

SILAS ALCOX PASSES

Was An Invalid for Many Years.

Funeral service was held for the late Silas Alcox at the First Methodist Episcopal church last Saturday with the pastor C. E. Pollock officiating. Mr. Alcox was a long time member of the I.O.O.F. and this local organization attended the service and conducted the regular fraternal service for the deceased brother.

He was a native of Canada but came to this region in an early day and at the time of his death was one of the pioneer settlers of Charlevoix.

In earlier years Mr. Alcox was an expert mechanic and worked at his profession until his health failed some ten or twelve years ago, since which time he has been an invalid and for the major part of the time confined to his home where his wants were administered by his wife, Sarah Alcox, until her death but a few weeks ago.

The date of his birth is given as January 1st, 1850 and place Province of Essen, Poland. When young he came to the United States and was for several years located in Cleveland, Ohio. About forty years ago the family left Cleveland, moving to Charlevoix and for about ten years resided on a farm in Hayes township where they successfully endured the hardships and privations of pioneer life and at the same time by the exercise of thrift and energy made some financial progress. Following the ten years experience as a pioneer farmer Mr. Orlowski retired from that vocation and soon thereafter engaged in business in a small way in Charlevoix, a business he continued to give his personal attention until about 3

Young Man Fatally Injured at East Jordan on Sunday

A young lad, Allen Green, 16 years of age, met death Sunday afternoon at the plant of the Michigan Iron & Chemical Company. Young Green was struck by one of the Chemical company ore trucks which knocked him down and then passed over his body causing an injury that proved fatal shortly after the accident.

He was a sophmore in the East Jordan high school and a member of the high school band.

A call was made for the ambulance to bring the unfortunate lad to the Charlevoix hospital for treatment. This made the trip to East Jordan in charge of Chester Sno but arrived too late to be of service as the boy passed away but a few minutes before the ambulance arrived in East Jordan.

SEVRIN ORLOWSKI PIONEER, PASSES

At Family Home, 801 Bridge Street, Wednesday Afternoon.

Sevrin Orlowski, for upwards of forty years a continuous resident of this region and for more than thirty years closely identified with business affairs in Charlevoix passed away at the family home, 801 Bridge street, Wednesday afternoon at 5:00 o'clock.

While it was known generally that Mr. Orlowski was not a well man, nor had he been for some time, there was but few if any persons, except intimate members of the family, who considered his condition critical and even the family members had come in constant attention, were wholly unprepared for his death coming as it did suddenly, with but little warning given by the silent messenger. Just time for family members near at hand and a few friends to gather at the bed of death and there surrounded by his beloved and faithful wife, children and grand children he lapsed into unconsciousness, an instant later the great mystery for him was solved and an exhalted soul had passed on to enter a new realm and meet its Great Creator.

The date of his birth is given as January 1st, 1850 and place Province of Essen, Poland. When young he came to the United States and was for several years located in Cleveland, Ohio. About forty years ago the family left Cleveland, moving to Charlevoix and for about ten years resided on a farm in Hayes township where they successfully endured the hardships and privations of pioneer life and at the same time by the exercise of thrift and energy made some financial progress. Following the ten years experience as a pioneer farmer Mr. Orlowski retired from that vocation and soon thereafter engaged in business in a small way in Charlevoix, a business he continued to give his personal attention until about 3

GREEN AND ENTIRE

Republican Ticket Elected—Little Interest Taken Here.

The election is over, but Calvin Coolidge still stands. This is the one positive and determined fact which the election returns have made clear. In various parts of the country, Republican party leaders had their ups and downs, but it is agreed by all that the hold which the president has on the people remains unchallenged. In explanation it can be said that this has resulted largely from the fact that while the election was for national officers it was fought throughout the country on local issues.

The political wise owls from now on will, of course, attempt to see signs and read omens with regard to Coolidge in '28. It can be said now that what is to happen in '28 is of the very slightest concern to President Coolidge. His gospel of doing the work of the day is one which he practices as well as preaches, and for that reason he is not wasting either time or energy in over prospects of possibilities. It can, however, again be said that even the wisest of forecasters is in danger of ruining amuek if he attempts to forecast adversely on Coolidge by reason of any of the recent happenings.

No great amount of enthusiasm was shown by electors last Tuesday in this city, nor as a matter of fact in the county, but few of the whole number of voters taking advantage of their right of franchise. Approximately one third of the voters cast their ballots, the big majority not taking the time to go to the polls. Throughout the campaign there has been a lack of interest exhibited by electors, due to the fact that but one ticket—the republican—was represented in county politics.

In the three wards in Charlevoix only 235 votes were cast for governor and of these Fred W. Green was favored with 207 and his opponent with 48.

For representative in congress Frank E. Bolton received 223 and Robert H. Wright 48, the same three precincts, a total of 271.

For state senator Calvin A. Campbell received 234, Leon W. Miller 32, total 266.

Amendments to the constitution relative to increase of compensation to representatives in the state legislature, 28 were in favor of the proposition while 142 voted No.

Terms of office of county sheriffs 120 were in favor and 115 opposed the measure.

Creation of Metropolitan districts the vote 65 supported the proposition while 138 voted No.

Condemnation of excess land and property for boulevards, streets, etc., 73 voted yes and 135 No.

Revision of the constitution—29 electors favored the measure and 150 cast their vote in the negative.

"Just Bickes Dancing"

There is a lot of posing and nonsense about art, but it is rarely that the artist, and never the really great artist, who is guilty of it. He leaves that sort of thing to the half-educated and insincere "admirer" of art, who is always trying to see in painting or sculpture something esoteric, something else than the attempt to create grace and beauty on canvas or in stone or bronze.

In his life of the late John S. Sargent, Mr. William Howe Downes tells how the great painter took the wind out of one inflated person of that sort, an ecstatic lady who was admiring in the artist's presence one of his pictures which represented several classical figures frisking about in a green glade.

"Oh, Mr. Sargent," she giggled, "tell me, what does it mean?"

"Just bickes dancing," replied Sargent gravely.—Youth's Companion.

Where Water Is Scarce

When residents of Fairbanks, Alaska, need drinking water, says Popular Mechanics Magazine, they hang a card in the window such as is used here for ice orders, the "water man" hauls his conveyance, a wagon in summer and a sled in winter, and delivers the desired quantity. The supply is mainly derived from deep wells and in cold weather a stove is placed near the tanks to keep the water from freezing. Most of the water for other purposes than drinking is obtained from a central plant and flows through underground pipes near steam conduits. In winter the fire plugs are housed in tight boxes and heated by steam so that a water supply will be assured even on the coldest days when the mercury drops to 60 degrees or more below zero.

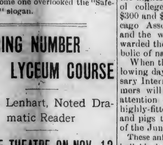
Public Supper

The Congregational Ladies Aid will serve a public supper at the church next Wednesday from 5:30 p. m. on. Tickets 50.

$1.00 Silk and Rayon Hose, wonderful value, all colors at Holley Gift Shop.

Automobile Mix-up on the O'Brien Hill Last Monday

Three machines, two touring cars and a truck, the latter loaded with coal were more or less damaged when they collided on the cement highway near the top of the O'Brien hill early this week. The driver of one of the touring cars passed the truck both southbound evidently failed to observe the approach of a car moving north, an instant later they met practically head on. Before the smoke of battle cleared the loaded truck crashed into the stalled and entangled passenger machines, making for a three cornered mixup with the loaded truck having the best of the argument. Luckily the latter machine was traveling at a low rate of speed, otherwise the damage would have been greater with the chances of occupants of the passenger cars escaping serious injury practically out of the question. Evidently no one overlooked the "Safety First" slogan.



Selma Lenhart

OPENING NUMBER LYCEUM COURSE

Selma Lenhart, Noted Dramatic Reader

PALACE THEATRE ON NOV. 12

An Experienced Entertainer —Season Tickets On Sale for Five Numbers

Selma Lenhart, noted dramatic reader, who reproduces a complete play in an evening, will appear here on the Lyceum course, Friday evening, Nov. 12. In presenting an entire cast of widely different characters, Miss Lenhart has the dignity necessary for the impersonation of a man and the grace of a woman, is surprisingly competent in simulating lighter characters.

Many critics who have heard the platform's most famous monologists venture the strong assertion that she excels her contemporaries in the matter of differentiating her characters. Miss Lenhart's presentation of "Erstwhile Susan" has been one of her most popular parts. It is the play which she usually gives in communities where she has not before appeared. However, her repertoire includes other plays of equal popularity and a series of delightful miscellaneous sketches, which will be given if requested.

It was difficult to convince a patron who is totally blind, that he had not heard a play given by a complete company, when she recently presented "Erstwhile Susan" in his home town. Miss Lehnan received from this enthusiast the following letter which she considers one of the most gratifying rebates ever tendered her: "It was my special privilege recently to hear you read "Erstwhile Susan." Although I am totally blind, your characters were portrayed so distinctly that I have a definite picture in my mind of each character and its action. I did not miss a line, word or syllable of any character. Your articulation was wonderful, and your impersonation of each was really inert. I especially wish to compliment you on your Pennsylvania Dutch dialect. In short, if I had not had absolute confidence in the friends who accompanied me, I should not have believed that one person was entertaining. Your work was truly marvelous."

The following comments from Miss Lenhart's home city, Pittsburg, is given:

"At the Schenley Theatre last night Selma Lenhart achieved a brilliant success. Her work ranks with that of artists of the highest calibre."—Leader.

"Last night Miss Lenhart was given another hearty reception. She is highly gifted in her art and will long be remembered for her personal charm."—Press.

DAIRY MEETINGS

To be Held in Charlevoix County on November 9 to 12

A series of Dairy Feeding schools will be conducted in the county for assistance to farmers with their many problems connected with dairy production. J. G. Wells, extension specialist in Dairying will be present and is particularly fitted to discuss dairy problems, as at present he is in charge of the dairy work in the upper peninsula and has had considerable practical experience with the dairy industry all through the state.

The following meetings have been arranged, fast time:

Nov. 9—12:30 p. m. farm of Martin Howard, Chandler township.

Nov. 9—3:00 p. m. farm of Robt Rumsel, Hudsonville.

Nov. 10—9:30 a. m. farm of John Struthers, 1 mile east Greensky Hill.

Nov. 10—1:30 p. m. farm of Albert West, Bay township.

Nov. 11—9:30 a. m. farm of Geo. Ver Snyder, south of Charlevoix.

Nov. 11—1:30 p.m. farm of Lawrence Boss, Marion township.

Nov. 12—9:30 a. m. farm of Terry Barber, south of Boyne City.

Nov. 12—1:30 p.m. Charlevoix county Poor Farm.

Now is the time of year to make your plans for the winter. What to feed and how much to feed are two of the big questions. These and many other subjects will be discussed by Mr. Howard. All meetings will probably be held in the dairy barn, where the atmosphere will be pure dairy.

Silver Guarantee

Sterling silver is silver of standard fineness. The British government legally fixed the fineness of its silver coinage in the proportion of 925 parts of silver to 75 of copper. Such silver is known the world over as sterling silver. A silver dollar contains 371.25 grains of silver and 41.25 grains of alloy.

Love Can Be Cruel

As a race becomes more practical with age, the credits and debits of love are gone over with more candor and wisdom. Some of the debits are very hard on both sides; some say women with women than with men. Still, love sometimes slays a man pretty hard, too.—E. W. Howe's Monthly.

HONORED AT SHOW

Farm Youth Center of Attention at International

Rosy-cheeked boys and girls of the farms of America—the pride of today and the hope of tomorrow—will be given distinguished recognition at the International Live Stock Exposition in Chicago, Nov. 27 to Dec. 4. Starting before the official opening of the Exposition, the Non-Collegiate Live Stock Judging Contest will occupy the limelight Nov. 26, when over 20 state champion junior judging teams will meet in the arena to decide the national title.

The three individuals ranking the highest will receive agricultural college scholarships of $500, $300 and $200 offered by the Chicago Association of Commerce and the winning team will be awarded the handsome trophy symbolic of nation-wide supremacy.

When the curtain rises the following day on the "27th Anniversary International," the future farmers will again be the center of attention as they lead their highly-fitted baby beeves, lambs and pigs to compete in the classes of the Junior Contest.

These animals were the outstanding individuals of the county and state fairs this fall and have been carefully groomed for the supreme struggle.

A special auction will be provided for their sale on Friday, Dec. 3. While the junior live stock titles are being decided in the arena, farm boys and girls will also be exhibiting samples of corn in the junior classes of the International Grain and Hay show for the honor of being crowned the Corn Prince or Princess of 1926.

The Fifth National Boys' and Girls' Club Congress, conducted by the National Committee on Boys' and Girls' Club Work in cooperation with the U. S. Department of Agriculture and the State Agricultural Colleges, will be held in connection with the International. An entire building on the Exposition grounds has been dedicated to club work and this will be filled with junior activities.

RETIRES FROM HARDWARE CO.

L. G. Cannon, Here for Past Year, Takes Position in Detroit

Mr. Lester G. Cannon for the past year connected with the Charlevoix Hardware Company, severed his relations with this old established, well known business house last week and announces that he has taken a position with an established business institution in Detroit where he will be actively engaged in the future.

Mr. Cannon came to Charlevoix about a year ago from Crystal Falls to assume the management of the business of the Charlevoix Hardware Company and he immediately devoted his time and efforts in the interest of the company since he has been here. He will be the scene of his action in the future as Mr. Cannon considers the larger field

Former Charlevoix Pastor is Charged with Serious Acts

Notices of an unenviable character relative to Rev. Clarence W. Long, former pastor of the First Congregational church in Charlevoix, appeared in several state papers a few days ago from which it appears that relations between one or more families have been seriously disrupted, a divorce suit started or threatened and an action for damages brought against Mr. Long in the sum of $25,000.

The notices state that Mr. Long has resigned his pastorate at Harrison thereby cancelling his service with the church at least temporarily. We are skeptical concerning the charge brought against the pastor as to reprehensible acts. We have seen no published denial of the offence with which he is charged, but hope that he is found fully with a positive defense that will absolve him from the accusations made thereby perpetually removing this present annoyance and embarrassment.

"First Book in English"

The oldest book in the English language is alleged to be "De Proprietatibus Rerum," by Bartholomew de Glanville, who wrote in the Fourteenth century. It was translated into English by Trevisa after it had been printed in folio form by Caxton in 1480, and probably the translation was made from the Caxton folio. The translation was published by Wynkin de Worde in 1497.

"Eat Lots of Apples"

The American people lead the world as apple eaters. Although we fall considerably short of the proverbial "apple a day," we average about three apples a week per capita. The United States stands second as eaters of apples. They consume an average of two pounds a week per capita." The consumption of this fruit is comparatively light in Europe.

Over twenty kinds of harmless bacteria have been found in the mouth of a human being.

THE WORLD'S GREAT EVENTS

ALBERT PAYSON TERHUNE

(© by Dodd, Mead & Company.)

Tamerlane

A LAME man, sinister and swarthy of face, and magnificent of attire, stood in a chariot, drawn by five other men. Behind the chariot, trundling along in an iron cage, was a gorgeously attired prisoner.

The sinister charioteer had a strong, ugly Mongolian face. He lashed the five luckless men who drew his chariot, and at every lash his watching army applauded. For he was Timour the Lame, commonly known as Tamerlane, conqueror of the East. And the five men who drew his chariot were kings whom he had captured and whose countries he had subdued. The man in the cage was Bajazet, the once mighty sultan of Turkey.

Tamerlane was in the full glory of his career. He chose the foregoing way to celebrate his achievements.

In 1330 this unprepossessing, ugly son had been born to the petty chief of a Mongol tribe near Samerkand. The lad was brought up more as a student than as a warrior, for before he was twenty his wild fighting blood, inherited from his great ancestor, Genghis Khan, broke out and he threw aside his scrolls and inkhorn for sword and helmet.

Handicapped by lameness, in a country and age when physical perfection counted for far more than now, he nevertheless, by sheer force of character, won early fame as a general and tribal chief. Of his father's death, murdered by Hussein and made himself sole chieftain, little by by no means settled in boundless ambition. He had fabricated a connection worthy of Charlemagne or Caesar, and with his scimitar proceeded to carve his name upon the map of the world.

He began at home, by changing the semi-savage lawlessness of his own people into an established, firm government, worthy of a much later day; then started on his carefully prepared campaign of world conquest. Persia was the first object of his attack. It is an odd fact that nearly every great conqueror of early times, from Alexander to the Tartar, chose that powerful but ill-disciplined land as a primary goal of his achievements. Tamerlane swept Persia, his fiery tribesmen carrying all before them. He captured the Persian king and laid the country waste.

Cheered by his easy victory over a country so much stronger than his own, the Mongolian leader next subdued all of Central Asia and girded his conquests from the Great Wall of China to Moscow. Had he been a European his first ben would doubtless have been to conquer Europe, and he would have set the East for a later exponent—but to his Oriental mind Asia seemed the most important part of the earth. It was, perhaps, due to the influence of Tamerlane's that Europe was not overrun by the Eastern hordes and Western civilization and character shaped forever with Orientalism. Europe was probably reserved for subsequent invasion—an invasion which fate averted.

Rumors of the wealth of India reached Tamerlane. In 1398 he marched his vast armies thither, plowing a bloody furrow to the Ganges, overcoming all opposition, and looting millions of dollars' worth of native treasure. Here his native barbarity cropped out more strongly than ever before, and he left behind him a name for needlessness that is to this day. For instance, Delhi the richest house he massacred 100,000 prisoners.

The Turks, under Sultan Bajazet, were menacing the Eastern empire. Learning of his ambitious that any other man should emulate himself as an invader, Tamerlane hurried back from India and defeated Bajazet at the Turkish doubtless. Like an army of ants he crushed Bajazet's power, Turkey, seizing Syria from the brave Mamelukes, and, on June 20, 1402, meeting Bajazet's army on the plain of Angoria. After a fiercely contested battle Tamerlane routed the Turks and took Bajazet prisoner. Not content with subduing Turkey, he vented his hate against Bajazet in a unique fashion. He caused a great iron cage to be built, into this he thrust the beaten sultan and carried him about as a sort of human menagerie exhibit until the broken-hearted prisoner died of shame.

The conqueror next planned a mammoth expedition against China. When he should thus have subdued the last Asian power he would be free to turn his attentionsto Europe. But, in 1405, on the eve of the Chinese campaign, he died, and the "yellow peril" was checked.

Had Tamerlane been wholly a barbarian his feats would have been less far-reaching in their effect on the history of the world. But he was also a patron of science and the arts, a promoter of culture at home and abroad, an author and a man who built up civilization even while he destroyed nations. By forwarding the arts of learning, as much as by wholesale slaughter, he left an indelible mark on all the Orient.

Chief Crazy Horse, of the Sioux tribe, one hundred four years old and one of the few survivors of the Custer massacre, was an interesting visitor to the national capital. He arrived from Philadelphia by airplane.

Flood Have Hard Life

Travelers report the Siberian dog lives under unpleasant conditions during the long hills, being in danger of starvation at my time, as food supplies are exhausted on tours with the sledges, and yet the dogs there do not bark like domesticated dogs, but have a long wiffling howl, much like that of the wolf.

These dogs live on frozen fish during the summer, but in the winter they must do much active hustling for their supply.

Dead Barberries Spread No Rust

By Use of Salt or Kerosene It Has Been Found Possible to Kill Bushes.

(Prepared by the United States Department of Agriculture.)

Results at the end of the eighth year of the campaign against the common barberry as summed up by Dr. F. K. Kempton, in charge of the project for the United States Department of Agriculture, show that practically all of the 12,180,021 bushes, sprouting bushes, and seedlings found in the 13 states have been destroyed. By the use of salt or kerosene it has been possible to destroy the bushes beyond any possibility of future sprouting.

Completing Surveys.

Under the direction of state leaders in the 13 states, 250 field men and squad leaders started on the present season's work July 1. Ten men in Michigan, Ohio, Illinois and Montana are attempting to complete the preliminary survey in those states. A thorough second survey is being carried on in Minnesota, Wisconsin, North Dakota, South Dakota, Iowa, Nebraska, Colorado, Wyoming and Indiana, where many escaped bushes are being found in natural and planted wooded areas. Many local areas of rusted grain have been found during the season and, in gractically every case, nearby barberry bushes were found to be the source of infection.

Bushes and Seedlings Left.

No doubt common barberry bushes and seedlings still exist in the barberry eradication area, says Doctor Stakman, but they have been found and destroyed. It is evident, he says, that barberry eradication is a material aid in the solution of the stem-rust problem. Stem rust has been controlled in the eastern group of the barberry states by removal of the bushes, and epidemics seem to be less severe generally in the last few years. In many localities the elimination of barberries has already so reduced stem-rust losses that it is again possible to grow wheat where formerly it had been abandoned because of rust.

Young Chickens Spread Tuberculosis to Swine

It is a general belief that chickens under one year of age seldom develop tuberculosis to the extent of becoming spreaders of the disease. Hence, it is thought that cutting all birds above that age from the flock would soon eliminate the disease.

To determine whether or not this belief is well founded, Dr. T. S. Hicks of the Department of Agriculture, in charge of tuberculosis-eradication work in the state of Michigan, conducted a general culling campaign, covering all poultry flocks in one township in the state. Every chicken on 151 farms was individually examined, or a total of 15,377. From this number 1,494 were received as culls, and 86 were found upon post-mortem examination to be infected with tuberculosis. The disease was demonstrated to exist in about 38 per cent of the flocks examined. Three generated cows were kinds under one year of age. This was conclusive proof to Doctor Hicks that young chickens as well as old are a source of danger in spreading tuberculosis to hogs and should be removed along with the rest of the flock when infection is discovered.

Burning Weeds in Fall Will Kill Their Seeds

Fall is the best time to burn weeds. The burning of weeds is a practice that should be universally followed in places where they cannot be used for grass manure. The use of fire destroys the seed as well as the unsightly dead plants.

Where weeds are burned in the fall there is less chance for the seeds to be scattered than later, when the plants have died from frost. It is a good plan to mow the weeds close to the ground while they are still green and immediately rake them into piles. In this way the seeds will not be rattled out. The piles should be made small—half-one-size of a man's rock—so that they will dry out quickly and burn up completely. Set fire to the piles, and see that the leaves that are raked into the coals when the center has burned.

FARM FACTS

Star boarders should get the gate—can the hen that won't lay.

As soon as the risk of fall work is over it is a good plan to start filling up the barns for winter.

The breeding of a cow cannot be changed, so if she produces more milk the roughage and grain must account for it.

Infertile eggs will keep much better than fertile eggs.

No wise farmer objects to new labor-saving devices when tried.

Alfalfa seed grown in Africa and in Chinese and Russian Turkestan has been declared by the secretary of agriculture unadapted for general agricultural use in the United States.

A legume in the rotation at the Kansas Agricultural college increased the wheat yield 6.5 bushels per acre and raised the protein content of the wheat 1.7 per cent.

The entire United States has only 777 cow test associations with 827,653 cows under test. Denmark, one-fifth the size of Iowa, has 1,083 associations and 412,000 cows under test.

Noxious weeds occupy one-tenth of the entire cropping area of Iowa, or a total of about 2,000,000 acres, according to M. H. Barrie, plant disease and weed specialist with the extension service of Iowa State college.

HOW TO KEEP WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

INTERNATIONAL HEALTH CONTROL

THAT health and the prevention of disease is a matter of international importance may seem strange to many. As long as the people in one nation or in one country are well and happy, why should they worry about what is going on in other nations?

It is only the student of disease, who takes a broad view of the whole world in point of space and over hundreds of years in point of time, who realizes how closely bound together are all the races of men in fortune or misfortune. In a recent issue of the American Journal of Public Health Dr. Hugh S. Cumming, surgeon general of the United States public health service, tells some interesting facts about the influence of disease on Europe's history and development.

And what do you suppose Doctor Cumming considers the most important historical event in the history of the Christian era, as far as health is concerned? The rise of Mohammedanism in Arabia in the Seventh century and its spread all over the Far and Near East. Why? Because the spread of the religion in Asia, Africa, and later on in southeastern Europe, started great trains of pilgrims from all over the eastern world to Mecca and Medina, the holy places of Mohammedans in Arabia. Pilgrims from both carried with them the germs of Asiatic cholera. Pilgrims from China and Manchuria brought bubonic plague, while pilgrims all over the world meeting these infectious and becoming themselves infected, brought home to their own countries these strange, mysterious and fatal diseases and also spread the germs all along the routes of travel.

So the control of these most dangerous diseases became a matter of controlling travel and reducing the danger of a ship, pilgrim laden, bringing into a healthy seaport a new and dangerous disease.

So quarantine was first invented to protect the Mediterranean seaports and quarantine was a nuisance and a burden to the ships of all nations. This, and the fear of disease, were the motives that as early as 1852 brought the nations of the world together in an international sanitary conference in Paris.

Since this time, now nearly 75 years ago, frequent international conferences have been held. The one in Paris in 1903 resulted in the organization of the first real world's league, the International office of public health in Paris, which since that time has sent monthly bulletins to all the nations telling them, thus forming a league of nations against man's common enemy, disease.

BLINDNESS FROM AUTO-MOBILE EXHAUST

MUCH has been written lately about the dangers to life from carbon monoxide gas, the gas that is found in large amounts in automobile exhaust. Little so far has been said about the danger to sight, probably because it is not so great as in the case of the amount of gas inhaled is enough to cause death, the patient dies of poisoning before blindness has time to develop.

With the increasing number of automobiles and the growing carelessness on the part of drivers in allowing carbon to accumulate in their cylinders, deaths and blindness from this cause will probably become more numerous.

Carbon monoxide is produced by incomplete combustion of any substance containing carbon. Most gases have some other gas in combination, so that the victim is warned of their presence. The dangerous thing about carbon monoxide is that it gives no warning, so that the person exposed may and often does become unconscious without ever knowing what has overcome him.

As is usually the case with new devices, no one realized that there was any danger connected with automobiles. When automobiles first came into use there were not enough machines on the street at any one time to pollute the atmosphere seriously. Today, with twenty-five million autos and trucks and with ordinary illuminating gas in constant use for cooking, heating and lighting, with coal stoves and hot-air furnaces in constant use there is a possibility of almost anyone being exposed to the daily inhalation of small amounts of carbon monoxide. And as Dr. W. R. Murray of Minneapolis points out in an article in Minnesota Medicine, repeated and regular inhalation of small amounts over a long period may be more dangerous than a single exposure to a large amount.

Doctor tests on employees in garages, service stations and auto repair shops show that it is possible for a worker to be exposed during a car for one hour, in an open and well-ventilated garage to absorb a dangerous amount of gas.

The usual symptoms are headache, dizziness, stomach disorders, tiredness, palpitation of the heart and mental disturbances. Eye symptoms may vary from dullness of vision to complete blindness.

Started Something

In regard to the attitude of some of our former allies, Senator Smoot of Utah remarked:

"A gentleman called me handsome yesterday," said a rather elderly lady to her minister. 'Do you think it is sinful of me to feel a little proud of the compliment?'

"'Not at all, ma'am,' replied the minister. 'It's the gentleman who is the sinner, not you.'"

Women, Why Not Enjoy Health?

Racine, Wis.—"I used Dr. Pierce's Favorite Prescription and it was a most wonderful benefit to me, because it gave me health and strength. It is an excellent tonic and nerving and should be given a fair trial, I believe, by every woman who is not enjoying the very best of health."—Mrs. Eleanore Pagel, 822 Racine Street.

All dealers. Large bottles, liquid or Tablets $1.35 and 65c.

Planted a Great Forest

Boy scouts played an important part in the New York state tree-planting program during the last spring and summer, according to a report of the conservation commission of that state recently made public. New York is one of the states which has adopted a broad reforestation program and has invited private individuals and agencies to assist. The boy scouts, according to the report, planted 70,000 trees, an increase of 50 per cent over the year previous. The scouts in their increased planting kept pace proportionately with the increase in tree planting activities throughout the state.

Getting Perfect

"Well, sighed the fellow whose horse balked when, "at least I am a good loser."

"You ought to be," snarled his wife. "You have had plenty of practice."

Overdoing?

Hurry, Worry and Overwork Bring Heavy Strain.

MODERN life throws a heavy daily burden on our bodily machinery. The eliminative organs, especially the kidneys, are apt to become sluggish. Retention of excess uric acid and other poisonous waste often gives rise to a dull, languid feeling and, sometimes, toxic backaches and headaches. Then the kidneys are not functioning perfectly is often shown by burning or scanty passage of secretions. More and more people are learning to assist their kidneys by the occasional use of *Doan's Pills*—a stimulant diuretic. *Ask your neighbor!*

CHAPTER I

—I—

The Fray in Mincing Lane

"Watch! Ho, watch!"

The words rang through the misty darkness of the narrow street, I thought, echoed my cloak around me and skulked closer to the nearest house-wall. Could it be possible the Row Street runners had picked up my trail again?

And a new worry assailed me. Did the cry come from in front or behind? The fog that mantled London, and which so far had stood my friend, now served to muffle the source of this sudden alarm. Which way should I turn?

"Watch! Curse the sleepy varlets!"

The houses just which I had been feeling my way came to an end. An alley branched off to the right and from its entrance echoed the click of steel—music after my own heart. The blood conned faster in my veins. No, this could be no trap such as had awaited me at the door I had stepped from the smuggler's small boat. Here was several of the city watch engaged in some desperate affray, a scrimmage with footpads, perhaps, or thieves of the Whitefriars which had sickened me.

I ran on, and took back over my shoulder and drew my sword from its sheath, as I ran down the mouth of the alley. Dimly I saw before me a confused huddle of figures that instantly parted and showed the ghostly mirk of the fog.

"Hold, friend," I shouted.

"Make haste," panted a voice from the middle of the group.

One man against a band (or assassins) So that was the story. It savored more of Paris than of the city where

PRIMARY REPEAL

Perhaps no public utterance in some time has raised more discussion than the address of Vice President Dawes before the American Legion in which he expressed serious doubts as to the efficacy of our primary system. That this address should create wide discussion is an encouraging sign as it indicates that the people are interested in the question of primary repeal. There can be little doubt that the trend of public opinion during the past few years has been running strongly against the primary. In a number of states there are proposals this year to abolish the system and in others there are mutterings of discontent over the way it works.

Mr. Dawes properly calls attention to the fact that fewer voters each year are taking part in the primary elections. It is doubtless true as he suggests that in city, state and county elections perhaps not more than 25 per cent of the voters take part in primary elections. The fact that in many states the primary is equivalent to an election clearly indicates the fact that we have now come into a condition whereby we have government by the minority.

And the most serious fact is that year by year the percentage of qualified voters taking part in the election is growing less and less. Not only is this true of the primary, but it can be said in all justice that the primary itself is the cause of the condition of apathy on the part of the voters. The primary has brought about more bitter personal warfare in politics than was ever possible under the convention system. This has disgusted a great many voters and they have formed the habit of remaining away from the primaries. Under both all our primaries, general elections and special elections the people are getting overfed on voting.

They want a rest once in a while and are taking it by ignoring the elections altogether. In a campaign came once every two years, as was generally the case in the old days, voting might come to be regarded as a privilege again. No people will tire more quickly of "too much of a good thing" than the American people, and they are showing this in the way they stay away from elections.

To say that to return to representative government in the selection of our candidates will result in widespread corruption is absurd. If we are to believe the alleged reformers who are in such vehement in defending the primaries there was never more corruption abroad in the land than at present when the primary system is pretty general. Surely conditions were worse in the day when there was an attempt at party regularity maintained by the convention system. In a great many instances conditions may have been better. At least there was less personal vilification and more attention paid to the principles in politics.

MAKE YOUR OWN FIGURES

There is abundant evidence that the American farmers are coming to see that their troubles like the troubles of the rest of us, are economic, due to natural laws and not legislation. One might go a step further and assert that most of the farmers have seen this from the first. Word comes from the southwest that a meeting of farmers recently passed a resolution to the effect that it didn't want to hear any more political speeches on the plight of agriculture. Evidently this organization believes that something else is needed than more or less visionary plans to lift the farmer by his own bootstraps. All sorts of theories have been propounded as cures for the ills of the farmer and all sorts of figures have been produced to show what is the matter with him. Most of these have been erroneous, as was a recent arithmetical exhibit tending to show how much less the farmers' dollar will buy than the dollar of the fellow in town—a set of figures which the Secretary of Agriculture branded as an absurdity. In commenting on the situation of the farmer and the tendency of tariff reformers and others to quote their own statistics to suit their own purposes, Mr. Jardine wisely said:

"Since 1921 agriculture has been going through a slow but steady process of recovery. The index of purchasing power of farm products has risen by an average of five points per year from its low point of 69 in 1921. It is true that cotton has slumped in price this fall, but it is equally true that other products of regional importance enjoy a favorable price position. In August, the latest month for which our figures are complete, such leading products as hogs, potatoes, butter and wool had a unit purchasing power even above the prewar parity of exchange.

Of course, no informed man will argue from this that the difficulties of farmers are ended nor that there are not real agricultural problems to be solved. On the other hand, no real progress can be made toward restoring full agricultural prosperity if such important matters as tariff protection or other issues of national policy are to be settled on the basis of incorrect and misleading statistical evidence."

CHANGES LITTLE

Europe has changed but little, in its political psychology in the last century and a quarter. The boundaries of the nations have changed, some countries have grown greater and others have vanished. But the American viewpoint might well remain the same. President Washington, as every American well knows, in his farewell address issued a word of warning to Americans about their mixing into the quarrels and dissentions of Europe. In the current issue the National Republic quotes a letter written by George Washington to Lafayette at a time when Washington was President of the United States. The letter, which seems almost entirely applicable today reads:

"While in Europe, wars or commotions seem to agitate almost every nation, peace and tranquility prevail among us, except in some parts of our western frontier, where the Indians have been troublesome, to reclaim or chastise whom, proper measures are now pursuing. This contrast between the situation of the people of the United States and those of Europe is too striking to be passed over, even by the most superficial observer, and may I believe, be considered as one great cause of leading the people here to reflect more attentively on their own prosperous state, and to examine more minutely, and consequently approve more fully, of the government under which they live, than they otherwise would have done. But we do not wish to be the only people who may taste the sweets of an equal and good government. We look with an anxious eye to the time when happiness and tranquility shall prevail in your country, and when all Europe shall be freed from commotion, tumults and alarms."

TARIFF FOR THE FARMER

The free traders in the United States are getting little consolation just now from the trend of public events. The prosperity of manufacturing establishments in American cities and towns and the high wages resulting for the workers, pretty well exploded their arguments so far as our manufacturing industries are concerned.

But a few months ago the so-called tariff reformers thought that they perceived a ray of light. This ray came from the agricultural situation. Immediately they began to tell the farmer that all his troubles were due to the tariff, that he was buying in a protected market and selling in a free one, and that the never would get anywhere until the present tariff law was repealed and one of the free trade or tariff for revenue only variety substituted for it.

But they have been unable to put over this argument. It was easy for the protectionist to show by the official figures based on our imports, that the farmer was receiving more protection on his products than the manufacturer. It was also easy to show that practically everything the farmer uses exclusively on the farm, is on the free list; that the cost of products on the open market prove the tariff has little to do with the retail price which the farmer and the man in town has to pay for what he buys. So the farmer was not fooled. Representative men, whom the farmers have great confidence, like Senator Capper of Kansas, said that what the farmer really needs is not less protection but more of it. and proved this by pointing out how in certain lines foreign competition from abroad is hurting the farmer in the American market.

And now we have the testimony of another prominent American, ex-Gov. Lowden of Illinois. In a recent statement he said:

"The farmer needs a protective tariff as he never needed it before. What he should have is a better method of marketing his products, by which the tariff shall be made more effective. I am more and more persuaded that the occasional surplus, which is inevitable with any farm product, must be handled through a central organization of producers if that surplus is to be prevented from unduly depressing the market. It is conceivable that a democratic tariff would reduce the general price level, but it would leave the great burden of interest and taxes untouched. The true policy is not to debase industry, but to raise agriculture to the level of industry. That policy can not be maintained without a protective tariff"

The farmer sells at least eighty per cent of his products in the American market and he is entitled to protection in that market. To repeal the tariff will not reduce the cost of living for him; it will not help in securing better foreign markets; its only result will be to give him greater competition from abroad as the tariff will not reduce the cost of living for him; it will not help in securing better foreign markets; its only result will be to give him greater competition from abroad

TARIFF FOR THE FARMER

The tariff will be an issue in the '28 campaign. It was featured in an intermittent sort of way in the '26 campaign just closed, but because of the fact that the '26 elections were local rather than national it was not brought to the front as a national issue. The battle royal, however, will come in the '28 campaign.

It will be a battle for the preservation of the American wage scale and the American standard of living. The Republican party is with the workers of the country whose activities are devoted to production, whether on the farm, in the ground or goods from the factories, and as between them and the gentlemen who deal in foreign trade it will stand by the workers. The Democrats have already scorched their fingers on this issue because they cannot deny that Baruch and Baker and other officers of their High Command started the agitation for the cancellation of debts, which was the first step toward the destruction of the protective principle which has safeguarded American industrial life for many generations.

We'll be HOME Thanksgiving - Use Long Distance

Call the homefolks by long distance and let them know you're coming. Your message will bring the greatest joy if your voice delivers it to them.

If circumstances prevent your being there in person, send your voice over the wires, and it will help to alleviate the disappointment your absence is bound to cause.

Long distance is direct, personal— and the cost is low

LAWRENCE A. DOWNS

Lawrence A. Downs has just become president of the Illinois Central Railroad company, succeeding C. H. Markham, who becomes chairman of the board. Mr. Downs, who is fifty four years old, was born at Keokuk, Iowa, and is a graduate of Pin dustrial activity. He has been with the Illinois Central since 1893, and recently was president of the Central of Georgia railroad, an Illinois Central subsidiary, and of the Ocean Steamship company of Savannah.

WHAT THEY SAY

McKinley and Protection—It was just a quarter of a century ago last month that William McKinley was assassinated in Buffalo, N. Y. So engrossed has it been in current topics that the American press has almost entirely failed to give notice to the passing of that great protectionist, who defined the American tariff system sponsored by his party then and now as a tariff levied upon foreign imports "so adjusted as to secure the necessary revenue, and which imposes the duty necessary on the foreign competing product, making it bear the burden of duty, and as far as possible, luxuries only excepted, permits the non-competing foreign product to come in free of duty.

It says to our foreign competitor, if you want to bring your merchandise here, your farm products here, your coal and iron ore, your wool, your salt, your pottery, your glass, your cotton and woolens, and sell them alongside of our producers in our markets, we will make your product bear duty—and in this way in effect to pay for the privilege of doing it."

The operation of the republican protective tariff is such as to make the competing foreign article bear the burden, draw the load, supply the revenue, and in performing this essential office it encourages at the same time our own industries and protects our own people in their chosen employments. This is the purpose and the effect of the protective tariff, championed by the republicans and opposed by the democrats. In it there is no denial of equal opportunity to any, no grant to any of special privilege to any, no save, perhaps, a special privilege to the American producer against the ruinous competition which, without the tariff protection, would be offered by the peasant labor of the Old World.—Ft. Wayne News-Sentinel.

THE THEATRE

"Grass"—It is not often that motion pictures evoke editorial comment from a newspaper. "Grass", the Paramount picture which comes to the Palace Theatre November 11th, during its trial showing in New York, proved an exception the rule. Said the New York World:

"To the person who has sourly concluded that art in art and movies are movies and never the twain shall meet, the new picture "Grass" will come as a surprise. It compels complete revision of all ideas as to what can be done and what cannot be done with the camera. It deals, to begin with, with a theme which is peculiarly the camera's theme, a theme that cannot be adequately presented in literature, drama or any of the orthodox arts—the struggle of man against nature for existence. Avoiding the pitfalls of traditional movie treatment the producers have managed to extract the maximum of effect that is in it. "

"Behind the Front"—One hundred and thirty doughboys, veterans of the World War, get their first view of "France" some months ago, while "Behind the Front" was being taken. They were under the supervision of the Veterans Bureau, and composed for the most part of men who never got overseas. In the Paramount picture, coming to the Palace theatre on November 10th, they were cast as members of a regiment of the American Expeditionary Forces by Director Edward Sutherland.

In this case, France was the Lasky ranch. A whole French village was rebuilt for the taking of many of the scenes. It was so realistic and true to those they had actually seen, that some of the men in Sutherland's direction declared "it had given them the first real thrill they'd experienced since the guns stopped firing on Armistice Day, back in 1918."

The comedy features Wallace Beery, Raymond Hatton and Mary Brian. Chester Conklin and Richard Arlen lead the supporting cast.

"Born to the West"—From prize ring to the more congenial business of playing comedy roles for the screen, marks the transmigration of a once famous exponent of the manly art of self-defense —Tom Kennedy. A decade ago Tom Kennedy was one of the foremost contenders for the heavy-weight boxing championship of the world. He never became champion, but he never barred any of the champions, when it came to meeting them in the ring.

Kennedy won enough time to successfully appear in vaudeville for two years, As manager and matchmaker of the Hollywood Legion Boxing stadium, where the movie stars go every Friday night to see the bouts, he gained a wide circle of friends. These associations inspired him to try for a screen career.

"Crook" roles in "As Man Desires," "Madonna of the Streets", and others, brought to the surface a comedy vein which reached its height in his role as top sergeant in the screamingly funny Paramount picture, "Behind the Front," which featured Wallace Beery and Raymond Hatton.

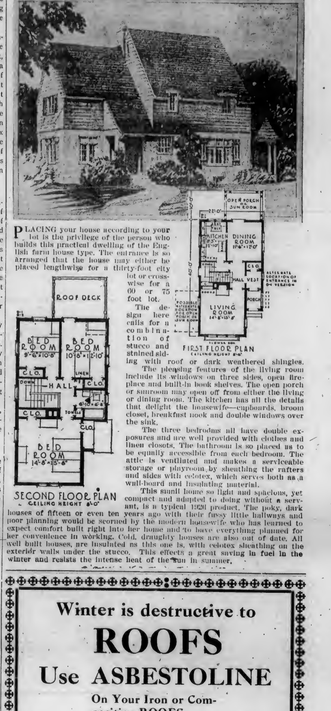
Old World Charm Meets New World Conveniences



PLACING your house according to your lot is the privilege of the person who builds this practical dwelling of the English farm house type. The entrance is so arranged that the house may either be placed lengthwise for a thirty-foot city lot or cross-wise for a 60 or 75 foot lot.

The design here calls for a combination of stucco and stained siding with roof of dark weathered shingles.

The pleasing features of the living room include its windows on three sides, open fire place and built-in book shelves. The open porch or sunroom may open off from either the living or dining room. The kitchen has all the details that delight the housewife—cupboards, broom closet, breakfast nook and double windows over the sink.

The three bedrooms all have double exposures and are well provided with clothes and linen closets. The bathroom is so placed as to be equally accessible from each bedroom. The attic is ventilated and makes a serviceable storage or playroom by sheathing the rafters and sides with celotex, which serves both as a built-board and insulating material.

This small home so light and spacious, yet compact and adapted to doing without a servant, is a typical 1926 product. The picky, dark Kennedy was one of the foremost contenders for the heavy-weight boxing championship of the world. He never became champion, but he never barred any of the champions, when it came to meeting them in the ring.

houses of fifteen or even ten years ago with their fussy little hallways, and poor planning would be scorned by the modern housewife who has learned to expect comfort built right into her house and to have everything planned for her convenience in working. Cold, draughty houses are also out of date. All well built houses are insulated as this one is, with celotex sheathing on the exterior walls under the stucco. This effects a great saving in fuel in the winter and results the intense heat of the sun in summer.

Winter is destructive to ROOFS

Use ASBESTOLINE

On Your Iron or Composition ROOFS

The very best waterproof and weatherproof Asphalt of high elasticity thoroughly fabricated with ASBESTOS fibre constitutes its ingredients and perfects a product that meets every climatic requirement or change—a substance that neither expanding heat or contracting cold can effect

The application of ASBESTOLINE requires no experienced help or any elaborate money outlay for tools. A common stiff floor hand brush is all that is needed, and one coat of ASBESTOLINE will save that worn-out, no-more-good roof," and keep it as tight as the proverbial drum for many years.

Bank Bandits Kind to "Grandma" in Holdup

Covington, Okla.—Four bandits who looted two banks here, maltreated a high standard of etiquette toward the aged.

At the forced departure of the rear of the Covington State bank and scooped up nearly $5,000 in currency, one of the robbers noticed Mrs. Lucy Leroy, seventy, among the victims.

"Did we take any of your money?" the bandit asked the old woman.

Informed he had picked up about $70, representing checks she had cashed, the cashier was ordered to return the checks and honor them later. "Grandma" Leroy was then escorted to a rocking chair in the rear of the bank and told if she kept quiet she would not be locked in the vault with the other customers. She complied.

Saves Life of Man in Coils of Giant Python

Los Angeles, Calif.—Wrapped in the coils of a giant python that was slowly crushing the life out of his body, Wilbur Westlake, forty, veteran animal trainer, was saved from death by the presence of mind of a small boy recently.

As the enraged reptile wound its body tighter around Westlake, the youth sprang from a group of fearstricken onlookers and hurled a stick of wood down the snake's throat.

The struggle took place at the winter quarters of the Al G. Barnes circus near Culver City.

And That's That

New York:—A woman can be just as attractive at forty-five as at twenty-five, in the view of Mrs. Townsley Parsons, author. And no girl should marry before twenty-five.

Lower Animals Indicted

The appearance of two bears in the police court at Bern, Switzerland, recently, brought by their keeper to prove that they were harmless, in a case involving an attack on two boys, recalls the days when animals were summoned to the court not merely as witnesses but as plaintiffs, or, much more frequently, as defendants. In Europe the trial of animals—always allowed legal defenders—seems to have ended in 1720, when a cow was tried and executed for some offense in France, but American can supply an example of much more recent date, says the Manchester (Eng.) Guardian. Only a few years ago, in Indiana, a performing chimpanzee was served with a summons for beating the suffragette law of the state by smoking during his stage performances. The animal had to appear, was found guilty and fined $5. Payment was made by the keeper.

Relic of Colonial Times

Finding a medal, the first of its kind ever unearthed in Kentucky, reminiscent of the treaty of 1765 between the famous Ottawa chieftain, Pontiac, and the British, has been announced by the Wisconsin Archeologist society. The medal, of solid silver, was given during the reign of King George III and his bust, in armor, is on one side. Underneath are the words, "Georgius III Dei Gratia." On the reverse side is a picture of a lion in repose and at his feet a smarting wolf. A church and two houses and a group of trees form the background.

Lightning "Off Side"

Forked lightning was responsible for a remarkable accident during a football match at Ogmun, on the Upper Peninsula, Michigan, recently. At a moment when the players were bunched in the goal of the Kitchiskis club, there came a vivid flash of lightning, accompanied by a terrific thunder-clap. All the players, the referee and a number of spectators behind the goal were struck to the ground. Some scrambled to their feet at once, and others lay stunned, but, ultimately, all regained their feet except one player, who was found to be dead, the lightning having actually struck him. After passing through the body, the flash had gone to earth, making a large hole in the ground. Two players lost the power of speech temporarily, and all those within the field of the lightning flash were afflicted with very severe headaches.

Will Seek for Dragons

Aviator Says He Saw

New York.—Dragons that blow smoke from their noses and eat a small pony for Sunday dinner, reported to exist on the island of Komodo, off the coast of Australia, will be sought by a party of unnamed Americans, according to word received here from London.

The dragons were reported by Alan Cobham, the British aviator, on his airplane flight from London to Australia.

They were described as terrible creatures, built like giant lizards, some 12 feet long, with long claws and long red tongues, which they flashed in the air just like the ones which St. George killed. They emitted a vapor, according to description, like legendary dragons are supposed to have done.

ATTRACTIONS FOR THE WEEK

Saturday-Sunday, Nov. 6-7

Zane Grey's "Born to the West" with Jack Holt, Margaret Morris, Raymond Hatton. Zane Grey's latest romance-thriller. No ordinary western, but a knock-down-drag-out, blood-tingling, he-man action drama of the great open spaces, with romance running wild. Also Educational comedy, Bobby Vernon in "Dummy Love."

Wednesday Only—

The sunny side of the war, "Behind the Front" with Wallace Beery, Raymond Hatton, Mary Brian. The story of a rough-neck and a sap who fought the whole German army for a girl (Mary Brian) with Raymond Hatton and Wallace Beery the laughable musketeers of adventure. Brought back by request of many. Extra—Fox News and Felix the Cat.

Thursday Only—

"Grass." Under a cynical sky dotted with doubting stars which seemed to say "It can't be done." 50,000 human beings and a half million beasts enact a drama that is greater than the hand of man has written. Also Fox News and "Felix the Cat."

COMING—"The Lost World." A super special.

PERSONALS

County Agent H. C. Mellencamp was a business visitor in Charlevoix Tuesday.

R. F. Sloan Sr., spent the major part of last week here on business, returning to Muskegon Monday.

Captain S. M. Rose and crew with the government ship Palmar made a trip to Manistique yesterday.

Mr. and Mrs. W. S. Richardson and Mr. and Mrs. Floyd J. Fessenden motored to Grand Rapids last Monday.

Miss E. Roy returned from the south part of the state, where she was called on account of sickness, last Monday.

Harry Kitchen, son "Mickey" and Mrs. Eugene DeVincent, of Rogers City, were business visitors in Charlevoix Wednesday.

Mr. and Mrs. Clarence F. Bridge and family, visitors in southern Michigan for about ten days, returned to their home here last Tuesday.

George W. Beaman is motoring to Ann Arbor today with the intention of witnessing the big football game Saturday in the University City.

John Eble, of Manistee, spent the week end with his sister, Mrs. Adam Pfister and family. Mr. Eble is a former resident of Charlevoix.

Mrs. Irving Leventon has taken the R. F. Sloan residence, 105 State-st., for the winter months and with her children is now occupying the same.

Tony DeHoor, who spent the summer months in Cleveland, returned to Charlevoix early this week with intentions of remaining through the winter season.

Ladies of the local Baptist Society will hold a rug and rummage sale in the Brosensky sales-room, opposite Hotel Charlevoix, Friday and Saturday of this week.

Attention is directed to the special service that will be conducted at the Church of God commencing on the 14th inst. For particulars read the church notice.

Captain Lou Allard, assistant light keeper at Squaw Island returns to his post of duty tomorrow, following a leave of absence for one week spent in Charlevoix.

Mrs. Anna O'Donnell who recently spent two weeks in Chicago, visited Charlevoix friends for a short time early this week before continuing her trip to her home, St. James.

Mrs. Bridget Gallagher returned from Chicago last Tuesday after spending several months with friends in the big city. Prior to her return to St. James, she spent a day or two with friends in this city.

Improvement work in charge of C. R. Munyon is in the present order of the day at Wilson's wharf. The work underway is extensive and carries with it the appearance of being substantial and permanent.

The S. S. Algomah, of the Arnold Transit Line that takes care of passengers, mail, express and freight between Mackinaw City and Mackinac Island during the summer season, entered this port Wednesday.

Cecil Byers for several months past holding a position with F. S. Myers severed his connection with this business place and left last Monday for Indianapolis where he contemplates spending the winter months.

Mr. and Mrs. J. J. Hallett left for French Lick, Indiana, early this week, where they will spend the next few weeks with their son Irving Hallett and family who are permanent residents of Indiana's most famous resort.

Several hunting parties made up of local citizens are in process of organization and in a few days more will be satisfactorily arranged and most of the big game hunters will be on the way to their favorite hunting grounds.

L. P. Adams and family who planned to start for Florida last week on a motor trip met with some delay which upset their original plan, as a result they did not leave Charlevoix on the southbound trip until early this week.

Mr. Edward Dawson and Miss Grace Ward were married at the Methodist Episcopal parsonage by Rev. C. E. Pollock last Wednesday afternoon at four o'clock. Both bride and groom are from Central Lake where they expect to make their residence.

Mr. T. J. Brady left for Milwaukee, Wisconsin, last Wednesday, making the trip to Ludington via the motor boat route and thence across Lake Michigan. Later he may go to Indianapolis and other southern points on a business trip that will occupy his time for several weeks.

Hard luck continues to follow Guy Eccleston formerly of this city, now of Petoskey, the latest being a fire loss through which he lost nearly all his personal effects, last Sunday morning at an early hour. Some insurance was carried on the property destroyed but sufficient only to pay a small percentage of the actual fire loss sustained.

DILL ASSORTING TIME is here. Bring your 5-gallon jugs to the Pickle Station, or phone 25 J.

—Order your personal Christmas Cards now, the new designs are ready at Holley Gift Shop.

Mr. and Mrs. Frank M. Glassford started out on their annual motor trip south last Tuesday morning. Each fall for the past several seasons they have made the pilgrimage to Florida over the motor route, hence the experience will not be new to them.

Several cars whose occupants have been hunting in Canada recently are making their homeward trips, taking with them as evidence of their skill in woodcraft and gun various kinds of game, particularly deer. Several fine specimens being on display as they passed through this city.

Agriculturalists are marketing large quantities of potatoes this week, exceptional in quality and size. Thousands of bushels of this farm product are being delivered daily, a goodly percentage of which are handled by L. S. See for shipment to Chicago and other large markets. The yield of this farm product throughout this region is out of the ordinary, with quality such as commands a price satisfactory to producers.

Mr. and Mrs. George W. Weaver, for some ten days visitors in Grand Rapids, Charlotte and other southern points, returned to Charlevoix Tuesday afternoon. On their return trip which was made by automobile they encountered a heavy fall of snow, extending for miles north and south of Cadillac, that was negotiated with difficulty, while other machines were stuck in snow-drifts. After leaving the snow belt they found good roads the balance of the way home.

The Miller residence located at 306 Belvedere-av. has been transferred by the former owners, A. J. Stifter purchased the property early this week and with his family will occupy the same in the very near future, possibly before this week closes. The property is desirably located on one of the most prominent avenues in Charlevoix, the lot commodious and so placed that it commands a view of Charlevoix harbor, all making for a pleasant and comfortable residence property.

The Boy Scouts were out in force last Sunday evening at the Methodist Episcopal church for a very unusual service. The distinctive features of the service were presentations of the various achievements of scouteraft which have been mastered by our local boys. Tying of knots, rendering of first aid, artificial respiration and the sending of messages by semaphore made the work of the boys very interesting. Rev. C. E. Pollock is Scoutmaster, with John Nordine and Addison Dailey as assistants. Particular credit is due Mr. Nordinn for his painstaking work with the boys.

Charlevoix citizens were treated to a view of the so-called beautiful last Monday morning, the first of the season, in quantity sufficient to form a complete ground covering. The snow flurry continued throughout the day but melted as fast as it covered the ground. A frequent intervals the storm approached the stage of an old fashioned blizzard. Sunday, the previous day, was bright, clear and all that could be desired for this season of the year. Monday just such a day as we can expect at any time until regular winter weather becomes the order of the season.

A new boathouse 28x45 feet in dimension is in process of construction on the north shore of Round Lake for the use of the owner, Mr. Joseph Moses, of Chicago. W. J. Hogart, contractor, is in charge of the work under a contract awarded to him recently when he made a trip to Chicago to confer with Mr. Moses concerning the plans and building program. Roe Brothers, of Harbor Springs, have charge of the sub-structure and will have the sheet piling in place in time for Mr. Bogart to commence building operations some time early next week.

Joseph Snows started for his native home in San Saturday where it is probable that he will remain throughout the balance of his lifetime. He has been a resident of Charlevoix for about forty years and with his wife until her death some years ago had a little home in the north part of the city where he continued to live until his leavetaking Saturday last. Some thirty years ago Mr. Snows made a trip to Bohemia where he visited relatives and friends for a short time, returning to the United States and Charlevoix where he continued as a resident but never as a citizen. The call of the fatherland was too strong for him to relinquish his Bohemian rights of citizenship or make a declaration of intention to become an American by adoption. The old gentleman is now on his way to his native land and there he will spend his last years amid the scenes and remaining friends of Childhood days.

Rich English Coal Field

The mined coal fields of England are being depleted, but recently one of the richest fields in the world was discovered near Hull. It is a continuation of an exhausted vein, from which it was separated by an eight-mile gap, and is estimated to contain 250,000,000 tons of coal, sufficient to provide Great Britain's needs at the present rate of consumption for 400 years.

The Golden Age Fallacy

Why may not even a foolish idealist realize that there is no Golden Age in the future? The race will always be as it is now, except that it will gain a little in some things and possibly lose in some others. I think it possible greater individuals will develop, but, so far as the masses are concerned, we will never have a greater age than the present.—E. W. Howe's Monthly.

S. ORLOWSKI PASSES

(Continued from page 1)

years ago when he retired from the firm of S. Orlowski and Son, the business taken over by his son, Louis S. Orlowski, by whom it is still conducted.

From a small beginning the business gradually grew in volume, gradually enlarged and expanded until a few years after the first opening when it was recognized as a substantial, sound, financial institution of no mean proportions, one than no longer purchased goods in small quantities but in car lots, something practically unheard of in small business centers in early days.

During the years of Mr. Orlowski's residence in this region he has been recognized as an upright citizen, honest with himself, family and the public, this honesty of action, integrity of purpose and the further fact that he was an industrious indefatigable worker were potent factors in his life, work and success.

He was united in marriage to Miss Margaret O'Leary, August 15th, 1874, who survives him; also by one son, Louis S. Orlowski of Charlevoix, and three daughters, Miss Mary Orlowski, Charlevoix; Mrs. Agnes M. Tallman, Detroit; Mrs. Josephine Madill, Charlevoix; also three grand children, Mary Margaret and Louis S. Jr. and Edward J. Madill, all of Charlevoix.

During his entire life time Mr. Orlowski has been faithful and devoted member of the Roman Catholic religion and died fortified with the rites of the church.

Funeral service will be held at St. Mary's church, Saturday at 10:00 a.m. at which three priests will be in attendance the service to be the solemn requiem, a mass for the departed.

Missionary Society

The Missionary Society of the M. E. church met Wednesday afternoon with Mrs. Frank Partridge, Park-av. This being the Home Thank Offering meeting Miss Lettie Withers, a teacher at Aiken Hall, Olive Hill, Ky., one of the fields of Methodist Home Mission work, gave an interesting talk on the personnel of the school and the work being done there. The girls coming from careless homes in the surrounding communities are intelligent and eager to learn.

Most of the girls have to assist in the Dormitory to pay their tuition. One girl brought a cow with which to pay her tuition—a much needed addition to the comforts of the school.

Miss Withers was called home by the sudden illness of her father, Mr. John Withers, and has resigned her position with the school to take her parents to some warmer climate.

The meeting was well attended and everyone present entered into the spirit of a Xmas box for Aiken Hall.

The Thank Offering was larger than ever before because of the personal interest created by Miss Wither's talk, combined with the interesting report by Mrs. F. A. Edwards of the Missionary convention just held in Manton.

Washington Wants Own Song; Plans Big Contest

Washington.—The nation's capital hopes soon to have a song all its own. Perhaps not exactly like the "Stars and Stripes Forever" or "Maryland My Maryland," but some original selection distinctive and worthy of Washington's history and traditions.

The proposal is sponsored by the Federation of Music Clubs and is indorsed by the district commissioners. They are co-operating in conducting a contest designed to furnish a song deemed adequate for the purpose.

Why He Came Home

Billy, nine, and Bob, seven, are the sons of a local auditor and were invited one day recently to visit a little school friend. After the manner of the afternoon Bob came home alone. His mother asked him how he had spent enough to cause absent-ness, telephoning for him and he said he was throwing rocks and one of them hit a "kid," and the "kid" cried on him. His mother scolded him for throwing rocks and, after quite a lecture, asked whether it was a big "kid" he hit. To which he replied: "No, not a very big one."—Indianapolis News.

Cairo Has Big University.

In Africa the largest university is El Azhar, located at Cairo, and it dates back to the Tenth century. It is strictly Mohammedan and has 7,500 students and 250 professors. The students sit on mats on the floor and they bring their own blankets and sleep on the floor. The bedding is rolled up and put on a shelf during the day. The teachers deviate but ask few questions. Although the higher sciences are taught, the university is essentially a center of religious instruction.

The Artist's Alibi

The teacher had spent nearly an hour on the drawing lesson that morning. Explaining the reason for every line, she had painstakingly given a dog on the black board. Then, after talking with the children about dogs they had seen, they were told to draw one.

The little folks got busy with their pencils at once, and the teacher began to walk around the room, examining the work. She stopped beside a little boy whose drawing resembled anything but a dog, and she asked: "Albert, what is this? It looks like a boy. I asked you to draw a dog."

"Well," replied the boy, "that's the Boss. He's calling Stubbs, but he hasn't come yet."

Nature's Perfection

With all our knowledge we cannot keep clean a piece of glass, if over so precious such as the lens of a microscope, without scrutinizing it to the cleaning. The window and lens of the human body, the eye, is kept automatically clean for the time of one's life by means of a wonderful slightly disinfectant fluid, the tears, and the winking of our eyelids, and the water sent down the nose.

Old English Tradition

An old midsummer eve custom in England was for a girl to walk backward into a garden and sow hemp seed. This had to be kept in a clean sheet of paper and never looked at until Christmas day. Tradition had it that the rose would then be as fresh as it had been in June.

CHURCHES

Church of God

Rev. Paul L. June, Pastor

Services held at the chapel on W. Hurlbut-av, next Sunday as follows:

Morning service, preaching, 10:30.

Sunday School at 11:45.

Young Peoples class meeting 6:30 pm.

Evening service, regular worship, at 7:30 p. m.

Prayer meeting at 7:30 Wednesday evening.

Sewing Circle meets at Mrs. Bernice Pearl on Thursday p.m. at 1:30.

Special notice: Next week on the following dates, November 11th, 12th and 13th, there will be held at the chapel of the Church of God an assembly meeting—all ministers of the district will be arranged in the meantime, and there will be a number of speakers. We invite all to attend.

Immediately following the assembly meeting will come the revival, starting Nov. 14th. We will have with us as evangelists the Rev. Mr. and Mrs. J. C. Millspaugh from Sullivan, Ill., "The Singing Evangelists." They have traveled extensively over the states and in Canada holding evangelistical meetings; 14 years of experience, fluent speakers.

Regular services on Sunday and every night. If you have any affliction? Come! The Lord can heal you. We believe in Divine Healing. Lectures from Biblical Charts. Don't fail to come.

Congregational Church

Rev. R.G. Mattison, D.D., Minister

Morning worship at 10:30 with sermon by the pastor on "The Dynamic Conception of Life."

Sunday School at 12:00.

The evening service hours are changed half hour earlier as follows:

Young People's meetings, Senior and Junior at 6:00 and evening church service at 7:00. The pastor will give the last in the series of talks on "The Conflicts of Early Christianity with the Heathen Empire." The topic for next Sunday evening will be "The Last Struggle and the Final Victory." The dramatic characters of Constantine and Julian will be depicted and the great scholar and teacher of the early church, Athanasius, will sound the note of victory.

The mid-week meeting in on Thursday at 7:30 p. m.

Plans are in progress for setting up the annual every member canvass for the 1927 budget to take place early in November.

Services at Ironton are at 2:30 p. m. The Sunday School is conducting an attendance contest with men and boys on one side and women and girls on the other. The goal will be a social treat given by the losers to both losers and winners. Last Sunday the losers conducted the adult bible class with great interest to the large attendance. Plans are in progress for a shingling bee to finish putting the new roof on the church.

Methodist Church.

C. E. Pollock, Pastor.

The members of the Junior Church will receive their New Testament books next Sunday morning at the close of thirty services.

Morning worship 10:30 each Sunday. "Overcoming by Faith" is the Sunday School lesson topic at twelve o'clock next Sunday.

The Epworth League will meet at six o'clock next Sunday evening.

"Twice Born Men"—book sermon topic next Sunday evening at 7 o'clock.

Prayer meeting each Thursday evening at 7:30.

Wood and Water

The property of absorbing water seems to be a property of the wood substance itself, not any modification, although it might change the amount of absorption, does not remove the absorptive property entirely.

No! Really?

Exchange—"Women predominate in the profession of stenography, since it is said that over 90 per cent of women stenographers are females."—Boston Transcript.

HEARD IT KNOCKING

Prospective Autoist (trying out flivver)—"I think this is a great opportunity to get a good car." Friend —"No doubt it's an opportunity—I hear it knocking now."

Franklin Never Atheist

Benjamin Franklin was not an atheist. According to one authority, for a while during his youth he was a skeptic, and he was never an orthodox Christian. His attitude, however, whom he died was such that today he would be classed with the "liberal Christians."

Some Mistake

A Great Bend husband sent his wife flowers by a messenger boy on her birthday, and she sent them back, saying it must be the wrong address. "I guess I know my husband better than you," she said.—Capper's Weekly.

First Typewriters

In 1714 a patent for the first typewriter was applied for by Henry Mill, a London engineer. In 1829, W. A. Burt patented the first American machine.

HE KNOWS

Manager—Kid McSwatt is a fair scrapper but sluggish in his work. Middleweight—I'll say so. He packs the most sluggish wallop I ever felt. But slow.

Quart of Perspiration

The British army manual of sanitation for 1926 advises that if a soldier carries more than one-third of his own weight in baggage he will soon tire and require increased food. It also says that, in marching, a soldier can lose, "by perspiration alone," nearly a quart of water during a march of eight miles, even in a temperate climate.

HOW THE PILGRIM MOTHER

Kept Her Family in Good Health

A statue to the Pilgrim Mother was recently unveiled at Plymouth Rock, Mass. Through her home every pioneer mother was honored who endured privation and hardships that a nation might live. Shoulder to shoulder with her husband she built a home in the wilderness and reared her sturdy sons and daughters. She cooked and sewed,

She spun and wove, for her growing family and when they were ill, she brewed potent remedies from roots and herbs—such roots and herbs as are now used in Lydia E. Pinkham's Vegetable Compound.

A Massachusetts woman writes: "I was all run-down, with no ambition. I was tired all the time. Sometimes I would be in bed two or three days at a time, and the doctor would have to give me something to set me right. A friend told me about Lydia E. Pinkham's Vegetable Compound and I have had wonderful results from it. I felt better after taking the second bottle, and I am never without it in the house now. I have told lots of people about it, and they say it helps them, too. I am willing to answer letters from women asking about the Vegetable Compound."—Mrs. J. W. Carpenter, 2 Hammond Street, Cambridge, Mass.

Today's Big Offer to All Who Have Stomach Agony

Read About This Generous Money Back Guarantee

When you have any trouble with your stomach such as gas, heaviness and distention, why fool with things which at best can only give relief.

Why not get a medicine that will build up your upset, disordered stomach and make it so strong and vigorous that it will do its work without any help.

Such a medicine is Dare's Mentha Pepsin, a delightful elixir that is sold by your local dealer and druggists everywhere with the distinct understanding that if it doesn't greatly help you your money will be gladly returned.

It has helped thousands—it will no doubt help you.

STOP THAT ITCHING

You won't have to wait—relief follows the first comforting touch of

The Admonition of Age

Dick possessed a tennis racquet, which, though it had been classed as "junk" by an older sister, was the envy of the youngsters of the neighborhood. The neighborhood gang was assembled in the back yard one day and little Mary, five, grabbed the tennis racquet and said: "Throw the ball, Richard, and I'll bat it."

Nancy, her sister, and the senior by three years, felt it necessary to correct little Mary, so she yelled: "You don't say bat it, ally, say tennis it!"

Any newspaper that has headlines that are read doesn't need headlines that are red.

Salts Fine for Aching Kidneys

When Back Hurts Flush Your Kidneys as You Clean Your Bowels

Most folks forget that the kidneys, like the bowels, sometimes get sluggish and clogged and need a flushing occasionally, else we have backache and dull misery in the kidney region, severe headaches, rheumatic twinges, torpid liver, acid stomach, sleeplessness and all sorts of bladder disorders.

You simply must keep your kidneys active and clean and the moment you feel an ache or pain in the kidney region begin drinking lots of water. Also get about four ounces of Jad Salts from any good drug store here, take a tablespoonful in a glass of water before breakfast for a few days and your kidneys will then act fine. This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and is intended to flush clogged kidneys and help stimulate them to activity. It also helps neutralize the acids in the urine so they no longer irritate, thus helping to relieve bladder disorders.

Jad Salts is inexpensive; makes a delightful effervescent lithia water drink which everybody should take now and then to help keep their kidneys clean.

A well-known local druggist says he sells lots of Jad Salts to folks who believe in trying to correct kidney trouble while it is only trouble.

Boschee's Syrup

has been relieving coughs due to colds for sixty years.

Soothes the Throat

loosens the phlegm, promotes expectoration, gives a good night's rest free from coughing. 85c and 90c bottles, at all Druggists. If you cannot get it, write to G. G. Green, Inc., Woodbury, N. J.

Assessors Use Airplanes

The Connecticut tax assessors are using with good effect photographs of interior lands to help in their assessments. In one county the tax list recorded 1,551 barns, garages and sheds, but when the air photographers had finished their task it was found there were 2,502 such buildings in that area, with the result that the tax list increased in value more than $10,000,000.

A Nice Distinction

Sam—Do yuh refuse to pay me dat two dollahs I lent you?

Rastus—Oh, no sah. Ah don't refuse. Ah jes' refrains.

The self-made man usually hurries and forgets to add the finishing touches.

When a fool holds his tongue he isn't as foolish as he might be.

NEW COATS FEATURE CUFFS; COLORFUL CREPE FROCKS

TO THINK that cuffs, mere cuffs, could be so interesting! But they are. The newer-designed coats are proving it too. Surely nothing could be more attractive in the way of an ultra-smart coat than the one in this picture and the picturesque pirate cuffs which it boasts have much to do with the dash and go of its style. We are to have more and more of the pirate and the cavalier cuff, so fashion tells us.

Aside from the cuffs, which give this coat so much chic, there are other details which tell the world the dernier cri from Paris. There is, for instance, the handsome velvet applique arranged in strappings of military precision and as to the color of this coat, here, indeed, is the very latest described, for blonde and beige shades are the talk throughout all fashionland. The fact that the hand-appliqued velvet and the kasha cloth from which this coat is made, are perfectly matched light beige, stamps this model with authoritative style. Furthermore, the dainty shoes worn with this adorable coat carry out the same beige or blonde color scheme. It has come to be most important that one's shoes match or at least harmonize with the costume. To this end stylists are featuring navy kidskin shoes with suits and street frocks of that same shade while brown footwear in all its variegated progressees, scarcely an up-to-date wardrobe will there be, which does not include a colorful or a black dress, as it may please, lavishly trimmed in self-toned velvet. An outstanding trimming treatment is the skirt tiered with straight or circular velvet ruffles. The effectiveness thereof is set forth in this picture of a chartreuse crepe frock boasting row upon row of velvet ruffles. The flaring ruffle of velvet on the sleeve makes the whole gown smart.

Very often the tiers are cut circular and sometimes just the reverse is expressed in that flat velvet bands are placed so as to simulate wide tucks.

Borderings of velvet which extend at each side of the front opening, are much in vogue and when around the bottom of the dress are fashionable. Velvet pockets used in conjunction with other velvet details denote this season's mode. The newest flaring cuffs cut of velvet, also velvet cape collars, adorn many a silken frock.

Two distinct trends are evidenced in the latest velvet-trimmed frocks. One is for the colorful frock, preferably one of the new wine shades or perhaps jungle green or likely a rust tone, or some desirable shade of blue, or if one aspires to the extreme of the mode a biscuit-colored crepe embellished with matched velvet. The other cult of fashion is for the black crepe or dull satin frock trimmed in black velvet.

Most unique is the crepe frock trimmed in bands of velvet ribbon, so arranged as to present an ombre effect. That is, the velvet is of deepest color, grading each row a tone lighter

Interesting Cuff Treatment.

Tiered With Ruffles.

He resolutely and faithfully what you are, be humbly what you aspire to be. Man's noblest gift to man is his sincerity, for it embraces his integrity also.—Henry D. Thoreau.

OLD-FASHIONED DISHES

Corn is so well liked as a vegetable, in soup, scalloped, and here it is in

Corn Muffins. — Beat two eggs, add a tablespoonful of melted lard, a teaspoonful of salt, two teaspoonfuls of baking powder and two cupfuls of corn meal. Add enough milk to make a thin batter. Grease muffin pans and pour in batter. Bake one-half hour.

Fresh Corn Soup.—Grate the corn from four or more ears, the amount depending upon the size of the family to serve. One-half cupful of grated corn will serve two. Cover the cobs with cold water and boil them for 20 minutes, drain the water and add to the grated corn with milk and seasonings. Cook for a few minutes until the corn is well cooked, adding butter and flour, a teaspoonful of each for a pint of soup. Serve hot, unstrained.

Fresh Corn Cake.—Two cupfuls of fresh-cooked corn put through the meat chopper or cut fine, one-half cupful of milk, two eggs, two cupfuls of flour, three teaspoonfuls of baking powder, one-half teaspoonful of salt, a dash of pepper and a tablespoonful of melted shortening. Bake 25 minutes in gem pans. Canned corn may be used with more milk for moisture.

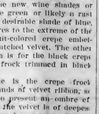
Flummery.—Make a rich custard, using six eggs, one quart of milk, and sugar to taste. Soak one and one-half cupfuls of milk, and two ounces of gelatin which has been softened in a little cold milk. With one quart of cream, add one cupful of sugar, add the gelatin to the custard and when well mixed and cool, the whipped cream. Pour into molds and cover with crushed macaroons. Flavor with vanilla.

The old-fashioned gingerbread is always a delightful dessert served hot with a marshmallow sauce.

Ginger Bread.—Take one cupful of molasses, one cupful of sugar, one-half cupful of melted shortening, a half teaspoonful of salt, one tablespoonful of ginger, one egg, three cupfuls of flour, and lastly a cupful of boiling water in which a teaspoonful of soda is dissolved. Mix well and pour into a large shallow pan. Bake 40 minutes.

Everyday Dishes.

A tasty luncheon dish which may be prepared in a short time is:



Chicken Chop Suey.—Take two cupfuls of minced cooked chicken, a cupful or two of celery (more is good if necessary to piece out the dish), one small minced green pepper and a cupful of rice. Cook the rice and use as a border for the platter. Into a frying pan put a tablespoonful or two of corn oil, or any good vegetable oil; when hot add the celery and pepper and stir until softened, then add the chicken with a cupful of chicken stock, if at hand, or any gravy leftover. Cover and simmer, adding seasoning to taste, then just before serving add two tablespoonfuls of soy sauce and pour another tablespoonful over the rice. Serve hot. Steak is good served this way, or a combination of pork and beef.

Chicken With Asparagus.—Cut a young chicken into six or eight parts, season well and brown in two tablespoonfuls of butter, then add a cupful of stock and a bunch or can of asparagus. Cook for two hours at the simmering point.

Surprise Biscuit.—Make a soft biscuit dough, roll out and cut into biscuits; spread with minced cooked beef well seasoned. Lay on another biscuit and bake. Pour over a rich brown gravy and serve piping hot. This makes a good luncheon dish.

Snow Balls.—Make a plain cake flavored with orange and bake in iron Brownie pans, filling them one-third full. Remove when baked and spread the flat side with orange marmalade, putting two together in pairs, making a ball. Now cover with boiled frosting and roll in cocoanut.

Lobster Salad.—Take two cupfuls of flaked lobster, one cupful of diced celery, four tablespoonfuls of capers, one-fourth cupful of mayonnaise and one head of lettuce. Mix the ingredients lightly and serve on lettuce with a cupful of mayonnaise to which one cupful of finely minced cucumber has been added. Sprinkle with paprika and finely minced parsley.

Yankee Plum Pudding.—Take one cupful of finely chopped suet, add one cupful of New Orleans molasses, sift three cupfuls of flour with one-half teaspoonful of soda, one teaspoonful of cinnamon, one-half teaspoonful of cloves, nutmeg and salt; add alternately with one cupful of sweet milk, reserving some of the flour to dredge one cupful of raisins and one cupful of walnut meats broken into bits; mix well and turn into a buttered mold and steam three hours. Serve with an egg sauce. Beat two eggs, add one-half cupful of sugar and when dissolved add one-half cupful of hot milk and a teaspoonful of grated lemon rind.

Nellie Maxwell

Christ Second to Mahomet

Although the Mohammedans deny the divinity or deity of Jesus, they attest to His virgin birth and that He is "from the Spirit of God." In the Mohammedan calendar Jesus is placed second only to the prophet himself.

Grocery Fairy Tale

Once there was a customer who never said to the clerk: "Is it hot enough for you today?"—Progressive Grocer.

Bloomers and Knickers in Winsome New Shades

Bloomers and knickers are engaging in style and color with many new shades. These form the answer to undressing with the autumn ensembles, suits and frocks, and the lady with the long purse may indulge her fancy for color in many new garments. They are to be had in pansy, periwinkle, navy, geranium, fawn, rosewood, plum, rush, French nude and the staple colors. Now that dyes are more trustworthy, black is being worn in great deal in these bloomers—all of glove silk or rayon. All of the crepes are being used for lingerie of all descriptions and some who have become accustomed to the very sheer stuffs cling to them for chemises, step-ins and nightgowns. Garments of this type are shown in delicate shades of yellow, pink, green, orchid and blue, with some stunning combinations of black and white. Models in these last are trimmed in chantilly, in black and white, in striking contrast.

Experience Will Help Others, Says Chicago Man

Suffering from Indigestion, Nervousness and Run-down Condition, Chicago Business Man Regains Health and Strength, Takes Tanlac

Mr. William E. Simon, 127 No. Dearborn St., Chicago, says: "After suffering from nervousness, run-down condition, I regained good health, new strength and youthful energy . . . Thanks to Tanlac.

"Imagine not being able to eat without suffering from indigestion. I was so nervous and my business suffered because I was always tired, too tired to think. My head always throbbed with blinding pain and dizziness bothered me. Still I dragged along. Then came the moment when I had to get relief.

"I decided to try Tanlac and the results amazed me. I began to sleep better, eat my food with relish and without suffering from indigestion.

"Tanlac made me 100 per cent. I now enjoy robust health, sleep like a child, and work all day without tiring. My head is clear as a bell. Everyone should take this wonderful tonic."

Tanlac has helped many Illinois men and women. It is Nature's remedy made from roots, barks and herbs and if that there is too much life and too little college."

The man with a cool million always gets a warm reception.

What He Did With Million

What would you do with a million dollars inherited unexpectedly? When this happened to Cornelius Sullivan, Boston insurance collector at $30 a week, he bought a $50,000 house for his parents, says Capper's Weekly. Then he bought an auto for each of his five brothers and sisters. For himself he bought a ticket for a tour around the world. When he returns he will go back to his insurance job and keep on living a simple life.

A Lady of Distinction

Is recognized by the delicate, fascinating influence of the perfume she uses. A bath with Cuticura Soap and hot water to thoroughly cleanse the pores, followed by a dusting with Cuticura Talcum powder usually means a clear, sweet, healthy skin.—Advertisement.

Nothing Like That

Judge—Then the two women had an epidotalary dispute.

Witness—No epistols at all about it, sah. They jes' writ a lot o' mean things to one another.

Big Tobacco Revenue

During the fiscal year 1926 the taxes on tobacco and tobacco manufactures amounted to $369,534,282.90. In 1925 the amount collected was $344,121,296.26.

Motor on Roller Skates

A motor small enough to run roller skates has been perfected by a German engineer. It uses acetylene gas for fuel, and is oiled automatically, is water cooled and has a unique ventilating system. Power for six hours, with a speed of from 18 to 22 miles an hour, costs only about two cents.

Demand BAYER ASPIRIN

SAY "BAYER ASPIRIN"—Genuine

Unless you see the "Bayer Cross" on tablets, you are not getting the genuine Bayer Aspirin prescribed by physicians and proved safe by millions over 25 years for

Colds | Headache | Neuritis | Lumbago
Pain | Neuralgia | Toothache | Rheumatism

DOES NOT AFFECT THE HEART

Safe — Accept only "Bayer" package which contains proven directions. Handy "Bayer" boxes of 12 tablets. Also bottles of 24 and 100—Druggists.

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

Home-Builder Gets Good Investment Plus Comfort

ECONOMY of space in this five-room English town house has not meant a sacrifice of an artistic exterior. Built of refrigerated or common brick, whitewashed, with a roof of stained shingles or slate, it presents an unusually attractive and cozy, quiet appearance. The parties is arched and roofed, and has a red brick floor. The shutters of solid stained boards give an interesting departure from the usual green Englund type.

A number of features provide for exceptional comfort and convenience. The living room has an oriel bay window that lets light in through three casement sections and affords a window seat or forenry within. Every room has windows on two sides, giving cross-ventilation. The house is insulated, walls and roof, with celotex as protection against cold and waste of fuel in the winter, and the hot rays of the sun in summer. The doors are hardwood throughout, and have a layer of celotex placed between them to deaden noises within the house, a feature that is especially appreciated where there are small children and noisy boys in the house.

The living room has an open fireplace and built-in book case. The porch or sun room may open off the living room or dining room, and can well have a sleeping porch above if extra sleeping quarters are needed. The service entry is conveniently placed at the side, to save the housewife steps. The kitchen has built-in cupboards, ironing-board and breakfast-nook.

U. S. SET TO FIGHT MATERNAL MORTALITY

High Death Rate Speeds Bureau's Plans.

Washington.—A national program for the prevention of maternal mortality and morbidity throughout the United States is outlined by the children's bureau of the United States department of labor in a report on maternal mortality.

This report, the work of Dr. Robert Morse Woodbury, formerly director of statistical research for the children's bureau, brings together and analyzes all available material, both American and foreign, on deaths of mothers during childbirth, and is considered one of the most important pieces of recent research in the field of the bureau's work. Children's bureau officials feel that it indicates the necessary emphasis during the coming fireside in the effort to reduce double annual toll of babies and mothers.

Mortality Rate High.

Maternal mortality rates in the United States are today among the highest in the civilized world, and but a slight decrease in these rates has occurred since the beginning of the present century, Doctor Woodbury's report states. The significance of these facts from a national point of view is found not only in the loss which this means of the lives of women presumably at their prime, but also in the far-reaching effect of maternal mortality on the infant death rate.

"A very considerable proportion of all deaths of infants under one year of age," Doctor Woodbury points out, "occur during the first month of life from causes which have their origin in the care and condition of mothers during pregnancy and confinement. In the United States as a whole it may be estimated that approximately 100,000 deaths of infants under one month of age occur every year. Reduction in the mortality from these causes depends upon improvement and extension of facilities for prenatal, confinement and postnatal care. It may also be estimated that at least 100,000 stillbirths occur each year. The same measures which will safeguard the lives and health of mothers during pregnancy and labor will also tend to reduce the stillbirth and neonatal mortality rates."

Doctor Woodbury estimates the total annual number of maternal deaths in the United States on the basis of 1921 birth-registration area statistics to be 18,281. However, a careful survey of sources of error in certificates of death throughout the area leads him to the conclusion that the true number of maternal deaths is probably at least one in 12 per cent in excess of those reported, making an estimated yearly death toll of more than 20,000 women. The maternal mortality rate in 1921 was 6.8 per 1,000 live births. The prevalnoni 1923 rate was 6.6.

Poverty Proves Obstacle.

As with infant mortality also, poverty is found to be an important factor in maternal death rates, these increasing as the husband's earnings fall, probably because of lack of proper facilities and adequate care for the poor mother. Color and nationality are also important factors in maternal mortality. In the birth-registration area for 1921 the negro maternal death rate was 67 per cent higher than the white rate. On the other hand, the rate for foreign-born white mothers was slightly lower than native white mothers.

Among the nationalities included in the foreign-born white group the rate was lowest for mothers born in Canada, and next to lowest for mothers born in Italy. At the other extreme were the rates for mothers born in Ireland, Great Britain, Canada, Hungary and Germany. The racial stocks represented in the nationalities for which the rates were highest are, it is pointed out, those which largely compose the native white population.

20,000 Persons Lost Yearly in New York

New York—It is almost impossible to be lost or missing for a considerable length of time in New York, probably in no other city in the world are so many persons reported lost, strayed or stolen. Every day brings, on the average, 60 inquiries to the police for missing persons, a total of more than 20,000 a year. Of this number less than half of one per cent are classed as permanently unaccounted for.

The missing persons bureau of the police department comprises 40 detectives, men and women, especially trained for the work. Searches are organized much more completely than is generally realized, and now the machinery is set in motion the effort becomes comparatively simple.

Auto Perils Mount

Washington.—The perils of motoring are mounting. Official statistics are that 3,274 persons already have been killed this year in 90 cities, Norfolk, Va., is the safest city and Camden, N. J., the most dangerous, judging by averages.

Foolproof Planes

Philadelphia.—Airplanes are going to be foolproof; also so cheap that anybody who can afford an auto can now have one; also the air traffic will be so heavy that there will be virtually no police. A few predictions made at a convention of automotive engineers.

Radio Amplification

Two University of Kansas professors have built special apparatus to receive by radio the "voice of the atom," or the sound made by electrons, the smallest division of matter, battering against each other. By suspending a piece of ore over their recording apparatus they can determine in an instant whether it is radioactive, but in order to make the electrical motion audible, apparatus is used to make the ratio of amplification seven thousand billion.

Toad Market for Snakes

The town of Harper, in Kansas, has a rather unusual industry in a local toad market. Hundreds of the animals are bought and sold daily and delivered at 2 cents apiece. The demand is created by the Lea Laird snake farm, near Harper, where thousands of the reptiles are handled annually, some shipments going as far as France. Laird keeps the reptiles in a pit, as a side line, as he is a prosperous wheat and stock farmer as well.

Bride Will Remember That Night on Porch

The Woman needed cheering up, so she decided to call on a recent bride, feeling sure that the young wife's exuberant spirits would lift her own.

But to her amazement the door was greeted by a weary, heavy-eyed appartition bearing but slight resemblance to the radiant creature she had seen just a few weeks before at the altar.

"Why, my dear," the Woman stammered, throwing tact to the four winds in her desire to be sympathetic.

"Oh, do come in," urged the bride, pushing the Woman into a cretonne-covered chair and taking a seat close beside her. "Nothing is the matter—now." The last word was added after a delicate pause. "But you should have seen me early this morning, about 4 a. m. to be exact."

Four a. m.," murmured the Woman, with an incredulous stare.

"Yes; I spent the night on the porch, waiting for my husband. You know he is most punctilious about keeping me informed of his goings and comings, so when he wired me he would be home late I sent the maid off and made myself comfortable on the porch."

"Hour after hour passed and no Carl. Suddenly I began to worry. I felt that something dreadful had happened to him. After that idea got firmly fixed in my mind I watched each car that passed with apprehension, expecting that each one would stop and tell me that my husband was lying dead somewhere on the road. I worked myself up until I was a nervous wreck. Suddenly through the faint dawn I spied a huge white car. I knew at once it was an ambulance. I sat with every sense keyed praying that it would not stop, but as it came to our driveway I slowed down and stopped. A man I met and I flew to the side door, trying to hold together to hear the dreadful news.

"As I slowly opened the door I intellectively put out my hand. Something cold was placed in it and a cheery voice greeted me 'Good morning, lady. I don't often see you when I leave the milk.'

"Of course, Carl came finally. He had a puncture and had been delayed. But the milk bottle brought me to my senses. Still, I guess it didn't help my complexion any. The next time I will think of that and perhaps I'll be more sensible."—New York Sun.

Potato Has Vitamine B

The lowly potato is an important source of vitamine B—the anti-neuritic vitamine, whose lack causes the disease known as beriberi. According to F. J. Bynum and Inez Bilystone in the laboratory of applied chemistry at Ohio university this essential element is distributed almost uniformly throughout the potato and is stable both during cooking and storage. Experiments in calories, the white potato furnishes about 12 per cent of the American dietary. Mr. Bynum and Miss Bilystone have conducted a series of experiments in which they found that rats thrive and grow at a normal rate on a diet excluding as much as 75 per cent potatoes. When put on a diet of only 10 per cent potatoes from which other vitamines containing vitamine B were excluded the rats showed a rapid decline in condition, which disappeared as soon as a sufficient quantity of vitamine B was again supplied.

Storks Forsaking Germany

Germans are worried by the disappearance of storks. In the north of Germany the number has decreased sensibly, and in central Germany it has fallen off to about half that of former times. In some parts of Germany there are only one-third as many stork nests as once there were. "What are we going to do about children if the storks desert us altogether?" ask the Germans. But persons who watch the birth rate say that the growth in population does not seem to have been affected by the absence of storks. Perhaps, though, the storks have decided to make their homes in lands where population encouragement is more needed.—Chicago Daily News.

Old Sol Has Fever

According to Martin Gil, Argentine meteorologist, the sun is now suffering from an attack of eruptive fever, which has disturbed the electromagnetism of our planet and has been the cause of the last waves, floods, earthquakes and other extreme conditions experienced in the northern hemisphere. "The sun," says the scholar, "is always feverish, but it is now in the throes of a very severe attack. The sun spots show us that a most ritualic solar agitation is taking place." Calculations show us that such agitations in the sun occur in cycles of about 250 years. The Argentine authority thinks the present one will continue until 1928.—Publisher Magazine.

CIVIL WAR REALLY "FAMILY QUARREL"

Leading Men on Both Sides Closely Related.

It is true that some of Mrs. Abraham Lincoln's relations fought for Jefferson Davis, says "Girard" in the Philadelphia Inquirer. Mary Todd Lincoln was the daughter of Robert S. Todd, for whom her own son, Robert Todd Lincoln, was named. She was one of eight children by Todd's first wife. Todd remarried and had eight more children, of whom three were sons. All three were Confederate soldiers, one killed at Shiloh, another at Vicksburg and the third at Baton Rouge. So it is seen that more of Mrs. Lincoln's half brothers died for the Stars and Bars than Mrs. Lincoln gave sons to the Stars and Stripes, although the latter got that beautiful letter from President Lincoln for her sacrifice.

But the Lincolns were not the only ones in the North who had relations fighting in the South. Gen. George G. Meade of Philadelphia married a Miss Sergeant, one of her sisters was the wife of Gen. Henry A. Wise, governor of Virginia, and the other sister the wife of Lieut. T. H. Hines of the Confederate navy. Gen. George H. Mendell's sister was on the staff of Gen. "Jeb" Stuart, dashing cavalry leader of the south.

On the border land, Gen. Robert E. Lee's cousin, Samuel P. Lee, commanded Union gunboats on the James river which were under the command of one's army at Petersburg. Admiral David Farragut was a southerner who fought for the North and Gen. George H. Thomas, "Rock of Chickamauga," was another southerner who followed the old flag.

Just as interesting was the occupation in April, 1861, of men who later became military celebrities. Ulysses S. Grant was living in Galena, Ill. Bain Tecumseh Sherman was operating a streetcar line. Among those in the "horse" railway. George B. McClellan was president of a railroad. All three were Civil War leaders, but had resigned from the army.

"Stonewall" Jackson died in April, 1863, was a Virginia college professor who had married a Pennsylvania girl whose father was the first president of Lafayette college. Leonidas Polk, later a general, was an Episcopal bishop when Fort Sumter was fired upon.

Ball Run changed everything. Henry Villard, then a war correspondent, later a newspaper proprietor and railroad president, used to say the only man who ever made a lasting friend of Bull Run than his old himself was Colonel Hunsdale, who had a better horse. The colonel's desire for going so swiftly was explained by his desire, he said, "to get rations for his men.

English Geese Land Stables Like Watch Dog.

London.—A goose stalling a sick horse in some stables at Cunling, Town, recently found its way home by two large geese which guarded its approach. All his efforts to pass were unavailing and the two geese finally ultimately chased the man away, beating him on the legs as he fled.

When the owner of the geese was called the geese became as quiet as a pair of turtle doves. "I've had them for 17 years," she explained, "and they have saved me the price of many a pair of boots. I've been stalling a sick horse in some stables at Cunling, and every night when I went to feed it the geese would set up a terrible hissing. I soon found that if I went in without them I was attacked by the geese. Now they are quiet as lambs."

MANY-TUBE PERFORMANCE

AT FIVE-TUBE COST

Radiola 20, with five radiotrons, $115
RCA Loudspeaker 100, $35.00.

This Radiola 20 is one of the tried, tested and perfected RCA Radiolas that are far in advance of their day. It has five tubes—dry battery tubes that take very little current from the batteries—costs little to buy and little to run. But the last tube is a power tube that gives you volume with true reproduction. And for distance, when the number of tubes counts, it has a special sensitizing control that makes the five tubes as sensitive as much larger sets.

For musical quality—and for fine performance—Radiola 20 has no competitor anywhere near it in price

Three Big Departments:
HARDWARE--FURNITURE--ELECTRICAL

ANNOUNCEMENT

We have recently secured the agency for the A. H. Grebe and Company line of Radio Receivers. This receiver has features that no other receiver on the market has incorporated in its construction. In performance it is second to none. And there are definite and easily understood reasons why this is so. Back of there is Grebe construction—the Standard of the industry. Every part of the Grebe set if designed and made in the Grebe factory.

GREBE BINOCULAR COILS—Guarantee "Selective Sensitivity" or the power to get the desired station, and keep undesired stations from breaking through.

GREBE LOW-WAVE EXTENSION CIRCUITS—Enable the Synchrophase to receive stations down to 150 meters. This means that it will tune-in over 100 existing low-wave stations with worth while programs, not now available to other receivers.

GREBE COLORTONE—With it you may vary to your taste the quality of speech or music, from high thin pitch to low, deep, round tones, with all variations between, without changing the positions of the dials or losing the full strength of the broadcast signals. It is also possible to suppress, to a great extent, disturbances due to static.

GREBE VOLTAGE CONTROL—In the Synchrophase a complete and continuous range of sound intensity from all stations, is at your disposal, without any distortion or change in the character of the sound.

GREBE FLEXIBLE UNIT CONTROL—Enables you to set two or all three dials by operating one; or to adjust all three separately, at will.

THE GREBE SYNCHROPHASE—will give you everything that the Radio has to offer. Hear it.

LEGAL NOTICES

Order Appointing Time for Hearing Claims

STATE OF MICHIGAN—The Probate Court for the County of Charlevoix.

At a session of said Court, held at the Probate Office in the City of Charlevoix in said County, on the 28th day of October, A.D. 1926.

Present: Hon. Servetus A. Correll, Judge of Probate.

In the Matter of the Estate of Sarah Emrey, deceased.

The above estate having been admitted to probate and The Detroit Trust Company appointed executor thereof.

It is Ordered, That four months from this date be allowed for creditors to present their claims against said estate, and that such claims be heard by said court on Wednesday, the 3rd day of March A. D. 1927, at ten o'clock in the forenoon, at the Probate office, in the city of Charlevoix.

It is Further Ordered, That public notice thereof be given by publication of a copy of this order, for three successive weeks previous to said day of hearing, in the Charlevoix Sentinel a newspaper printed and circulated in said county.

SERVETUS A. CORRELL,
28-3t Judge of Probate.

Order for Publication—Appointment of Administrator

STATE OF MICHIGAN—The Probate Court for the County of Charlevoix.

At a session of said Court, held at the Probate Office in the City of Charlevoix, in said County, on the 25th day of October A. D. 1926.

Present: Hon. Servetus A. Correll, Judge of Probate.

In the Matter of the Estate of Anna Mossington, deceased.

Margaret Widdifield having filed in said court her petition praying that the administration of said estate be granted to herself or to some other suitable person,

It is Ordered, That the 18th day of November A.D. 1926, at ten o'clock in the forenoon, at said Probate office, be and is hereby appointed for hearing said petition.

It is Further Ordered, That public notice thereof be given by publication of a copy of this order, for three successive weeks previous to said day of hearing, in the Charlevoix Sentinel a newspaper printed and circulated in said county.

SERVETUS A. CORRELL,
27-3t Judge of Probate.

MORTGAGE SALE

Default having been made in the conditions of a certain mortgage executed by Guy Peart and wife, Marion Peart, of Charlevoix, Michigan, unto Charlevoix State Savings Bank, a Michigan Corporation of Charlevoix, Michigan, dated May 21st, 1924, and recorded in the office of the Register of Deeds for Charlevoix county, Michigan, on May 22nd, 1924, in Liber 64 of Mortages, on Page 113, on which mortgage there is claimed to be due at the date of this notice the sum of $581.22, including the principal sum due with interest, together with an attorney fee as provided for by statute and no suit or proceedings at law having been instituted to recover the money secured by said mortgage, or any part thereof, and whereas the taxes required by the statute to be paid on said mortgage were duly paid prior to the recording thereof;

Now Therefore, Notice is given that by virtue of the power of sale contained in said mortgage and of the statutes made and provided, said mortgage will be foreclosed by sale of the premises therein described, or so much thereof as may be necessary to satisfy the amount then due thereon together with the costs and expenses of the foreclosure, including the attorney fee provided by statute, at public auction, to the highest bidder therefor, at the front door of the Court House in the City of Charlevoix, Charlevoix county, Michigan (that being the place where the Circuit Court for the County of Charlevoix is held), on Saturday the 18th day of December, A.D. 1926, at eleven o'clock in the forenoon on that date.

The premises described in said mortgage being the land and premises situated in the City of Charlevoix, County of Charlevoix and State of Michigan, viz: Lots seven and eight excepting the north fifty feet of Lot seven of J. Mills Eaton's addition to the Village (now city) of Charlevoix, Michigan, according to the recorded plat thereof.

Dated September 9, 1926.

Business Address: Charlevoix, Michigan
108 Clinton Street.

MORTGAGE SALE

Notice is hereby given that a certain mortgage dated the fifth day of November nine hundred and twenty five, given by Oliver G. Davenport by K. G. Davenport, attorney in fact, and Nowland G. Davenport, wife of Oliver G. Davenport, in her own and lower right, to Alfred E. Hunt. The said mortgage was recorded May fourteenth A.D. 1925, in liber sixty eight of mortgages, on page seven, in the office of the Register of Deeds for the county of Charlevoix, Michigan. Which said mortgage was duly assigned by said Alfred E. Hunt to Mrs. Verona J. Visscent, Sept. eighth, 1926, and recorded September 14th, A.D. 1926, in liber fifty three of mortgagen, on page 530 in the office of the Register of Deeds for the county of Charlevoix, Michigan. The said mortgage containing a power of sale in it, which has become operative, on which mortgage there is claimed to be due at the date of this notice the sum of One Thousand Twenty Three Dollars, for principal and interest and taxes paid by the mortgagee to protect his security, and an attorney fee of Twenty-five dollars, provided for in said mortgage, and no suit or proceedings at law having been instituted to recover the moneys secured by said mortgage or any part thereof;

Now, Therefore, By virtue of the power of sale contained in said mortgage, and the statute in such case made and provided, notice is hereby given that on Friday the 24th day of December A. D. 1926, at ten o'clock in the forenoon, I shall sell at Public Auction to the highest bidder, at the east front door of the Court House in the City of Charlevoix, in the County of Charlevoix, State of Michigan, (that being the place where the Circuit Court for said County of Charlevoix is held,) the premises described in said mortgage, or so much thereof as may be necessary to pay the amount due on said mortgage, with seven per cent interest, and all legal costs, together with an attorney's fee of Twenty five Dollars, as provided by law and as covenanted for therein, the premises being described in said mortgage as follows, to-wit:

Lands and premises situate in the Township of Hayes, County of Charlevoix and State of Michigan, viz: East Half of the Northeast Quarter of Section Two, Township Thirty three North, Range Seven west containing Eighty acres of land according to the return of the Surveyor General.

Dated, September 29th, 1926.

Pictures of Local Fishing Industry are Taken for Pathe News

Last Thursday, a photographer for Pathe News arrived in Charlevoix to film the fishing industry headquartered at this port. In particular, his company wanted a motion picture story of the spawn fishing now going on, to show the world how this important food supply is harvested and propagated.

The cameraman, Mr. Felbinger, from Pathe's Chicago office, went out Friday morning with Captain Harold McCann in the tug Liberty, to get that part of the news-reel dealing with the taking of the trout. Saturday he spent getting scenes around the docks, while fish were being unloaded, and nets put on the reels. Beside these pictures, he also filmed the work at the hatchery, a feature expected to have been brought in by the government boat Fulmar, commanded by Captain Bosse, and prepared for the hatching process.

Mr. Felbinger regretted, on his arrival Thursday afternoon, that the lake was so calm. A rough sea, he said, would put spirit and action into what he called his "story." But soon after his departure Friday morning on the Liberty, a high wind came up, and kicked up a lot of the moaned weather the fishermen have had this season. Soon the fishermen detected him busily throwing something overboard. It is both affirmed and denied by the crew of the Liberty, that pictures were taken of the cameraman, as he leaned overside, oblivious of wint, went on around him.

Charlevoix may never know whether this unofficial report is true, for Mr. Felbinger's role in the movie may be deleted by the censor before Charlevoix sees the film. There is another unconfirmed report that Mr. Felbinger plead to be taken ashore, offering fifty dollars to Captain McCann if he would quit the fishing grounds and land them at once. To the skipper, however, this was just another bit of "dirty weather," and he stayed with the fishing.

Surely the picture will have all the spirit and action that Mr. Felbinger could have desired. It will show how fishermen the risks the Great Lakes fisherman takes to make a livelihood—that Charlevoix seamen are worthy the name We hope Mrs. Moon will be able to show Charlevoix this newsreel. It should prove a great drawing card for the Palace theatre.

Shoes in Stone Age

Did Stone age men wear shoes, is an interesting question. The Stone age lived in caves or tunnel mounds. They used the flesh of those animals for food, the furs for clothing and the leather often for sandals just as much as we do nowadays; and they made them out of leather, as we do. Only the shape was very much cruder. —Exchange.

Egotistical Husband

The palm of revengeful spirit must be given to the Englishman who left to his wife the sum of £500, ($2,500) which, however, she would not enjoy one of all she was to be expended after her death, so that she might have the "satisfaction of knowing that she would be buried in a style most befitting my widow."

VACATION TIME FOR DEER HUNTERS NEAR

The big vacation time for hunters is near at hand, especially for those who enjoy deer hunting, and several such made in this region, each of which looks forward to the time when they can range the woods in some favorite locality. With the approach of the season party after party starts out on their annual hunting trip.

One of the last of such companies left Charlevoix on their north bound trip with some point north of Petoskey as their objective. The party was composed of Don T. McHugh, A. J. Hamilton, A. L. Fitch, Harold Meggison and Kenneth Usher of Charlevoix; Attorney Thomas D. Meggison of Traverse City, will also join in on the trip; all leaving this a. m.

BLACK BEAR STORY

Caught in Trap When Stealing Honey, Near Boyne Falls

Boyne Falls was awakened from its sleep Nov. 2, with the startling report that a bear with its foot in a steel trap was in the outskirts of the town. Men and boys were soon on their way to investigate the report. A prominent game warden named Joe was seen to drive in the direction of the disturbance and soon the report arrived that the 300-lb bear had been dispatched.

Hubland Bros. operate some four hundred colonies of bees south of Boyne Falls. On Sunday they discovered signs of bear in their apiary. They borrowed a bear tray and set it in the path the bear had used the first night, but the bear stepped all around the trap, ate honey from it and left happy way. Then two more traps were placed with great care. The Hubands and their neighbors have trapped many years, the neighbors say and they smeared honey on a post near the trap. Monday morning the bear in the trap through its sense of smell to walk into one of the traps.

Two days before election, one bear cubs back and carefully placed a front foot into a trap which was secretly set for him. Several hours later he was shot to death by the state to prevent further destruction of private property.—Citizen.

Find Cancer Withers With Oxygen Removed

Berlin.—That the growth of a cancer is lessened by oxygen is the belief advanced by Prof. Otto Warburg, head of the Kaiser Wilhelm Biological institute here.

A sensation has been created among scientists by an article written by Professor Warburg, in which he describes how cancerous growth ceases when placed in rats withered and died within forty-eight hours when the oxygen inside the glass cage containing the rodents was reduced to the minimum atmospheric ratio capable of sustaining life. During the treatment, he says, the rats refused food, but they immediately regained their normal vitality when the oxygen supply was increased.

Professor Warburg says he is not yet ready to believe this treatment is successful in humans, letigs, but others scientists regard his experiments as an advancement toward the cure of cancer.

CANNING FACTORY

Meeting Attended by Many Farmers Throughout the County

The meeting held at East Jordan last Friday night for the benefit of growers who are raising crops for the Canning Factory, was attended by fifty-five interested farmers.

Prof. C. E. Starr, main speaker, gave a talk that was wonderfully instructive and helpful. Anticipating the additional facilities for canning small fruits and vegetables, each of the crops were discussed in detail. Prof. Starr spoke very optimistically of the prospects of raspberries, string beans, beets and sweet corn, as profitable crops to raise for the factory.

The speaker spoke for some length on the subject of quality, which is the deciding factor between success and failure and mentioned that the canned goods market has never been glutted with good quality goods, but rather with poorly packed cans. Many new varieties have been developed in the past two or three years, as well as new strains of the same variety and it is up to the factory officials to demand of their grower the right varieties.

The success made by the factory at East Jordan the first year should lead many farmers to begin thinking about the future that this new industry means to the community and will additional equipment another year they will be able to serve a larger field of activity. But don't forget the success is equally divided between the grower and the management of the factory and that means study, thought and effort.

TURKEYS TO BE MORE COSTLY

Turkey Crop Not so Large, Many Families Will Be Without Nov. 25th

Thanksgiving turkey eating will be somewhat more costly this year than in the past two years. The turkey crop is not as large as it was last year or the year before, and a prediction of 45 to 48 cents a pound for this year's Thanksgiving turkey is not considered speculative.

The cold weather this fall has been favorable "turkey weather." So long as the days and nights are comparatively warm, turkeys continue to run in the country and fail to put on flesh. When the temperature falls, they are content to cease wandering off, and settle down to grain feeding which rapidly adds pounds of turkey meat. The crop generally is further advanced than at this time in several years, and reports from the country consistently tell of the high quality of the turkeys. In Texas, which is the big early state for turkeys, the crop is believed to exceed last year when many of the young broods were lost during the hot dry summer. Oklahoma, Arkansas, Missouri, Kansas, Iowa and Ohio are expected to have fewer turkeys for the market this season while the other states report flocks of about the same size last year.

Stocks of turkeys in storage are less than half as large as at this time a year ago and 40 percent below the five-year average. Reserves of frozen turkeys, therefore, will be less of a market factor this season than last. Holdings of chickens and fowls are five million pounds larger than a year ago and ten million pounds larger than the five-year average, however, offsetting to some degree the decline in turkeys.

Advocates More Use of Flowers as Food

To suggest that we add flowers to our daily menu would to many people seem like foolishness. But a famous French food authority expresses surprise that we do not make more use of flowers in this way. He reminds us that we eat cauliflowers, artichokes, and brussels sprouts, all of which comes under this heading.

In China flowers often figure on the table as part of a meal. One of the national dishes is a soup made of the day lily, over 4,000 tons of the blooms being used for this purpose every year.

A chrysanthemum salad is one of Japan's most highly favored dishes. The flowers are carefully washed and served in the way that we serve lettice or watercress.

In some eastern countries the petals of the yellow waterlily are used as frequently for dessert as apples and oranges in this country.

STR. ALGOMAH TO BE REBUILT THIS WINTER

The steamer Algomah left Tuesday to receive an entire rebuild at the Manitowoc ship yard this winter at a cost of between $50,000 and $75,000. It will take all winter to complete the job and when she comes out in the spring she will be practically new. The steamer has been forty five years of service in battling with the ice in the straits, coming out in 1881, when the Michigan Central first reached the straits, and the only means of transferring freight cars across the straits was with a huge lighter towed by the Algomah and later replaced by regular car ferries.

She will be in commission again early in the spring in time to resume the regular runs between Mackinaw City and Mackinac Island June 15, 1927.—St. Ignace Republican-News.

SHOW SAFETY DEVICES AT SESQUI

Lighthouse Service Display Illuminants for Navigation.

Lights and life-saving at sea and all the technique of making a safe pathway amid storms and raging waters is shown in the exhibit of the United States Lighthouse Service, U. S. Department of Commerce at the Sesqui-Centennial International Exposition, at Philadelphia.

The Lighthouse Service now maintains more than 18,000 lights, buoys, fog signals, and other aids to navigation. It is the largest organization of its kind in the world. It employs 3,000 persons throughout 40,000 miles of coast line. It operates a fleet of 115 vessels, from 2,000 ton ships to small launches.

The development of the Lighthouse Service from 1716 to 1925 is shown in the various lights and aids to navigation at different periods in the safety of navigation. Some of the old-time lights in use in America, first placed on September 14, 1716, and in 200th anniversary was celebrated ten years ago.

The engineering force of the service has developed all kinds of lighthouse lenses and many special devices. There are 1,000 lighthouses in the service, and many special devices. There are twelve sizes, beginning with a massive, first order lens, six feet in diameter and ten feet high, which is composed of cut glass prisms, with an oil vapor light for its illuminant, and capable of projecting a 20-mile beam. Other types of lenses include those mounted on mercury floats, having frictionless rotation, and lenses adapted for electric illumination and for compressed acetylene gas.

A part of the exhibit includes typical devices used for warning ships in fog. There is an old fog gun or cannon first used in 1720, a fog bell struck by electric power; a powerful six-inch compressed air siren audible for ten miles, and a radio beacon transmitting paired for sending radio signals in fog. The latter is the latest development in this art with an effective range of more than 100 miles.

All kinds of buoys have a place in this display. An automatic gas and bell buoy weighing twelve tons which carries a 1000 pound bell struck automatically thru the motion of the sea, has proved one of the most popular features of the service. Other types include first-class tall-type buoy and can buoys, an automatic whistling buoy and several smaller types for different classes of service.

INDIANS SPURN AUTOS --BENEATH THEIR DIGNITY

Rather Appear on Horseback or on Foot at All Street Functions

Spurning automobiles as beneath the dignity of Indian braves, the several hundred full-blooded Indians in camp at the Sesqui-Centennial International Exposition in Philadelphia, flatly refused the offer of Exposition officials, recently, to ride in motor cars in their numerous public appearances.

Led by Chief Crazy Horse, 101-year-old survivor of Custer's last fight, the other chiefs and braves high in councils of the Indian Congress held a pow-wow and turned down the suggestion that they ride through the streets of Philadelphia and the Exposition in the automobiles. The chiefs and bucks served notice that they would appear in all parades and all functions on horseback or they would appear not at all. Several tons of the bloomin' proposition chiefly as a move for greater comfort to the descendants of the one-time rulers of America, provided the mounts. The squaws and children, however, had no say in the matter and they usually appear in automobiles.

$1.00 Silk and Rayon Hose, wonderful value, all colors at Holley Gift Shop

BIG APPLE CROP

To Boost Health in United States if Old Adage Still Holds

America should have the healthiest year in 1927, if the old adage about apples and health still holds.

The estimated apple crop for this year is more than 254,000,000 bushels, the third largest in the history of the United States. Because the 1926 production is one-third larger than last year, apple prices have dropped to the lowest point in years.

Practically all of the increased production of the apple crop this year was made in the East, the principal apple section. Here favorable conditions prevailed during the growing season. The crop in the Northwest, the only other important apple section in the country, however, suffered severely from frosts in the middle of June with the result that yields were reduced.

The export trade is likely to affect the apple market to some extent. Increased consumption in England, one of the big customers of American apples, is not expected this year because of the continued unemployment which is keeping the buying power of that country low, Germany, another of the big consumers, is taking more American apples than the year before. Improvements in the purchasing power of the German people and reduced apple crops in European countries will compete with the United States in the German apple market are given as the reason for this year's increase in the American apple trade in that country.

AD. FOCHTMAN PASSES FRIDAY

He Was City's Oldest Store Owner and Resident Since 1875.

Adolph Fochtman, Petoskey's oldest merchant and founder of the Fochtman Department store, passed away this afternoon at his home on Michigan street. He had been in business in the same location on Mitchell street since 1876 and, until his last recent illness, had retained an active interest in the operation of the store.

Mr. Fochtman came to Petoskey in 1875 from St. Mary's Pretty Prairie, Kansas, and the following year opened his general store. He saw the village grow and with it a succeeding year. For many years the family occupied the second floor of the store building. Later the family home was erected and the store enlarged to include the second floor. Later a three-story brick structure was built, and this was rebuilt following the fire of some years ago.

Mr. Fochtman has been in failing health for the last three years but his passing was hastened by a recent hard fall and the breaking of a bone in one of his hips. Everything possible was done to relieve this injury but his advanced age was against him.

The entire city, and especially the older residents and pioneers were grieved to hear of his death.—Petoskey Evening News, Nov. 5th.

Death Hastened by Cup of Cold Water

When General Kleber was assassinated in Cairo by an Egyptian female in 1800 the French authorities condemned the murderer to be roasted alive. The sentence was duly carried out, and the punishment was borne by the criminal with true oriental stoicism. The French account of the executive states that soon after the punishment the wretched man asked for a drink. A French soldier was about to hand him some water, but was pr

THE WORLD'S GREAT EVENTS

ALBERT PAYSON TERHUNE

(© by Dodd, Mead & Company.)

Joan of Arc

THE great prosperous chamber of the French court was crowded to the doors. On a dais at the upper end of the room sat a gorgeously attired man, surrounded by fluttering courtiers. Into that brilliant assemblage a poor peasant girl was ushered. Her tanned face was homely, but lighted by unusually large, exclusively eyes. She was Joan, the peasant's daughter of Domremy.

Her eyes swept the gay court, rested indifferently on the gaudy form in the chair of state, then passed on to a far corner of the room, where she singled out a plainly dressed man who stood unnoticed in a lesser group of courtiers. Going up to this man, she knelt before him, saying:

"You are Charles, the dauphin (crown prince) of France!"

A murmur of amazement ran through the listening crowd. The dauphin raised the peasant girl to her feet. The smile of derision that had curled his lips gave place to a look of awe. Joan of Arc's career had begun.

France and England had for centuries been bitter foes. They were forever at war with each other. (These wars endured at intervals until the battle of Waterloo, in 1815.) France had been repeatedly beaten by the better-disciplined islanders. Invasion after invasion on the part of the English had torn away more and more French territory and had annexed it to England. Edward III had several times invaded France, and his son, "the Black prince," in the battles of Crecy and of Poitiers (1336 and 1356) had wrecked France's military power.

The Black prince has come down through history as the very flower of chivalry; whereas, as a matter of fact, he was a brutal freebooter.

Later, Henry V of England had further subdued France, until, early in the Fifteenth century, England had conquered all the country north of the River Loire, and the infant son of Henry V was crowned not only king of England but of France as well. France, lying helpless, almost passive, in the grip of her British masters. Charles, son of the French king and rightful heir to the French throne, should have been crowned in his father's death, but he had no genius or ambition and was content to spend his time in idleness and dissipation, uncrowned, while his kingdom slipped away from his nerveless hands.

Affairs had reached this point when Joan of Arc appeared. She had passed her childhood in the forest of Domremy, at the edge of the province of Lorraine, where she tended her father's flocks, excelled at housewifery and spun and peeled all day long. She could neither read nor write. But she had heard of the prophecy made of old by the magician, Merlin, that France, in the hour of direst need, should be saved by a maiden. Tradition had added that the maiden should come from Lorraine. Joan brooded over this prophecy in her long hours of solitude in fields and woods until she honestly believed into the belief that she heard divine voices telling her she was the Holy Maid destined to rescue her country from ruin.

At this juncture the English captured Orleans, the way to all southern France. Joan declared that the "voices" bade her to wrest Orleans from the invader and to crown Charles at Rheims. With this double aim in view, and backed by the clamor of popular feeling, she secured an interview with Charles. To deceive him, he decked out a courtier in his royal robes, and himself stood disguised, in a remote corner. Joan at once saw through the imposition. So impressed was Charles that he gave her an army of about 4,500 men and sent her against Orleans.

She had no military knowledge, no education of any sort. Yet she had absolute faith in her own inspiration, and she inspired her soldiers with the same belief. Incidentally, she worked strongly upon the superstitious fears of the English. Clad in mail and carrying a sacred banner, she rode at the head of her famished army, captured Orleans, beat the English in battle after battle and drove their hosts shelter beyond the Loire. Then she returned and assisted at Charles' coronation at Rheims.

Her double mission thus accomplished, she begged leave to go back to her flocks and the quiet life of her village. But Charles would not hear of it. He ennobled her and her family and sent her to wrest Paris from the English. In vain she pleaded that she had no further divine call. Charles relied on the fanatic enthusiasm of her soldiers to sweep all before them. So she obeyed. But she was henceforth no more than a mere soldier. On September 8, 1429, she attacked Paris, but was beaten back and wounded. Her last divine power—was gone. Soon afterward she was captured. Charles, who owed her his kingdom, made no effort to ransom or rescue her.

The English tried her as a sorceress and a heretic. Although its crime or deceit could be proven against her, they pronounced her guilty, and on May 30, 1431, burned her at the stake.

Thus died Joan of Arc, holy martyr maid, and the bravest, purest patriot the world has ever known.

Odd Coincidence

During a heavy fog at Vancouver, British Columbia, an auto driver taking his wife to the theater lost his way. He jumped out of his car to read a street sign, returned and proceeded. He went a short distance when he addressed some remark to his wife, only to find that it was not his wife who sat beside him. He took her to her home and found that the other man in the thickness of the fog had done the same thing with his wife.—Indianapolis News.

Marines Now Protect United States Mails

Because of numerous mail robberies the government has directed that the mails be protected by marines until other arrangements can be made. Some of the "devil dogs" are shown on guard in a mail car. Inset is portrait of Brig. Gen. Logan Feland, commanding this special service east of the Rocky mountains.

Memory of South Africans Honored

Nearly eight years after the signing of the Armistice a memorial has been erected and dedicated to the memory of the allied soldiers who fell in the battle fought at Delville wood, France. Most of them were from South Africa. Here is a view of the dedication ceremony.

Girl Reserves Give Ileana a Ring

These things I love, and they are friends to me—
A pearl pink east above a summer sea,
A cold green sunset over snow-wood fields,
The earthly incense that the furrow yields.
—W. P. Eaton.

FOR SUNDAY NIGHT TEA

On a chilly night there is nothing more satisfying and agreeable to the palate than a bowlful of hot soup. If one prefers no labor of preparation there are cans of soup which are ready to serve in a few moments by setting over the heat. Many delicious soups are prepared with the vegetables found in the house, such as potato cream soup, celery soup, tomato soup and various combinations of these and other vegetables.

After a heavy dinner on Sunday, supper should be a light meal. A salad is always acceptable, and one which is easy to prepare and tasty, too, is dates and cottage cheese. Wash, dry and pit the dates, arrange on tender lettuce with a spoonful of cheese, using three or four dates. No seasonal dressing is needed if the cheese has been well seasoned and cream added.

Figs and nuts or dates and nuts, seasoned with a pinch of salt and moistened with a little thick cream, make a fine filling for sandwiches.

An avocado filling, which is well liked by nearly everybody, is sliced cucumbers dipped in a good salad dressing and placed on buttered bread. Onion juice or lemon juice may be used in place of the dressing.

Chopped green onions, seasoned with oil and vinegar and salt, make another good filling. A cup of cocoa with a sandwich will make a meal sufficiently satisfying for the majority.

For those who desire more substantial food, milk toast with grated cheese, roast beef sliced and served with white sauce will be found quite filling.

Now that the oyster is in season again there is always the ever-satisfying stew, or if there is time for the preparation, scalloped oysters or the delicious fried oyster with shredded cubbage for salad.

Salmon, tuna fish, shrimps, all make nice salads for a night supper.

The Daily Meal.

A good soup which is hard to equal in tastiness, and liked by all, is:

Pea Soup.
Take one-half cupful of dried peas and soak over night until soft, then cook until tender, then put through a sieve. Add two tablespoonfuls of butter or pork drippings in a saucepan, add two tablespoonfuls of flour and when a few minutes cook, add a quart of milk. Add one teaspoonful of salt, a little chopped onion, one-half teaspoonful of celery leaves and one-eighth of a teaspoonful of pepper.

How to Cook an Old Chicken.—Cut up a fowl as for fricassee, roll in seasoned flour and fry a golden brown, then place in a dripping pan or roaster with one cupful of chopped celery and two tablespoonfuls of minced onion. Bake slowly until tender. The older the fowl the longer it will take to bake.

Graham Muffins.—Take one cupful each of graham flour, wheat flour, and sour cream. Add one teaspoonful of sugar, one teaspoonful of baking powder, one-half teaspoonful of salt, and one-quarter of a teaspoonful of soda. Mix the dry ingredients, add the sour cream mixed with the soda, beat thoroughly and bake in gem pans in a quick oven. Serve hot.

Sweetbreads and Mushrooms.—Parboil, then small pairs of sweetbreads and remove all the fiber. Cut each into two pieces. Heat a tablespoonful of butter, lay them in, saute quickly, turning them once; sprinkle with salt and pepper and lay on a hot platter. Have ready a can of mushrooms or an equal quantity of fresh ones cooked in butter for five minutes; add them to the dish with a cupful of rich cream, thicken with a tablespoonful each of flour and butter cooked together until smooth. Pour the cream around the sweetbreads and serve very hot.

Imperial Salad.—Wash and chop one-half cupful of celery, add an equal measure of pineapple. Soak one and one-fourth tablespoonfuls of gelatin in one-fourth cupful of cold water and dissolve in one-fourth cupful of boiling water. Add to the first mixture with one-fourth cupful each of sugar and vinegar, the yolks of a cupful of pineapple syrup and one tablespoonful of lemon juice with a little of the grated rind and a pinch of salt. Turn into individual molds and chill. Serve on crisp lettuce with mayonnaise dressing.

Watercress makes a delightful salad and is good for the blood and for anemic chops. It may be eaten simply with a bit of salt or dressed with French dressing.

Humans in Hives

It is said that in Mesopotamia there is to be seen a curious form of dwelling, built of mud and bricks, in the form of a hive. Villages and whole towns in this odd form of architecture are disclosed. As the country is for the most part destitute of trees from which to hew rafters, and also devoid, in some parts, of stone, the natives build their habitations of sun-dried mud bricks with high, steep domes, for their abode, as the coldest nights are cheerless.

There is one of these villages not far from Aleppo, on the route of the famous Bagdad railway. Each town consists of several of these hives standing near together and surrounded by a wall of similar material. One or more is used to live in, another for the animals, and still another serves as a granary, and so on according to the possessions of the owner.

Clean Kidneys By Drinking Lots of Water

Take Salts to Flush Kidneys If Bladder Bothers or Back Hurts

Eating too much rich food may produce kidney trouble in some form, says a well-known authority, because the acids created in the system irritate. Then they become overworked, get sluggish, clog up and cause all sorts of disease, particularly backache and misery in the kidney region, rheumatic twinges, severe headaches, acid stomach, constipation, torpid liver, sleeplessness, bladder and urinary irritation.

The moment your back hurts or kidneys aren't acting right, or if bladder bothers you, drink plenty lots of good water and also get about four ounces of Jad Salts from any good pharmacy; take a tablespoonful in a glass of water before breakfast for a few days and your kidneys may then act fine. This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and has been used for years to flush clogged kidneys and stimulate them to activity; also to neutralize the acids in the system so that they no longer irritate, thus often relieving bladder disorders.

Jad Salts can not injure anyone; makes a delightful effervescent lithia-water drink which millions of men and women take now and then to help keep the kidneys and urinary organs clean, thus often avoiding serious kidney disorders.

Fits Attacks of epilepsy of the very worst kind have yielded to the Tower Treatment. In use 52 years. Chicago Clerk Approves Tanlac

Nervousness and Sour Stomach Following Diphtheria Ravaged Health.

"After a siege of diphtheria I was in such bad shape, so weak and run-down, that I thought I would never regain health," says Miss Viola Powell, 124 E. 39th St., Chicago.

"Food that I ate soured on my stomach. I could not exert myself without suffering from headaches and dizziness. I was so nervous that nights were just hours of thinking, restless tossing and tossing. I never felt rested.

"Tanlac cleansed my system, gave me an appetite for food, relieved my stomach trouble and soothed my nerves. It has put me in the best of health and I enjoy life, both work and recreation."

Tanlac builds up scrawny, weak bodies, drives out causes of suffering and gives the body good health. Made from roots, barks and herbs. Take wonderful Tanlac. At Armstrong-Driggs'.—Over 40 million bottles sold.

Marjorie—"What do you think John said, daddy?" Father—"I don't know. What?" Marjorie—"I asked a shy recluse, a country place, three acres and a lot of servants!" Daddy—"Well, whatever did the person say?" Marjorie—"He said that if I would sleep late on my right side, I wouldn't have any worries."

Bad dreams are a good sign of poor digestion; when hand-worked stomach begins to complain, Dr. Caldwell's senna softens and we have pleasant dreams, stimulate breath and sanitize disorders.

GREEN'S AUGUST FLOWER has been relied on by many such sufferers for the past sixty years, and has established a reputation for relieving indigestion, biliousness, sick headache, dyspepsia, etc. Price, 75c. and $1.25 per bottle. At all drug stores. If you cannot obtain it, write to G. G. Green, Inc., Woodbury, N. J.

STORY FROM THE START

Harry Ormerod, proscribed traitor to the British crown as a Stuart partisan, returning from France to London without friends or prospects, rescues Alderman Robert Juggins from anaesthia who had waylaid him. The arrival of the watch puts an end to the affair, and Harry tells his new acquaintance of his former activities as a soldier in the service of the Stuarts and later as official at the "court" of the so-called King James the Third.

CHAPTER I—Continued

—2—

I had forgotten my surroundings, forgotten the dingy cobbles of Hilarding lane, forgotten the strange circumstances under which I had met this strange person who seemed so intimately versed in my family history. I lived over again the brave days at Foxcroft when Charles had been master and I his lieutenant. But the mood passed, the memories faded, and my eyes saw again the drab buildings of the alley and the pallid figure of my deliverer—whom I had first delivered.

"And you, sir," I said, "May I ask how it happens you know so much concerning the fortunes of a plain Dorset family?"

He seemed not to hear me, standing there in a brown study, and I spoke to him again sharply.

"Yes, yes, I heard," he answered, almost impatiently. "I assure you there is no place for discussion. Come with me to my house."

Some trace of my feelings must have been revealed in my attitude—my face he could not have seen in the darkness—for he continued:

"You need not fear me, Master Ormerod, I mean you no harm. I could not do harm to your father's son."

"But you?" I asked. "Who are you, sir?"

He chuckled dryly.

"You know my name," he answered, "and you heard the watch acknowledge my civic dignity. For the rest, if you have spent much time in Dorset you should know a Dorset voice."

"I do that," I assented heartily, "and 'tis grateful to my ears."

"Then let content with that, sir, for a few minutes. Come, let us be on our way. I have reasons for not wishing to invite a second attack upon me."

He set off at a great pace, his head turned in his cloak collar, and I followed him, puzzled exceedingly.

Two minutes later we stopped before a tall, gabled house of brick and timber on the near side of Holborn. My companion produced a key from his person and unlocked a heavy door which opened upon a staircase leading to the second story. "The first floor was occupied by a shop.

"Enter, Master Ormerod," said Juggins. "You are right welcome, and if you have none of the country gentleman's scorn for the home of an honest merchant."

"A beggar must not be a chooser," I answered. "But if I were not indebted to you for my liberty I should still be glad to visit a Dorset man who knows how to fight and who has resided in the woods of Foxcroft."

"Well spoken," applauded Juggins as he fastened the door behind us. "So I might have expected your father's son to speak."

"That is the second time you have called me 'my father's son,'" I said. "Prithee, Master Juggins, had you acquaintance with my father?"

"Hide, dear," he replied enigmatically. "We shall settle all that anon. After you, sir."

And he ushered me up the stairs, which were long with the skins of many kinds of animals, some of which I did not even know. The stairs gave upon a large hall, similarly decorated, and through this we passed into a comfortable chamber which was stretched across the front of the house.

Master Juggins relieved me of my cloak and hat and motioned me to a chair in front of the fire.

"Now, Master Ormerod," he requested, "if you will have provender for the inner man as well. Ho, Goody! Art ahed, afore all?"

"Ahed! Ahed!" answered a thin, old voice that was inexpressibly sweet, with a Dorset burr that made Master Robert's sound like the twang of a lumberer. "Ahed says he. When did I ever feel the sheets, and not knowing he was warm and safe and his poset-cup where it belongs—which is in his stomach? Ahed! Didst ever hear?"

She stepped into the room, a quaint little figure in boddergay, a full skirt cap perched on her wispy white hair, her brown eyes glancing in the middle ages with a network of fine lines. In her hands she held a tray supporting a steaming flagon and divers covered dishes of pewterware. Juggins favored me with a humorous glance.

"Sirre, I grow more troublesome year by year, granny," he said as she paused at sight of me. "I must become home later than ever, bringing a guest with me. Who think you he is?"

She looked at us inquiringly.

"'Tis Master Ormerod."

"Ormerod is it, Bob—"

"Aye: Master Harry."

"But he is in France?"

"Nay; he is here."

She drew closer, and studied my features under the candles that shone from the mantel shelf.

"Is he in danger?" she asked breathlessly.

"The watch were after him when he came to my rescue," replied Juggins.

"Yet he came."

She patted my cheek with her hand. "That was a deed which you need never be ashamed of, Master Ormerod, and you shall win free to safety, whether it may be or wherever, if Hobert and I have any wits between us. Sit ourself down, Master Ormerod, and you shall have a draft of mulled ale and a dish of deviled bones and there afterward a bed with sheets that have lain in Dorset lavender. Hath it a welcome sound to you?"

The tears came into my eyes.

"I am happier this night than I have been any time since Charles and I left Foxcroft," I said. "But pray tell me why you two, who are strangers to me, should be so interested in an outcast?"

"He does not know?" exclaimed the little old lady.

"Well, 'tis time he knew he was amongst the right sort of friends," the little lady said. "You are too young, Master Ormerod, to remember old Lyster Juggins—"

A light burst upon my addled wits.

"Why, of course!" I cried. "He was steward under my father, and in his father's time before him! But you?"

"Peter was my husband," she said simply. "Robert here is our grandson. When Peter died your father offered his place to Robert. Robert would have none of it. He had the wanderlog hoe in his bonnet. He was young, and he must see the world. He would make his fortune, too. No life in an estate steward for him."

"And wise I was, too, granny," interjected Master Juggins. "Even you will grant that now."

"He not too elevated by your good fortune," she retorted. "Had you followed your grandfather at Foxcroft your rounset might have restrained Master Henry and his brother from their madness—"

"I wish it might have," I said bitterly, thinking of Charles' lonely grave on a mist-draped hillside in the Scotch highlands.

"Many a gentleman would have fallen in hart such an answer to an offer made in kindness, Master Ormerod. Be not your father. No, after trying all he could by fair means to dissuade Robert from his course, he asked where his fortune drifted, and then supplied him with money for the voyage to the Western Plantations and to enable him to secure a start. There he remained, prospered in his overseas and to set himself up as a fur-trader there and afterward to return and establish his business downstairs, which hath grown so that it is more than he can handle. All of it, I say, we owe to you."

"All of it, granny," reaffirmed Master Juggins himself. "They have not made it one whit too strong for me. But I would not and before we sleep low if I may be of aid to Master Ormerod."

"Aid!" quoth she. "All that we have in the world is his, if he wants it; aye, the clothes off our backs. Good night to you, Master Ormerod. And remember, this house, poor though it be for your father's son, is to be your home until you have a better."

I rose and bowed my acknowledgments, but I could not speak. My heart was too full. Here in this bleak, unfriendly London, which had greeted me with suspicion and persecution, I had found friendship and assistance. It was almost too good to believe.

"I have no claim upon you, Master Juggins," I said, as the door closed behind his grandmother. "Believe me, sir, that I am not ungrateful for one moment two friends of my father, who reverse his memory as I had not suspected, and, save myself."

He pushed me down into my chair by the fire.

"There is no question of claim, sir.

(TO BE CONTINUED.)

Coal First Employed for Melting Metals

Coal probably was burned for the production of superheated steel in the fabrication of metals during the Iron age, as early as B. C. 1000, but the first authentic use of this fuel in metallurgy was where it was burned in B. C. 300. These facts relating to the common coal of today are presented by Malcolm MacFarlane, general chief inspector of the New York Juggins favored me with a humorous glance.

"Sirre, I grow more troublesome year by year, granny," he said as she paused at sight of me. "I must become home later than ever, bringing a guest with me. Who think you he is?"

She looked at us inquiringly.

"'Tis Master Ormerod."

"Ormerod is it, Bob—"

"Aye: Master Harry."

"But he is in France?"

"Nay; he is here."

She drew closer, and studied my features under the candles that shone from the mantel shelf.

"Is he in danger?" she asked breathlessly.

"The watch were after him when he came to my rescue," replied Juggins.

"Yet he came."

She patted my cheek with her hand. "That was a deed which you need never be ashamed of, Master Ormerod, and you shall win free to safety, whether it may be or wherever, if Hobert and I have any wits between us. Sit ourself down, Master Ormerod, and you shall have a draft of mulled ale and a dish of deviled bones and there afterward a bed with sheets that have

"Tis a privilege. Do you tell me now of your present plight. Fear not to be frank with me, Master Ormerod. I do not mix in politics. I am none of your red-hot loyalists who would hang a man because he remarks that our worthy king is a Hanoverian by birth. But on the other hand I'll have nought to do with those plotters who curse over the exiled Stuarts.

"The Stuarts went, sir, because they overtaxed the forbearance of a long-suffering people. They might have returned on this, as you know, had they possessed the good sense to appreciate what their millions people required. But they lacked that good sense, Master Ormerod, and with all deference I say to you they will never return unless they learn that lesson very soon."

I leaned forward in my chair and interrupted him, the words bubbling from my lips."

"I could not have put matter my own feelings, Master Juggins. When I was a lad not yet of age I risked all I had for the Stuart cause. What came of it? A life of exile that might have ruined me, as it has many a better man. My family estate was sequestrated; my outlawry was proclaimed. I have no place to lay my head unless I seek it in the plots and plans which were aimed to bring about his restoration to power.

"But the longer I studied them the more impotent they became. I found my leader a catspaw of foreigners, used to undermine England's prestige. His aims were not the good of England, but his own aggrandizement, the furthering of France's ambitions."

"Hast learned that, lad? Why, thee, there's no more loyal Englishman in London!"

"So you think," I answered. "So I think. But hear me out. I told my feelings to a certain great gentleman who handles affairs at St. Germain. He cursed me for a turncoat, would have ordered his lackeys to flog me from the palace. I left him—in disgrace. The doors of my friends were closed to me. I thought I would make my way to England and begin a new life.

"So I applied to the English ambassador for a passport. He laughed at me. Did I think he was so innocent as to be blinded by such transparent trickery? Nay, the Stuarts must seek otherwise for means to plant a fresh spy in England. In desperation thes I bought passage from a smuggler of Dieppe, who landed me three weeks since in Sussex. I made my way to Dorset, hoping to find old friends who would help me to gain a pardon; but I was recognized by one of my cousins who now held Foxcroft house, and he raised a hue-and-cry after me, fearing I might claim the estate. I lost my estate.

"Since then I have been hunted like a beast. My last clothing was spent this morning. Tomorrow, had I escaped so long, I planned to sell my sword, and if that failed to seek employment.

"Let us thank God you heard my cries," said Juggins earnestly.

"I do," I said. "And with no lack of reverence, my friend, I also thank you."

He gave me a keen look.

"You call me friend. Do you mean the word?"

"Why not?"

"It was your father's servant," he said, and he said it so that the words were at once proud and humble.

I caught his hand in mine.

"You were his friend, too; and who am I, an outlaw without name or fortune, to set myself above a man who has prospered like you through the diligence of his own hands and brains?"

Master Juggins drew a deep breath and wrung my hand hard.

"You'll do, lad," he said. "My help you have, but I could not speak. My heart was too full. Here in this bleak, unfriendly London, which had greeted me with suspicion and persecution, I had found friendship and assistance. It was almost too good to believe.

"I have no claim upon you, Master Juggins," I said, as the door closed behind his grandmother. "Believe me, sir, that I am not ungrateful for one moment two friends of my father, who reverse his memory as I had not suspected and, save myself."

He pushed me down into my chair by the fire.

"There is no question of claim, sir.

(TO BE CONTINUED.)

The part played by the inexhaustible resources of the British colonies in the machinations of European politics comes as a revelation to Ormerod.

SMART ONE-PIECE CLOTH DRESS; NOVELTIES IN STYLISH HATS

AS TO "button, button, who's got the button," there are none missing this season within fashion's domain. The stylist is not losing sight of a button of any description, employing myriads of these either in a useful or an ornamental way. In consequence, buttons continues present a scene of unusual animation, for choosing buttons for one's new frock or coat has become a matter of outstanding importance.

The mode smiles approvingly on the practical yet smartly styled cloth frock which buttons up the front like the one shown in the picture. For the tailored twill, flannel or crepe wool frock, self-colored bone buttons are a combined good form, or cloth-covered ones if so preferred.

Fashion, however, does not expect one to be unerringly practical when it comes to the buttons we sew on our frocks and our coats. At the sight of the adorable jeweled buttons which are making their appearance in such great numbers this season, one loses best for things too utilitarian and prosaic. That is why so many of the pretty crepe and silken frocks fairly sparkle with buttons set in rhinestones. At times one finds the jeweled buttons prove a beautifying force to many a costume. The wispy frock, which leads all others this season, in black or in color, needs no other embellishment to lend to its enchantment if there be link rhinestone buttons positioned advantageously at neck and at waistline.

From buttons to buckles is not a far cry, and if the one does not perform the act of fastening the belt or girdle, the other does. Especially is this true in regard to the popular redingote dress models which are shaped together at the front waistline.

Millinery, ever capricious and always setting the unexpected thing, is giving some extra thrills this season. There is, for instance, the nature of draping which is truly extraordinary. Especially do close-fitting turban styles emphasize the curious and fascinating manner in which the world of fashion lets its material be draped.

Smartly Styled Cloth Frock.

Often velours and felt are combined in the newest models for a manner illustrated in two of the hats in the group pictured below, where the unborn calf are so interworked as to appear not as a trimming but rather as an intrinsic part of the hat itself.

Each of the hats in this picture features the fashionable beige color. The smartly styled turban at the upper right corner shows a clever manipulation of fine velours. The coquettish feather arrangement as do the majority of hats this season.

Draping at its intricate best is accented in the high crown of the ribbon-trimmed hat pictured in the lower left corner of the group shown above.

Concluding this group of stylish hats is a turban most cunningly draped with a drapable crown and two smart looking spikes piercing the felt flap at the left side.

Among other imported models using that fur is a striking African draped model with an interesting bonnet of black and gray shaved lamb.

JULIA BOTTOMLEY.

Group of the Latest Hats.

Velencia New Color

For evening the geranium reds vie with maroon and violets for leadership. The best violet is named velencia, sometimes called primrose pink. It is an orchid, almost pink, and unusual in the eyes of the modes.

Borrowed From Man

The finely ribbed vest with the narrow Peter Pan collar and tiny buttons is featured on many of the striped wash silk sports dresses.

Flower at Wrist

One of the very feminine conceits of the mode is the use of the flower bracelet—a flower the color of one's frock is slipped into one's bracelet or a ribbon band allowed to fall over the hand. Needless to state, this style is only for evening.

Very New, Indeed

The quilted taffeta coat is smart both for day and evening wear, and frequently has a handling.

THROUGH ADVICE OF NEIGHBOR

Woman Tried Lydia E. Pinkham's Vegetable Compound

"A neighbor advised me to try Lydia E. Pinkham's Vegetable Compound, which she said had helped her so much. So I bought a few bottles and tried it out. It sure helped me wonderfully. I felt much better. My work was no longer a dread to me. If I hear of any one who is troubled the way I was, I will gladly recommend the Vegetable Compound to them and I will answer any letters in regard to the same."—Mrs. Bertha Meagher, 210 Center St., Lansing, Mich.

"I had been sickly ever since I was fifteen years old. After taking Lydia E. Pinkham's Vegetable Compound I got so I could do all my housework and I am in good health."—Mrs. Mamie K. Williams, Ketchikan, Alaska.

From Michigan to Alaska, from Maine to Oregon and from Connecticut to California letters are continually being written by grateful women recommending Lydia E. Pinkham's Vegetable Compound.

The Compound is made from roots and herbs and for more than fifty years has been helping to restore run-down, over-worked women.

Resinol

"Scalp" Books

With the growth of gopher catchlig into business proportions in Marshall county, Kansas, trappers are using a really up-to-date system, says the Topeka Capital. The plan is to obtain sample books from tailor shops, remove the patches of cloth, and number the scalps in rows in place of the cloth. A sample book holds 22 scalps to a page, and by looking over a sample card the county clerk can easily count the number.

TARIFF DOCTRINE

A great deal has been heard during the past two weeks about the international drive against national tariffs. Doubtless more would have been heard about it had not the administration at Washington given the world to understand that the United States does not propose to have any international interference with its tariffs. This word assured the American people, who were beginning to react, through the newspapers of the country, in no uncertain terms against the so-called international tariff document.

This unfavorable reaction in America was followed by the assurance that the suggestions published were for European countries and had nothing to do with the United States. All of which is well and good, although there is a suspicion in the minds of a great many of us that if the outcry against the free trade plans had not been so instantaneous and decisive in the United States the schemers and its proponents might have not been given.

At any rate the publishing of the views of the international free traders has had a very clarifying effect. It has served notice on the world that the United States does not intend to have any outside interference with its tariff system, and that we do not propose to mix into European tariff troubles. Europe ought to be able to settle these little troubles for herself. What is her League of Nations for, anyhow?

The international proposal brot comment from many American public men among them Secretary Mellon who gave his views in no uncertain terms on the proposal. He said:

"Unless we are willing to bring our standard of living down to the level of that of Europe, we cannot consider a change in our tariff, however desirable such a change may seem to Europe. The United States is the largest customer in the world today. If we were not prosperous and able to buy, Europe also would suffer. It is inconceivable to me that American labor will ever consent to the abolition of protection which would bring the American standard of living down to the level of that in Europe, or that the American farmer could survive if the enormous consuming power of the people in this country were curtailed and his market at home destroyed."

The internationalists may get us sooner or later but when they do they will have to have a more enticing bait than international free trade

WANT THE MARINE

Members of the United States Shipping Board who are conducting hearings in various parts of the country to ascertain the state of public sentiment with regard to the merchant marine are already hearing in no uncertain terms that the American people want an American merchant marine maintained.

Two of the commissioners, following out the plan for a nation-wide investigation, recently held a hearing in Mobile. At this meeting it developed that sentiment in the Mobile section is unanimously of the opinion that the United States government should continue operation of the marine until at such time it is demonstrated that private capital can take over the routes and operate them in a proper manner.

This sentiment was ascertained by a series of questionaires sent out by representatives of the commercial organizations in Mobile and other cities in Alabama. The sentiment reflected in Alabama will doubtless be found in other sections of the country as the investigations of the shipping board progress. The people of America, regardless of section, take pride in the American merchant marine. They see it as a protection to shippers and consumers in time of peace and as a protection and safeguard to the whole country in time of war.

It is also to be noticed with interest that the first time since 1920 when the shipping boom collapsed, there is now a noticeable pickup in shipping business. There is actually a demand for more ships and cargo rates are said to be steadily advancing. The situation is not expected ever again to result in shipping but is said to indicate a steady and healthy growth in the world's shipping. Of this growing business the United States ships should have their part and they doubtless will get it. Now that shipping is on the upgrade and the world is gradually getting on its feet again, there is more reason than ever that the United States should retain its merchant marine.

The plan of getting in touch with the citizens of the country through hearings in various important cities is a good one, and the report rendering will give Congress something to work on when it tackles the merchant marine problem next winter.

The confidence of the people in President Coolidge was in a considerable way responsible for the apathy of the people in the last campaign. The feeling was current that with the President only half way through his term, there was no special reason for getting either excited, alarmed or distressed over the conduct of affairs at Washington. In short the average voter had the feeling that the Senate and the House were really incidental; that if they undertook any movement which was dangerous to the government that the President could be not only depended on but had the power to stop it, and that on the other hand he had the strength, which it must be admitted he had demonstrated in the past, to secure the adoption of such a programme as he finally evolved. This may seem curious reasoning, but it is now admitted that this line of thought was largely prevalent throughout the country. Once again it has been made plain that when the people take a real interest in an election, as in presidential, they vote Republican. Lack of interest is accordingly why Republicans have set backs in off-years.

Notwithstanding the desires and efforts of the politicians to make the congressional election national in scope, the voters made their selection and cast their ballots on local issues. From, Maine to California, from Kentucky to Minnesota, every possible effort was made to give a national tone to the proceedings. The personality and character of the President was introduced, and valiant efforts were made to center the mass thought of the public on national issues. But the voters continued "not" in their ways. They voted as they have always voted on off-years, on the personal characteristics of the candidates and their personal reactions toward those individuals.

In Massachusetts they turned down Butler, a businessman, and voted for David I. Walsh, one of the few surviving relics of the boy-orator period of our American political life.

In New York they rejected Wadsworth and elected Wagner on a local combination of milk and booze.

In Missouri they rejected Williams, Republican, and elected Hawes, because, to cite the defense of the people who did it, they thought Hawes was more of a goodfellow."

So one might run through the whole gamut of victories and defeats. In certain cases Republican victories were the result of equally trivial agitations. In short, while every effort was made to drag the voters up to the national-issue watering trough, they failed to drink. Coolidge was not a candidate and they were not voting on him.

WHAT THEY SAY

Come Up or Shut Up—One who stands on the sidelines, refusing to join the fight, has no business criticising the decision. Next year well-intentioned citizens will be damning one public official or another, some judge, some executive or some legislator who, the critic thinks, is false to his public duty. Finel Honest fault-finding is the life of democratic government. But—

Did you, Mr. Critic, take part in the contest, or merely stand on the sidelines? In other words, did you register and vote at the last election? No citizen who neglects this elementary obligation of his citizenship has any right whatever to complain of results. If incompetent or dishonest men or chosen to office a large part of the blame rests on the shirkers who imagine themselves too busy, but are in fact too indifferent, to attend their puny primary, register and cast their ballots.

More devotion to civic duty now—less criticism by the sidelines after election. That's our slogan.—Plain Dealer.

Land of Opportunity

—The arrival of Roumania's queen and her reception should serve to demonstrate the equality of opportunity that exists alike for the peasant girl and the daughter of beautiful roses of pearls? Do they buy nasties? Or do they just salt down?

It is almost to think that they use them all for the upkeep of the home; or to pay for their children's education. They could never spend their fees all on that.

How do I know? I paid my lawyer this morning.—Kansas City Times.

Disappointed

A Yankee from New England was lounging on a park bench in London when a great excitement arose. People rushed toward the street, falling over each other in their haste to get there. "What's it all about?" asked the Yankee, starting to get up.

"Stop, man," cried a little man, "the king is coming!"

"Thunderation!" said the Yankee, settling back on the bench, "I thought it was a fire."—Country Gentleman.

Self-Sufficient

She was three years old and very independent, objecting to being helped in any way. One morning she proceeded against having her hair brushed, saying, "I brush my own hair." And so it went on during the stages of dressing, until finally her mother exclaimed, "Edna, if you don't behave you'll spank you!"

Immediately came the retort from Edna. "I 'pank myself."

Can't Hurry Slow Thinker

Bright people must learn to be tolerant and patient with slower people, says the American Magazine. Full, slow to respond to this often gets a foreman into trouble with his men. Naturally, the foreman is likely to be brighter than those under him. And if he can't be tolerant with their slowness he is in for trouble. Trying to hurry naturally slow people is a foolish process. It hurts and irritates.

The duller man is mentally, the less capacity he has to hurry. He can't hurry. Any attempt on the foreman or executive unless you are able to learn what goes on inside of him, your aim are to defeat your own purpose. Those featured with her in this picture are Ricardo Cortez and Wallace Beery. Vidocan arrives at the Palace on November 17-18.

"The Lost World"

Blood-thirsty human dragons feeding on Nero and the gentle lambs compared to Tyrannosaurus Rex, which is the scientist's way of saying King of the Terrible Lizards. Tyrannosaurus Rex is one of the prehistoric dinosaur species which First National and Watterson R. Rothacker bring to life in "The Lost World," to be shown at the Palace theatre next Saturday and Sunday.

Fleischgeisters and Nero are the most fearsome meat-eater of all time. Bigger than eight or nine elephants, mare power, if that means much, he spread terror among other species of dinosaur when he started out to get a meal. He required a ton of meat a day to keep from barely starving.

Moved by Conscience to Make Restitution

The American treasury derives a certain amount of pleasure from restitutions made by persons who are troubled by the pangs of conscience. In one year the amount received from this source exceeded $5,000. Among the contributions to this fund are taxpayers who have mislaid their incomes, taxpayers who have evaded customs duties, letter-writers who have used stamps that have done service before but not been defaced, government clerks who have exaggerated their expense accounts, and soldiers who wish to make amends for a saddle blanket stolen long ago.

One of the most curious recent examples of penitence was that of a Washington man who wrote an "in desperate need" of a story which could be procured only from a newspaper to the files of the Library of Congress. It was several columns long, and she felt unequal to the labor of copying it, so she took the paper away with her. Thereafter her conscience gave her no rest until she sent four cents in payment of her debt.—Manchester (England) Guardian.

Hotel Reservations by LONG DISTANCE

Football games and conventions crowd hotels. Make sure of your accommodations by long distance telephone. Results are all out of proportion to the small cost.

Use Long Distance and you'll appreciate it.

IRA WALL

Ira Wall of Des Moines, Iowa, is considered America's most versatile boy scout. He holds 69 of the merit badges presented by the boy scout organization for proficiency in various accomplishments, and has only those for interpreting and bugling to win to have every one on the list.

THE THEATRE

"Volcano!" Some day Bebe Daniels is going to direct a motion picture. She has promised herself this interesting experience and Bebe is widely known for a habit of keeping her promises.

"A few successful pictures have been directed by women," she says, "and I believe that some day we will have as many female directors as there are women writers. Why not? I watch the methods of every director with whom I work. I have studied scenario construction and all the other important and minor details of picture making. I'm going to make one some day, perhaps a lot of them. You just watch."

Miss Daniels plays the leading feminine role in "Volcano!" which William K. Howard produced for Paramount. Those featured with her in this picture are Ricardo Cortez and Wallace Beery. "Volcano!" arrives at the Palace on November 17-18.

"The Lost World" Blood-thirsty human dragons feeding on Nero and the gentle lambs compared to Tyrannosaurus Rex, which is the scientist's way of saying King of the Terrible Lizards. Tyrannosaurus Rex is one of the prehistoric dinosaur species which First National and Watterson R. Wood for Newsprint

Since the customary units of wood measurement—cord, log measure or lumber scale—do not represent an exact quantity, the cubic foot solid wood is used. Even this unit is variable as to pulp yield according to the character of the wood as to species and rate of growth. However, taking an dry weight of spruce as 24 pounds per cubic foot the commercial yield of 100 cubic feet would be about 2,200 pounds of mechanical pulp and of sulphite pulp, 1,020 pounds. Consequently, newsprint be made from a mixture of 75 per cent mechanical and 25 per cent sulphite. Consequently, a ton of newsprint would contain 1,650 pounds mechanical and 560 pounds sulphite. Then 1,500 pounds mechanical would require 06.2 cubic feet wood; 560 pounds sulphite would require 48.3 cubic feet wood; one ton newsprint would require 114.7 cubic feet or 2,728.8 pounds oven-dry spruce wood.

Two Centuries of Crusades

The children of the religious wars called the Crusades were originally to insure the safety of pilgrims visiting the holy sepulchre and to set up Christian rule in Palestine. Later on the attack was directed against Egypt and even Constantinople, and in the Fourteenth century the conquests of the Ottoman Turks turned Crusading into a defensive movement. It is usual to speak of the Crusades as six or seven in number, but actually the movement was continuous for over two centuries, hardly a decade passing without one or more expeditions.

Shark Pulls Body From Rescuer's Grasp in Surf

Seaside Heights, N. J.—The decapitated and limbless body of Charles A. Burke, aged eighteen of Trenton, washed up on the beach, strengthened the belief that he was snatched from the arms of a rescuer by sharks.

An unidentified bather who went to the youth's rescue explained his failure to bring him in by saying the boy was pulled from his grasp by a large fish. Later in the day persons on the beach saw three sharks.

Coroner David O. Parker of Ocean county said the body had been attacked by sharks.

How Do They Celebrate?

I wonder what lawyers do to celebrate their fees. Do they buy new cars? Do wife and daughter get beautiful roses of pearls? Do they buy nasties? Or do they just salt down?

It is almost to think that they use them all for the upkeep of the home; or to pay for their children's education. They could never spend their fees all on that.

COLLAR DISCLOSES MAN'S DOUBLE LIFE

Wife No. 1 Sees Neckwear in No. 2's Window.

Omaha, Neb.—Henry A. Barnts of Omaha maintained a wife and home in Council Bluffs and another one in Omaha and got away with it until one day recently when wife No. 1 inquired to see one of her husband's collars swinging to an apartment house window. Now he's in jail.

"That's Henry's collar," Mrs. Barnts No. 1 said to her friend as she pointed to the window on the third floor.

"Nonsense," said the friend.

"It is too," answered No. 1. "I know Henry's collars. He likes colored and checked collars and he bought that one last week. I'm going to see what it means."

And she did. She found the collar belonged to Mr. Barnts all right. But she found another woman who set only claimed the collar but claimed Mr. Barnts as well. Mrs. Barnts No. 2 had washed the collar and put it in the window to dry.

Barnts' Council Bluffs home is at No. 621 First avenue. His wife there is Mrs. Mary Barnts. His Omaha home is in Apartment 47, No. 816 South Twenty-second street. His Omaha wife, No. 2, is Mrs. Emily Barnts.

"Extra Run" His Plan.

Barnts is a railroad engineer, and it was because of his "runs" that he was able to keep up two establishments. "Have to take out an extra tonight," he would tell one of the wives. But instead of taking out an "extra," Barnts would go over to the other home for the night.

Six years ago Barnts married wife No. 1 and took her to live in Council Bluffs. Nearly a year ago he married No. 2, after several months of courtship, and established their home in Apartment 47, No. 816 South Twenty-second street.

Both women did their shopping in Omaha, but each of them now recalls her husband never would go shopping with her.

"He was a perfect husband and in our six years of married life never said a cross word to me," says No. 1.

"That's the best husband that ever lived and I'm going to keep him," says No. 2.

Investigations show that a year ago when Barnts married No. 2 and went on a two-weeks' wedding trip, he told No. 1 he was taking out an extra train all the way to the coast and would be gone two weeks. When he got back from the "extra," he told No. 1 he had been given two weeks' off because of the long "extra" and then told No. 2 he had to take out an "extra" to pay for the time he was on the wedding trip.

Collar Proves Undoing.

But the colored collar proved his undoing.

Barnts had a penchant for flaming neckwear—ties as well as collars. Two weeks ago he bought a new collar of peculiar design. He was living with No. 1 in Council Bluffs at the time. When the collar became soiled, No. 1 washed it for him.

Some days later when Barnts started on a "run," he took the new collar along. When he completed his "run," he went to his Omaha home. And the collar was soiled again.

This time No. 2 washed that collar. The day was warm and she hung it in the window to dry. Then along came No. 1, saw the collar, recognized it, investigated, and had Barnts arrested on a charge of bigamy.

No. 2 has applied to have her marriage with Barnts annulled. She wants No. 1 to secure a divorce and then she and Barnts can marry. That is No. 2's plan.

But No. 1 has a different plan.

"I'm going to send him to the penitentiary for the limit," she says.

"And I'm not going to get a divorce from him and he can't get one from me. He's my husband, and though I'm going to stand for this."

"If I just hadn't bought that collar," says Barnts, from his cell in the county jail.

New Palace Theatre
ATTRACTIONS FOR THE WEEK

Saturday-Sunday, Nov. 13-14

"THE LOST WORLD." Sir Arthur Conan Doyle's stupendous story with Bessie Love, Wallace Beery, Lewis Stone and Lloyd Hughes. See the giant dinosaur crashing down the streets of London. Take a trip to Wonderland—to the Lost World—now found, and placed before your eyes in a vivid, startling story of romance and adventure. Come with Prof. Challenger and his band of adventurers; a trip up the Amazon to places never explored by man. Live with them in battles with savage native tribes—missing links, Pass beyond, to the strange unknown world of pre-historic monsters as big as fifteen elephants—flying reptiles as big as aeroplanes. Fight with them against these monsters of the air, the land and the deep. Back to London with a caged dinosaur. Flee with them as he snaps his chains and runs wild down the streets, smashing trams and skyscrapers, crashing through tower bridge.

Truly the marvel of the screen. Will hold you breathless, clinging to your seats—a picture you never will forget. Also a comedy, "Beauty a la Mude." Special prices for this big super special, Adults 40c, children 20c.

Wednesday Thursday—

Bebe Daniels in "Volcano" with Ricardo Cortez and Wallace Beery. Bebe as a fiery French girl whose tempestuous career is brought to an amazing climax with the eruption of a great volcano—a stupendous scene! Also Fox News and "The Hodge Podge."

—PERSONALS—

E. Hoffmastqr, of Marine City, spent part of last week on business here.

William Vandorn, of East Jordan, was a business visitor here last Sunday.

Mr. George A. Burke, of Grayling, visited friends in Charlevoix last Saturday.

Frank Lalone, of Bellaire, was a business visitor in Charlevoix early this week.

Mr. and Mrs. C. A. Barry, of Central Lake, were Charlevoix visitors last Saturday.

Attorney J.M. Harris, of Boyne City, was a business visitor in Charlevoix last Monday.

Mrs. Barney Martin, of St. James, spent several days here recently returning to St. James Monday.

Mr. C. S. Guile, register of deeds in Antrim county, and Mrs. Guile, were Charlevoix visitors last Sunday.

A. F. Young came up from Detroit Tuesday and will remain here a few days attending to business matters.

Born, to Mr. and Mrs. A. Wickersham, of Marion Center, Monday, a girl—Hildegard Ione—Saturday, Nov. 6th.

Mrs. Nellie McCafferty and Mrs. Lou Briggs, of St. James, were business visitors here during the first part of the week.

James R. Pollock and Clayton Saunders motored to Ann Arbor last Friday and attended the football game, returning to Charlevoix Sunday.

The annual Thank Offering meeting of the women of the Congregational church will be held Wednesday afternoon at Mrs. Shores, 305 Dixon-av.

Mr. and Mrs. Fred M. Fisk and daughter, Miss Kiee, of Traverse City, spent a few hours with friends in Charlevoix during the latter part of last week.

Charlevoix Lodge No. 282 F. & A. M. will hold a special meeting Tuesday evening, Nov. 16 at which time work will be exemplified in the degree of Fellowcraft.

Mrs. Adolphus Peltier Sr., and her daughter-in-law, Mrs. Adolphus Peltier, of St. James, made the trip to Charlevoix last Sunday and are spending the week with friends here.

Will Campbell has been visiting relatives and friends in and around Charlevoix for the past week, but his vacation is about over and he will motor back toward Flint today.

Rev. and Mrs. C. E. Pollock transacted business in Lansing and visited their son John in Ann Arbor University and the football game, Saturday.

Mr. and Mrs. Amos O'Neill, according to present plans, leave for some northern point Friday and will spend some part of the hunting season in quest of big game north of the straits.

Mr. and Mrs. S. O. Sorenson, who spent about one month on a motoring trip going as far west as Omaha and visiting at numerous points, returned to Charlevoix a few days ago.

Mrs. Janet Branch, district manager of the Maccabees will be at Mrs. Cha. Langshaw's, 209 Mason-st., the first of next week. All parties wishing to consult her about their policies will interview her there.

Sheriff Charles Novak and Prosecuting Attorney A. L. Fitch motored to Detroit last Monday, making the trip via Ionia where they delivered a passenger who accompanied them from this place to the reformatory city.

The Woman's Christian Temperance Union will meet Friday afternoon with Mrs. N. A. Shores. Mrs. Mattson will present the topic, "Internationalism" and a social hour in charge of the committee will follow the program.

Charlevoix Chapter No. 141 R.A.M., will hold a regular convocation at the Masonic Temple Monday evening, Nov. 15th. At which time special important business will be under consideration. All members are requested to be present

Some point north of Newberry will be the objective of a party leaving for the north tomorrow, on a hunting expedition. The party will be made up of five members as follows: Eddie and Louis O'Neill, George Myler, William Goss and Glenn See.

Benjamin Brown has purchased the Emrey clothing stock, and intends to close it out where it is, in the old Emrey store building. H. K. Allen will take charge for Mr. Brown, and the plan is to close the entire stock out in two or three weeks.

Charles McCarty who spent a short vacation in Massachusetts recently returned to Charlevoix, last Friday, and has resumed his duties at the F. S. Myers store. He was accompanied from Grand Rapids on the return trip by Mrs. McCarty.

Messrs. A. C. Belding, Frank F. Bird and Oral Lewis, of Charlevoix, and superintendent of schools, William Fuhrer, of Boyne City, have organized a hunting party and leave for their favorite camping ground near Alpena, where they will spend a few days in quest of deer and other game, Friday of this week.

—Order your personal Christmas Cards now, the new designs are ready at Holley Gift Shop.

Territory near Lake Gogebic will claim the attention of Lance Neff, Grover Genoit, Vaughan Orvis and Fred Bergman for the next few days. The members of the hunting party are leaving for the north today and will be in their camp in time for the opening of the season.

George R. Collette, president of the Kansas City Stock Yards Co., who recently bought a cottage on the Belvidere, has acquired a pleasure boat for use in Charlevoix next year. The boat was the property of Mrs. Louisa Slimer of Cincinnati, and the transaction was made through R. T. Merrill, "Petoskey."

County Commissioner of Schools, A. C. Belding, reports that he has visited all schools except three, in Charlevoix county since the opening of the school year and that all are making splendid progress and that conditions are better than at any time during the years that the schools have been under his observation.

Some men can not be restrained from making a pilgrimage into the big woods during the hunting season when big game shooting is on. Four such Charlevoix citizens are now at their favorite hunting ground—Millard Otsey, Hugh L., M. Roy and Homer Brady who left for some point beyond Mackinac Straits last Tuesday morning.

Mr. Albert Stanley Houghton and Miss Emily L. Himebauch were united in marriage at the Baptist parsonage last Thursday, November 4th, pastor Herman Burns D. D. officiating and Mr. and Mrs. Clarence Withers witnessed the ceremony. The young couple are Charlevoix residents and will continue to make this place their home.

Mr. Albert Stanley Houghton and Miss Emily L. Himebauch were united in marriage at the Baptist parsonage last Thursday, November 4th, pastor Herman Burns D. D. officiating and Mr. and Mrs. Clarence Withers witnessed the ceremony. The young couple are Charlevoix residents and will continue to make this place their home.

W. H. Hill, representative from the Department of Public Instruction, is scheduled to meet with the County Commissioner and the several superintendents of schools, in Charlevoix, today, the prime motive of the meeting being for the purpose of discussion and getting a complete understanding of the present child accounting system as established for school work.

Dr. and Mrs. W. W. Mitchell, two children and Miss Margaret McCann anticipate spending a few months in the south, probably at Orlando, Florida. Before making the trip via the motor route, leaving on the trip last Tuesday, going to Ann Arbor where they will spend a day or two; thence to Cincinnati for a short visit, after which they will continue to some point in the extreme south.

Holders of tickets for the Lyceum course and others interested will remember that the opening entertainment of the season is scheduled for Friday evening, Nov. 12, at the Palace theatre at which time Selma Lashart, dramatic reader will appear as guest entertainer. Complimentary press notices relative to her ability as an entertainer and character delineator not only herald her appearance but give her high rank as a dramatic student.

Not all the hunters are confined to the locality is evidenced by the number of automobiles now being loaded with simrods and camping equipment. Some fifty such machines passed through Charlevoix Wednesday, all bound for some hunting ground north of the straits. In the number of hunters there were several women and they were as enthusiastic concerning the hunt as were the male members of the several parties.

Two prisoners confined in the Emmet county jail, Pete Sineway and Louis Graham, escaped some time during Sunday night, their disappearance being discovered at an early hour Monday morning. Two other prisoners refused to join the escaped prisoners, although they had ample opportunity and time to make their getaway. A hole in one end of the jail wall made by the prisoners as shows plainly the manner in which the men regained temporarily at least, their liberty.

A marriage ceremony was solemnized last Friday forenoon, November 6th, by Rev. Herman Burns in which Emerald Bertrand Meggison, of East Jordan, and Miss Beryl Elizabeth Snider, of Charlevoix, were the contracting parties. They were attended by Mr. Alva Snider and Miss Dorothy Brugh, of Grand Rapids. The young couple immediately following the ceremony left for their future home, Detroit, where Mr. Meggison has a position with the Fischer Body Company.

The Methodist Episcopal church has in preparation a very unusual patriotic and religious vesper service for Sunday afternoon, Nov. 21. After the feasting of that first Pilgrim thanksgiving occasion, as the day was drawing to a close, a religious service of thanksgiving was held by the whites and Indians. A reproduction of this classic scene with a message from the pastor to go with it is to be given. Features of the occasion will be a letter from "Gov. Winslow," a proclamation from "Gov. Bradford," special singing by real Indians, "King Massasoit, King Philip and King Alexander" and others will participate. The church will be decorated to harmonize with the service. The public is invited to keep this great festival with the church. The hour is 4:15 p.m.

The heavy storm of Tuesday prevented a full meeting of the new 1st County Real Estate Board, which was to have been the occasion for a banquet at the Hotel Charlevoix, Tuesday night. In spite of the blizzard, however, there were members present from Emmet Antrim and Charlevoix counties, who listened to a talk by Major John Emory of Porter, Emory & Healey, Grand Rapids realtors. Major Emory explained the purpose of the West Michigan Development Bureau, newly formed and how it would function. The bureau has engaged a capable newspaper man, whose job will be the promotion of West Michigan publicity in the newspapers and magazines of the country. The resort advantages of the region will be stressed, but agriculture, horticulture and industry will not be overlooked. The idea is to keep constantly before the country that our region has most to offer to the resorter and homemaker.

MODERN CLOTHES ADD TO COP'S WOES

Make Curfew Law Enforcement Difficult.

Chicago.—Time turned back a generation or two on Chicago, a sophisticated city of 3,000,000, revived the curfew law of its innocent village days, but policemen, bemused by the styles of the reigning generation, found enforcement a matter of considerable difficulty.

All boys and girls sixteen years old or under must be off the streets at ten o'clock, the city fathers last ruled in an effort to end a long record of attacks and kidnapings, and 5,000 bluecoats were sent forth to enforce the edict.

Then their troubles began, for they claimed that with the prevailing modes of short skirts, rolled hose and bobbed hair they were unable to distinguish children from grownups. Several married women, well past twenty, were taken into custody as "children," while bewildered policemen who stopped "kids" ere indignantly informed that their ages were above the curfew limit.

One suggestion that the age limit be raised to eighteen was made by juvenile authorities, but the youthsearching bogeyes unlimited that that did not make much difference.

Although the order of the city police did not go into effect until recently, the county curfew, which applies to girls under sixteen after 10 p. m., was sounded the previous night. More than a score of girls were caught and warned that the next time they will go to the juvenile detention home. Their parents were notified.

The orders to the city police were to question any children found unescorted after the forbidden hour and send them home. On a second offense, under the city ordinance, the parents will face a fine of $5 to $100 and the child the juvenile court.

Parks were ordered cleared at 10 p. m., and county highway officers patrolled county roads and leaves' lanes.

"Youngsters must do their courting hereafter by the parlor at home," said Chief of Police Collins. "Not that we want to be old-fashioned and stick-in-the-mud two grumblers. On the other hand, an average American seeing a Tibetan woman for the first time would be likely to say, "There ain't no such thing."—Capper's Weekly.

HENPECKED

Mrs. Jones—"Doesn't your husband ever stand up for his rights?" Mrs. Smith—"If my husband should stand up for his rights, he would soon find out what the seating capacity of the house was."

A Question of Leadership

A very small boy was trying to lead a big St. Bernard up the road.

"Where are you going to take that dog, my little man?" inquired a passer-by.

"I—I'm going to see where—where he wants to go first," was the breathless reply.—United Presbyterian.

Didn't Get It

Madge—So you're going back to town tomorrow and would like something to remember me by. What would you prefer?

Jack—That diamond ring I gave you two weeks ago.

Details Needed

"My dear, did you hear that Mrs. Humphreys was taken seriously ill the other day while trying on a new hat?"

"How dreadful! What was it trimmed with?"

WOULD COST NO MORE

Hubby—"I'm all for buying a flivver, dear." Wife—"No—no—I insist on orchestra seats for the show. It's the only high-class one that's been here all this season and I certainly must see it."

Well Defined

Willie (reading advertisement of his father's shop)—"Our goods are acknowledged to be the best by connoisseurs." What does that last word mean?

Father—A connoisseur, my boy, is an eminent authority of keen discrimination—a person, in other words, who admits our goods are best.

Previous Orders

Officer (to motorist who refused to stop)—Didn't I signal you to stop?

Motorist—Yes; but my wife told me not to stop until I got home.

Playing Safe

"Why is it you always sing in a quartet?"

"That divides the responsibility by four."

In Dry U. S. A.

WRIGLEY'S

still quenches thirst, cools the parched throat and by its delightful flavor and refreshment restores the joy of life.

Nothing else can give you so much enjoyment for so little. G13

Cities of Sumeria Highly Civilized

In an address before the British Association of Science, Professor Langdon, noted archeologist, declared that science is reasonably certain that civilization originated in either Sumeria or Egypt, says the Pathfinder Magazine. His opinion is based upon the results of extensive excavations made under the auspices of the Oxford museum and the Field museum of Chicago. That Sumerian civilization originated in a very early date is shown by the excavations at Kish and Jemdet Nasr, two of the most famous of the ancient Sumerian cities. The finds included the earliest known monochrome and polychrome painted ware. Pictographic tablets, seals and copper objects of many kinds were found. The earliest of these date back to the greatest antiquity—just how far nobody has been able to ascertain; the latest date 3,000 years before the beginning of the Christian era. It is an interesting fact that both in Sumeria and Egypt the best art was always produced at the beginning of an era.

Stop the Pain.

The hurt of a burn or a cut stops when Cole's Carbolisalve is applied. It heals quickly without scar. 30c, 60c, $1.20 at all druggists, or send 3c to Dept. W, W. Cole Co., Rockford, Ill.—Advertisement.

Horticultural News

FROSTED APPLES CAN BE TREATED

Last fall, at a packing house hundreds of boxes of apples were damaged and thrown in a great pile to be hauled away as fertilizer. Some of the fruit had frozen on the farms and some in transit. Annually large quantities of apples are frozen in transit or in storage.

Freezing has a great variety of effects, but in general it produces a condition which is quite similar to a disease of the fruit called "internal breakdown." Frozen apples turn brown inside, the brown color often extending to the surface of the fruit; besides, the affected tissues become watery and the conducting vessels show up prominently as dark brown strands. The affection may appear on any part of the apple, and on the small green one as well as on the overripe.

Apples will stand safely a temperature of thirty-two degrees Fahrenheit, but their fluid is twenty-one degrees. Some are touched by frost at this temperature while others are not. Fruit that is only slightly frozen may be thawed out at a temperature of thirty-two degrees so that it will not show any injury, but the quality will never be as good as it was before the freezing. A housewife told me the other day that frozen apples can be thawed out in ice-cold water so that they will not lose any of their good qualities, but I have never tried this method, says a writer in an exchange. The fruit should be thawed out slowly at a temperature of thirty-two degrees, whether it is intended for home use or for the market. However, apples that have been badly frozen or that have had repeated light freezes will show frost injury no matter by what method they are thawed out.

The fruit is greatly damaged by any punctures or bruises made on it while it is in a frozen state, therefore, if frosted apples are to be saved, they must be handled carefully. The packages and boxes must be moved without throwing or bumping—almost as if their contents were eggs.

Mulching Strawberries Before Heaving Begins

Mulch the strawberry bed in order to prevent injury to the plants from heaving as a result of alternate freezing and thawing of the soil. Clean straw, salt hay, and coarse horse manure are the most desirable materials to use as a mulch, although corn stalks, crab-grass, leaves, and other coarse vegetable materials are sometimes used. The particular material used will depend largely on the cost and availability. Manure is generally more satisfactory than straw on light sandy soils, because of the plant food it contains. This factor is of less importance on heavier, richer soils where mulching rather than plant food is the important consideration.

Two or three tons of straw or five or six tons of strawy manure an acre will make satisfactory mulch under average conditions. A uniform layer of the mulching material should be spread over the entire area so that it will form a mat not over two or three inches deep after settling. A thick mulch may smother the plants, the ideal amount being just enough to prevent alternate freezing and thawing of the ground. In using manure, work the fine material around the plants and between the rows and spread the strawy portion over the plants. Materials containing objectionable weed seeds, or in fact viable seeds of any kind, should be avoided for mulching purposes.

Several Advantages of Plowing Orchard Early

"In orchards, where a winter cover crop is not given," says W. A. Kinkpiner, pomologist for the North Carolina state college department of horticulture, "the ground should be broken with a plow any time from fall to spring. The middles should be broken deep, but care should be taken not to disturb the roots of the trees.

"There are several advantages of plowing early, the most important of which are: It increases the aeration of the soil, allows organic matter to decay before spring, kills insects that are hibernating in the soil over winter, and clears the surface of rubbish. Cover crops turned under in the fall will decay in time to furnish fertility for spring growth of trees.

"Many orchards are plowed in the fall and not harrowed until spring. This method of fall plowing keeps the land from washing and also reduces the spring labor question, thereby checking the rush of that time of year. There is no added expense to fall plowing, as no extra harrowings or plowings are made, the work merely being transferred from spring to fall."

Top-Grafting Apples

The actions for top grafting apples should be cut in fall as soon as the wood is mature, and then kept over winter in cool storage where they will not dry out or start to grow. In spring the grafting should be done. As soon as cold weather is over and before the sap starts to flow, cut off the limbs to be grafted, split back in the middle a little ways, and insert the graft, which has been cut to wedge shape, being sure that the cambium layer graft and stock are in contact.

Poison Bait for Mice

Mice can be controlled pretty well by means of poison bait. Sweet potatoes cut into half-inch cubes make a good bait when sprinkled with strychnine sulphate, an ounce to one bushel of bait. The bait is first soaked in a tub of water, and the poison, usually mixed with baking powder, is sifted over it from a salt shaker. Pieces of bait are placed under each tree, either in wide-necked bottles or under boards so the chickens will not come into contact with the bait.

Garden Clean-Up to Kill Insects Saves Much Time and Money Next Year in Spraying and Dusting.

A few hours spent in giving the garden a fall clean-up will save much time and expense next year in spraying and dusting to control insect pests according to gardeners and entomologists at the college of agriculture, University of Illinois. A general clean-up of the garden in the fall, preferably late fall, will do a great deal to reduce the available hibernating quarters of many of the most troublesome and destructive insects. The benefits from this practice will be multiplied, if anyone will co-operate and thus make the clean-up general.

Forget Insect Troubles.

After the season's crop has been harvested, the average gardener forgets his insect troubles for a while. However, at this time of the year certain steps may be taken which will greatly reduce the possibility of serious insect injury the coming vegetable season. This consists of taking active steps in the fall to clean up the garden. Many crops have a large amount of foliage which is left in the field or garden after the edible part of the crop has been harvested. Such trash and rubbish affords hibernating quarters for many of our most troublesome and destructive insects. Piles of cucumber, melon and squash vines left in the field offer excellent shelter for the striped cucumber beetle and squash bug during the winter. The potato stalk borer, which has been very destructive to eggplants in some sections, winters over in the stalk of the eggplant, potato and tomato. Cabbage stumps and leaves left in the field offer protection for the various species of cabbage worms.

Serious Cabbage Pest.

"In areas where the harlequin cabbage bug is a serious pest, the practice of cleaning up the fields in the fall will greatly reduce the possibility of injury the following season. Where possible, the cabbage stumps should be pulled and destroyed. The tarnished plant bug, which feeds on a large variety of vegetables, hibernates in all sorts of rubbish about the field. Boards scattered loosely about the field offer shelter for many insects. They should be collected, the old, useless boards destroyed, and the good pieces piled compactly. Where onion sets are grown, it has been found advisable to clean up the field after the sets have been harvested and screened. The piles of onion refuse that accumulate where onions have been milled and screened should be burned, as they contain large numbers of the puparia, or resting stage of the onion maggot. Immediately after the onions have been milled and screened, the resulting refuse will burn quite readily.

"It is important to give one step further than cleaning in the garden proper. Clean up the weeds and grasses along fence rows and field margins. All weeds and grasses should be cut and destroyed, and where possible the ground should be plowed."

Control Stomach Worms by Change of Pasture

Sheep heavily infested with stomach worms cannot be thrifty and profitable. At the Ohio experiment station it is recommended that control be obtained by frequent change of pasture and by dosing.

Dosing may consist of either copper sulphate or nicotine sulphate (Black Leaf 40). Never use both treatments at the same time. The copper sulphate solution is made by dissolving two ounces of dark blue copper sulphate crystals in one gallon of water. The nicotine sulphate is prepared by adding two teaspoonfuls to one quart of water.

Keep the sheep off feed for 18 hours before and six hours after treatment. If possible, turn them on pasture not grazed by sheep for two months previous. Give sheep weighing 50 to 60 pounds one ounce of either solution, but never both. Sheep weighing 60 to 80 pounds need one and one-half ounces, and all sheep over 100 pounds, three ounces. Dose with an oil can or syringe.

Tight Floor Simplifies Sanitation of Henhouse

A tight concrete or board floor is a big aid in maintaining a sanitary henhouse, poultrymen of the college of agriculture, University of Illinois, point out. A dirt floor cannot be cleaned satisfactorily, and furthermore in case of a disease infection or worm infestation, there is little chance to get rid of the trouble. Concrete is permanent, rat proof, easy to clean and dry, if properly put in. The house should be located so that natural drainage is possible. In addition, at least six inches of some porous material such as cinders or gravel should be used as a sub-base.

FARM NOTES

Alfalfa is the best hog pasture.

* * *

Land unprofitable for farming will grow profitable tree crops.

* * *

Liming lifts crop yields, and with them, the farm mortgage.

* * *

Lime is an important factor in building a prosperous agriculture.

* * *

Smut and rye and Hessian fly, will be enemies of wheat until they die.

* * *

After clover is grown for two years, crop yields on average lands are practically doubled.

* * *

Lime increases the yield of corn and many other crops 20 per cent, experiment station records show.

* * *

"Homes for Birds," farmers' bulletin 1450, United States Department of Agriculture, Washington.

Cards Win Apples

According to Westbrook Pegler, writing in the Chicago Tribune, Grover Cleveland Alexander, who made such a remarkable showing in the recent world series, is guilty of eating apples in bed. What could be more comforting in a sleepy time to lie in bed and listen to your bedfellow champing an apple? A bunch of old-fashioned cats on the back fence caterwauling along about midnight would be more pleasant. A Missouri nursery firm, hearing of Old Pete's fondness for apples, struck on the happy idea of spreading the vice and offered a box of Golden Delicious apples to every National player making a clean hit during the series. Nearly every player on the team won one or more boxes. Alexander, Bob O'Farrell and Babe Ruth, the latter making three home runs in one game, each received five boxes. What an awful noise there must be in Old Pete's room these cool nights.

BABE RUTH SETS SERIES RECORD

Bambino Only Player to Get in Seven Classics.

A record for participation in world's series by an individual player was established when Babe Ruth went to bat in the opening game of the annual classic this year.

He was taking part in his seventh world's series and is the only player to enjoy that distinction. At the present time five other players share the record of having played in six of the annual series. These are, Home-Run Baker, Eddie Collins, Wallie Schang and Everett Scott.

Ruth has played in three world's series with the Red Sox and four with the Yankees. His first world series was in 1915 as a member of the Red Sox. He took part in only one game against the Phillies that year and he was used as a pinch hitter, failing to connect in his only time at bat.

In the series of 1916 against the Robins he was used in one game as a pitcher and he scored a 14-inning shutout over the Brooklyn club. In the series of 1918 against the Cubs the Red Sox again used him as a pitcher and he hurled in more scoreless innings. He holds the world's series record of having pitched a total of 29 scoreless innings.

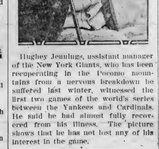
Ruth took part in the first world's series as a Yankee in 1921 against the Giants. He played the outfield in six games that year and he made five hits in 16 times at bat. In the following year he played the outfield for the Yankees in all five games against the Giants. He made only two hits in 17 times at bat that year.

In 1923 Ruth participated in his third world's series with the Yankees. He played in all six games against the Giants that year and he helped defeat the National league champions by making seven hits in 19 times at bat for an average of .368.

J. Franklin Baker, one of the players who shares the record of participating in six world's series, took part in four of the annual classics with the Athletics and in two while a member of the Yankees. Collins also played in four of the championship series with the Athletics and in his other two he were the uniform of the White Sox. Schang has taken part in world's series as a member of three different clubs. He first played in two with the Athletics, then one with the Red Sox and then three as a member of the Yankees.

Everett Scott has been eligible to play in six world's series, but he took an active part in only five. He played in three with the Red Sox and then two with the Yankees. He was among the eligible players on the Washington roster last year, but he did not actually get into a game. He has since dropped out of the game.

Jennings Sees Games



Hughey Jennings, assistant manager of the New York Giants, who has been recuperating in the Pocono mountains from a nervous breakdown he suffered last winter, witnessed the first two games of the world's series between the Yankees and Cardinals. He said he had almost fully recovered from his illness. The picture shows that he has not lost any of his interest in the game.

Lester Bell Big Factor

One of the stars on this year's Cardinal team is Lester Bell, third baseman. Bell's consistent work at the plate was a potent factor in the club's drive for the pennant. This is the youngster's second season as a regular. Last year he hit .285, but this season winds up at the .300 mark, a nice gain considering the less lively ball now in use. Bell started out as a shortstop, but was switched to the hot corner last year, and he sure has made good with the fans.

This Thrifty Home Brings Joy to the Rent-Weary

FOR THE family of four or five there is this attractive two-story, six-room house of beveled siding and slate or shingle roof.

One of the interesting features of this house is that every room has a double-exposure, while the living room has three sides exposed. Extra windows are shown in the plan may at slight expense be added at either end of the living room. While this type of house affords the utmost in light and cross-ventilation, it would be well to protect it against the extremes of cold and heat by insulation with celotex for the walls and roof. Such insulation will also cut down outside noises to a marked degree, as in addition to its insulating property, celotex is an efficient sound deadener.

The living room has the much desired open fireplace and cleverly arranged bookcases flanking the entrance to the dining room. The sun porch may be put either to the side or the back of the house, according to the builders' wishes or to conform to the demands of the lot.

© Celotex Institute, Chicago, 1926.

WHERE U. S. SPENDS MILLIONS FOR NUTS

Half a Million Tons Purchased Abroad.

Washington.—A government agency states that nuts must be added to the list, of supplies for which the United States is dependent upon the world.

Last year America bought for about $50,000,000 a half million tons of nuts or nut products, including chestnuts, walnuts, coconuts, and copra, palm nut oil and kernels, Brazil nuts, almonds, filberts and peanuts. The peanut, which is classified as a nut by the government, accounted for 30,000 tons. "The nut tree has not been taken seriously by American until recent years," says a bulletin of the National Geographic society from its headquarters in Washington.

"The Indian and the pioneer respected its gifts, but for many years a nut tree existed in America only to provide a happy outlet for the excess energy of small boys in the fall.

"America would be importing many more tons of nuts but for the fact that Americans have gone in for nut crops within the last twenty years. Pecan orchards have been planted in Florida, Georgia and other southern states; walnut and almond orchards have been planted in California. The peanut, of course, is a new world native by birth, and a standby in Virginia and the South. Nevertheless, America still must look abroad for nuts, especially those produced in the tropics.

"Where does America step for nut meats? She goes to Tobago, Trinidad, Jamaica, the Philippines and South Seas for cocoants; she goes to Brazil for Brazil nuts and balsoan nuts; to Lagos, Liberia, and Sierra Leone for palm nuts; to Italy and Spain for almonds, filberts and pignolia nuts; to Syria and Palestine for pistache nuts, and to France for English walnuts and chestnuts. Walnuts also come from China, Italy, Spain, and Chile in some quantities.

On the Trail of the Elusive Walnut.

An American investigator went to the Orient to study the Chinese walnut industry. His experience throws light on the odd sources of our nut meats. Shanghai, he knew, was the main shipping point for millions of pounds of walnuts meats coming to the United States. Arriving there he called on the exporters and asked how to find the Chinese walnut orchards. No one knew. They came from the interior. That was enough for the exporters. But the American found a Chinese assistant who told him that the walnuts came from Talyunfu, capital of Shansi province.

"Strange," the American investigator said to himself when he reached Taifunfu. There are no walnut trees in sight.' But he was soon put right by a citizen who told him that the walnut trees were eighty 100 miles further on, at Fenchow. He obtained one of the 18 native cars in Shansi province and started off for Fenchow. The American reached his destination only to be informed that the walnut trees, as a matter of fact, were 25 miles further on. Although the nuts were similar to the English walnut of California, the Bear state has no such walnut trees to show as the investigator found deep in China.

"In another part of the world tongues are wagging over a new and probably important development in the nut trade. Beside the northern tributaries of the sprawling Amazon grows a palm tree which produces the balsoan nut. Probably the balsoan gave inspiration for the phrase, 'a hard nut to crack.' Its spherical shell, about the size of a baseball, has been known to withstand six tons' pressure! The prize for the strong man who can crack a balsoan is a group of nut meats the size and shape of shelled Brazil nuts. Each nut meat will burn readily and can be used as a pickles candle. Balsoan meat is 66 per cent oil, which is said to be the only nut oil that can be substituted for cocoanut oil.

"To Americans must come much credit for putting nut growing on a business basis. The walnut orchard, the pecan orchard and the almond orchard are largely American institutions.

Coconut Puts Luther in Luther

"Almonds are grown all around the Mediterranean basin, but the United States gets her chief supplies from Italy and Spain. Anatolia, Syria, Greece and North Africa ship to northern Europe. The Orient also looks to the Mediterranean for almonds. Practically the entire Italian supply of shelled almonds goes to India, where it is an essential to some of the famous Indian dishes.

"Recent exposures of cream dilution with coconut fat in New York give some hint to the uses of the coconut. Its role as an edible nut is small compared to its part in the modern industrial science as maker of oleomargarine, soap and salad and cooking oils. It also is widely used in shaving cream manufacture to impart a lasting lather to the suds.

"An all-important nut which is not edible is the palm nut. From the Gold Coast ships thousands of tons annually to the United States for soap. Palm kernels are also shipped from Sumatra, Borneo and other southern states; walnut and almond orchards have been planted in California. The peanut, of course, is a new world native by birth, and a standby in Virginia and the South. Nevertheless, America still must look abroad for nuts, especially those produced in the tropics.

"Where does America step for nut meats? She goes to Tobago, Trinidad, Jamaica, the Philippines and South Seas for cocoants; she goes to Brazil for Brazil nuts and balsoan nuts; to Lagos, Liberia, and Sierra Leone for palm nuts; to Italy and Spain for almonds, filberts and pignolia nuts; to Syria and Palestine for pistache nuts, and to France for English walnuts and chestnuts. Walnuts also come from China, Italy, Spain, and Chile in some quantities.

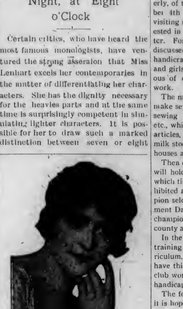
FIRST NUMBER ON LECTURE COURSE

Palace Theatre, Tomorrow Night, at Eight o'Clock

Certain critics, who have heard the most famous monologists, have ventured the stgng assertion that Miss Lamont's excels her contemporaries in the matter of differentiating her characters. She has the dignity necessary for the heavies parts and at the same time is surprisingly competent in simulating lighter characters. It is possible for her to draw such a marked distinction between seven or eight



Selma Lenhart

members of a cast that an audience can easily follow the entire play without a line of explanation.

Since her fourteenth year Miss Lenhart has been doing dramatic work—not commonplace dramatics, but dramatics of a type stamping her as unique in her profession. She devoted several seasons to directing and taking leads in plays in her home city of Pittsburgh. At the same time she was equipping herself through private study add training at the King School of Dramatic Art. Her first work for the Redpath Bureau was done in 1920 when she appeared on courses which have booked such notables as Katharine Ridgeway, Guy MacLaren and Strickland Gillilan.

Coming to Earth

It is acknowledged by aviators that the most difficult part of a trip begins when one is nearing one's destination.

In landing a machine certain rules have to be observed. The pilot must first circle once round the aerodrome; then he must shoot off a green light which, in effect, asks, "Is it safe for me to land?" If a similar green light is sent up from the aerodrome, he may land; if, however, a red one is shown, it means that there are other machines on the ground, or for some other reason it is not safe to come down. He must then circle round until a green signal is given him.

On the grounds of the Croydon (King) air port there are gas flares that mark the boundaries of the landing spaces. Those flares shine intermittently and one fuel supply keeps them burning day and night for six months. In addition the ground is swept at night by several powerful searchlights.

STATE CLUB LEADER VISITS COUNTY 4-5

Mr. A. G. Kettunen, State Boys' and Girls' Club Leader, and Miss Ruth Featherly, of the State College, spent November 4th and 5th in Charlevoix county, visiting several schools that were interested in carrying on Club work this winter. For the girls, sewing clubs were discussed and outlined and for the boys handicraft clubs. In all cases the boys and girls were very interested and desirous of organizing immediately to begin work.

The members of the Sewing Clubs will make several articles this winter such as sewing bags, kimonas, aprons, dresses, etc., while the boys make many useful articles, such as bench hooks, tie racks, milk stools, book racks, nail boxes, bird houses and numerous other articles.

Then early in the spring each school will hold a local Achievement Day at which time all the articles will be exhibited and judged and the local champion selected. Later a County Achievement Day will be held and the county champion chosen, who will represent the county at the Gaylord Club Camp.

In the city schools sewing and manual training are usually included in the curriculum, but rural boys and girls do not have this privilege, hence they believe in club work, which tends to overcome this handicap.

The following schools were visited and it is hoped that 75 boys and girls will make up the membership:

Lottie Webster, Hilton School, Charlevoix; Mr. Duffy, Phelps School, Phelps; Ireue Bruce, Burgess School, Charlevoix; Helen Germond, Bay Shore School, Bay Shore; W. C. Palmer, Clarion School, Clarion; Vera Belding, Peninsula School, East Jordan; Mrs. Cora Willis, Chandler Park School, Boyne Falls; Francis Gould, Star School, East Jordan; Marguerite Scheper, Wildwood School, Boyne City.

Facts Most Important

Much discussion is based wholly on opinion, and opinion soon becomes talk. Unanswerable argument is based on facts. Facts are more than necessity for facts. Facts are more than ever before, cold facts are what thinking people want.—Grit.

Uncle Eben

"Dem dat can't follow de straight an' narrow path is de ones dat's always talkin' 'bout de straight an' narrow," said Uncle Eben, "Is liable to find deirselfs classified as jay-walkers in de world to come."—Washington Star.

LEGAL NOTICES

Order for Publication—Final Administration

STATE OF MICHIGAN—The Probate Court for the County of Charlevoix.

At a session of said Court, held at the Probate Office in the City of Charlevoix in said County, on the 8th day of Nov. A. D. 1926.

Present: Hon. Servetus A. Correll, Judge of Probate.

In the Matter of the Estate of Harmon Berdan, deceased.

Elza J. Berdan having filed in said estate his final administration account, and his petition praying for the allowance thereof and for the assignment and distribution of the residue of said estate.

It is Ordered, That the 2nd day of Dec. A. D. 1926, at ten o'clock in the forenoon, at said probate office, be and is hereby appointed for examining and allowing said account and hearing said petition.

It is Further Ordered, That public notice thereof be given by publication of a copy of this order, for three successive weeks previous to said day of hearing in the Charlevoix Sentinel a newspaper printed and circulated in said county.

SERVETUS A. CORRELL,
29-3 Judge of Probate.

Order Appointing Time for Hearing

STATE OF MICHIGAN—The Probate Court for the County of Charlevoix.

At a session of said Court, held at the Probate Office in the City of Charlevoix in said County, on the 28th day of October, A.D. 1926.

Present: Hon. Servetus A. Correll, Judge of Probate.

In the Matter of the Estate of Sarah Emrey, deceased.

The above estate having been admitted to probate and The Detroit Trust Company appointed executor therein.

It is Ordered, That four months from this date be allowed for creditors to present their claims against said estate, and that such claims will be heard by said court on Wednesday, the 3rd day of March A. D. 1927, at ten o'clock in the forenoon, at the Probate office, in the city of Charlevoix.

It is Further Ordered, That public notice thereof be given by publication of a copy of this order, for three successive weeks previous to said day of hearing, in the Charlevoix Sentinel a newspaper printed and circulated in said county.

SERVETUS A. CORRELL,
28-3t Judge of Probate.

Order for Publication—Appointment of Administrator

STATE OF MICHIGAN—The Probate Court for the County of Charlevoix.

At a session of said Court, held at the Probate Office in the City of Charlevoix, in said County, on the 25th day of October A.D. 1926.

Present: Hon. Servetus A. Correll, Judge of Probate.

In the Matter of the Estate of Anna Monsigton, deceased.

Margaret Waddifield having filed in said court her petition praying that the administration of said estate be granted to petitioner or to some other suitable person.

It is Ordered, That the 18th day of November A.D. 1926 at ten o'clock in the forenoon, at said Probate office, be and is hereby appointed for hearing said petition.

It is Further Ordered, That public notice thereof be given by publication of a copy of this order, for three successive weeks previous to said day of hearing, in the Charlevoix Sentinel a newspaper printed and circulated in said county.

SERVETUS A. CORRELL,
27-3t Judge of Probate.

MORTGAGE SALE

Default having been made in the conditions of a certain mortgage made by Guy Pearl and wife, Marion Pearl, of Charlevoix, Michigan, unto Charlevoix State Savings Bank, a Michigan Corporation of Charlevoix, Michigan, dated May 21st, 1924, and recorded in the office of the Register of Deeds for Charlevoix county, Michigan, May 22nd, 1924, in Liber 64 of Mortgages, on Page 113, on which mortgage there is claimed to be due at the date of this notice the sum of $534.22, including the principal sum due with interest, together with an attorney fee as provided by statute and no suit or proceedings at law having been instituted to recover the money secured by said mortgage, or any part thereof, and whereas, the taxes required by the statute to be paid on said mortgage were duly paid prior to the recording thereof;

Now Therefore, Notice is given that by virtue of the power of sale contained in said mortgage and of the statutes made and provided, said mortgage will be foreclosed by sale of the premises therein described, or so much thereof as may be necessary to satisfy the amount thus due thereon together with the costs and expenses of the foreclosure, including the attorney fee provided by statute, at public auction, to the highest bidder therefor, at the front door of the Court House in the City of Charlevoix, Charlevoix county, Michigan (that being the place where the Circuit Court for the County of Charlevoix is held), on Saturday the 18th day of December, A.D. 1926, at eleven o'clock in the forenoon on that date.

The premises described in said mortgage being the land and premises and property situated in the City of Charlevoix, County of Charlevoix and State of Michigan, viz: Lots seven and eight excepting the north fifty feet of Lot seven of J. Milo Eaton's addition to the Village (now city) of Charlevoix, Michigan, according to the recorded plat thereof.

Dated September 9, 1926.

MORTGAGE SALE

Notice is hereby given that a certain mortgage dated May fifth, one thousand nine hundred and twenty five, given by Oliver G. Davenport by K. G. Davenport, attorney in fact, and Rowena L. Davenport, wife of Oliver G. Davenport, in her own and dower right, to Alfred E. Hass. The said mortgage was recorded May fourteenth A.D. 1925, in liber sixty-eight of mortgages, on page 6, in the office of the Register of Deeds for the county of Charlevoix, Michigan, by which said mortgage was duly assigned by Alfred E. Hass to Mrs. Verona J. Vincent, Sept. eighth 1926, and recorded September 14th, A.D. 1926, in liber fifty three of mortgages, on page 530 in the office of the Register of Deeds for the county of Charlevoix, Michigan. The said mortgage containing a clause, wherein it is expressly agreed that default be made in the payment of interest, or any part thereof, on any day whereon the same is made payable, and should the same remain unpaid and in arrears for the space of ten days, that after the lapse of the said ten days, no more of the principal sum as remain unpaid, with all arrearages of interest thereon, shall, at the option of said party of the second part, or his assigns become and be due and payable immediately thereafter, although the period limited for the payment of the same may have expired, anything hereinbefore or in the note contained to the contrary thereof in any wise notwithstanding. Power also being granted to the said mortgagee or assigns to sell the said premises and property situated in the City of Charlevoix, County of Charlevoix and State of Michigan, viz: Lots seven and eight excepting the north fifty feet of Lot seven of J. Milo Eaton's addition to the Village (now city) of Charlevoix, Michigan, according to the recorded plat thereof.

Dated September 9, 1926.

The Diamond Tragedy; or, to Be Continued

The diamonds, which the woman had sought so desperately to gain, lay in a little heap on the table. She gazed at them, covetously, as if hypnotized, then turned towards the man who had outwitted her. He laughed triumphantly.

"My lady must acknowledge defeat," he said. "A bitter pill, indeed, for one so seldom beaten."

A sigh of disappointment escaped her.

"They would have meant so much to me," she murmured, "and I made my plans so carefully that failure seemed out of the question. I never thought—never dreamed—that you would take them from me."

"You're too trustful, my dear Lily," he answered. "I liked the look of those diamonds from the very beginning, and I soon discovered that you were after them, too. So I decided to steal them."

"You knew?" she put in.

"Your scheming rather amused me," he went on, heedless of the interruption, "especially as I knew that you were bound to fall."

"And so?" she cried hotly, "you watched and waited, and as soon as I touched the diamonds—"

"As soon as you touched the diamonds, my dear, I put the ace on your sleeve, which made my queen good, and put you one down, doubled."—The Passing Show.

Old Ideas Revived by Experiments in Diet

Some remarkable cases of fasting have attracted attention lately, but one striking experiment of history has not even less attention than it deserves.

This experiment was carried out by three scientists who lived for several months entirely on potatoes and vegetable margarine, with a slight addition of onion.

One of the results of this experiment is that science is now beginning to believe that there may be something in the old idea that potato water is a remedy for gout. The potato does appear to have considerable virtues where this disease is concerned.

Another result is that it is now claimed that the diet of the peasantry in some parts of Europe, in which meat figures very rarely, is healthier as well as cheaper than more elaborate fare.

Sir Rowland Hill, founder of the penny post, was very keen on dieting experiments. He lived for many periods of three days each on not more than two articles, such as boiled green peas and salt, and dansom pie and sugar.

Hops as Insomnia Cure

In Germany and France, where hops have been cultivated since the Eighth century, and where for centuries they have been taken for cultivation, there is a widespread belief that insomnia may be overcome if one will use a pillow of hops as a head rest at night. The essential principle in the liquids or the yellowish powder on them, is used in household remedies as a sedative and mild hypnotic, and that fact is held up as proof that hops will help one find restful sleep. Those who have that belief say fresh hops fall one to sleep more quickly than the old dry hops, so long as the hops are in good condition they are sleep producers, the old ones no less certainly than the fresh picked ones.

Original "Mausoleum"

The term "mausoleum" is applied in modern times to a tomb of considerable architectural pretension, was derived from the tomb of Mausolus, a king of Caria, near the Aegean sea. When he died in 353 B. C., Artemisia, his widow, erected at Halicarnassus one of the most magnificent tombs the world has ever seen. Artemisia died before the tomb was completed, but the work was carried on by the most famous sculptors of ancient times, and became known as one of the wonders of the world.—Kansas City Star.

Busy Street Crossings

Recent investigations indicate that Seventh and Broadway, Los Angeles, is the most congested intersection in the world. More than 240,000 persons pass this corner on street cars during a day of 24 hours. The pedestrian traffic reaches nearly 270,000 and the automobile occupant traffic about 35,000, making a grand total of 565,000 persons in 24 hours. Other busy corners are Hyde Park corner, London; 17th avenue and Forty-second street, New York city; Times square, New York city; Columbus circle, New York city, and Place de l'Opera, Paris.

THE CHARLEVOIX SENTINEL

Volume 57 Charlevoix, Michigan, Thursday, November 18, 1926 Number 30

Lighthouse Service Prepares for Close of Navigation.

The U. S. Lighthouse Service ship Sumac put into Charlevoix Thursday afternoon to wait for the sea to run down enough to work with small boats around the lightships at Grays Reef and White Shoals. Among the supplies to be delivered, was coal.

On Friday morning, the Sumac started out on her mission, but finding the seas still too high, returned to this port, where she waited until Saturday morning.

November 20, this tender will start on its annual fall task of taking up buoys from the shoals and reefs of her district in northern Lake Michigan, preparatory to the closing of navigation.

ENDING OF 1926

HIGH SCHOOL FOOTBALL

LOSE TO CHEBOYGAN ELEVEN

Report of Injuries to Maxwell Novak were Exaggerated.

The high school football season closed Saturday, Nov. 13, on a muddy, slushy field, in Charlevoix, when Charlevoix took a defeat from Cheboygan, with a score of 10 to 0. Immediately after the game there were rumors that Maxwell Novak, son of the sheriff, suffered severe injury in the game.

It was reported that he had sustained fractured or broken ribs and a punctured lung; another report that the injury was a broken collar bone. There was some foundation for this, owing to the alarm felt in the field when he was hurt; but examination later happily showed no bone fracture. Maxwell was in school, as usual, Monday morning.

Charlevoix football has been disappointing this year, and there has been some feeling that the less said of it the better. In the general comment however, blame is not attached to the team. Many citizens think that facilities for the proper encouragement and fostering of athletics are lacking in the public schools; notably, of course, gymnasium facilities. In its notices of its games, the football team has requested plans for local support and attendance. The proper state of mind would be a boosting of the city's enthusiasm for its athletes.

In neighboring towns there is no stint of this enthusiastic support. Business houses contribute advertising; and the broadcasting of victory slogans, with splitted cheering marathons precede each game at home and abroad. These sports are exciting and exhilarating to onlookers as well as participants; they promote health and aggressiveness of character; they should be fostered. With all the natural enthusiasm for sports and games, it would be a great boast for Charlevoix that one of its sons became an athletic idol of the country. Let's pull hard for our basketball team. In the approaching season. If we have been lax, we should make amends.

SCHOOL MUSIC

IT WINS A WARM INDORSEMENT

NOW PART OF COLLEGE LIFE

Benefits of Musical Training in Their Character Building

Charlevoix's present effort to organize a good high school band, gives an added interest to a recent survey on college music. The University of Michigan, Albion, Alma, Hillsdale, Hope and Marygrove colleges, are the six Michigan institutions of learning who contributed to the survey. Close to 200 colleges furnished the information upon which the results of this survey are based.

Music has become an indispensable part of college life in the opinion of presidents and heads of music departments of the institutions who answered the survey. It is not only of inestimable value to the college itself, but is also of great material and spiritual benefit to the student who takes an active part in it.

Great stress is laid by college heads on the benefits of musical training in character building, the survey reveals. Fully one-fifth of the college executives who contributed to the survey considered this the best argument for music in their college or university. Others mentioned the social and cultural advantages accruing to the music student, music as an aid to ward developing clear thinking; music on the campus as an outlet for surplus energy as a as a help in getting many youths through school. All but three of the colleges find their musically-trained students more efficient in their studies than those that are not trained.

NICK SHORES NOT WITH THE HUNTERS THIS FALL

First in Over Fifty Seasons—Will Try His Luck Fishing Instead.

For the first time in over fifty seasons Nick Shores, admitted dean of Charlevoix woodsmen, is not going to the woods for his deer. He will be missed by the hunters, for every fall, he has been able to take his place in any one of a half dozen hunting parties.

Until last year, he had never failed to bring home his full share of the venison; but upon his arrival at camp last fall, Nick fell victim to a severe attack of the flu. He did drive himself out for a few hours hunting—but it was no use—he was to inhospitable. After that, for the entire duration of the hunt, he lay in camp, a slightly sick hunter.

He has never fully recovered, and says he will probably never hunt deer again. But he is fixing his little fishing shanty, and will get his share of the fishing—and the fish—on the ice in Round Lake this winter.

CHARLEVOIX FIRM AFFECTED BY SUIT

Grand Rapids Action May Halt Contract Let Locally

Charlevoix will be interested in the outcome of a suit recently filed in Grand Rapids, whereby wealthy Chicagoans seek to keep the Muskegon county from proceeding in the construction of the scenic highway along Lake Michigan, between Muskegon and Whitehall.

The contract, it will be recalled, was let to the Charlevoix Abstract & Engineering Co., whose engineering department, by consolidation, has become the Sloan-Lyons Construction Co. The contractors had done some grading, and had shipped in a large supply of South Manitou gravel, preparatory to the laying of concrete in the roadway. Equipment had been moved to the work, and a large building force was being assembled. Robert F. Sloan, head of the firm, says, however, that he thinks the matter will be so settled that the job will be completed this fall.

The plaintiffs contend that Muskegon county officials never properly established the need for such a highway; they are hard hit, besides, by an assessment of $600 in the assessment district property. Their injunction was directed against the Muskegon county road commission.

JAMES B. LANCASTER PASSES

Monday, November 15th—Resident for Fifteen Years

On Monday, Nov. 15, James B. Lancaster, for fifteen years a resident of Charlevoix, died at his home on East Upright avenue. He had been ill for some time, and his advanced years, combined with his delicate condition, brought the end.

Mr. Lancaster was born in New York, Sept. 27th, 1841. He was a soldier in the Civil war, having served in Co. F, 14th Michigan Infantry, in 1863. He had served one year when he was wounded, and spent nine months in a hospital as a result. For six years of his residence in Charlevoix, he has been confined to his bed.

In 1872 he married Minnie Tracy, and there were five children, two of whom, Roy Lancaster of Santa Ana, Cal. and Hazel DeVol, of Traverse City, survive. December 8, 1898, Mr. Lancaster married Helen E. Bateman, of Traverse City, who also survive him, with his sister, Mrs. Ada Kelgiis.

The funeral was held at the home on East Upright avenue, today, with Dr. Matson officiating. Interment was at Greenwood cemetery, Petoskey.

"Seedy Looking Fellow"

"Seedy" literally refers to a plant which has "gone to seed." A poor, shabby and unemployed person is supposed to resemble a plant in its last stages. The term "seedy" is especially applied to a person who is in need of a brush and whose clothes are shabby and threadbare.

EMMET COUNTY PIONEER DEAD.

Emmet county mourns a pioneer who was also well known and respected in Charlevoix. Andrew L. Deuel, often called Judge Deuel, died at his home in Harbor Springs, November 12th. The funeral, held at the First Presbyterian church, Harbor Springs, was Nov. 14th. Judge Deuel's life had been an active one. He had served as prosecuting attorney and judge of probate for his county. He also served as postmaster at Harbor Springs three several administrations, and as president of the village. He was an energetic Republican; and active in the Masons, Elks and K of P. He was born at Walled Lake, Mich., Aug. 22, 1850.

ACHIEVEMENT

IN GRIM SCIENCE OF WAR

NEW FIRE-CONTROL SYSTEM

The New Guns Hurl Death Stream Far Up In The Sky

World war veterans remember vividly the impudence with which enemy aviators often defied the marksmanship of machine gunners and anti-aircraft batteries. In another war, however, the story would be different, for anti-aircraft gun pointing, trickiest and most baffling of all feats of gunnery, is robbed of many of its difficulties and the young science of shooting down airplanes radically transformed by means of a phenomenal new apparatus developed by ordnance officers of the army for the control of sky-firing.

The new fire-control system was given an official try-out recently at Aberdeen Proving Ground, Maryland, with what the War department has called "highly satisfactory results."

Not only does the sky-firing apparatus sharpen the accuracy of anti-aircraft gunnery, but it amazingly simplifies the once complicated business of plotting the course and speed of moving airplanes. Merely by watching an airplane through two telescopes mounted on the apparatus, complete firing data is automatically computed and transmitted to gun crews.

The apparatus is so designed that, given the altitude of the plane, which other instruments easily determine the only action necessary is to force telescope observer to follow the direction and the other the elevation of the airplane. The movements of the telescope control an electrically operated mechanism which runs to the guns.

By means of the information thus supplied a stream of high explosive shells fired at the rate of 27 a minute, may be directed at such a target as a speeding airplane. Time fuses on the shells permit the projectiles to explode at predetermined altitudes and their fragments to destroy the cross the path of the airplane.

IN CONNECTION with the recent death of Mr. Adolph Fochtman in Petoskey, there is an incident that illustrates the possibilities of present-day rapid communication. A son of Mr. Fochtman, who is a Catholic priest in Germany, was notified by cable of his father's death. Within four hours his reply had been received in Petoskey. It had been sent by radio.

Two sons of the Fochtman family are priests of the Catholic Church; and one daughter a nun. One of the priests is stationed in China. In all there were thirteen children in the family, and, quite remarkably, all are alive.

THE POTATO AND BEAN SHORTAGES

May be Some Hope for Charlevoix Co. Farmers In This

A government report dated on November 11 says that the Michigan average potato yield this year is 132 bushels per acre, which is better than was expected. The state's total crop is put at over thirty million bushels, and the quality is average.

But national production, while it exceeds that of 1925 by thirty million bushels, is still twenty to twenty five million short of consumptive demand. This may augur higher prices for spuds. In fact Grand Rapids did report, for Armistice Day, a slight increase, bringing the price up to $1.35 to $1.40 per bushel.

The bean crop is short, too. The persistent wet, gloomy weather limhindered harvesting and materially damaged the crop. Little threshing has been done, and many fields are likely to be abandoned without an attempt at pulling. The result indicated is a smaller merchantable crop, but with prices such that even meager yields can be drawn until weather conditions permit a final survey.

RED CROSS ROLL CALL

Asks Members and Support for Greatest Humanitarian Work

Friday and Saturday, Nov. 19-20 have been appointed as the days for the Red Cross Roll Call in Charlevoix. There will be booths for the enrolling of members at both Charlevoix banks; and beginning with the annual membership at $1.00, other memberships may be taken as follows: Contributing member, $5.00; sustaining member, $10.00; supporting member, $25.00; member, $50.00; and patron, $100.00.

The modest dollar membership entitles the honor of affiliation with the world's greatest humanitarian foundation to the person of most modest means; and those who can also may express endorsement of what they have seen of the Red Cross efficiency, courage and mercy by taking one of the other memberships enumerated.

Charlevoix is very fortunate in not being subject to the natural disasters and epidemics that so often call into play the ministrations

(Continued on page Eight)

EAST JORDAN HIGH TEAM PENALIZED

As an unfortunate aftermath of the high school football season comes the news that the Michigan Interscholastic Athletic Association has suspended the East Jordan high school indefinitly. This penalty was imposed for East Jordan's breaking of a two year contract with Cheboygan high school, for football contests to be played between the two schools.

East Jordan, it is said, sought to cancel this contract last winter; and upon the statement that it had been canceled, arranged another game for the date previously scheduled with Cheboygan, only to learn later that the Cheboygan game was still on the official association schedule. The suspension not only bars East Jordan from athletic contests with any other high school in the state, but eliminates East Jordan from a tie with Cheboygan for Northern Michigan Class U high school football honors.

SERIOUSLY HANDICAPPED

Michigan Farmers Warned to be Careful of Seed Corn

Michigan farmers will be seriously handicapped in their corn planting next spring, unless they take special care now in selecting and storing their seed corn. Continued rains and overflowing streams have caused much of the corn to stand in muddy fields, and exceptional care must be taken by the farmer who wants a good stand next spring.

Good seed corn next spring will depend on artificial heat and ventilation that is given it at this time of the year. As it comes from the fields in the fall, seed corn contains 25 to 35 per cent moisture, and this content must be reduced to about 12 to 15 per cent if the corn is to pass through the winter without losing the vitality of the seed.

Corn properly dried will not be damaged by freezing, so that it is very important that immediately after picking, the corn be placed where it will receive free ventilation in order to dry it rapidly. This done, the corn should be stored where it will not be exposed to extreme cold.

Any arrangement the farmer can make for drying the seed corn is all right, providing there is plenty of ventilation. Corn trees, wire racks, bag strings to tie the ears, or any other method usable and expedient will do. Care should be taken, however, that the moisture laden ears do not touch, as moisture from one ear will cause rings on or the windmill should be avoided, as this results in lowered germination because of freezing.

STOP, LOOK AND MARRY

Under the old Michigan Marriage Law a couple could become engaged, get a license and be married within ten minutes. Eighteen months ago the legislature passed a second thought law requiring a five-day wait after the license is issued.

The marriage license clerk at Detroit clocked his records at the end of a year under the new law and found that one couple in every twenty never came back.—Colliers Weekly.

Twenty-two cases of typhoid fever in a Missouri town were traced to one family of typhoid carriers.

One of the most important means of preventing serious explosions in coal mines is good ventilation.

THE WORLD'S GREAT EVENTS

ALBERT PAYSON TERHUNE

(By Issler, Mead & Company.)

Richard III

RICHARD III—hero and scoundrel; genius and degenerate, great king and greater criminal—stands out through all time as the "heavy villain" of medieval England's history drama: And that same drama was one of the bloodiest and most turbulent ever enacted.

During the four centuries since the Norman Duke William had conquered England many changes had come to the island kingdom. Most important of these was the substitution of English for French as a court and national language. The Normans had tried to make England a French-speaking nation. The stubborn Saxons had refused to give up their cruder native tongue. Little by little, thanks to this resistance, the earlier English, modified by certain French words and lingual forms, became the accepted tongue of the country. This was practically the same as the English we speak today.

The Black prince's son, Richard II, was deposed by his cousin, Henry, of Lancaster (son of the Black prince's younger brother), who took the throne as Henry IV. The usurper's son, Henry V, conquered nearly all of France and died while still a young man. His infant son, Henry VI, was called king of France as well as of England. But while he was still a youth Joan of Arc roused France to cast off the British yoke. Then, having no longer a foreign foe on whom to vent their aggressive, warlike tempers, the English turned against each other in a series of civil wars.

The cause of those conflicts was as follows: Henry VI was weak and semi-imbecile. The powerful duke of York claimed descent from a brother of the Black prince older than the brother from whom Henry was descended. He therefore declared himself rightful heir to the throne, and went to war to make good his title. His followers adopted the white rose as their badge, while the Lancastrians (Henry's adherents) wore red roses. The contest thus became known as "The Wars of the Roses." It began in 1455 and endured off and on for thirty years.

The duke of York was killed at the Battle of Wakefield, 1460, but his three sons, Edward, George and Richard, kept up the strife. Success fell first to one faction and then to the other; and intervals of peace occurred; but in the main the nation had little breathing space. At length, at the battles of Barnet and of Tewkesbury, 1465 (where on both occasions Richard led the Yorkist's carried by all victory), Edward wholly routed the Lancastrians and was undisputed king of England, with the title of Edward IV. His brother George, who had once turned traitor but had come back to the Yorkist cause, was duke of Clarence, and Richard, the youngest brother, was duke of Gloucester. To make Edward's throne more secure, Henry VI and the latter's son, Edward, prince of Wales, were murdered. The crime is generally told at Richard's door, as is the subsequent murder of George, duke of Clarence. Edward IV died in 1483, leaving his two little sons under Richard's guardianship and appointing Richard "Lord Protector of the Kingdom" during the elder son's minority.

Richard thus found himself with only two lives between him and the crown of England. He laid his plans with a desperate ingenuity and set out at once to fulfill them. His first step was to execute on various pretexts such noblemen as were adherents of Edward's two boys. Then, by lobbying, threats and false claims, he caused an irregular election to be held and had parliament proclaim him king. The two little princes, Edward's sons, were put out of the way, presumably by Richard's hired assassins, and the "Lord Protector," having waded to the throne through his brother's blood, began his reign as King Richard III. To the surprise of all, he governed the country justly and wisely.

But the hostile Lancastrians were growing restive. Their party's only remaining claimant to the crown was Henry Tudor, earl of Richmond. Oddly enough, he also had a strong trace of the ancient British blood, thus uniting in himself the Norman and early English strains. He had been humbled, but in 1485 he returned to England and drew to him a powerful faction. Richard, at the head of a large army, marched in person against him. The two forces met at Bosworth on August 22, 1485. After a hotly contested battle, in which the king performed prodigies of valor, Richmond won a decisive victory. Richard was slain on the field. Richmond came to the throne as Henry VII, and strengthened his cause by marrying Princess Elizabeth of York, thus uniting the rival houses of York and Lancaster.

Richard III is described by Shakespeare and other Sixteenth century writers as a dwarf-hunchback. This idea is absurd. No man so handicapped could have performed the personal feats of strength and valor that were ascribed to him. His character presents one of the strangest paradoxes of history. He was conscienceless, devoid of scruple or honor, ferocious, cruel and bloodthirsty even for those true times. Yet he was a wise and just king, a general second to none, a hero in battle, and of marvelous mental attainments.

David I. Walsh, Democrat, was elected United States senator from Massachusetts, defeating Senator William M. Butler, chairman of the Republican national committee and close friend of President Coolidge.

HOST TO QUEEN

Tida is Chief Two Guns White Calf of the Glacier park reservation who was chosen to be host to Queen Marie of Rumania upon her arrival at the Great divide.

New Anesthetic

Propylene, a constituent of manufactured gas, has recently been found to possess valuable anesthetic properties, and has been made use of in the case of major operations. This anesthetic is much more powerful than ethylene, employed by dentists, to which propylene is closely related.

Weight of Rain

The weight of an inch of rain on an acre of ground would be 226,517 pounds.

Propagation of Many Nut Trees

Under Normal Conditions It Is Cheapest to Buy From Nurseryman.

(Prepared by the United States Department of Agriculture.)

Useful information on the propagation of various nut trees is given by C. A. Reed of the United States Department of Agriculture in Farmers' Bulletin No. 1501-F, Nut-Tree Propagation, just published. Nut trees do not reproduce themselves true to variety when grown from seed, but must be propagated asexually as other fruits. Propagation with most species of nut trees is more difficult than with ordinary fruit trees, although the general principles are the same. Certain methods of budding and grafting are practically identical with nuts and with fruits.

Ability to Propagate.

The ability to propagate nut trees should be acquired by every grower, says Mr. Reed, so that if the occasion arises he may top-work to better kinds any inferior trees in his planted orchards, may work over seedlings in his native groves or, if necessary, easily establish a branch or two of a variety for pollination purposes from the tops of trees of standard varieties. With new varieties it often happens that scions only are available and not trees. Trees in sufficient numbers for orchard planting may not be available. In any case, by obtaining from a nursery a single tree true to variety, the planter may provide himself with an early supply of scion wood with which to increase his planting stock.

The purpose of this bulletin is to provide growers with a working knowledge of how asexual propagation is effected. It is not to encourage the general practice of growing their own trees, as the production of desirable planting stock is expensive and without experience it is generally unsatisfactory. Under normal conditions it is cheaper in the end to buy such stock from professional nurserymen.

Advantage in Budding.

Regardless of other reasons that prompt a mastery of the art of propagation, the nut orchardist will find his ability to bud or graft trees of great advantage in handling his orchard, says Reed.

Copies of this bulletin may be obtained upon request, as long as the supply lasts, by writing to the United States Department of Agriculture, Washington.

Excellent Rhubarb Can Be Grown During Winter

Rhubarb can be successfully grown during the winter and in many ways it is superior in quality to that grown in the summer, especially to that grown during the hot and dry months. The possibilities of winter growing have been overlooked unduly for the reason that very few are familiar with the fact that rhubarb will grow during the winter months.

There is, of course, a secret of growing it, but it is very simple. The roots should be stored in a warm cellar during the latter part of November or the first of December. For best results, none under two years of age should be used. Either boxes or barrels can be used for containers of the roots. A large quantity of soil should be placed in the containers and the roots laid on top of it. Then a rich covering of the soil goes over it all.

Near Christmas or later, sprouts begin to appear and are ready for harvest in January. Thereafter, they grow quickly and may be picked often.

Poisonous Plants Fatal Only in Large Quantity

There are many popular misconceptions respecting poisonous plants on the open range. One of the most notable relates to the quantity of poisonous plants that must be eaten to cause illness. It is not unusual to hear stories of poisoning of animals from having eaten a few leaves of larkspur, cocklebur, whorled milkweed, monkshood, etc. Experimental feeding has proven that with the exception of water-hemlock, and plants that produce prussic acid, illness results only from having eaten considerable quantity. For instance, cattle must eat approximately 30 pounds of larkspur to become seriously affected.

Horticultural Hints

Standing pools gather mud.

* * *

Every farm should have at least a small wood lot.

* * *

Cultivate and clean up the ground where vegetables have matured.

* * *

Although the 1926 peach crop in Georgia is estimated at 8,200,000 bushels, it is about a million bushels less than the record crop of 1924.

* * *

Go carefully with the saw or the knife in the farm apple orchard. In late years pruning often has been promoted to exaggeration.

* * *

The early bird gets his choice of nursery stock. Order yours in the fall.

* * *

Forestry is usually concerned in encouraging one good tree to grow thriftily where several poor ones are now striving to grow.

* * *

A sure way of starting grape vines is to bury some of the new growth, letting about eight inches of the tip stick up. If buried in late summer, it will be ready to set out next spring and make a good growth.

* * *

Garden tools are not costly, and their use makes gardening a pleasure, or at least robs the job of some of its backaches.

* * *

Cutting off good-sized limbs of an apple tree is about as reasonable as cutting off a man's leg to make him a better man.

* * *

No system of marketing, however effective, can be put into operation that will permanently solve all of the problems of merchandising agricultural products under all conditions.

FARM NOTES

Three timely tips: Seed in time, weed in time, feed in time.

* * *

For guiding the plow in these modern times brain is more important than brawn.

* * *

Fences keep live stock out of growing grain. How about that other farm crop, the wood lot?

* * *

One-half the value of manure may be lost in four months if left exposed.

* * *

Unclean surroundings are detrimental to milk flavor, for milk absorbs flavors and odors readily.

* * *

Lime sweetens the soil and makes it possible to grow good crops of clover and alfalfa and other legumes.

* * *

It is easier to wipe off a layer of grease from the farm implements next spring than to rub off a layer of rust.

* * *

Most vegetables keep best at a temperature of 35 to 40 degrees Fahrenheit in a well-ventilated storage room.

* * *

Vegetables will keep best in a cellar that has good ventilation, and where the temperature is maintained at between 35 and 40 degrees Fahrenheit.

* * *

After freshening, the cow should receive lukewarm water for two or three days. A bran mash (bran on which boiling water has been poured) is excellent for cooling the system and keeping the bowels open.

◦ Orchard ◦ Information

GET MICE BEFORE THEY GET TREES

Get the mice before the mice get your fruit trees. Any grower is liable to losses of hundreds of dollars, and the aggregate loss every year runs into many thousands of dollars.

Mice can be controlled, and the best way is to stop them permanently with strychnine. Stir an eighth of an ounce of powdered strychnine to which has been added an equal amount of baking soda over a quart of rolled oats. Stir it well to distribute it evenly. Heat the oat flakes and then pour over them a mixture of about six tablespoonfuls of paraffin, which should be well stirred to coat each flake with the grease.

When the flakes cool each one will be poisoned, with a waterproof coat of grease which is attractive to the mice. Place this poisoned bait in a tin can or a wooden shelter at the base of as many trees as possible, under boards, near runways, and along stone walls. It should not be placed so that birds will find it—some sort of a container should always be used.

Other practices are the use of wire screen guards around the base of the trees, and close cultivation. Both of these help discourage the mice, but do not remove the source of the trouble as does the poison, which is recommended in all serious cases.

The greatest damage usually occurs in orchards where dead grass and weeds are left to form shelter for the mice near the base of the trees. Here the mice make runways and build their nests, close to a good food supply and protected from their natural enemies, the hawks, owls, cats, skunks, foxes and weasels."

Winter Orchard Injury Prevented in the Fall

"A few simple precautions taken during the fall or early winter will prevent most of the harm caused to orchards by rabbits, mice and various forms of winter injury," says Prof. A. J. Farley of the New Jersey experiment station.

"Volunteer grasses and weeds usually grow up in an orchard during the late summer and early fall after the regular cultivation of the tree is discontinued. In young orchards this mat of material comes right up to the trunks of the trees and provides an ideal nesting place for mice that may seriously injure the trees by eating the bark and sapwood of the lower trunk and large roots. A large amount of this injury may be avoided by removing all dead grass and weeds from an area at least 3 or 4 feet in diameter around the trunk of each tree.

"To reduce winter injury the soil should be firmly packed around the trunks and a mound of earth 6 or 10 inches high made around them.

"Such treatment will provide some protection against winter injury by preventing the settling of water around the trunks, which by alternate freezing and thawing may cause injury to the bark and sapwood."

Cuttings Are Employed in Propagating Grapes

Cuttings are employed in propagating the grape. In all ordinary cases, hardwood cuttings are made from the ripened canes in autumn or winter when the vines are pruned. It is advisable to take the cuttings before the canes have been exposed to much cold. Choose only those canes that are well matured, solid, and rather short-jointed. In common practice, the cuttings are made in two-bud lengths, the lower cut being close to the bud. The cuttings will range from six to ten inches in length. The cuttings are tied in bundles of fifty or one hundred, and stored in sand, moss or sawdust in a cellar, until spring in order that callusing may take place, when they are planted in rows in the open. For most planting it is advisable to procure well-grown plants from the nursery.

If Kidneys Act Bad Take Salts

Says Backache Often Means You Have Not Been Drinking Enough Water

When you wake up with backache and dull misery in the kidney region it may mean that you have been eating foods which create acids, says a well-known authority. An excess of such acids overworks the kidneys in their effort to filter it from the blood and they become sort of paralyzed and lazy. When your kidneys get sluggish and clog you must relieve them, like you relieve your bowels, removing all the body's urinous waste, else you have backache, sick headache, dizzy spells; your stomach sours, tongue is coated and when the weather is bad you have rheumatic twinges. The urine is cloudy, full of sediment, channels often get sore, water scalds and you are obliged to seek relief two or three times during the night.

Either consult a good, reliable physician at once or get from your pharmacist about four ounces of Jad Salts; take a tablespoonful in a glass of water before breakfast for a few days and your kidneys may then act fine. This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and has been used for years to help clean and stimulate sluggish kidneys, also to neutralize acids in the system, so they no longer irritate, thus often relieving bladder weakness.

Jad Salts is inexpensive, cannot injure and makes a delightful, effervescent lithia-water drink. Drink lots of soft water.

CHILDREN WHO ARE SICKLY

Mothers who value the health of their children, should never be without MOTHER GRAY'S SWEET POWDERS FOR CHILDREN, for use when needed. They tend to Break up Colds, Relieve Feverishness, Worms, Constipation, Headache, Teething disorders and Stomach Troubles. *Used by Mothers for over 30 years.* All Druggists everywhere, 35c. Trial package FREE, address THE MOTHER GRAY CO., LeROY, N. Y.

Rattlesnake Serum

The dread of the rattler may soon be greatly reduced, if not totally eliminated. Anti-rattlesnake hite serum in portable cases can now be purchased by hikers and outdoor workers. The San Diego Zoological society makes a business of extracting poison from the fang sack of rattlers, preparing the serum from it, and then selling it at little more than cost, put up in little cases that can be easily carried by all who venture into rattlesnake territory.

Cuticura for Sore Hands.

Soak hands on retiring in the hot suds of Cuticura Soap, dry and rub in Cuticura Ointment. Remove surplus Ointment with tissue paper. This is only one of the things Cuticura will do if Soap, Ointment and Talcum are used for all toilet purposes.—Advertisement.

Filial Admiration

Henry's father, a farmer and stock grower, took several carloads of hogs, reared on his own farm, to Chicago, where he sold them to a great meatpacking firm.

While in Chicago, Henry's father received the following letter from his little boy:

"Deag Papa: Did you see Mr. Armour kill that big fat hog with the black tail, and didn't he think he was a buster? I am sorry to see the hogs leave the farm, and most of all you. Your loving son, Henry."—Everybody's.

DEMAND "BAYER" ASPIRIN

Take Tablets Without Fear If You See the Safety "Bayer Cross."

Warning! Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians for 26 years.

Say "Bayer" when you buy Aspirin. Imitations may prove dangerous.—Adv.

THE ELECTION

Election returns from the various states are now in and tabulated and an analysis of the result seems to bear out the statements made before the election to the effect that the results in practically all of the states would be based on local rather than national issues. From a Republican standpoint the outstanding losses in the senatorial contests were in New York and Massachusetts, both of which states ordinarily support the G. O. P. in general elections. But even in these two commonwealths the result was based largely on issues which have but little bearing on national affairs, although one of these issues, that pertaining to the enforcement of the prohibition amendment, promises to become a national political problem in the not distant future.

Practically all of the other senatorial losses sustained by the Republicans in the so-called border states, which are normally Democratic especially in off years, and so far as the senatorial contests were concerned, there was a setting down to normalcy after the Harding landslide of six years ago which gave the Republicans a number of unexpected senators.

In the Republican states of the Middle West and the Northwest the Republicans were generally successful. One noteworthy feature of these Republican successes in the West is that they were gained in the main in agricultural regions.

We have heard a great deal in the past few months about the plight of the western farmer and how he was going to take his spite out on the national administration. This reported discontent did not crystallize into Democratic votes. The Republican losses were sustained in the larger centers of population where local issues were more of a factor.

From a Democratic standpoint the outstanding feature so far as 1928 is concerned at least, was the unexpectedly sweeping victory for Governor Al. Smith, a victory which carried a Democratic senatorship along with it. Governor Smith is now the outstanding democratic figure of the country. He is the big figure in the 1926 democratic ranks and looms larger now as a presidential possibility than he did in 1924. Just what his candidacy means to the future of the Democratic party, time alone can tell. There is little doubt that, while it will be greeted enthusiastically in the east, by the hosts of the Democracy, it will not be regarded as an unmixed blessing in the South and the West.

Outside of this decisive Smith victory there is little in the 1926 elections which seems to have a bearing on the next presidential campaign. From now on in the Democratic Party the political students will do well to look out for the Smith Special.

DEFECTS OF THE DIRECT PRIMARY

Vice President Dawes, speaking at the convention of the American Legion at Philadelphia, said he thought the direct primary ought to be largely abolished. That, with regret, is an increasing opinion. We do not like to give up our theories, especially when they are based on a fine estimate of human purpose and intelligence. The direct primary was the objective of a great crusade. Enthusiasm thought it was all good. Dejection may say it is all bad. It is neither one thing nor the other. Experience has revealed a great deal of bad. That at least can be put away. It asks too much of voters and they cannot respond to its requirements.

The political convention, as General Dawes said, is the product of the system of representative governments. Americans know their form to be one of representative democracy and we doubt if they have had as much success with the departures from it as they have had in the main with the straight article.

The straight party ballot has been derided for more than a generation. For a long time he was fixed in place by the civil war and its consequences. He voted against Cleveland because his father voted against McClellan or he voted against McKinley because his father voted for Tilden. This process under scrutiny seemed absurd and party loyalties were derided as infantile.

Loyalty has been the foundation of a good many governments, and even when it has been unintelligent it has preserved government. A two-party system has saved the United States from many of the weakening vagaries of opinion and act which are found in the newer and less integrated republics of Europe. They tend towards dictatorship because their people cannot keep from splitting into so many parties that parliamentary decision is impossible.

In this country party loyalty will require party responsibility in the long run. A party management which promotes incompetence and dishonesty will not retain support if the consequences are traceable back to the management. The direct primary, applied to the whole confusing machinery of elections and party control relieves the party management of responsibility and it does not invest the voter with information sufficient to act well on his own hook. A convention at least knows what it is doing. If it does the wrong thing that is done deliberately most of the time and a party organization generally sidesteps responsibility for continuous bad behavior. If it does not it is dealing with an indifferent constituency against which there is no political protection.—Chicago Tribune.

NEW SCIENCE CREATES BUSINESS

One of the newest sciences which we have with us is the science of advertising. And advertising has really come to be a science. It is no longer conducted in a haphazard way. Men of brains and ability have studied it and have evolved plans which bring about the greatest amount of good through advertising, benefit to the public as well as to the advertiser.

It is pleasing to know that men everywhere are beginning to appreciate the great part for good which advertising plays in our everyday life. That we do not yet fully appreciate this good, however, is evidenced by the fact that only a small percentage of the potential advertisers avail themselves of its assistance.

In a recent address, President Coolidge pointed to the fact that we are still apt to place too low an estimate on the subject of advertising. Mammoth factories and great transportation systems impress us when we come in personal contact with them, the President said, but we have not yet come to appreciate the great business which greets us through the advertising pages in the newspapers and periodicals of the county. Yet even the most casual examination must point out to us, the appreciation of its advantages. Representative government is typically American. It was given to us by our forefathers where they fashioned the American Constitution, a document which was regarded as an experiment at the time, even by its framers, but a document which has excited the admiration of the world by the manner in which it has given us a fair, workable government, a government which has made the United States the greatest nation in the world.

—So long as we appreciate the blessings of representative government there is no danger that the result at the polls will not be accepted just as it was accepted in the various communities of the United States this year, quietly and with real American sportsmanship. It will only be when we lose sight of party principles and the fundamental necessity of constitutional government, and follow off after false gods in the shape of vain personal ambitions, that armies will be necessary to enforce the decisions of American elections. We hope and believe that that time will never come. The way to see that it does not come is to keep fresh in our hearts the spirit of American representative government.

Mrs. Bessie P. Brueggeman, chairman of the United States employees' compensation commission.

President added, that advertising has become a great business.

Then to show why this is true he continued:

"When we stop to consider the part which advertising plays in the modern life of production and trade we see that basically it is that of education. It informs its readers of the existence and nature of commodities by explaining the advantages to be derived from their use and creates for them a wider demand. It makes new thoughts, new desires and new actions. By changing the attitude of mind it changes the material condition of the people. Somewhere I have seen ascribed to Abraham Lincoln the statement that 'In this and like communities public sentiment is everything. With public sentiment nothing can fail; without it nothing can succeed; consequently he who molds public sentiment goes deeper than he who enacts statutes or pronounces decisions. He makes statutes and decisions possible or impossible to be executed.'

"Advertising creates and changes this foundation of all popular action, public sentiment, or public opinion. It is the most potent influence in adopting and changing the habits and modes of life, affecting what we eat, what we wear, and the work and play of the whole nation. Formerly it was an axiom that competition was the life of trade. Under the methods of the present day it would seem to be more appropriate to say that advertising is the life of trade."

By creating a demand and stimulating business advertising tends to reduce prices and the cost of living. It raises, too, the standard of the products which we buy. It brings therefore, greater profits to the advertiser and greater satisfaction to the buyer. There is no longer any doubt about its general benefit. But, as yet, few of us realize its tremendous importance.

NATIONAL NEWS
Written for This Paper by
FRANK P. LITSCHERT

—The election is over. Already the people of the East and the West, the North and the South are settling down to business again. For no matter who is elected, whether it be Smith, Jones, White or Brown, the most of us have a living to make after the returns are all in and the celebration of victory or the sorrowing of defeat is over. Therefore, the day after the election, the "Business as Usual" sign is hung out again.

—And the fact that we do forget our campaign prejudices, accepting the result with true sportsmanship, is one of the outstanding features of American elections. We go to the polls by the million on election day, deposit our ballots and go about our business. The clerks tabulate the returns, send them in to the various headquarters, the press associations assimilate them and announce the results, and the verdict is quietly accepted in every commonwealth in the land, by those who have lost as well as those who have won. That is all there is to it. There is little if any recrimination, and no thought of revolution or the setting aside of the verdict by force. No army of sheriffs is necessary to enforce the result. The theory of representative government, of the rule of the majority is accepted and the next day we start all over again.

—It may be said that the cheerful acceptance of the result, whether it is republican or democratic is due to the splendid sportsmanship of the American people. This is no doubt true in part. The American people do not like a poor loser, and there is no way to lose popularity faster than to "squeal" after one has been beaten in a fair political battle. But it is not all sportsmanship which induces us cheerfully to accept the result. Back of it is the splendid heritage of American representative government, and our proper appreciation of its advantages.

Long Lecture Career

Ralph Waldo Emerson, the celebrated American essayist, began a long career as a lecturer in 1833-34. For over thirty years he lectured on such subjects as "Human Culture," "Human Life" and "The Present Age."

Tribute Seems Rough on Wedding Finery

Rice and confetti, for use after wedding ceremonies, both have their opponents, but they seem preferable to the coal dust which, we are told, was thrown at St. Pancras recently after the wedding of a coal heaver and his bride.

But the idea of this occupational tribute is not quite new; some years ago a confectioner and his bride were pelted with the little sweets which are known as "hundreds and thousands." The idea might be endlessly extended—tee leaves for the grocer, tinsel for the joiner, chopped suet for the butcher, buns for the baker, buttons for the draper, orange peel for the greengrocer, and pills for the doctor and chemist. In the case of writing people and journalists, presumably all their friends would turn up and empty their fountain pens at the bride and bridegroom. That sounds a curious compliment—but, then, so does coal dust.—Manchester (England) Guardian Weekly.

Truth and Liberty

There was a time when men were standing with their love of truth in advance of their love of personal liberty. We see that we are standing now with our love of personal liberty in advance of our love for truth. We anticipate a time when the love of truth shall have come up to our love of liberty, and men shall be cordially tolerant and earnest believers both at once. When that comes it will be a new thing in the world. It has long been in beautiful or splendid individuals scattered all through the ages, but there has been no age in which the mass of thinkers were of once strong in positive belief and tolerant of difference of opinion.—Phillips Brooks.

DILL PICKLES—There fine unclassified sizes. Price right. Have your jug refilled at the Pickle Station now.

From Planter to Platter--Chicago Exhibition

The visitor to the International Live Stock Exhibition at Chicago, November 27th to December 4th, will be able to obtain a complete picture of live stock production from the time the seed is selected for planting through the various stages of growing and feeding until the savory meat is served on the dinner table.

Starting with the soil itself, models of an actual farm will show how a run-down piece of land was taken in hand by experts and put on a business basis in a few years. Adjoining this demonstration will be samples of numerous varieties of grains, seeds and hay, many which have never previously been introduced to the public, together with specimens of the finest feed crops produced on the North American continent. The visitor may next inspect the educational exhibits of the United States Department of Agriculture and the State Agricultural Colleges where he will find a great fund of timely and valuable information dealing with problems of seed selection, crop production and feeding, and be privileged to ask questions of the authorities in charge.

In the surrounding barns will be assembled outstanding representatives of the various breeds of beef cattle, horses, hogs and sheep, allowing an unexcelled opportunity to study breed types and make comparisons. Exhibits of cattle and sheep will illustrate the various methods of breeding up a herd or flock from ordinary foundation stock.

Following the story one step further, the visitor may spend a pleasant hour in the Sheppe where he will find the carcasses which have been produced from the use of various feeding methods with different grades of stock. Here also he may observe the retail cuts into which the carcasses are divided and learn how inexpensive meat dishes may be prepared from the less popular portions.

Stepping across the street he enters the Boys' and Girls' Club Building where he will find exhibits of canned meats and other foods and listen to demonstrations on various topics concerning the table and the home.

Stuffed Owls Used as Decoy for Crows

There is one way in which a wild crow may be shaken out of his accustomed ways—suspicion may be reduced even to a state of hysteria, says Henry C. Cary in Bird Lore.

Preserve in stuffed owls, preferably one of the largest species, like the great horned or the barred, and place it out in the open in the country.

The crows will gather more quickly than do the vultures when they see carrion and they will follow each other, as the vultures are said to do, so that the whole crow population for miles around will soon be pouring out the vials of its wrath on the poor stuffed fowl with its yellow glass eyes.

The crows have an instinctive fear of the owl tribe, and hence they unite in an attempt to drive the stuffed owl, which they suppose to be alive, away from their own neighborhood.

This method of deceiving crows seems to work best in the nesting season. Its efficacy may be due to the owls' preying upon old and young crows in and near the nest at night.

Certainly the habit of nesting and roosting very near the topmost branches of tall trees would seem to make the crow more than most birds, an easy victim of both hawks and owls.

* * * *

A total of more than $8,000,000 will be received for the eleven months of 1926 from the gasoline tax which went into operation last February 1. The total amount expected by December 1st exceeds May 1 will aggregate $8,750,000, it is estimated.

ATTRACTIONS FOR THE WEEK

Saturday-Sunday, Nov. 20-21

Extra Special Western. Two great shows in one! Hoot Gibson in "The Calgary Stampede." 2 Injuns and cowboys; Roman races and bronco busters; rope spinners and bull-doggers; trick riders and trick ropers; crashing wagons and foaming horses lashed like mad by demoniac drivers; wild cows, wild steers, wild riding by the world's wildest wild westers. The two biggest movies of the year all for the price of one admission. Hoot Gibson in a ripsnorting drama enacted amid the actual scenes of the Calgary Stampede of 1926. Also a comedy "The Diffy Dill"

Wednesday Thursday—

Colleen Moore in "We Moderns." Bang! Bang! Bang! She's in to win hearts with thrills and smiles. Flashing, flying, soaring through the air, like a winged bird of steel—and aboard, the modern dancing, whirling to the time of a snappy Charleston. And then, crash! bang! and a hundred humans jump overboard 10,000 feet to the earth. That's a thrill of a lifetime. Don't miss it. Also Fox News and Felix the Cat.

THE W. C. T. U.

Meeting Held Last Friday With Mrs. Shores

The Women's Christian Temperance Union meeting last Friday at Mrs. Shores' was largely attended by women interested in prohibition and other religious causes. Mrs. John Jolliff had charge of the devotions and Mrs. H. G. Mattson presented the topic of "International Friendliness," making it clear that peace among the nations will result only from effort.

There are at the present time fifty or more international organizations functioning and making for friendliness between the citizens of the nations of the earth, exclusive of political leagues and conferences. The bringing together of groups of young people of all nationalities through the Y. M. C. A. and other agencies to discuss matters of common interest is a hopeful sign of the times.

The Japanese doll project was mentioned as another venture in friendliness. At the time of the Doll Festival in Japan in March, thousands of dolls will be presented to the Japanese children by the children of America with messages of good will and friendship.

Tea was served by the Social committee and the Union adjourned to meet in December with Mrs. Usher.

W. C. T. U. NOTES

According to the headlines in some of the big dailies, Norway has voted to end prohibition. But Norway never had prohibition in the sense that we understand it. She did have a regulatory law limiting the alcoholic content to 14 per cent. This was raised to 21 per cent three years ago and we must come off altogether. Norway has found by experience that compromise with booze doesn't work, and if Gibson is a skilled rider, having first won the all round championship at the Pendleton roundup in 1912.

The story revolves about the adventures of a cowboy who is wanted by the Canadian Northwest Mounted Police. All the principals in the story congregate in Calgary during the stampede and lively action of the picture is had when Gibson farfuns punctuates the actual festival, which was the biggest in history, due to the celebration of the centennial or fiftieth anniversary of the establishment of Fort Calgary and the coming of the Northwest Mounted Police to Alberta.

THE THEATRE

"We Moderns" a story of the younger British generation, with the ever charming Colleen Moore as the star, will prove a surprise to patrons of the Palace theatre, next Wednesday and Thursday.

Fetched against a canvas that fairly palpitates with the din and bustle of London life, photographed in the actuality, Miss Moore is seen not only in an entirely new frame, but plunged into the very British after the war development, in her characterization of Mary Sandale.

The play is adapted from an Israel Zangwell novel, with June Mathis responsible for the screen version. It was directed by John Francis Dillon, who gave screen fans those two flapper epics, "The Perfect Flapper" and "Flaming Youth," by means of which Colleen originally climbed to stellar heights on the screen.

Surrounding Colleen in her new medium are Jack Mulhall, who is always interesting and convincing; Claude Gillingwater, Clarissa Selwynne, Carl Miller, Cleve Moore, and others.

The picture was produced by John McCormick for First National.

"The Calgary Stampede,"—When Hoot Gibson and his director, Herbert Blache, took a company of 44 to Calgary, Canada, to film the great Calgary Stampede many of the Universal ranch-riders who made the trip entered the sporting events and made an excellent showing by winning their proportion of the prizes. Every type of Western frontier sport was staged before a monster grandstand. The Universal riders made an especially good showing in the horse races while Hoot, the star of "The Calgary Stampede," a Universal Jewel coming to the Palace theatre on Saturday and Sunday was winner in the finals of the Roman race about which the dramatization of the festival revolves. This event, one thirty years ago, was first staged as an exhibition by the Universal ranch riders.

The necessity of shooting many scenes of the story during the week made it impossible for Gibson to enter any events, despite his desire to do so. Gibson is a skilled rider, having first won the all round championship at the Pendleton roundup in 1912.

The story revolves about the adventures of a cowboy who is wanted by the Canadian Northwest Mounted Police. All the principals in the story congregate in Calgary during the stampede and lively action of the picture is had when Gibson farfuns punctuates the actual festival, which was the biggest in history, due to the celebration of the centennial or fiftieth anniversary of the establishment of Fort Calgary and the coming of the Northwest Mounted Police to Alberta.

FIRST THANKSGIVING

A Realistic Thanksgiving Vesper Service at M. E. Church

A Thanksgiving service, at the Vesper hour, which will be unique because it contains certain elements that were in evidence at the First Thanksgiving Service, will be rendered at the First Methodist Episcopal church in Charlevoix next Sunday afternoon, by the pastor assisted by the combined choirs of the Indian and Charlevoix Methodist Episcopal churches.

Certain of the Indians, who are excellent singers, will be dressed in Indian costume and will escort some of their wonderful music in the Ojibwa tongue. "King Massasoit" and his two sons, "Philip" and "Alexander" will be represented by real indians. "Gov. Bradford" [and "Gov. Winslow" will have an opportunity to speak officially. The First Methodist choir, costumed very suggestive of Pilgrim days, will render excellent music and the pastor will speak on the subject, "The Old Time Religion." Suitable and suggestive decorations will be much in evidence.

The entire service will center around the idea of the original purpose of Thanksgiving as conceived by our Pilgrim fathers and mothers. The public is invited. The hour is 4:15 p.m.

—) PERSONALS (—

On Tuesday Mrs. Robert Bonthron entertained at a bridge luncheon, with four tables.

The Leo Powers family left Tuesday morning for Miami, Florida, for the winter. They drove through in A. S. Musselman's Cadillac.

A petition now being circulated asks that the matter of bonding for new school buildings be reopened. The limit set forth is $250,000.

B. A. Herman left last Thursday by rail for visits to Holland, Grand Rapids, St. Joseph and Chicago. This is according to his annual custom, following inventory, each fall. He expects to be gone until about Thanksgiving.

Does Distance Make Investments Good?

Charlevoix County has received hundreds of thousands, within a year, for resort real estate. Shrewd outside investors did the buying. How often it happens that we see opportunities to make investments right at home—after it is too late.

LAWRENCE R. CHASE
REAL ESTATE
230 Bridge Street. Telephone 113

Rev. Fr. Leo McMannon came from Saint James on the Sanford, Tuesday, and returned the same day.

The Busy Bee society will meet on Friday afternoon, Nov. 19, at the home of Mrs. Luella Korth, 801 State street.

Miss Marion Sears returned to Pittsburg Monday, after spending a week with her parents, Mr. and Mrs. F. M. Sears.

At its regular morning service hour, 10:45, the Christian Science society will hold Thanksgiving services on Thanksgiving Day, November 25th.

Mrs. Garret Cole, of St. James, arrived in Charlevoix on Friday's boat enroute for Big Rapids, where she will visit her mother, Mrs. Seaman.

The Baptist Ladies Aid will give a fish supper at the church parlors, on the evening of Wednesday, December 1st. The charges will be 35c and 50c.

Mrs. Will Graves, with her son Billy Boy, and Miss Marie Grau, left, last Sunday on the Manitou, for Chicago, where they will remain for the winter.

The Reverend B. G. Mattson was the principal speaker at a Father and Son banquet held at the Congregational church in Central Lake, the evening of November 11th.

On Monday Raymond Seymour and Albert Clark opened a grocery store in the Madison building, near to the State Bank. They have a good location and attractive windows.

Mont Withers, Ralph Bacot and John Slezak left on the Sanford Tuesday for the Beaver Islands to hunt fox. The length of their stay will depend on the kind of hunting they find.

Mrs. Alonzo Powers was surprised on the evening of November 11th by many of her friends, who held a party in her home, in honor of her birthday. A supper and cards made the festivity.

Frank Kenyon, of Mackinac Island, who has been much in Charlevoix recently overseeing the remodeling of his home at Dixon and Michigan, fell down a flight of stairs last Thursday and wrenched his knee painfully.

The Loyal Order of Moose has leased the second floor of the Emrey building, now owned by Jos. Foster and Chas. Hamlin, on Bridge-st., near Clinton, and will occupy same December 1st. The lease reads for five years.

The Charlevoix City Band will give a concert, at a date to be announced later, the proceeds from which will be used for the purchase of instruments and the defraying of other expenses. Watch for the forthcoming announcement.

A. D. Crimmins, of Grand Rapids, came to Boyne City last week, and after disposing of business matter in that city, came on to Charlevoix where he stayed Thursday night. He left last Friday morning for the return to Grand Rapids.

The committee appointed by the American Red Cross to conduct its roll call in Charlevoix county includes Mrs. J. M. Harris, Boyne City, chairmen; Mrs. C. A. Foregeorgeer, Boyne City, secretary; and A. F. Bridge, Charlevoix, treasurer.

Mrs. Leon Taylor and Mrs. Wm. Taylor left for Chicago last Saturday, by train. Mr. Wm. Taylor will join Mrs. Taylor there later and will stay for some weeks, then leave for Florida. The Leon Taylors will live in Chicago this winter, as Mr. Taylor is employed there.

Mr. and Mrs. George Myler and son James drove up from Detroit, arriving in Charlevoix last Friday. Mr. Myler went with the O'Neils hunting party to the north woods, while Mrs. Myler and son remained in Charlevoix with Mrs. Gaither and Mrs. Eddie O'Neill.

Miss Emma Roy, representative for Real Silk of Indianapolis Hosiery and Lingerie Co., reports an active Christmas business already. All wishing their orders for winter hosiery and sox and Christmas gifts, telephone her at Hotel Charlevoix after 7 p.m., and she will call at once. x x x

George Beeman, who left Charlevoix on Thursday, Nov. 4th, returned Monday morning, after having made a trip which included Detroit, Ann Arbor, Albion, Kalamazoo and other Michigan towns. The chief event of his vacation was his attendance at the Michigan-Wisconsin football game.

J. B. Redpath, who closed his store last week, has been busy since then with inventory. He expects to have this finished in time so that he can leave for Chicago next week. In the spring, as soon as conditions indicate the opening of the resort season, he will return, reopen his store, and make preparations for summer business.

On the 8th, Mrs. J. J. Simmons left for Owosso to attend the W. C. T. U. convention held there on the 9-10-11. From Owosso Mrs. Simmons went to Chicago to remain until she was called to Saginaw to attend the convention of the Women's League of Voters, the 18th. Mrs. Simmons is Charlevoix county's delegate at the latter meeting.

The school board, at its meeting Monday, Nov. 16, took under advisement the new petition to reopen the matter of bonding the district for a new school building. At a date to be determined later a committee will be appointed to prepare the matter for public consideration and to set a date for a special meeting when the taxpayers may vote on the proposition.

FAREWELL PARTY

Those enthusiastic grandparents, Mr. and Mrs. R. C. Hammel Sr., left Wednesday morning to motor to Daphne, Baldwin county, Ala., where they will spend the winter at the home of their granddaughter, Eugenia Latady. Charlevoix will remember the day that Eugenia was born at the Hammel home in Park avenue, last summer. Now the little town of Daphne will doubtless be the scene of a keen family rivalry for the small Eugenia's favor. Eugenia's mother, Mrs. R. Dineen Latady, who was Bess Hammel, is going to see some stiff competition for possession of her daughter. Mr. and Mrs. Hammel expect to stay in the south until May.

The evening before "Big Dick's" departure, Meyer Levinson gave a party for the tall traveler. Probably it was intended as a farewell; but judging from the good time, it looked more like a celebration. The guests were all men —eighteen of them—and they played cards and gave businesslike attention to a wonderful midnight supper, prepared and served by Mrs. Levinson.

News of Miss Henriette Baldwin, who has for some time been under critical condition in a hospital at Ann Arbor, is that her condition continues to improve. This will greatly relieve the anxiety of her many friends and relatives in Charlevoix. Last Friday DeForest Wood joined Mrs. Wood in Ann Arbor, where the latter has been for some weeks at the bedside of her daughter, Miss Baldwin.

Five of our neighboring counties are considering the building of a sanitarium for the treatment of tuberculosis. The counties are Grand Traverse, Leelanau, Emmet, Antrim and Kalkaska. There is a state law which permits counties to levy a one-mill tax for the erection and maintenance of such institutions, and these five counties consider the pooling of their resources to take advantage of this provision. No place has been selected for the sanitarium site.

Ira A. Adams, editor of the Sentinel, left Charlevoix Friday morning to join his old friend, George A. Burke, of Grayling, at that place, for a sleer hunt. He intends to remain in the woods until the season closes. These two gentlemen have hunted much together; they put in several seasons in camp north of the Straits of Mackinac. Two years ago they went to Lake Gogebic, Mich., and one winter, some years before that, into the Coeur D'Alene Mountains of Idaho.

According to the Petoskey news for Monday, Nov. 15, Emmet county is hit with hog cholera. S. J. Culver, county agricultural agent, warns farmers that every preventive should be exercised; and especially since a scarcity of chloride of lime prevents no supply for Emmet county to use in putting down the scourge if it gains headway. This report is one of the many which Emmet county will doubtless put Charlevoix county farmers on their guard against a spread of the disease.

Miss Belle Flewelling of Bellaire, came to Charlevoix last week and took over the practice of Virginia Hyall Brown, chiropractor. With Miss Flewelling is her father, Simon Flewelling, a civil war veteran of long residence in Antrim county. The Flewellings are highly respected in their former home, where the family went bravely through the trials of homesteaders in the early days. Miss Flewelling is here permanently, and with her father has taken up residence in rooms adjacent to her office in the postoffice building, where Miss Brown had her office.

Dr. G. W. King and family, who left Charlevoix about October 25th, on a motor trip to Kansas and Missouri, returned Saturday the 13th. At Kansas City, Kan., they visited some relatives of Mrs. King's and their tour also took them through parts of southern Missouri, outside of Kansas City, Mo. Dr. King says the Missouri roads do not compare with ours—that if a motorist ventures off the concrete he finds mud hub deep, for the by-roads have not even been graveled. The last leg of the journey, from Chicago to Charlevoix was made in twelve hours, including stops for an hour and a half and a mistake at a detour, which cost them 20 miles of rough driving.

Charlevoix building contractors are all busy this fall. They report that this is the best season they have ever had, with more work than they can easily take care of. Most of the work is on buildings for resort purposes, such as summer cottages and boathouses. No one seems able to give definite figures on the amount of building being done, but real estate men and contractors variously estimate that the value for Charlevoix and immediate vicinity will reach $150,000 to $250,000. One estimate for Charlevoix county placed the total at $300,000. Whatever the exact truth may be, it is certain that there is an unusual activity in building.

Under date of November 16, the First Congregational Church launches its new venture, a newsy little publication called the Weekly Calendar. It is an illustrated magazine, with news of the church in its activities throughout the world, and matters concerning the local parish. With Volume 1, No. 1, Dr. Mattson and the trustees send out a parish letter, which touches parish business matters and announces an All-Parish supper to be given Thursday, Nov. 18, at 6:30 o'clock. This will be a potluck affair, with each family bringing some of the food and the necessary dishes. Of course there will be no charge, and all persons interested in the church are invited.

Born, October 23th, to Mr. and Mrs. Lester A. Cannon, of Detroit, a son—Jarvin Aubrey.

Mr. and Mrs. Bert Noble have returned from Bay View to Charlevoix, and will spend the winter at home here.

Captain James H. Gallagher, wife and family, of Boyne City, were visitors at the home of Mrs. Albon Smith last Monday.

Ernest Loeb returned from Chicago, Thursday, Nov 11th. He reported Mrs. Loeb and the new daughter, Elizabeth, to be in good health.

The O. D. Hammonds moved last week into their new home at Dixon and Lewis, which they had recently bought from Lobert Paddock.

Joseph Floyd, of Saint James, was suddenly called to Toledo, Ohio, by the serious illness of his wife. Arriving on the Sanford Tuesday, he immediately left for Toledo, by rail.

Chester See left Monday by automobile for Grand Rapids, where he was joined Thursday by his father, Chas E. See. From Grand Rapids they will go to Florida for the winter.

The steamship Manitou, when she left Charlevoix Sunday morning, touched here for the last time this season. This departure closed the season for the Michigan Transit Company's boats, as the Puritan has also made her last trip.

Prof. C. J. Coe, inspecting accredited schools for the University of Michigan, visited our schools Tuesday. He said that he found the schools in excellent condition, and staffed by a splendid corps of teachers. He commended the movement for a new high school.

R. F. Sloan Sr., was here from Fridday, Nov. 12, until today, when he returned to his construction interests near Muskegon. While here he was concerned with office affairs and threshing at his farm. Despite bad weather and the injunction suit elsewhere related in this issue, work progresses on his company's road contract near Muskegon and Whitehall.

Guaranteed

William Lord Wright, the serial king, is quite a collector of antiques and is always receiving letters from friends who know this fact.

The other night, one of these friends, recently returned from the Holy land, called at Billy's Hollywood home and presented him with a vase which he declared Rebecca used to take to the well.

"I'm sure it is genuine," said the friend, "because the boy I bought it from assured me it was the original, as he had stolen it himself, and believed his because he had such an honest face."

For Art's Sake

It was lovely, captivating, the divine. A million stars blazed in the heavens. The full moon scattered tiny flakes of silver on the waves which danced and sang at our feet. Away off to our right the red beacon of the Round Island light shot its message of guidance, good cheer and security out across the endless sea. To the left, and hugging the horizon, a four-masted schooner loomed phantom-like against the blue-black of night. It was all so restful, serene and comforting that I was quite overcome with emotion.

"What a night for lovers?" I confided to my friend.

"Yes," he said, "and I got it frame and all, with 45 soup wrappers."

Horses and Mules in War

Motors take an important part in modern warfare, but it is virtually necessary that horses and mules be provided to assume the burden of transportation in places that motors cannot go. Soft ground, by-roads and paths are traversed by animals that are impracticable for automobiles. The Clydesdale, the Shire, the Percheron, the hackney and the trotters are used for artillery and transportation, while the thoroughbreds, the Kentucky saddle horse, the Morgan and the Arabian are the breeds which furnish the cavalry and riding horses.

Much in a Name

A little colored girl, a newcomer in Sunday school, gave her name to the teacher as "Fertilizer Johnson."

Later the teacher asked the child's mother if that was right.

"Yes, ma'am, dat's her name," said the fond parent. "You see she was named for me and her father. Her father's name an Fertilizand and my name is Lina. So we named her Fertilizer."—The Watchman-Examiner.

Take Your Choice

I had a hard cold and husband, wanting to make me comfortable, as he thought, started to put something around my shoulders.

I said, "I don't want to be bundled up like an old woman."

Friend husband shot right back "It's better to be wrapped up like an old woman than be wrapped up like King Tut."—Buffalo Express.

CHURCHES

Methodist Church.
C. E. Pollock, Pastor.

Thanksgiving Sunday, next Sunday, November 21. Sermons are as follows:

"The Methodist Good Samaritan,"—Juniors.

"Thanksgiving," morning subject at 10:20

"The Old Time Religion", vesper subject 4:15.

Epworth League, "Win-My-Chum," at 6:30 p. m.

Sunday School, "A Place For All," 12 noon.

Young People's prayer meeting each Monday at 7:15 p.m. All young people invited to come.

Regular prayer meeting 7:30 Thursday evening.

A new supply of hymn books in the Indian language has been placed in the Indian Methodist church. The Indians are real singers. Those who have never heard them sing may have a treat by attending the vesper service at the First Methodist Episcopal Church next Sunday at 6:15.

Rev. J. O. Randall is the Thursday evening speaker at the Epworth League potluck supper at the Methodist church at 6 p.m.

The First Quarterly Conference was held this week, Thursday evening, at 6:30 p. m. The year's plans were considered at this meeting. Rev J. O. Randall, District Superintendent of Grand Traverse District, is president of this Conference. The church is planning great things for the entire year.

The Ladies Aid Society will meet with Mrs. Charles Arnold, on Dixon-av. next Tuesday afternoon. Mrs. Reinhart and Mrs. Durance will assist with the program.

Church of God
Rev. Paul L. June, Pastor

Services Sunday:—Preaching at 10:30 a.m. Sunday School at 11:45 a. m. Young Peoples' meeting at 6:30 p. m. Services every evening at 7:30 including Sunday evening.

J. C. and Edith Millspaugh are here. The messages have been timely and of much interest to those who have heard them. Did you ever hear a camera boom? Well we haven't heard many cannon booming yet, but we expect to hear it and see some of the results which follows the explosion. The messages which come to the front do not come over radio, telegraph or telegraph keys, but come directly from the throne of Grace—through the word and the Holy Spirit. They haven't got down to real business yet, but will in the meantime before you get there. Have you sent the charts yet? They give you a real inspiration to look at them and see the various figures represented—come and see for yourself.

Sunday morning the subject being "Confidence", the main outlines being presented. First, Confidence in Ourselves. Second, Confidence in God. Third, Confidence in our Fellowmen. Sunday evening subject being "Hope," illustrated by a drawing on the blackboard—our real hope of Heaven; Faith in God; an Anchor for the Soul. We expect to do more illustrating. The subject Monday evening being "Preach the Word." The opened Bible illustrated before us left a relative impression.

Congregational Church
Rev. B.G. Mattson, D.D., Minister

At the Sunday morning service the pastor will preach a sermon on "Christ's Law of Spiritual Economy."

Sunday School at 12 o'clock.

A special vesper Thanksgiving service will be held at 4:30 with musical program by vested choir and with a brief address by the pastor.

Young Peoples' meeting at six.

This Thursday evening at 6:30 the church will hold a fellowship supper on the potluck plan to which all families and individuals interested in our church are invited. A parish letter has been widely circulated this week explaining the plan for the annual all-parish canvass. This fellowship supper besides being an occasion of hearty social enjoyment will be the occasion for the launching of a new plan to increase the interest in the church and the success of its work.

Christian Science Society

Sunday service, 10:45 a.m., Subject, Soul and Body.
Sunday School 12 o'clock.
Wednesday evening service 7:45.
Reading room, Tuesdays and Saturdays, 3 to 5 p. m.
The public is cordially invited to attend our services and use our reading room.

**St. Mary's Cathol

Women, Don't Suffer!

Kokomo, Ind.—"I was suffering with all kinds of aches and pains—back and side, dizzy spells and nervousness. The doctors tried to help me and I tried all kinds of remedies but got little relief. I was advised to try Dr. Pierce's Favorite Prescription. I hesitated on account of the failure of other treatments, but at last I tried it. One bottle helped me so much I got two more, and by the time I had taken them I was feeling like a different woman. It had relieved me of all aches and pains and made me well."—Mrs. Roy Griffey, 1225 W. Taylor St. All dealers.

ITCHING RASHES
quickly relieved and often cleared away by a few applications of
Resinol
Harmless, purely vegetable, lotion- and ointment-like. Contains no poisonous mineral salts. Does not stain, smart, or irritate. Sold by druggists.
Resinol Soap is unsurpassed for the toilet and bath.

Mrs. WINSLOW'S SYRUP
The Infants' and Children's Regulator
Children cutting teething and relief from colic, diarrhoea, flatulency, constipation and other troubles, is given it at teething time.
Mrs. Winslow's Soothing Syrup is harmless and gratifying results.
At All Druggists.

Garfield Tea
Was Your Grandmother's Remedy

For every stomach and intestinal ill. This good old-fashioned herb house remedy for constipation, stomach ills and other derangements of the system so prevalent these days is in ever greater favor as a family medicine than in your grandmother's day.

OIL STAFFORD'S
OLIVE TAR
FOR COLDS
Relieves Coughs, Soothes Throat, Breaks up Colds, Prevents Pneumonia.
Refuse Substitutes
Manufactured only by
HALL & STREET, Brockville, Ont.

Peace and Faith

Senator Park Trammell was talking in Lakeland about the era of universal peace.

"I used to think before the World war crashed down on us," he said, "that universal peace had already come; but the World war has given me such a low opinion of humanity that I think, Hamlet though I am, that it will never come.

"Those who believe in universal peace certainly have faith. Think! It's a wonderful thing. A school marm said to a boy one day:

"'James, what is faith?'

"'Faith,' said James, 'is believin' what you know ain't so.'"

Cole's Carbolsalve Quickly Relieves and heals burning, itching and torturing skin eruptions. Instantly stops the pain of burns. Heals without scars. 30c and 60c. Ask your druggist, or send 30c to The J. W. Cole Co., Rockford, Ill., for a package.—Advertisement.

Giant Cyclopedia

Chu-Chin-Soh, the Chinese delegate to the League of Nations, aroused skepticism recently when, in announcing that he would present the league with the Chinese encyclopedia, he said that it was the largest encyclopedia in the world, running to 500 volumes, and consisting of 500,000 pages. Inquiry at the British museum revealed that Mr. Chu was correct, as the set is there and actually occupies nine large bookcases in the museum. It was compiled 200 years ago under the patronage of the Emperor Kang Shi.

Nothing dries sooner than a tear.

Keep Fit!
Good Health Requires Good Elimination.

To be well, you must keep the blood stream free from impurities. If the kidneys lag, allowing body poisons to accumulate, a toxic condition is created. One is apt to feel dull, languid, tired and achy. A nagging backache is sometimes a symptom, with dizzy headaches and dizzy spells. That the kidneys are not functioning properly is often shown by burning or scanty passage of secretion. If you have reason to suspect improper kidney functioning, try *Doan's Pills*—a tested stimulant diuretic. Users praise them throughout the United States. *Ask your neighbor!*

STORY FROM THE START

Harry Ormond, proscribed traitor to the British crown as a Stuart partisan, returning from France to London without friends or prospects and in danger of apprehension and execution as a traitor, rescues Algerman Robert Juggins from a band of assassins. Juggins proves to be the grandson of a former steward of Ormond's father, to whom Juggins feels himself indebted. Ormond tells Juggins he has abandoned the Stuart cause, believing it to be unavailing and its real aim the aggrandizement of France at the expense of England.

CHAPTER II

Before the Lords of Trade

How long I should have slept I know not, but the pallid sun that strove to pierce the fog-reek quenchined high room when Master Juggins waked me. He would get listen to my protestations of regret, but directed my attention to the pile of clothes he carried over his arm.

"Sire, we shall make a 'prentice lad of you," he said. "I have a youth downstairs of about your build, and these are his Sunday clothes."

"And must I in truth wear these?" I demanded with some disgust as I felt their coarseness of texture.

"Aye, indeed, Master Harry."

His tone sobered.

"I have been abroad since rising," he continued, "and forgive me if I say twas well for you we met last night. Your cousin is come to London, frantic with fear lest you should succeed in replacing him, and he hath set wires right and left, so that all are convinced you are here for no less a purpose than the murder of the king."

I cursed with a fluency conferred by two languages.

"There is no hope of a pardon now," proceeded Juggins. "I am not altogether without influence, and I had hoped— But 'tis dusky hopeless. If you were Scots or Irish, it might be done. But few of the English gentry besides you and Master Charles rose in the '15. You are a marked man, and with your cousin's interest against you 'twill be impossible even to gain a hearing for you."

"There is naught to do, then, save go back to France and the friends who now distrust me," I said bitterly.

"Never say so," remonstrated Master Juggins with energy. "I have an idea of another course which may commend itself to you. Come, doff these poor garments, which will seem the less cloak you with safety, and join me in granny's morning room."

The coffee which the old lady poured us in blue-bordered china bowls put new life and hope in me. I settled back in my chair and puffed at the long clay pipe which Juggins had filled for me.

Granny Juggins gave me an approving pat on the shoulder.

"That is well, Master Harry. Worry never solved any difficulty. And now I must be going about my duties, but remember that what Robert tells you hath my indorsement."

"And what is that?" I inquired in some curiosity as the door closed behind her.

He smoked in silence for several moments.

"I am resolved to take you fully into my confidence, Master Harry," he began at last, "and I should not do so if I doubted your discretion."

He fell silent again.

"Did it not seem strange to you that such an assault as you saw last night should have been made upon an ordinary merchant?" he asked suddenly.

"I thought they meant robbery."

"Robbery?: They never made a demand upon me. They meant murder. The truth is, lad, I am at grips with a deadly enemy. 'Tis a curious story, concerned with high politics, grim sports of trade, intrigues of church and state—anyhow the future of a continent. And as it happens Robert Juggins is at the bush of it.

"Then a mink you would like to play a hand—on England's behalf and to checkmate the very foreign influences which sickened you of the Jacobite cause? I need a strong man combined with an agile mind, a mind used to French ways and the French tongue."

I would have answered, but he checked me.

"If you accept you must be prepared to fight your old friends, for the enemy I have spoken of is Jacobite at heart and works under cover for the return of the Pretender through the weakening of England and the paramount influence of France. Remember that before you commit yourself."

"Even as I told you last night, Master Juggins, I am for England now," I answered. "If such a plot as you speak of is under way, then surely 'tis for loyal Englishmen to thwart it. Count me with you, I pray."

"I will," he said quietly. "Now bark to those facts. At the instance of myself and my associates in the Company of Merchant Traders to the Western Plantations, the provincial government of New York several years ago secured the royal assent to a law prohibiting the sale of Indian trading goods to the French in Canada.

"Our object was twofold. The best and cheapest trading goods are manufactured in England. If we can keep them to ourselves and compel the French to use more costly and less durable goods made on the Continent we shall be able to undersell them with the Indians. So the fur trade will come more and more into our hands."

Juggins leaned forward and tapped me on the knee.

"North America," he went on, "is the richest land in all the world—but rich it is or how vast no man knows. 'Twill require centuries to exploit it. Since first we colonized there we have contended with France, not only for further power, but for the actual right to breathe. Our two countries cannot agree to divide this domain, limitless though it be. Sooner or later one must oust the other.

"The fur trade is the key to it all. It is no business neither the French nor we are yet sufficiently powerful to ignore the strength of the Indian tribes. The fur trade is the source of the savages for securing trade goods. They will be bound closest to the country which gives them the best terms. If we can deprive the French of the ability to buy their goods as cheaply as we do, then we shall be able to trade to better advantage with the Indians and so increase their friendship for us. At the same time the volume of the provincial trade will be increased."

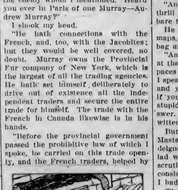
"I see," I answered. "But you spoke before of a twofold object in departing the French of the right to obtain trade goods through New York?"

"So I did, and that brings me to the enemy whom I mentioned. Heard you ever in Paris of one Murray—Andrew Murray?"

I shook my head.

"He hath connections with the French, and, too, with the Jacobites; but they would be well covered, no doubt. Murray owns the Provincial Fur company of New York, which is the largest of all the trading agencies. He hath set himself, deliberately to drive out of existence all the independent traders and secure the entire trade for himself. The trade with the French in Canada likewise is in his hands.

"Before the provincial government passed the prohibitive law of which I spoke, he carried on this trade openly, and the French traders, helped by



its bold operations a few years longer he will have laid the groundwork for England's overthrow in the New world.

"I leave to your imagination the effect upon our people at home of a disastrous war with France at this juncture. King George is scarce settled on his throne, and so good an excuse would pave the way for the Stuarts' return."

"Yea, that is true," I assented. "'Tis a dangerous plot."

Juggins looked at me keenly.

"You are still desirous to join in thwarting it?"

"More so than ever. But I see not how I can be of service to you."

"If the lords of trade have received the orders I expect, then you can be of great service to me and to your country. Come, you shall have your first lesson. You may attend me to the hearing before the lords of trade. I wish you to observe what passes at the hearing, and to study Murray. For if he wins his stay, as I fear he will, then it is my purpose to send you to New York for such evidence as will wreck his conspiracy."

"And I will go gladly," I said, a thrill of exultation in my heart at the turn things had taken. "I am quite ready."

He collected some documents and papers, placed them in a green string bag and gave it to me to carry.

"And remember," he cautioned me as at the door he saw I kept at least two paces behind me. Speak only when I speak to you and hold your head low and your shoulders stooped. Slouch, if you can. If any address you look steadily at them and mumble an answer, I will explain that you are slow-witted."

But none of the men who stopped Master Juggins during our walk deigned to notice the humble 'prentice lad who followed him. I avoided all scrutiny and reached Whitehall with considerable more self-confidence than I had started with.

The lords of trade sat in a lofty chamber of a dirty gray stone building over against the river. At one end was a dais with a long, closed-in desk across it. Behind this nodded my lords in perwigged majesty, five of them, two fat and pompous, one small and birdlike, one tall and cadaverous and one who looked like nothing at all.

"That is Tom Pelham," whispered Master Juggins, pointing at the last as we took our seats.

But I had already transferred my gaze to an extraordinary creature who stood by a window on the opposite side of the room. It was a black man, squat and enormously broad, whose long, powerful arms reached almost to the floor.

As I watched him, fascinated, his eyes found my face and he surveyed me, apparently without any human interest whatsoever, but as a wild beast might consider a fat stag when too full to care about a kill. He was dressed in a bright-red livery coat with gold lace, and the cocked hat which he held was covered with silver embroidery.

I felt Juggins tugging at my arm.

"Do you see him?" he whispered.

"I never saw anything so hideous in my life," I answered.

Juggins laughed, as his eyes followed mine.

"No, I meant not the negro. 'Twas Murray I spoke of. He sits several seats further on."

I looked as directed and picked out a man who lounged back comfortably in a chair, talking with a group of merchants who seemed to hang on his words. He was elegantly clad, yet very quietly, rather in the fashion of a fine gentleman than a rich trader.

Though sitting, he showed himself to be a large man of massive frame. He wore an immense periwig in the prevailing mode, and there was about him an air of pride and self-confidence. Though he must have been middle-aged, he carried himself like a young man or a soldier.

That is Andrew Murray he is to be a foeman worthy of his steel is brought home to Ormsred in a convincing manner. But that is not the last and has no thought of drawing back.

(TO BE CONTINUED.)

Suggestion Great Aid in Preserving Youth

"My, but Americans are young looking people!" exclaimed Miss Alma Low, an Australian, on her first visit to San Francisco. "There don't seem to be any old ones. And such handsome, well dressed and pleasant folks."

We do look young and, in fact, are looking younger every day. This is partly the applied science of the paint-brush parlor, but in larger measure it is due to a mental attitude in which a native optimism is reinforced by friendly suggestion.

We have not discovered the elixir of life—that is, not the elixir put in bottles—but we have the secret of keeping young, and it is telling each other that we look so.

Americans do know how to greet one another, and though greetings cannot make any difference to the calendar they may make a world of difference to one's appearance. Years are cut off when we are told we are looking well, and if we feel younger we cannot help looking younger.

Statistically we know that modern medical science has added at least ten years to the average American life, but the average man, and certainly the average woman, looks ten years younger than he and she did 20 years ago.—San Francisco Bulletin.

Easy One for Father

"Pa," began little Lester Livermore, who is a great hand to ponder.

"That will do, my son!" interrupted Mr. Livermore, who was endeavoring to read his newspaper. "I don't know what killed the Dodd sea nor whether a man who creates the advance entitlement for a chautauqua is a getter-up or an up-getter, nor why a lady doctor is equally pleased to kill, nor why it is when we see a comic picture of a man slipping down his self always remains up in the air, nor anything about anything else that you care to know. So if you do not turn off your breath instead of blowing it out, away you go to bed! Understand?"

"Yes, sir; but I wasn't going to ask you anything like that. I just wanted to know if a hard is a person who is barred from decent society?"—Kansas City Star.

Who will be the first to go under the North pole in a submarine? That's the big polar thrill left.—Syracuse Herald.

What we really envy in a man's disenchantment, not his personality.

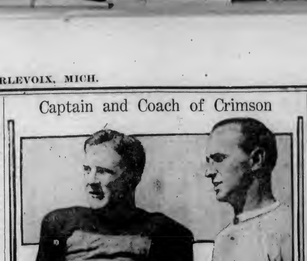
Mouth

Two definitions of "mouth": the feeding valve of the stomach; the safety valve of the heart. One may also call it the resting field for both love and gastronomy.

Then, the heart of the fool is in his mouth; the mouth of the wise is in his heart.

A large mouth is the sign of generosity of mind and feeding, and thus of those blessed with a large mouth one never hears it said that they have the big mouth.—Frank Harrison in Los Angeles Times.

Captain and Coach of Crimson



The photograph shows, left to right, Capt. Clem Coady and Coach Arnold Horween of Harvard university football squad as they appeared out for practice.

Drop-Kick Record Set by Payne Still Stands

A record that has stood for three collegiate generations challenges the kicking talent which the 1926 football season will uncover.

Thirteen years ago, Mark Payne, a halfback on the Dakota Wesleyan university football team, made a 62-yard dropkick against Northern Normal of Aberdeen, S. D., on the latter's field. And none of the pheonms uncovered in the more recent years of football's greater popularity have come within seven yards of the mark.

Payne's powerful boot fractured a record which had stood for 17 years—a 62-yard dropkick which Pat O'Dea of Wisconsin made against Northwestern in 1898.

But since 1904 only three men have made a dropkick from behind the fifty-four-yard line. Robertson of Dartmouth dropkicked 54 yards against Cornell in 1910, and Lamont Johnson of St. Mary's college, Kansas, dropkicked 55 yards in 1923.

Naval Academy Star

One of the Naval academy's football stars this year is Lloyd, prep school star, who is now playing end. He weighs 200 pounds, covers 6 feet 2 inches in his socks, and is speedy enough to run the hurdles for the Navy track team.

Manush Beats Out Ruth for A. L. Batting Honors

Heinie Manush, youthful outfielder, has gained the distinction of being the leading batsman of the American league for 1926. He beat out Babe Ruth, matching an average of .380 to .372 for the Babe.

Manush gained the throne held last year by a teammate, Harry Heilmann, who finished this season in fourth place, with an average of .363. The other regular Detroit outfielder, Bob Fothergill, is third, with .384.

Hargrave, Cincinnati catcher, seems likely to be the National league's champion batsman, with an average of .353.

Catcher Muddy Ruel Is Little in Weight Only

You'd think that to catch a delivery like that of Walter Johnson a big man would be necessary, but Muddy Ruel, who receives for him, weighs only 145 pounds.

He was asked one day how he did it, and his reply was a strange one. He said that Walter pitches both a fastball and a heavy ball and not superbly by design. The feather ball, so called, is the easiest thing in baseball to catch but the heavy ball bores and grinds its way in a manner that makes it hard to hold and painful to stop.

But little Ruel handles 'em all.

First Decision Title

The heavyweight title passed from Jack Dempsey to Gene Tunney on a judge's decision for the first time in nearly four decades of glove fighting. Every precious champion, from the days of John L. Sullivan's reign, has passed from the throne by way of a knockout. Down through an illustrious line—Sullivan, Corbett, Fitzsimmons, Jeffries, Burns, Johnson and Willard—the count of ten has been tolled to effect every shift of the scepter.

Sport Notes

The Amateur Boxing association of London controls more than 300 clubs.

Jimmy Smith, ten-pin expert extraordinary, is arranging a country-wide tour.

Canada has been asked to send four amateur boxers to Denmark next February.

The major league record for total runs in one season is 157, made by Babe Ruth in 1921.

There has been nothing in the papers about Tex Rickard's bank roll being a mere shell of its former self.

The youngest player in the major leagues is Melville Ott, aged seventeen, of the New York Giants.

One advantage of biring professional athletes instead of amateurs is that you can pay the pro off safely with a check.

Willie Hoppe is one of the busiest billiard players in the world, engaging in match play week after week without a rest.

All players' contracts for next year's Washington team will include a clause forbidding the playing of golf during the baseball season.

Jem Mace, one of England's famous fighters, was born a gypsy, but forsook the roving folk to enter the prize ring at the age of twenty-six.

Detroit has purchased Pitcher Donald Hankins from the Newark club of the International league. Advices are that the Tigers went high for the heaver.

Portland, Ore., and adjacent towns boast 13 golf courses. This latest will be located in the Peninsula district and will be laid out on 141 acres of ground.

A cynic is one who remarks that when a foreign amateur wins an American championship it means more, on account of the difference in exchange.

Edouard Horemans, former 182 balk-line billiard champion, will not compete in United States tournaments this season, having decided to remain in Belgium.

Golf statisticians declare that more than 1,000,000 persons take up the game each year and by 1940 this country must prepare to accommodate 15,000,000 players.

The world series remains a strictly American institution. It affords a healthful relaxation in the midst of the most tiresome cares. Europe would do well to get into the game.

A golf course and polo field will be added to the Lincoln Field race track, Crete, Ill., which boasts 700 acres of land, the largest one-piece tract owned by any racing association in the world.

The University of Honolulu football eleven, undefeated for three years, hopes to entertain the University of California shirking in 1927, playing a series of post-season contests.

Norman E. Brookes, the famous tennis exponent, is president of the Australian Lawn Tennis association, and says the team from "down under" will participate in the 1927 Davis cup play.

Dr. Hanz Peltzer, the German runner who recently set a new world's record for the half-mile, is reported to be even more "fussy" in his training methods than Paavo Nurmi, the Flying Finn.

Introduced in Japan but thirty years ago by a civil engineer, named Hirakoa, after his return from the United States, baseball has taken so deep a hold that Nippon teams are now capable of giving our professionals a hard battle.

Pop Warner, famous football coach, has turned his attention to golf and has created a new kind of club in which the shaft runs in to the middle of the head instead of the heel, giving a more even distribution of weight and therefore more accurate shots.

Device That Produces Visual Form of Music

A screen on which are projected fleeting colors may become an essential part of a symphony orchestra convert in the future, if a device demonstrated at the meeting of the Association of German Natural Scientists and Physicians in Dusseldorf by Alexander Laszlo, a musical composer of Munich, comes into general use. Previous attempts to correlate visual form of music have been made by the French composer Scriabine and Wallace Rimington, but it is scientifically impossible to follow any relation between the wave-lengths of light, which determine color, and of sound, which determine pitch. However, it can be done by correlating the light and sound frequencies directly, the composer. The Laszlo apparatus was made by a large optical firm in Dresden, and makes use of six stereopticon projectors, which operate in conjunction with a piano.

CENSUS REVEALS ASTONISHING FACT

8,549,511 Working Women in United States

MRS. W. M. BAILEY
R. F. D. No. 5, 802 S. ST., ATLANTA, GEORGIA

Many Say Lydia E. Pinkham's Vegetable Compound Helps Keep Them Fit to Work

8,549,511 women would be a vast army. According to the 1920 Census of Manufactures, that is the number of women and girls employed in all trades in the United States.

Napoleon said, "An army travels on its stomach." This army of women travels on its general health. Every working girl knows that time lost through illness often is paid for and seldom can be made up. Employers demand regularity. If she wants to keep her job or hopes for a better one, she must guard her health.

Atlanta, Ga.—"My system was weak and run-down, and I was tired. I was this way for five years or more. I read your advertisement in the papers and I decided to try your medicine, the Vegetable Compound, but I did not begin to take it regularly until after I was married. I got so much good from it that I feel fine and have gained in weight. I work in a broom shop, but my work is not so hard on me now, and I keep my own house, and work my garden, too. I am telling all my friends of Lydia E. Pinkham's Vegetable Compound and how it has helped me."—Mrs. W. M. Bailey, R. F. D. No. 5, Box 27, Atlanta, Georgia.

Missouri Woman Helped

Perryville, Mo.—"I am proud to recommend Lydia E. Pinkham's Vegetable Compound. I was so ill that I could not lie down at night. Then I got my husband to go to the store and buy me a bottle of Lydia E. Pinkham's Vegetable Compound and I was up and around before the first bottle was gone, although I only weighed about ninety pounds. I took six or eight bottles and was able to do all my housework, washing and ironing, take care of my five boys, and tend to my children and garden, where before I had to hire my washing and part of my housework."—Mrs. Anna Cole, R. R. 2, Perryville, Missouri.

The Good Old Days

Augustus Thomas, the famous playwright, said the other day at the Century club in New York:

"Erik Charrell, the German producer, announces that the world has got tired of nudity, that nudity is old-fashioned. And I can remember when the only kind of calves a fellow ever saw were those down on the farm."

The Workless Day

"Is he a clock watcher?"

"No. He doesn't stay awake long enough even to look at the time."

Japan to Be Quakeless

An earthquake such as that of 1923, in which more than 100,000 persons lost their lives, is not likely to come again to Japan for many years, said Dr. Kenzo Tamura, seismological expert and professor of the Tokyo Imperial university.

Love makes the world go round, when the darned thing ought to be asleep.

The best of all medicines are rest and fasting.—Franklin.

VOGUE FOR VELVET REIGNS; RICHLY FURRED CLOTH COAT

IT IS a velvet-inspired world in which nobody finds herself this season. Velvet for frocks, velvet for wraps, velvet for hats and velvet even for shoes—thus has the enchantment of velvet completely captured the mode. And now that the woman of fashion is to be velvet enrobed, she is asked to take her choice between regal dress of velvet all-black which shall scintillate with rhinestone embellishment, or frocks whose color-glory declares that "beauty unadorned is adorned the most."

Color, ever of irresistible appeal, reaches a climax of loveliness in the sunglass-chiffon velvets, which are just now proving such a delight to the stylist. Simplicity is the keynote of the charming velvet dress in the

Simplicity the Keynote of This Gown.

picture. Ample width and irregular hemline is achieved through stitching at the side which is caught at the waist, giving a touch of blousoness. Nearly every other evening frock has a suggestion of flare in its effect. This particular gown is in a refined dull rose.

Leading in lustrous chiffon velvets are the fashion and rage tones; especially is the fashionist exploiting the new eggplant color. This latest will be another favorite hue and many young girls are choosing it for their first evening frocks of velvet. However, select any color and you will make no mistake for the new velvets present a galaxy of rainbow shades. A pleasing theme is the frock of one shade of velvet worn under an evening wrap of velvet in darker shade.

Clever manipulation of fabrics is the stylist's joy and pride in creating new modes, and especially in velvet is adroit handling of the material featured. The dainty supple lightweight fabrics of modern velvet yields gracefully to generous shirring and the smartest gowns and wraps make profuse use of this treatment.

For the black velvet frock, yokes and sleeves, especially the latter of real lace or black chantilly, also gold lace are the latest style touch.

Outstanding style prestige is bespoken for the lavishly furred cloth coat. Not only the luxuriousness of the fur itself, but the novelty in its placement on the coat adds enthusiasm to the vogue.

Up-and-down the front fur trimmings characterize this season's modes, gather with the purse which this smartly attired woman is carrying, all in harmony.

Most every sort of fur is used to trim the worsted coat. But the extensive variety of furs together with the beauty of the woolens they trim lends a completeness with the ultra coat for honors. New arrivals among smooth furs embellishing the coat cross stripes beige and white spotted calfskin, pony and unshaved lamb. Long-haired furs emphasize red fox, also wolf dyed to tread with the cloaking it trims. Quite a few coats show a lining of spotted leopard either real or simulated in the genuine.

Contrasting the hair for showy col-

Bespeaks Style Distinction.

orful furs, is the vogue recently predicted for all-black fur on all-black cloth or velvet coats. Mole and seal are also counted among fashionable furs for trims.

JULIA BOTTOMLEY.
(©, 1926, Western Newspaper Union.)

Diamond Earrings

The smartest jewels to wear with an evening frock of black chiffon are long diamond earrings, which may be as fantastic in design as the wearer desires.

Fall Coats

Features of the fall coats are the fur collar, the set-in or the kimono sleeve, the tight hip line and the narrow belt with buckle, and also lining.

Crepe Satin

The rage for using both sides of crepe satin has produced street and afternoon dresses of elegant simplicity. No other trimming is needed than the contrast in surfaces.

Velvet Tam

Hat crowns grow higher as the season advances, and the number of folds and creases also multiplies. It is said that the velvet tam will have its inning.

The KITCHEN CABINET

A laugh is worth a hundred groans, in any market.—Charles Lamb.

GOOD CHEER FROM THE COFFEE POT

There's no earth way to make a bit at breakfast than by serving a delicious cup of coffee, steaming hot, and properly "creamed." It will feel kindly toward the world in general—and generally toward the coffee-brewer.

First—an economy suggestion about the "creaming." Try condensed milk (sweetened)—for a week, and see if you don't find the coffee just as smooth and flavorful as with pure cream. And such a saving! Some authorities claim condensed milk is twice as rich and full of cream as the ordinary kind, and besides it contains just the right amount of sugar to suit the taste of most people in coffee. A further convenience—condensed milk keeps without ice even after the can is opened, so it's easy to have a constant supply, without planning for each particular day.

About the actual brewing—it has been often said that American coffee, the English—do not make as good coffee as do Continentals. It's noted for its excellent coffee, the drip or filter method is the favorite.

And this method is also the one approved—as best for both flavor and healthfulness—by the department of biology and public health of the Massachusetts institute of technology—as the result of careful research.

Here are the directions for drip coffee: Place the fully ground coffee, one heaping tablespoonful for each cupful desired, in the coffee filter. Heat the coffee pot, filling the water in the tea kettle to boiling point and when ready to serve, pour the measured amount of water, one cupful for each tablespoonful of coffee used, over the ground coffee in the container. The filter should be of such shape and character as to permit rapid filtration. The coffee should be served immediately.

Note.—The coffee must be finely ground. Ordinary ground coffee will not do at all for this method. Care must be taken to heat the pot thoroughly before making. Then keep it off the fire.—Mildred Maddock Bentley, formerly Director of Good Household Keeping.

YE OLD GOODIES

The well liked Sally Lunn which has been famous for years in England was

named for the woman who originated that delicious hot bread. This was a favorite breakfast bread of the Prince of Wales' country.

Sally Lunn.—Take one quart of flour, four eggs, one-half cupful of melted butter, one-half of a yeast cake softened in one-fourth cupful of warm water, one teaspoonful of salt, and two tablespoonfuls of sugar. Beat the eggs until light, add one cupful of hot milk and water, the sugar, yeast, and beat in the flour. When perfectly smooth let rise in a well buttered bowl.—When well risen, cut or stir down, let rise again, then mold and put into muffin pans in which they are to bake. When very light bake in a moderate oven until well browned. Serve hot, broken open and spread with butter.

Mincemeat.—Stew four pounds of lean beef and two pounds of suet in a boiling water until the meat is tender. Chop the meat fine and add twice as much chopped apple—Baldwin is one of the good flavored apples—add three pounds cored but not peeled, and then chopped; three pounds of sugar; two cupfuls of New Orleans molasses, two quarts of cider, four pounds of seeded raisins, three pounds of currants, one-half pound of finely cut citron, a tablespoonful of mace, the same of cloves, two grated nutmegs, and salt to taste. Add the grated rind of two lemons and two oranges. Cook all together in a pot of the stock for two hours at a simmering temperature. Can while hot and seal for winter use.

Butter Scotch.—Boil together, one cupful of sugar, one-fourth cupful of molasses, one tablespoonful of vinegar and one-half cupful of butter, two tablespoonfuls of water. When the mixture becomes brittle when dropped in cold water, turn into a well buttered pan, and when slightly cool mark in squares.

Velvet Molasses Candy.—Take one cupful each of molasses and boiling water, three cupfuls of sugar, and three tablespoonfuls of vinegar. Put on to boil and at the first boiling add one-half teaspoonful of cream of tartar, boil until brittle when tried in cold water. Stir constantly during the last of the cooking. When nearly done add one-half cupful of butter and one-fourth teaspoonful of soda. Pour into buttered pan and cool. Pull, and while pulling add one-half teaspoonful of vanilla or any flavoring as desired—lemon and vanilla with a few drops of either oil of wintergreen or peppermint is well liked.

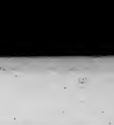
Chicago Lady Released From Grip of Ill-Health

Suffering from Anemia, Stomach Trouble and Nervousness, Young Chicago Lady, After Many Disappointments, Recovers Lost Health. Gains 10 Pounds. Thanks Tanlac



The remarkable experience of Mrs. Gladys Nissen, a popular young woman of 3760 George Street, Chicago, is just as many others who have found grateful relief from suffering and new strength in this wonderful tonic.

She says: "I was losing strength and vitality so fast that I was worried. Thought of the future discouraged me. I was anemic and run-down. My stomach was so upset that the sight of food nauseated me. I ate very little and became weak and run-down. Headaches and pains in my side bothered me constantly.

"Then a friend told me about Tanlac. I tried it and the result amazed me.

"I began to sleep well and get up in the morning refreshed. I took on weight and felt stronger. Glorious health has brought me happiness. I am getting back the weight I lost. Tanlac should be in every home."

Benefit by Mrs. Nissen's experience. Let this marvelous tonic made from roots, barks and herbs according to the famous Tanlac formula, help rebuild your run-down body, drive out pain and poison, give you health. Results after taking the first bottle will assure you. Ask your druggist for Tanlac—today! Over 40 million bottles sold.

The man who has made good doesn't have to blow his own horn.

Sleep is good, but no one cures to be caught napping.

Let him accuse none, let him injure none.—Emerson.

A wise man will make more opportunities than he finds.—Bacon.

"U.S." Blue Ribbon Boots
are made of high-quality rubber—flexible, long-wearing. They have sturdy gray soles, gray or black—in knee to hip lengths.

This live rubber *means longer wear*

HERE'S quality rubber. You can stretch a strip cut from the upper of a "U.S." Blue Ribbon boot more than 5 times its own length!

The sole is oversize—tough as a tire for wear. And at every vital point in this boot from 4 to 11 separate layers of reinforcements are there, to give extra strength.

For more comfort, longer wear, you can depend on "U.S." Blue Ribbon boots and overshoes. Get a pair and notice the difference.

United States Rubber Company

"U.S." BLUE RIBBON
Boots Walrus Arctics Rubbers

New England Atmosphere With 1926 Improvements

ANY one who has ever motored through the quaint sleepy towns of New England has fallen in love with the small houses that abound in that section of the country—neat, white, unpretentious and with a touch of refinement about them. Just such a house is the one pictured here. It is equally adaptable for town or country, and by merely shifting the living and entrance porches around can be built on a wide or narrow lot without spoiling it architecturally.

The house is sturdily built and has an exterior of wood siding except for the unusual stucco panels that start at the level of the second floor windows and run down. The roof is of stained shingles, preferably moss green, in keeping with the window shutters. A house of this compact style is very easy to heat, especially when the specifications call for insulation throughout with celotex, which prevents heat leaking, and keeps the house cool in the summer.

The living and dining rooms are here combined into one large room finished with light birch windows on three sides. The two bedrooms on the second floor each have double exposure and an extra large closet in which a window may be placed.

© Celotex Institute, Chicago, 1926.

LAND OF TUMULT AND BLAZING SUN

Cyrenaica Has Never Acknowledged a Conqueror.

Another revolt has been quelled in North Africa, according to news from Rome. Seussai tribesmen and an Italian detachment battled at a dry creek bed deep in Cyrenaica.

Many nations have endeavored to put the Cyrenaicans in their place, says a bulletin of the National Geographic society, that place being, of course, in control of a recognized power. The list begins with Greece in 700, B. C., not A. D., and is jeweled with such conquerors as Rome, the Moors, and, preceding Italy, came Turkey. But no matter what the title, the 'text' of every chapter in Cyrenaican history has the word 'revolt' sprinkled liberally through the pages.

Perhaps it is because there are few schools that the natives never learn to read the routine statements printed in Paris, Vienna or elsewhere, which have given Cyrenaica to tills nations or to that. Or it may be that nature leads the revolt. Possibly the nation has not yet risen which could impose her will in this kingdom of the blazing sun. Certain it is that news of a battle on the central plateau is not new, but the back drop against which the affair was staged is one to which the civilized audience sit up and take interest.

Cyrenaica can be called a Gibson headland of North Africa. The round lump of it facing the bronze blue Mediterranean toward Greece is surrounded by the pompadour characteristics of the "Gibson girl" in the form of a range of limestone hills. They rise from the sea shore almost as steeply as a cliff and then taper away toward the back. Benghazi, port on the west, and Bolbo on the Egyptian border, are in the position of "temples" on the "headland." Cyrenaica is inland as far as British Libya, covering an area almost as large as Texas. The British say that British Libya runs as far north as Cyrenaica. Exact location of the border is a secret whispered by the roving nauds of the Sahara and understood by not more than a few very close-mouthed Arabs.

Nevertheless great men have been born in Cyrenaica. When civilization was in swaddling clothes the Greeks knew the limestone ridge as the "gardens of Hesperides. From ancient Cyrene, a city of 100,000, up on the ridge amid groves and grass, came poets, and philosophers and statesmen to contribute to the glory that was Greece. Cyrene today houses a few dirty Bedouin families in the ridged tombs of the "largest and finest graveyard in the world," preserved from the wreck of the Greek era.

Even back on the central plateau, which drops off to a line of salt marsh oases and then merges with the desert, there are remains of a dead civilization. One comes upon broken tile of pottery and other mystifying relics in a region which is blasted and blistered by the red sun for eleven months of the year. The twelfth month is the brief season after the January rains. Every dried shrub miraculously produces olive-green leaves. The single wand of water recreates grass from under the bushes whose branches have protected the grass roots. Beautiful flowers carpet the plain. Larks sing and robins, down from Europe for the season, hop blithefully about. Spring is just as wonderful in a land that has no winter.

Save Surveyor's Life

Seven first aid is credited with saving a number of a Kansas surveying gang from bleeding to death.

While Jack Taylor was clearing stumps from a new road site near Junction City, his ax slipped and severed his arteries in his left leg. The blood gushed from the double wound with alarming spurts. Taylor's three companions, all former scouts, were, however, prepared by their training to meet the emergency. Applying a tourniquet they stopped the flow of blood, and then transported their friend 16 miles to the city for medical attention.

Without the first-aid measures, it was declared, Taylor would have died from loss of blood.

Good Turn in Miles

A good turn measuring hundreds of miles is chalked up to the credit of Troop 23, a ten-year veteran group, of Newark, N. J.

Twelve blind men were conducted back and forth to work, a distance of one mile each day, for a specified time, by members of this troop. The good turn required 1,500 miles. The network of escorting the sightless men required that the troop be on hand at 7:30 each morning and to report again at 5:00 at night.

So well did the boys accept the responsibility that not once during the period regardless of weather conditions did they fail to report.

World's Fastest Wheel.

The fastest revolving wheel in the world, according to estimates of experts, is the turbine wheel on the special supercharger of the airplane used by Lieut. John Macready in his recent attempts to better the world's altitude record. It revolves at the almost incomprehensible speed of 40,000 revolutions a minute—almost 700 a second, says Popular Science Monthly. This is about twenty times the highest speed of an automobile crankshaft.

Believe Curse Rests on Car of Archduke

In a beautiful valley in the heart of the villiest part of Bosnia there is a great red limousine which strikes fear into the hearts of the simple mountaineers who countrymen. The shudders past them in a cloud of dust, they cross themselves and look at it with distrust.

It is the car in which Archduke Francis Ferdinand and his wife, the duchess of Hohenberg, were traveling at Serajevo when they were assassinated, an event which was the signal for the outbreak of the war.

The history of the car since then seems to show that it is cursed, and is destined to bring ill-luck or violent death to its owner. In a high-powered car of German make, painted blood red. It became the property, after the Sarajevo murder, of the Austrian General Potiorek, who throughout the war kept it in a garage at Sarajevo without ever using it.

It may be that he was superstitious, for immediately the war finished he sold it to a rich Bosnian merchant without ever having ridden in it. Its new owner scoffed at the ruin which the car was cursed, but the fact is that a few days after acquiring it he was killed. The car, for no apparent reason, suddenly overturned and crushed him to death.

During the next few years the limousine several times changed hands, but every successive owner was involved in an accident, or was the victim of bad luck, and it never remained in the possession of any of them for more than a few months. Two of them met death while traveling in it.

Now the blood-red limousine is the property of a Bosnian doctor, but he has never had the courage to ride in it.

Recently, in order to recoup himself for what he paid for it, he installed a motor service between two mountain villages, but rather than risk their lives in the fatal car, haunted, as they believe, by the spirits of the archduke and his duchess, the peasants trudge their way along the dusty white roads and cross themselves as they jump clear of it when it passes with a load of tourists, hay or the manure of its sinister Motor.

FARM INDUSTRY HAS HEAVY TAX BURDENS

East Lansing, Nov. 17.—Corporations engaged in agriculture and allied industries, and those engaged in mining and quarrying led all other industrial groups in the percentage of net profits paid out in taxes in 1924, according to the statement of R. Wayne Newton, research associate at Michigan State College. The statement is based upon an analysis made of the corporation tax statistics for the entire country.

Ninety-eight per cent of the net profits of 9,758 companies engaged in farming and similar lines in 1924 was paid out as federal, state, or local taxes. Corporations engaged in farming and those engaged in mining have, for the three years preceding 1925, paid more taxes in proportion to their net income than any other class of corporate business. No statistics are available for the years preceding 1922.

Mr. Newton also says that farm corporations have the unenviable distinction of being the only major class of business enterprise whose taxes average higher on the unsuccessful firms than on those which realize a profit. Successful farming corporations paid out 2.1 per cent of their gross income in taxes in 1924, while unsuccessful firms in the same business paid 3.8 per cent of their gross income to the tax collectors.

Continued reliance of the states upon the property tax as the chief means of taxing agriculture is believed to be responsible in a large measure for the tax situation shown for farm companies. The property tax, it is pointed out, is based on capital values and has comparatively little direct relation to changes in current income.

SCARRED SCIENTIST RENEWS X-RAY FIGHT

Survivor of 72 Operations Taunts Old Enemy.

Baltimore, Md.—Dr. Frederick Hermann Baetjer, professor of roentgenology at Johns Hopkins medical school, is back at his big game of tag with the vengeful slave he is taming.

The "last of the old guard"—with the scars of the latest of more than three score and ten amputations and skin-grafting operations scarcely healed—is rounding out a quarter century of duelling with the dragon that lurks in Roentgen's ray. He plans to stay in the fight until the ray's searing thrusts finally break down the defense of modern surgery.

Burns Eat Body.

Insidious X-ray burns slowly are eating his body away. They have taken seven of his fingers and one of his thumbs, and the glands from life and arm and shoulder. Seventy-two times he has been burned and as many times has Doctor Baetjer's medical colleagues succeeded in staying the attack. But each burn has left its mark.

Doctor Baetjer is during a demon that has slain many of his early colleagues in roentgenology, and that is lost to die was Prof. J. Bergonie, an outstanding authority whose work had been contemporary with Doctor Baetjer's. Surgeons see a like fate awaiting the Johns Hopkins professor—but he goes on, displaying his contempt for the X-ray's death threat in writing whimsical rimes and jingles.

In common with his associates Doctor Baetjer engaged in roentgenological research when knowledge of the ray and its potency was in its infancy. It was some time after the discovery of the X-ray that its effect on the human body began to be understood, and in those pioneer days neither the scientists which today protect X-ray operators, nor the need for them was known. While a patient undergoing X-ray treatment would be exposed to the ray for only a fraction of a second, the early-day operators were subjected to the ray's full power for long periods. They suffered severely or died—and those few in which the knowledge that has contributed much to the present-day safety of X-ray control.

Began Experiments in 1901.

Doctor Baetjer began his experiments in 1901, immediately after his graduation from Johns Hopkins medical school. In a few months the rays had started a train of destructive burns. In its inexhipency the effect of prolonged exposure to the Roentgen ray resembles sunburn. If exposure is requested, as it was in the pioneer days, steady form and shriveling of the exposed parts sets in. Physicians say that most of Doctor Baetjer's burns are due to early infections.

By 1909 he had lost four fingers—now only one finger and one thumb remain. In 1914 the glands at the junction of the right arm and shoulder were removed to save the arm from advancing infection.

In the seventy-second operation, performed in March, skin was grafted in one more attempt to save the remainder of the hands.

She Gets 'Em

New York.—Ruth O'Shaughnessy, nineteen-year-old blind girl from Asheville, N. C., can play the piano in a way that stirs hard-boiled business men to tears. They did so when she gave her first metropolitan recital under the auspices of the Kiwanis club, which is sponsoring her musical career.

Most Children Defective

Washington.—Nineteen million out of the twenty-two million school children of the nation are physically defective in some way, and only four million of those have improvements defects, the United States children's bureau said in urging physical examinations and good medical care.

—Send your friends a Thanksgiving Card. Cards for all occasions, Holley Gift Shop.

RED CROSS ROLL CALL

(Concluded from page One)

of the Red Cross. Perhaps, for that reason, we may not realize to the full what the society's services to humanity are. Every veteran knows the part of the Red Cross in the war; and many a needy veteran still knows that he can count on the Red Cross for assistance or even money. The work of healing the wounds of the war never lags for a minute to this day.

But what is of greater importance to us now is that by means of the Red Cross, the world is able to take care of the stricken and afflicted in disasters of the sea, the mines, the tornado, earthquake, the devastating epidemic. It is not merely a "nice" thing to have such a huge organization to do the humanities for us—it is an essential thing. View it however selfishly we may, it is imperative, for the sake of health and the nation's well-being in business and pleasure, that famine and pestilence be controlled—that which today protect X-ray operators, nor need for them was known. While a patient undergoing X-ray treatment would be exposed to the ray for only a fraction of a second, the early-day operators were subjected to the ray's full power for long periods. They suffered severely or died—and those few in which the knowledge that has contributed much to the present-day safety of X-ray control.

Began Experiments in 1901.

Doctor Baetjer began his experiments in 1901, immediately after his graduation from Johns Hopkins medical school. In a few months the rays had started a train of destructive burns. In its inexhipency the effect of prolonged exposure to the Roentgen ray resembles sunburn. If exposure is requested, as it was in the pioneer days, steady form and shriveling of the exposed parts sets in. Physicians say that most of Doctor Baetjer's burns are due to early infections.

By 1909 he had lost four fingers—now only one finger and one thumb remain. In 1914 the glands at the junction of the right arm and shoulder were removed to save the arm from advancing infection.

In the seventy-second operation, performed in March, skin was grafted in one more attempt to save the remainder of the hands.

She Gets 'Em

New York.—Ruth O'Shaughnessy, nineteen-year-old blind girl from Asheville, N. C., can play the piano in a way that stirs hard-boiled business men to tears. They did so when she gave her first metropolitan recital under the auspices of the Kiwanis club, which is sponsoring her musical career.

Most Children Defective

Washington.—Nineteen million out of the twenty-two million school children of the nation are physically defective in some way, and only four million of those have improvements defects, the United States children's bureau said in urging physical examinations and good medical care.

Wonderful Rose Garden

Spain, which possesses one of the largest reserves of lessener ore in the world, has been an important producer of iron for more than 3,000 years. In other countries of Europe there are deposits of varying degrees of excellence. The Transvaal contains the largest reserve known in Africa, and in Australia, the Broken Hill and the tinfields of the Pacific there are deposits. It is supposed that Siberia contains important deposits still undiscovered, but China, according to recent surveys made by the Chinese government, cannot be considered as the source of an inexhaustible supply as some have thought. India is making rapid strides in the development of the iron industry. Much of her large reserve is of high-grade ore.

"Lost Flower" Found

A species of flower which was discovered about the year 1750 and then lost to view for more than 150 years has been rediscovered by two scientists, Dr. E. T. Wherry of the United States bureau of horticulture, and Dr. Paul H. Benedict of the United States museum. This rare flower is known as the pink-shooting star. It was found in Lafayette, Mo.

The pink turtlehead grows in wet ground, reaches a height of about three feet and has pink flowers resembling the neck of a turtle.

MORTGAGE SALE

Default having been made in the conditions of a certain mortgage executed by Guy Pearl and wife, Marion Pearl, of Charlevoix, Michigan, unto Charlevoix State Savings Bank, a Michigan Corporation of Charlevoix, Michigan, dated May 21st, 1924, and recorded in the office of the Register of Deeds for Charlevoix county, Michigan, May 22nd, 1924, in Liber 61 of Mortgages, on Page 113, on which mortgage there is claimed to be due at the date of this notice the sum of $534.22, including the principal, sum due with interest, together with an attorney fee as provided by statute and no suit or proceedings at law having been instituted to recover the money secured by said mortgage, or any part thereof, and whereas, the taxes required by the statute to be paid on said mortgage were duly paid prior to the recording thereof;

Now Therefore, Notice is given that by virtue of the power of sale contained in said mortgage and of the statutes made and provided, said mortgage will be foreclosed by sale of the premises therein described, or so much thereof as may be necessary to satisfy the amount due thereon together with the costs and expenses of the foreclosure, including the attorney fee provided by statute, at public auction, to the highest bidder therefor, at the front door of the Court House in the City of Charlevoix, Charlevoix county, Michigan (that being the place where the Circuit Court for the County of Charlevoix is held), on Saturday the 18th day of December, A.D. 1926, at eleven o'clock in the forenoon on that date.

The premises described in said mortgage being the land and premises and property situated in the City of Charlevoix, County of Charlevoix and State of Michigan, viz: Lots seven and eight excepting the north fifty feet of Lot seven of J. Milo Eaton's addition to the Village (now city) of Charlevoix, Michigan, according to the recorded plat thereof.

Dated September 18th, 1926.

MORTGAGE SALE

Notice is hereby given that a certain mortgage dated May 6th, one thousand nine hundred and twenty five, given by Oliver G. Davenport to C. G. Davenport, attorney in fact, and Rowena G. Davenport, wife of Oliver G. Davenport, in her own and dower right, to Alfred E. Haas. The said mortgage was recorded May fourteenth A.D. 1925, in liber sixty-eight of mortgages, on page seven, in the office of the Register of Deeds for the county of Charlevoix, Michigan. Which said mortgage was duly assigned by Alfred E. Haas to Mrs. Verona J. Vincent, Sept. eighth, 1926, and recorded September 14th, A.D. 1926, in liber fifty three of mortgages on page 520 in the office of the Register of Deeds for the county of Charlevoix, Michigan. The said mortgage containing a clause, which in it is expressly agreed that should any default be made in the payment of interest, or any part thereof, on any day whereon the same is made payable, and should the same remain unpaid and in arrear for the space of ten days, that after the lapse of the said ten days, no much of the principal sum as remain unpaid, with all arrearages of interest thereon, shall, at the option of said party of the second part, or his assigns become and be due and payable immediately thereafter, although the period limited for the payment thereof may not have expired, anything hereinbefore or in the note contained to the contrary notwithstanding. And whereas, the Power aled being granted to the second party by the first mentioned party, the premises thereof, to pay taxes that are in default, to be added to the principal and accrued interest. Therefore the said assignee of the second party having paid insurance premiums and taxes thereon said premiums, elects that the whole sum of principal and interest secured by the said mortgage be forthwith due and payable.

Dated, September 29th, 1926.

FRED S. MYERS,
Administrator of the Estate of Sarah Jane Myers, deceased, Mortgagee
Business Address: Charlevoix, Mich. 23-13

MORTGAGE SALE

Default having been made in the conditions of a certain mortgage made by Irene E. Young, of Charlevoix, Michigan to Sarah Jane Myers, of Charlevoix, Michigan, dated the 28th day of November A. D. 1922, and recorded in the office of the Register of Deeds for the County of Charlevoix and State of Michigan, on the 29th day of November A.D. 1922, in Liber 51 of Mortgages, on page 465, whereby the power of sale contained in said mortgage has become operative, on which mortgage there is claimed to be due at the date of this notice the sum of One Thousand Twenty Three Dollars for principal and interest and taxes paid by the mortgagee to protect his security, and an attorney fee of Twenty-five dollars, provided for in said mortgage, and no suit or proceedings at law having been instituted to recover the moneys secured by said mortgage or any part thereof;

Now, Therefore, By virtue of the power of sale contained in said mortgage, and the statute in such case made and provided, notice is hereby given that on Friday the 24th day of December A. D. 1926, at ten o'clock in the forenoon, I shall sell at Public Auction to the highest bidder, at the east front door of the Court House in the City of Charlevoix, in the County of Charlevoix, in the State of Michigan (that being the place where the Circuit Court for the County of Charlevoix is held,) the premises described in said mortgage, or so much thereof as may be necessary to pay the amount due on said mortgage, with seven per cent interest, and all legal costs, together with an attorney's fee of Twenty five Dollars, as provided by law and as covenanted for therein, the premises being described in said mortgage as follows, to-wit:

Lands and premises situate in the Township of Hayes County of Charlevoix and State of Michigan, viz: East Half of the Southeast Quarter of Section Two, Township Thirty three North, Range Seven west containing Eighty acres of land according to the return of the Surveyor General.

Dated, September 29th, 1926.

M.S.C. PLANS INEXPENSIVE SLIO

Provides Storage for Shredded Corn Fodder—Badly Needed

Need for a place to store shredded fodder has resulted in the development by the agricultural engineering department at Michigan State College of plans for use in the construction at low cost silo which will successfully store the material.

This method will meet the needs of farmers in sections infested by corn borer, when the farmers want to husk a part of their corn and provide for the destruction of the borers in the stalk.

The silo is built of sheet iron, attached to an octagonal baum of two by fours which are bolted at the cogners. These two by fours form the hoops and are spaced about three feet apart on the silo. The iron is attached to the inside of the hoops. The silo is built on the ground and raised to position by the use of a gin pole and tackle. This saves the expense of erecting expensive scaffolds. Materials for a 10x30 foot silo will cost approximately one hundred dollars.

The owner of one of these silos will not be compelled to delay husking corn when the fodder is wet, it is said. The corn can be husked at any time, and the silo will take care of the fodder so that it will not spoil. Low cost of materials and erection are expected to result in a number of the silos being built. The Department of Agricultural Engineering, M. S. C. East Lansing, will be glad to answer any inquiries on construction and materials.

HUNTERS ENCOUNTER HEAVY SNOW NORTH

Charlevoix Party Return From Upper Peninsula With Single Deer

A hunting party of five, consisting of Eddie and Lewis O'Neill, Glenn Sen and William Goss, and George Myler of Detroit, returned to Charlevoix Sunday after an unsuccessful trip to the upper peninsula. Lewis O'Neill was the only one to get a deer. There was but one day's good hunting during their stay; the balance of the time the storms prevented sport.

The snow became alarmingly deep at their camp, and made travel difficult. They came to St. Ignace with a load of logs—one other hunting parties, also driven out by the storm. In many places it was necessary for the hunters to pull the sled car along with ropes to prevent churning the road into impassibility for those that followed.

Monday, after his return from the above experience, Lewis O'Neill left for Detroit by boat, accompanied by Mr. Myler and Mr. and Mrs. Donald Swinton. Lewis and the Swinton's will return Friday or Saturday.

WORLD TALENT

HERE TO ENTERTAIN CHARLEVOIX

WHAT YOU LIKE AT LIBRARY

Take a Good Look at the Board in Library Building

We northerners have to endure much from the weather this time of year. We groan and may be swear some, and wonder if this vile weather, which is neither Autumn nor good, honest winter, will ever come to an end. Evenings are long, and reminiscence on the radio surily refuse to entertain us. There is a good time to go take a look at the colorful board in the Charlevoix library that advertises appearances of the Charlevoix entertainers now performing in Charlevoix. This board is the one to which the Misses Fastens fix gaudy jackets of books recently acquired by the library.

If you crave entertainment, you will find about anything you could ask, there. Maybe you will want a good mystery yarn, or a tale of daring adventure. Miss Peyton has got you "Sundrift," by Hilton Titus, which according to the jacket is a story of mystery and the sea—a private yacht, a murder, an innocent man condemned. To add a little filliip of interest for Charlevoix readers, it was written by a Traverse City man. E. Phillips Oppenheim is also present with "The Golden Beast." If that author sticks to his custom, there will be intrigue among the English gentry in "The Golden Barge," and, if he breaks with his tradition, it will be a surprise, so you can't lose.

For romance, love and gallant deeds we can look confidently to Jeffery Farnol and the jacket of his "High Adventure" looks alluring. There is also Rafael Sabatini. He digs out the high color of knights, picarons, villians and fair ladies in a way to make you sit up nights with his books. Coming a little nearer to reason and flesh-and-blood people is Dane Byrne and his sporting Irish folk of quality, with a background of Brian Boru, sprightly gallantries, fantastic lore and derring-do. His "Hangman's House" looks as if it would banish care for an evening or two.

If you think you are by way of being unusually dis- (Continued on Page Eight)

POLLUTION AND INADEQUATE RULES

Endanger Great Lakes Fisheries Says Washington Official

Lewis Radcliffe, deputy commissioner of Fisheries, with G. C. Leach, also a fisheries official, arrived in Charlevoix Saturday to study the local fishing situation. Mr. Radcliffe, out of his wide knowledge of fish and the Great Lakes fisheries, consented to write this article for The Sentinel. In it he compliments fishermen for their cooperation with the government, and defends them against the accusation that they are responsible for the depletion of Great Lakes fisheries. Mr. Radcliffe and Mr. Leach, whose particulars department is the hatcheries, were here to inspect the hatchery, which they designate as the country's largest trout hatchery, and to confer with local fisheries officials.

The story follows:

The Great Lakes fisheries are a great national resource supplying the midwest with a food itelicacy and the people bordering the lakes with employment. At the present time there are over 8000 fishermen on the lakes, the investment exceeds $12,000,000 and the annual catch is about one hundred million pounds, for which the fishermen receive $6,500,000, or an average of 6½ cents per pound.

Science discloses that fish is a highly important food. It is rich in minerals such as calcium and iron; its low fat content makes it especially valuable for people of sedentary habits; sea foods are rich in iodine so essential as an element of our diet in the prevention of goitre. Fish is also rich in vitamines, so essential to growth.

With the advent of good roads and the increased use of automobiles, millions of people now annually seek health and recreation in the out-of-doors. Outstanding among these communities which can offer these demands of the times are the fishing. Therefore the continued prosperity of many of the lake towns is dependent on continued good fishing. The angler who brings thousands of dollars to many such communities, without which the town would have gone down hill, instead of being prosperous and happy communities.

For these various reasons, every person living in states bordering the Great Lakes should be concerned over the future of the fish supply. He should be certain that the supply is not being endangered through ignorance, greed or carelessness.

That there is danger of exhaustion practically all who are thoroughly conversant with the fisheries will admit. The pollution constitutes one of the greatest dangers. Pollutants may be roughly divided into two classes — domestic sewage from the towns and cities and the industrial waste from the great industrial plants—waste from mining operations, paper mills, sugar mills, etc. The industrial wastes are by far the most dangerous as the effect of noxious materials dumped in the waters may be cumulative and in time practically sterilize the water, destroy fishes and their food. Under favorable conditions, while domestic sewage may wipe out the fisheries in adjacent waters, the sewage is gradually oxidized and turned into products which supply a great amount of fish food and more abundant fisheries.

Pollution has greatly depleted the fisheries of eastern Lake Erie and is becoming a serious menace in many other sections. The states should awaken to the need for action before it is too late. Full recognition should be given in evolving ways and means for recovering the wastes now dumped into the lakes.

Fish do not recognize boundary lines. Their habits differ with locality. For example the time of spawning may vary by a week or more for two localities only a score or more miles apart. Scientific investigations must be made in order to furnish the facts upon which to base wise legislation. Proper legislation is often hampered by the divided authority. As high as four separate and distinct law making agencies are concerned with the maintenance of a single one of these lakes. With divided authority it is almost impossible to regulate these fisheries.

Through the preparation of important Great Lakes fishes such as the herring, whitefish, lake trout, pike, perch, etc., the U. S. Bureau of Fisheries is trying to maintain these fisheries. It maintains stations at Cape Vincent, N. Y.; Put-in-Bay, Ohio; Northville, Alpena and Charlevoix, Mich.; and Duluth, Minn.

Through the cooperation of the fishermen it has been able to keep its egg collections at a very high level. At the present time there are in the Charlevoix hatchery about 40,000,000 lake trout eggs and 30,000,000 whitefish eggs. This is a material increase over last year's output.

FORWARD BENT

CITY PLANS POWER EXTENSION

COMPETE IN REGIONAL GROWTH

Work Out Tentative Plan for the Further Expansion.

When this was written, Friday the 19th, poles for the city's new electric power extension northeast on M11 were set as far as the railroad crossing, just beyond the golf course. This new line will carry Charlevoix current as far as Oldswood Lodge, the summer home R. E. Olds is now building near Oyster Bay, Lake Charlevoix. On its way, it will give light and power to outlying Petoskey summer residents hitherto unserved, and to cottages at Pine Point. This is fine.

The obvious benefits are that the city will serve new citizens, will sell more current, and will, under the plan in operation, ultimately supply this to a good line without cost to the city. But there is even more behind this—something of large significance in Charlevoix' future as a regional resort center.

Resort developers have learned that to sell lots they must be able to provide electricity. If they lack it, many a prospect will never go where he can get it; he will settle elsewhere and enrich some other town. We want all we benefits tributary to Charlevoix, that we can get; and it would be no glory or money to us if a competing town on the Michigan United Light & Power Company's new and much heralded pool line, was able to outbid us and get the goods coming.

The proposal to build this new line to the north, brought the city council face to face with a small question—how to consider propositions to build other such lines along the shore of our two lakes. We have many unusual large views, here, and it will attract homeowners who will want light. So the council worked out a tentative plan to cover for further expansion. It is a very fair proposition the council proposes to make any developer for he or she wants city current. The city will not be as tight-fisted about this as are some of the utilities corporations in the outlying metropolitan areas. On the other hand, it will not use taxpayers' money to finance any real estate developer.

If it were not for such a move as this, Charlevoix's tributary resort region would be at a disadvantage compared with the Torch Lake-Grand Traverse Bay region where they now have the new power line of the Michigan United Light & Power Company. Since Charlevoix avows itself a resort town and nothing else it should certainly strive to be the most attractive and aggressive. We have taken one good step. The thing now is to determine what would pay best to do next, along this line; and then do it.

Legal Will-Making Ages

In most of the states the age at which persons may make wills is twenty-one. However, both males and females are empowered to make wills at eighteen years in California, Connecticut, Idaho, Oklahoma, South Dakota and Utah, and females only may make wills at eighteen years in Colorado, Illinois, Maryland, Missouri, Washington and Wisconsin.

Tenderness and Tears

The happiest time of married life is when your pains, inexperienced wife is trying to make amends after she has let a mustard plaster blister you. —Milwaukee Journal.

FIND REMAINS OF ANCIENT AMERICAN

Believed to Be Ancestor of Indian.

Galena, Ill.—The skeleton of a prehistoric American, an ancestor of the Indian, has been discovered in a mound near here, by a University of Chicago anthropological expedition.

The bones, those of a man about thirty, were in a flexed position, with arms folded across the breast and the knees drawn up in closest approach to the chin. The dirt about and under the three feet below the surface, along a 1,100 foot ridge of mound on a farm, three miles east of here was carried up for two weeks. The scientists are under the direction of Prof. Fay Cooper Cole. Near by were portions of two other skeletons, while hundreds of bones also have been found. Those of a woman, a child and a dog.

It was thought at first that the ridge might have been a fortification, after the forts of ancient type, but investigation revealed it as a burial place. Below the ridge, in a little oak-shaded pasture, was located to have been the site of the primitive community.

Illinois, according to Prof. Cole, is the key state, anthropologically speaking, in the picture of prehistoric America which science is trying to depict. Before more can be said to find out what sort of people produced the Indian tribes that the white man found in this locality, and whether the civilization is linked with the great mounds of Ohio and lower Mississippi.

A large collection of relics already has been gathered in the Galena area by amateurs, and now it is planned to survey the district and open the mounds thoroughly. In one locality alone there are 142 mounds, all unexcited. Others have been looted. Articles found included arrow heads, hammer heads, pottery, copper beads, bear-tooth necklaces, pipes and copper ornaments.

Skeletons uncovered will be inclosed in plaster and sent to the university museum for examination, and then will go to the Field museum and other institutions. The type of civilization revealed is not high by the standard of Professor Cole, who said that no writing has been uncovered in mounds in any part of the United States.

Sweetness of Sugars

Several years ago the agricultural chemistry of Minnesota published a method for determining the relative sweetness of the various sugars, and they find that if the sweetness of cane sugar be represented by 100, fruit sugar becomes 173, grape sugar 74 and milk sugar 16.

Temptations Tell Tale

Find out what your temptations are and you will find out largely what you are yourself.—Henry Ward Beecher.

SCHEDULED FOR THANKSGIVING DAY

How Charlevoix Plans to Celebrate that Day —Football

Homecomings, church services, a football game and a large scale gastronomical celebration were the events scheduled for Thanksgiving Day, as this paper was being made up. School vacations are on short for Thanksgiving, that few of the young people away from Charlevoix at college will be able to get home. Regrettably, too, many Charlevoixans are spending their Thanksgivings elsewhere—indeed, the exodus seems to be larger this fall than usual. Many entire families have left for the winter.

According to their annual custom the Baptist, Congregational and Methodist churches will hold a union service the evening of Thanksgiving Day. This year it will be at the Congregational church, and the preacher will be the Rev. Herman Burns. There will also be music by the Congregational choir, which will repeat the special numbers of its most unique vesper service. The Christian Science Society will hold services at 10:45

IN THE DARK ROOM

Joe—So she gave you a negative when you asked her to marry you?

Jim—Yes; but we were in a dark room and I did a little developing, printed a kiss on her lips and finally produced a perfect picture of happiness."

The Safe Course

The Sire—You and your dog have upset everything in the house and I'm going to whip you for it.

The Son—That's right. Take it out on me 'cause you know if you licked the dog he'd bite you.

Collected a Fee

Burglar—Talk about hard luck. I broke into a lawyer's house last night an' he got the drop on me an' advised me to get out.

Pal—Huh! Yer got off easy.

Burglar—Easy nothing! He charged me $10 for advice.

The Distinction

"Have you Shakespeare's works here?"

"No, madam," replied the junior clerk, "but we have his plays."

IN DAYS OF OUR FOREFATHERS

Women Prepared Their Own Medicines

The wise pioneer women learned to gather, in woods and fields, the remedies the Indians used. From the rafters of colonial houses, hung great bunches of dried roots and herbs. From these, in times of sickness, the busy mother brewed simple and powerful remedies.

From roots and herbs, Lydia E. Pinkham, a descendant of those sturdy pioneers, made her Vegetable Compound. The beneficial effects of this dependable medicine are vouched for by hundreds of women.

Mrs. Wm. Kraft of 2338 Vinewood Ave., Detroit, Mich., saw a Pinkham advertisement in the "News" one day and made up her mind that she would give the Compound a trial. At that time she was very weak. "After the first bottle," she writes, "I began to feel better and like a new woman after taking six bottles. I recommend it to friends and always keep a bottle in the house."

Mrs. Gust Green of 401 Lincoln Park Boulevard, Lockport, Illinois, found herself in a condition similar to that of Mrs. Kraft. She was "all run down," she writes, "but the Vegetable Compound has built me up and I feel better now. I recommend it to all women who need more strength."

Listen, Dear

"I'm right this time and I can prove it." "Oh, all right. If you're bound to quarrel."

DODD'S PILLS
FOR TWO HUNDRED YEARS
Noble's Medicine
Diuretic Stimulant to the Kidneys

Recalled to Action

Mrs. A. L. Cravford, Medfield, Mass., writes: "Dodd's Pills cured me of Bright's Disease. I was in bed for three months and have been feeling in good health ever since my cure. When the doctors pronounced my case hopeless I was not expecting to live a month. Dodd's Pills not do anything for me. I kept getting worse. My limbs were my ankles to my knees swelled and my eyes were so swollen that I could hardly see. One day I thought I would give Dodd's Pills a trial. I gradually improved and kept on taking them and they cured me thoroughly."

Laughing Is His Business

Laughing has been adopted as a business by a man in Brisbane, Australia, who was out of employment recently. When a movie theater advertised for a man to laugh through a megaphone as a means of increasing the attendance when a comedy picture was being shown, the unemployed man was hired. Riding through the streets in an automobile bearing theater signs, the man laughed for several hours. He has adopted laughing as his profession and is reported to be earning more than he did at his former trade.

"DANDELION BUTTER COLOR"

A harmless vegetable butter color used by millions for 50 years. Drug stores and general stores sell bottles of "Dandelion" for 35 cents.—Adv.

Dependent Children

The children's bureau says that in the United States there are approximately 218,000 dependent children under the care of private and public agencies and institutions; 230,000 crippled, deaf or blind children are in hospitals and special schools; 135,000 mentally defective children are in special schools and other private and public institutions, and 130,000 children are given public aid in their own homes.

A word to the wise guy is wasted.

No Great Mystery in This "Magic" Number

The mysteries of the number 3852 are arousing keen interest in Germany. It has been found that the year of your birth, your age, the year of your marriage, and the number of years of wedded life always add up to that number exactly.

The puzzle may seem bewildering at first, says Popular Science Monthly, but simple analysis reveals it to be based on the fact that the "magic number" is nothing more than 1926 doubled. The addition of the year of birth and the age, of course, always results this year in 1926. So will adding the year of marriage and the number of years married. Next year, obviously, the mysterious number will be 3854.

Significant Answer

Wife—I wonder why your brother never married.

Hub—Oh, Rob's just smart, I guess.

An electric company that has been developing a new deep-sea cable has to devise an artificial ocean to make the necessary experiments.

Purity Flavor
have made
Baker's Breakfast Cocoa
The Household choice for many Generations
A delicious, pure and wholesome food beverage, made only of high grade cocoa beans, carefully blended and prepared by a perfect mechanical process, no chemicals being used.
WALTER BAKER & CO. Ltd.
Established 1780 Bottle of Chocolate on the DORCHESTER, MASS.

Not Well Informed

An attorney visited Mount Vernon, the home of Washington. In making a tour of the grounds he came to the old tomb.

Presently he came to his wife, who was not far away, and asked: "Who was Mike Egan?" His wife, who was not acquainted with "Mike," inquired why he wanted to know.

He took her to the old tomb and there she read the inscription: "Restored by Mich-igan."

The word is divided on the inscription plate, and the attorney had failed to recognize the name of our sister state.

Second thoughts are best; also second impulses. The first impulse is to run.

Museum in Skyscraper

The only skyscraper oceanographic museum in the world is located on the top floor of an office building in New York city. Three thousand specimens of marine life, many of them of hitherto unknown species, are in glass cases and glass jars.

Careless

"It's the woman who pays and pays and pays."

"That's right. You can't depend on the men to keep up the installments."

The white grub, one of the worst enemies of corn, is parent of the common June bug.

Perhaps the least observed admonition: "Don't tell anybody."

PRECEDING CHAPTERS

Harry Ormerod, proscribed traitor to King George as a Stuart partisan, returning from France to London, rescues Alderman Robert Juggins from a band of marauders. Juggins proves to be the grandson of a former steward of Ormerod's father, to whom Juggins feels himself indebted. Ormerod tells Juggins he has abandoned the Stuart cause. Jacobite informer Ormerod of a Jacobite plot in the American colonies to weaken England by thwarting French interests. At Inverness, Ormerod meets Scotsman, and a Frenchman, Jean Veulle, deadly enemy of Ormerod. The trio are in London furthering their schemes.

CHAPTER II—Continued

"He is no enemy to be slighted," I said.

"No, he thrives upon opposition; but—"

A secretary rapped for order.

"To the king's most excellent majesty in council," he recited from a document in his hand, "the humble petition and representation of Samuel Baker, Samuel Storke, Richard Janeway and others, merchants of London, trading to New York, in behalf of themselves and the rest of the persons concerned in the New York trade; which petition, having been considered by his majesty's council, hath been referred, with his gracious consent, to the lords commissioners for trade and plantations."

"You will note," whispered Master Juggins in my ear, "that the name of Murray is not included in the list; this appears here, not as the principal, which he is, but at the request of these merchants, who are his decoys, and ostensibly in their interest."

"You have heard the petition and reference of the council read," gabbled Pelham in whining voice. "We will now hear arguments by the opposing sides. Who appears against the petition?"

Master Juggins rose bedside me. His arguments were substantially those he had used with me, bolstered additionally by a mass of facts and statistics. When he sat down it seemed to me that no Englishman who thought of his own country's interest could regard the logic of his appeal.

There was a mustering of applause, and then a merchant introduced Murray, with the remark that he had kindly consented to give his opinion, as he had recently come on a visit to London from the province of New York, where he was in residence.

"The gentleman who preceded me," began Murray, "and who, I am told, once spent some time in our province many years ago, is unfortunately laboring under a misapprehension of the situation. It is not, my lords, as though we had the misfortune to be at war with France. Through the grace of God, the two countries have been born for some years at peace with one another, and their subjects in the New world have striven not to be behind hand in drawing closer the bonds of trade which in themselves are the best preventative of war.

"We manufacture in this country more goods of a certain kind than we can consume ourselves. These goods are in great demand amongst the savage tribes which inhabit the interior of North America.

"Both the French and our own traders have use for these goods in the fur trade, which is growing to be of increasing worth to the London merchants. If we withhold from the French the goods they require for trading with these tribes they will seek them from the manufacturers of the Low Countries and Germany. Thus our merchants at home will be deprived of a profitable trade, and we provincials will not be bettered. Also, the supply of furs for the London market, much of which comes from the French posts, will be reduced. It seems to me, your lordships, that this prohibitory legislation will only have crippling effects upon trade and, hinder the good relations between France and England and their colonies."

He said much more in the same vein, whilst Juggins twisted uneasily in his seat and the attending merchants and even their sleepy lordships hung upon his words. For he was a ready speaker. When he sat down the merchant who acted as master of ceremonies caused a start of surprise, in which I joined, by bringing forward a handsomely dressed gentleman, whose laced coat and gold-hilted sword showed conspicuously in such drab surroundings.

"Twas Raoul de Veulle; yes, Raoul de Veulle, whose and exploits and escapades, love affairs and gambling debts, had kept all Paris gossiping these past three years and had just driven him into exile, the facts concerning which had been mysteriously secret. I had known De Veulle well.

Now he stood before us, his handsome face smiling, bowing low before their lordships' lordships. In charming, broken English he repeated his brief message. He had been requested by his excellency the French ambassador to appear in this matter in answer to a plea offered by the petitioners to the ambassador for corroborative testimony to the justice of their assertions from a responsible French source.

He himself—he shrugged apologetically—as it happened was Canadian-born; he was just starting upon his way to take up an appointment in the Canadian government. He agreed unhesitatingly with what Monsieur Murray had stated. On behalf of the French government and of the Canadian authorities he begged to say that such legislation as New York wished to have perpetuated would have most unhealthy effects upon the trade and politics of their two countries.

Master Juggins sprang to his feet, his honest face afush.

"Mindful of the assertions of Master Murray and—"

Pelham waved him to his seat.

"We have heard enough," pronounced the whining voice. "You have no other first-hand witnesses from overseas?"

"No, your lordships," admitted Juggins reluctantly.

"Then further talk is fruitless," he went on, while his colleagues nodded their sleepy assent. "We are agreed that there seems to be some difference of opinion concerning this measure. Were it not for the fact that his majesty's governor of New York appears to favor the bill, we should consider the case made out against it unanswerable. But in view of Governor Burnet's approval we are resolved that the matter shall be referred back to him with a request for a full report upon the issues raised, and pending the receipt of this report and a decision being reached his majesty's government will not take action in the premises. What is the next case for consideration?"

The petitioners, much gratified, flocked around Murray and his quelike servant, and I followed Master Juggins from the chamber and out into Whitehall.

"What will happen next?" I asked.

"If I know Governor Burnet as well as I think I do, Murray and his French friends will drink slight comfort from their crystal lodgy. Remember he is three thousand miles from London and therefore able to think for himself. With you to help him—"

I felt something brush against my coat sleeve and looked around. I had just time to see the back of a gaudy red coat and a woolly black head crowned by an ornate cocked hat, disappearing in the crowd.

"Do you see?" I said.

"Aye," responded Juggins grimly: "I might have known it. Well, 'tis a lesson in time. We will not forget it."

We turned from Whitehall into the crowded Strand.

"Murray will figure that this delay gives him time to bribe, and buy his will, either in Governor Burnet's council or in the government here," continued Master Juggins. "At the worst he will think that he should be able to withstand the law's execution for several years, and in that time much may be done—aye, much may be done, and in more than one way," he concluded grimly.

"Then doubtless Murray will send at once a swift messenger to New York so that his friends may set to work in his interest," I suggested.

Juggins stopped abruptly in the center of the footway.

"No, he will go himself. 'Tis too important for trusting to another. That was well thought of, Master Harry. We must not let him get ahead of us. You must sail on the first passage available. Do you follow me?"

And he started off as fast as his legs could carry him, bumping and shoulding his person against all who did not move from his path.

"Whither are we bound now?" I panted.

"To Master Lloyd's coffee house, where the shipowners resort for trade. We shall find news of the sailings there."

(TO BE CONTINUED.)

Even Busy Bee Likes His Periods of Rest

Bees like to done and sleep during the day time, and they do it unmolested, according to Prof. Karl von Frisch, eminent entomological worker of Germany. Not only does Doctor von Frisch find that honey bees enjoy daily siestas, but love of ease varies greatly in individual bees. Continuing his earlier researches in bee psychology, Doctor von Frisch devised a method of marking individual bees with indelible colors. Carefully placed observers were able to follow the movements of these marked bees even in flight. Through disconcerted hives they saw marked bees return to their particular spot on the comb, indulging, after moderate activity, in periods of inactivity ranging from minutes to hours, although their total span of life is approximately five weeks. It was not until the marking device was hit upon that Herr von Frisch fathomed some of the age-old mysteries of bee civilization. To attempt to learn these by watching at random 10,000 bees in the hive was a hopeless task, Doctor von Frisch asserted, adding: "It was always the bees we weren't looking at that moved."

Africa's Treasure Tree

The most important tree of Africa is the oil palm, being first in beauty, in utility and in fertility.

If the traveler is athirst and weary, its luxurious foliage gives him shelter, while from its tree trunk pours forth a draught of foaming wine. Its nut oil and palm cabbage provide a meal fit for a sylvan prince. Among its leaves are the source of the West Africa wealth, the bunch of oilnuts.

The kernel of the nut, the size and shape of an almond, gives a white oil, which forms the basis of much of the "pure Spanish olive oil" of commerce. The kernel is inclosed in a hard shell, which is in turn cloaked with a mass of oleaginous fiber, the whole inclosed in a strong red-nued black skin. From this fiber are obtained lubricating oil, raw material for soap, margarine and an ingredient for explosives.

Alamo Originally Church

The Alamo, in Texas, was a Franciscan mission built about 1722 and occasionally used after 1765 as a fort. It consisted of a church, an inclosed convent yard about 100 feet square, a convent, a hospital building and a piaza covering about two and one-half acres and protected by a wall 8 feet high and 33 inches thick.

TIME TO BE THANKFUL

Now the time for the annual national inventory is at hand, and we approach the day when we ought to stop for a moment to give thanks for the blessings which have been conferred upon us during the year. And there is abundant reason to render thanks for the prosperity which has been showered upon us during the year 1926

The present year has indeed been generally a prosperous one for the various communities which go to make up the United States of America. There have been some spots, of course, which have not had their full share of the good things, but the general tendency has been everywhere for the better, and compared with the best which Europe has to offer, our material record is one which might well excite the envy, if not the admiration of the world.

Measured by the great corporations which are usually the barometers of our well being, the year has been a good one and there is every evidence that conditions will continue favorable. The twelve greatest industries in the country are said, according to conservative estimates, to have earned a billion dollars so far this year for their stockholders. The figure is one which may well nigh stagger the imagination. The prosperity, however, has not been confined to these twelve but has been general. It is true that the farmer started the year with some forebooding as to his future, but agricultural conditions have steadily improved and the farmer is gaining renewed courage. The fact that this is true is abundantly shown by the election returns. Dissatisfied people usually take out their dissatisfaction on the party in power. But in this year of 1926 the party in power held its ground principally in the rural districts. It was in the great centers of population that it lost, and in the centers the issue was something quite different from the plight of the farmer.

Materially the country has much to be thankful for, but there are other things, too, worthy of mention. We are at peace with the world and at home attending to our own business as a nation. This is something, too, that is worth being greatful for.

MORE LAW COMING

Now that the election is over and the issues and the fortunes of the various candidates have been settled for the next two years, there is about to come to us again the season of lawmaking. Soon Congress will be in session, and then will come the meetings of various state legislatures, all anxious to get the old legislative hopper ready to grind out laws by the hundred, laws for the regulation of the people and their business, and laws which a great many of us unfortunately will prepare to dodge whenever possible.

For the season of lawmaking always follows the election. Some of the experts on the subject are now predicting that at least 15,000 new laws will be made for the American people within the next few months —15,000 new laws to be added to the statutes which we now seem to be unable to enforce.

This number may seem to be tremendous, but it may turn out that it is a conservative guess. In addition to our Congress there will be about forty legislatures in session. These law-making bodies turned out in the neighborhood of 14000 laws two years ago and there seems to be no reason why they will not exceed this record in the coming year.

Just why we have to have so many new laws nobody seems to know. It would seem that legislators have a sort of mania for turning out new laws. They make the best sort of resolutions about figuring all unnecessary legislations, but when the boys get together, down at the same capital a veritable epidemic of law-making always breaks loose.

Sometimes perhaps the realization will come to us generally that what we need is not new laws but a better enforcement of the laws already on the statute books with the repeal of those which are found obnoxious in the enforcement. True, the editorial writers in the newspapers point out these facts occasionally now, but nobody seems to be able to do anything about it. So until there is a change doubtless we will continue to pile up new laws with the result that we shall increase the number of law-breakers and throw the law as a general proposition still further into public contempt.

COMMENT

—Well the international disarmament conference at Geneva has failed but it wasn't due to lack of advertising.

—Still it must be admitted that there are several rivers for Governor Smith to cross between Albany and Washington.

—The wets lost out in the Missouri referendum, but then the apple crop out there this fall is said to be a bumper one.

—A whole county ticket of redskins was elected in South Dakota which is much better than electing a ticket of ordinary reds.

—Maybe there wouldn't be so much cheating if the married men were compelled to wear license plates the same as automobiles are.

—Both the wets and drys were satisfied with the result of the election which is more than can be said of the Republicans and Democrats.

—An Atlanta man is going to receive $1,150 which he claims he won on the election. This naturally leads to the question of who would have the nerve to bet od the election in Georgia anyway?

—Of course, if it had been the other way around, and Europe had loaned Uncle Sam money to carry on a war to save himself. Europe would have been more than glad to cancel the debt and then lend us a lot more money.

—French wine merchants are said to be hopeful that the success of Al Smith and the wet referendum in New York will soon lead to the exportation of champagne from France to America. Which shows just how well these Europeans understand America.

Sparrow Finds a Way to Get Meal on Auto

Berkeley, Calif.—The irrepressible English sparrow has learned to make the automobile contribute to its bill of fare.

According to ornithologists' observations in such widely separated regions as Illinois and California the resourceful birds have been making a practice of collecting toasted grasshoppers and other insects that have become wedged in the fronts of automobile radiators. In central California large numbers of sparrows were observed "working" the front of car after car parked along the streets, says H. S. Swarth of the department of zoology of the University of California.

In spite of concerted drives to head it off, the industrious sparrow's march across the continent has proceeded unimpeded and the rowdy ragamuffin has ingeniously turned to its own advantage the machine that, by stimulating the horse from the streets, had deprived him of an important source of food.

PLAN MARBLE SHAFT FOR HISTORIC SPOT

Site of Fort Washington to Be Preserved.

Elaborate plans have been made for restoring historic Fort Washington and marking the site with a suitable memorial. A portion of the ground occupied by the fort has been set aside recently as a public park. The plans include the rebuilding of the famous ramparts and other details of the stronghold in their original form. From the site of the fort will also rise a great marble shaft, similar to the Bunker Hill monument, but rising to a greater altitude and set upon a more elaborate base.

The Fort Washington monument will rise to a height of 280 feet from the crest of the highest ground on Manhattan island. It will easily dominate the northern region of the city and be a conspicuous landmark from the harbor as well as from points up the Hudson river.

Despite New York's wealth of historic associations it has no adequate memorial of the Revolutionary period. It is considered especially fitting that such a memorial should take form on the one hundred and fiftieth anniversary of the Revolution. The Fort Washington shaft will doubtless be followed in the future as one of the show places of New York.

The restoration of the fort will be carried out with intelligence and sympathy. By a fortunate chance a considerable section of the area occupied by the main fortifications has been preserved. When the city came to be laid out, several streets crossed the site and rows of apartment houses now thickly encroach upon all sides. The greater part of the fortifications the south, however, has not been built upon in a century and a half. A slight elevation may still be observed which once formed part of the ramparts.

The historians who have made a study of this region have been aided by several old maps which show in detail the original forms of the fortification. With these guides much of the ground once covered by the fort has been carefully dug over and the earth sifted for relics of the past. Many interesting mementos have been discovered, including hundreds of buttons from the uniforms of the soldiers once encamped here, which serve to identify the various regiments of both combatants who were stationed here.

The house was built here many tons of cannonballs and other relics were discovered and sold as junk.

The monument will be built of granite, including the elaborate colonnade. Although in general lines suggest the Washington and the Bunker Hill monuments, the shaft at Fort Washington will have several distinctive features. The graceful colonnade or peristyle at the base will be an interesting decorative feature. This in turn will be flanked by groups of trees and thick foliage.

The shaft will be ornamented with appropriate sculpture which will relieve the rigid appearance of so tall a structure.

Knotty Legal Problem

Divorce news from San Francisco: To whom does the warm spot in the bed belong on a cold night—the wife who first climbed between the icy sheets or the husband who comes home later and demands the coveted place as lord of the household? Superior Judge Van Nostrand has the unpleasing problem to decide in the divorce suit of Mrs. Anna Weisinger and Jack Weisinger. The testimony was that the pollee were called to the Weisinger home one night last winter to quiet a war that started when Weisinger ordered his wife to move over and she insisted on remaining in the spot she had warmed up.—From "Americana" in the American Mercury.

Dog's Foot Fired Gun

Minus one eye and two fingers an Austrian game warden named Kurtbauer is now convalescing in the Vienna hospital from the effects of gunshot wounds inflicted by his own dog. Kurzbauer left his loaded gun leaning on the end of the boat while he jumped out to make the anchor rope fast. While Kurzbauer was busy with the rope the dog made a spring for the shore. One of the dog's feet had been resting on the trigger of the gun and as he jumped he fired the gun. Kurzbauer, who was bending over at the time received part of the charge in his left eye and part in his left hand.

Fruit Washed by Machines

Washing machines have been developed for service in the apple-packing industry. The fruit is cleaned, all residue from spraying removed, and the color of the fruit heightened by the friction by means of 500 bits of cane, was whipped on and about the apples as they pass over the revolving rollers, with a fan for removing all particles of dust. The treatment insures sanitary fruit and adds greatly to its appearance.

Filipinos Take to Wheat

Consumption of wheat flour in the Philippines has increased in the last few years. Figures of the bureau of commerce and industry show that although rice is the chief staple the Filipinos are using bread as a supplementary food generally and in some cases as their principal article of diet. Wheat importations last year were 76,000 tons as compared with 45,000 tons in 1921. Four-fifths came from the United States.

Much Lumber in Sight

Upwards of 555,000,000,000 feet of merchantable saw timber are contained in the national forests of the United States and Canada.

Hunting and Fishing Forbidden

On the grounds of the Belvedere Resort Suitable reward for information leading to arrest of persons violating this rule. 31-1t W. H. MILLER, Warden.

Entire Life Really Series of Adventures

What is an adventure? I remember one night in a skiff on the St. Francis river in Arkansas. I had paddled down all day long in a chill, wintry wind, which had at dusk died, but into freezing cold as I stretched the curves over the length of my skiff. I tried two methods I'd shot that morning, ate them with flapjacks cooked over my yellowflame oil stove. I listened to a flock of wild geese, travelers, going over. I remembered wondering that night, in that lonely eddy, if I just sitting there was adventure. Two years before I had nearly gone under at the now famous Muscle Shoals. A few weeks before I went down to my shoulders in roaring mud. After 20 years that quiet night with the ice crinkling around me had become as large in my memory as any peril.

I rejoice in uncounted experiences. Picking and choosing among them for relative values, I find myself stumped. I can no more weigh the importance of memories than I can estimate the value of facts. At one time I think a narrow escape the beyond price; at another time a big song has been equally thrilling; and again I have come upon a statement of fact in the repose of an evening's reading that exhilarated my thoughts for years, as Ruskin's judgment that the color of a rose, as the blossom opens, is the loveliest of all hues.

I do know this: When I have given months to reading about a subject, when I have gone forth to be vitally close to the region covered—as the Mississippi, or deserts, or green hills and far off-ness—and when I have returned again and again to the accumulation of facts, observations, ideas, theories, notions and all manner of information, I find that every phase, from library study to downright weariness under the pack in bone snow, adds to the joy of living, the joy of retrospect. And when I have neglected here and there to read books, or forbidden myself the experiences of down and storm—by that much I missed something. My regret are the things I failed to do when chances I didn't take—never the things that I declined. All life is adventure—for adventure.—Raymond S. Spears, in Adventure Magazine.

Prosperity in Hawaii

To prevent them from becoming commercialized, all the famous beaches in Hawaii are to be acquired by the government, including that of Waikiki, by subscription. Hawaii is not over the world. The territorial government will finance the construction of improved roads which it is hoped will attract tourists from all parts of the world. It has already begun the extension of new trunk roads which will open one-third of its unsettled areas. Hawaii is prosperous and is making a great prosperity. About one out of three of its native-born Kanakas owns a car. The government is building new roads and making extensive harbor improvements.

Little Soil Not Tilled

In Guatemala, Salvador, the two most populous countries in Central America, the population is so dense that there is little land left unfilled, Guatemala has 2,000,000 people and Salvador, with an area of only 7,225 square miles, 1,010,000, or 144 persons to the square mile. This is the densest population in the western hemisphere. These countries are rich in staple, coffee, minerals, rice, fruit, cotton and bananas.

WHAT THEY SAY

—Nothing changes except definitions. It is "personality" now that used to be "brass."—Brideport Telegram.

—Uncle Sam stands to get something out of Queen Marie's visit. He will learn the Roumanian anthem.—Boston Transcript.

—Gene Tunny says he is ready to fight anybody at any time but we notice he mains a bachelor.—Pittsburg Chronicle-Telegraph.

—The United States as she is today: About a hundred people are killed every day in the region covered—as the Missis-sippi, or deserts, or green hills and far off-darness—and when I have returned again and again to the accumulation of facts, observations, ideas, theories, notions and all manner of information, I find that every phase, from library study to downright weariness under the pack in bone snow, adds to the joy of living, the joy of retrospect. And when I have neglected here and there to read books, or forbidden myself the experiences of down and storm—by that much I missed something. My regrets are the things I failed to do when chances I didn't take—never the things that I declined. All life is adventure—for adventure.—Raymond S. Spears, in Adventure Magazine.

Dum-Dum Bullets in War of Independence

A collector of bullets dating from the period of the Revolutionary war and prepared for a variety of uses has been recently added to the collections of the New York Historical society.

Our fact of historical interest established by the finding of these relics is the certain use of dum-dum bullets by the soldiers of both armies, contrary to the practice of war. Accusations and recriminations have been common for a century and a half. It now appears that the soldiers of both armies displayed considerable ingenuity in preparing bullets in such a manner as to inflict jagged wounds, sometimes cutting them nearly in half and either twisting or beating them out of shape.

Other bits of the lead designed for deadly use were diverted to pursuits far from the intention of their makers. Pounded square, with spots cut in the sides, they were used for dice through the long winters of inaction. Hammered into strips—long and narrow or short and broad—they served as land pencils. Some of these were punctured and worn on a string about the neck, anticipating later styles. Other bullets were cut in two and tied together to serve as cuff links, occasionally ornamented by laborious carving.

Some of these bullets bear the marks of human teeth and recall those more humane days when fighting was a common punishment. Victims were tied to post or tree while the lads was applied to their backs. Bullets that were perulitted at such times to hold a bullet between their teeth as an safeguard crying out in weakness under the ordeal.

Here Is Pointer for Raising One-Man Dog

Here is a stunt you can try, but be sure you want a one-man dog before you start.

Take a puppy and after he is four months old do not let any one touch him or feed him but the owner. I suggest, however, you let the rest of the family in on this.

At about ten to fourteen months the puppy will become extremely suspicious and dislike to having anyone handle him or to follow strangers.

My experience has been that it is harder to do this with hunting dogs than other breeds, due to their tendency to follow a gun. However, I retail two large fox hounds that I raised on same method and do not possess and experience. And yet you comhandle and cry and whimper just because you aren't a millionaire. Great Scott, but you are ingrateful and unreasonable.—Atchison Globe.

THE THEATRE

"Rainbow Riley." A mirthquake is on its way to the Palace theatre, Dec. 1-2. It is "Rainbow Riley," the latest starring vehicle of Johnny Hines. An interesting fact in connection with this picture is that, as a play under the title "The Cub," it served as the last legitimate stage piece of Douglas Fairbacks prior to his entering pictures. Those who have already seen "Rainbow Riley" state that Johnny is at his best in this tale of a cub reporter who is sent to the Kentucky mountais s to report a feud. Arriving there, he is immediately immersed into a barrel of trouble, and it takes all his ingenuity to get out with his skin whole. This vehicle is reported to be made to order for the likable Hines and to those who enjoy speed, laughs and thrills in their motion picture fare, "Rainbow Riley" comes to the Palace theatre highly recommended.

"More Pay—Less Work." All actors of the all-star cast in "More Pay—Less Work" plunge into the ocean and inspect the "Florida Real Estate" at the bottom, but it is not "lying fish" opera in spite of the fact that sequences were filmed off Catalina Island, the favorite play ground of the aviating fish. Among the famous actors who "taste the mud at the bottom of the sea" when they appear in support of Fox Films' version of Peter B. Kyne's latest Cappy Ricks story, are Marcy Brian, Charles "Buddy" Rogers, Albert Gran, E. J. Ratcliffe, Charles Conklin and Otto Hoffman. They will be seen at the Palace Saturday and Sunday.

First Book in English

The oldest book in the English language to alleged to be "Jee Progelgatibus Iterum," by Batholomew de Glanville, who wrote in the Fourteenth century. It was translated into English by Trevisa after it had been printed in folio form by Caxton in 1480, and after the first translation was made from the Caxton folio. The translation was published by Wynkin de Worde in 1507.

Count Your Blessings

You have a few brains with which to think. You have eyes to see. You have hands with which to work. You have feet with which to transport yourself. You ought to glory in that capacity to name aloud and do and see and experience. And yet you com-plain and cry and whimper just because you aren't a millionaire. Great Scott, but you are ingrateful and unreasonable.—Atchison Globe.

The Grebe "Colortone"

hushes annoying sounds and allows control of voice and instrument to reach you in full natural tones

It enables you to alter to your taste the quality or timbre of speech or music from high, thin pitch to low, deep, round tones. This receiver, unlike others, is not at the mercy of the loud speaker. The "Colortone" also helps to subdue to a great degree, the scratching, hissing, whistling sounds that are usually the bane of radio reception.

The "S's" and the "F's" are plainly audible; naturalness of sound replaces the artificiality formerly therefore interfered with radio enjoyment.

Do not make a demonstration of this great Grebe innovation.

The CREBE SYNCHROPHASE

All Grebe specifications are covered by patents granted and pending.

Love Can Be Cruel

As a race becomes more practical with age, the cradits and debits of love are gone over with more candor and wi-dom. Some of the debits are very hard on both sides; some say worse with women than with men. Still, love sometimes stays a man pretty hard, too.—E. W. Howe's Monthly.

Says the Deacon

The wrong way is in working to make the world better, and forgetting to start with yourself.—Atlanta Constitution.

ATTRACTIONS FOR THE WEEK

Saturday-Sunday, Nov. 27-28

Peter B. Kyne's story, "More Pay—Less Work" with Mary Brian, and Charles Rogers. "More Pay—Less Work" is a fast-moving comedy-drama that ends in a riot of roars. It is centered around his famous character, Cappy Ricks. A double knockout that finishes a fist fight in another amusing incident. Tugs collide in the bay, and the captains starts fighting. Each lands a haymaker and knocks out the other at the same time. Also a comedy, Billy Dooley in "A Dippy Tar."

Wednesday Thursday---

Johnnie Hines in "The Rainbow Riley." Gallons of giggles, cascades of comedy in Johnny's latest and biggest laugh show. Speedier than "The Speed Spook." Livelier thau "The Live Wire." Come to the Blue Ridge Mountains of Virginia—hit the trail of Johnnie Hines. He went to the mountains to get a feud story—and if it wasn't much of a feud before Johnnie got there it certainly developed after he got there—as for the story! Ah, that's where you come in. Also the Hodge Podge Fox News.

Bachelors Had Little Standing in Colonies

Hommage is a subject not usually associated in the minds of bachelors, but it, or marriage at least, was the ambition of interest whilst offered parents, relatives and dignified elders of the community a thoroughly enjoyed opportunity to scrounge, interfere and meddle, says the Antiquarian.

Not to be married was more than a calamity; it was actually a disgrace. A bachelor was a harassed creature, looked at askance and sometimes taxed for failure to assume domestic obligations.

Parents or guardians began to look around for suitable husbands as girls approached seventeen or eighteen. If not at once successful the hunt became more and more feverish as time went on. A girl who was still single at twenty-four was given up as beyond saving, and by the time she was thirty she was regarded as being in what seems to us now the last stages of venerable spinsterhood. The popular name for such women was "clothes-backs."

As was the case with most New England customs, very practical reasons underlay this intense concern about marriage. A man needed a wife more than any other possession, for the scarcity of nuns and the difficulty of serice in small settlements of any accomplishments or slight education made a home imperative. A woman needed the protection of a husband among the dangers and uncertainties of colonial life.

Marriage was for the old as well as the young. So it was not unusual to find a widower of sixty-five, who had survived three or four wives perhaps, gravely conferring with friends a few weeks after his latest bereavement as to the best choice for his next venture. Widows were much sought because of the stability which was thought to go with their mature years, and one may suspect there was an equal attraction in the comfortable inheritance which many widows had.

Ether Waves, Maybe

Bobby had spent nearly an hour in carefully constructing a house of sand at the Jamison park playground and had nearly completed it when a little urchin who had no respect for artistic architecture kicked over the structure.

"Say, boy," blustered Bobby, "if you do that again you're going to beat from me, and it won't be by telephone, either."—Indianapolis News.

Mosquitoes on Radio

The hum of the mosquito is to be broadcast throughout England. The song of the nightingale, caught by the microphone in woods 20 miles from London some time ago, proved such a success that now the buzz of insects is to have a trial. Prof. Morce Hogarth announces that he has in trailing a family of mosquitoes which when predicted, will broadcast the high-pitched metallic ping so familiar to human ears.

—PERSONALS—

Fitch R. Williams, attorney, from Elk Rapids, was here on business Monday.

John Grill, of St. James, came over last Friday to return on the Saturday boat.

Mr. and Mrs. Charles Carey are in Detroit and may remain there for the winter.

Wm. Finucan, of Grand Rapids, arrived here Monday to spend Thanksgiving.

Mr. and Mrs. Milton Block returned from First last Friday, where they had been visiting.

Alvin Yelder, who served the Beaver Island Air Transporation Co., as mechanician last summer, was in Charlevoix last Saturday.

Jake Lindeman and E. L. Denny each killed deer. In a party that went from Norwood, George Light was the fortunate hunter.

Mr. and Mrs. Frank A. Kenyon, of Mackinaw Island, arrived here Tuesday to spend Thanksgiving. They return home Saturday.

Mr. and Mrs. Robt. Honthron left Tuesday morning for Chicago, by water, to spend Thanksgiving with Mr. Honthron's mother.

Bert Wilbur, son of Captain and Mrs. O. E. Wilbur, is expected here from his home in Chicago on a Thanksgiving visit to his parents.

Charles Roddy, accompanied by Mr. Cregger, both of Chicago, arrived here Tuesday on their way to St. James to spend Thanksgiving.

Mrs. Flora N. Lewis and daughter Mrs. Blanche Greenman and son Lewis, arrived Friday for Detroit where they will spend the winter.

Miss Alice Chew is teaching at the Bloomingdale school, and Galo Chew has matriculated from the Western State Normal College.

W. J. Gallagher Jr., and son Norman, Joseph Leff, David McDonough and Patrick Lafeniere, all of St. James, arrived in Charlevoix Tuesday.

Mrs. James Cook, of Marion, returned home last Saturday from Flint and other southern Michigan cities, where she had b en visiting for two weeks.

Receipts in the Red Cross Roll Call held here last Friday and Saturday were $65; the guests of Charlevoix by the National Red Cross had been $115.

Hunters reported a foot or more of snow on the highways near Gaylord. The Lewis-Belding-Bird party were twelve hours making a five hour drive.

Mrs. Archie Russell left for Peoria, Ill., Tuesday afternoon. She will probably remain there until February, and Mr. Russell expects to join her there for a time.

Mr. and Mrs. A. J. Stelter and two daughters, motored to Ripon, Wis., Wednesday to spend Thanksgiving. Before returning home they will visit in Milwaukee.

The Sentinel with the rest of the city, celebrated Thanksgiving Day. The paper was therefore off the press and in the postoffice some hours earlier than is customary.

Mr. and Mrs. A. J. Stelter left Wednesday morning on a short business trip to Milwaukee and also to spend Thanksgiving Day with Mrs. Stelter's parents at Ripon, Wisconsin.

The school board, at its meeting Monday night, appointed December 8th as the day for holding a special meeting for a vote on the newly petitioned schoolhouse bonding proposition.

Mrs. Reber and daughter, Irma, of Boyne City, mother and sister respectively of Mrs. J. C. Ogden, were guests at the Ogden home Saturday. Miss Reber is a teacher in the Boyne City schools.

Mr. and Mrs. Bertram Edwards of Buffalo, N. Y., are in Charlevoix for a Thanksgiving reunion with Misses Mary and Eleanor Finucan and William Finucan. Mrs. Edwards was Miss Irene Finucan.

The evening of December 1st, the ladies of the Baptist church will give a fish supper. They are making plans and preparations for, in advance for what will probably be their last and greatest fish supper of the season.

The Robert Bridges, who had tickets for the Army-Navy football game in Chicago, Nov. 27, will not attend the big athletic event; but Mrs. Lisle Shanahan plans to go, and see the contest with her son, Midshipman Edward.

Mr. W. H. Miller, of the Belvedere Resort, received a telegram last Saturday, telling of the death of Mrs. E. V. Schwab, in Nashville, Tenn. Mrs. Schwab is the mother of Mr. George Schwab, who comes yearly to the Belvedere.

Mr. and Mrs. Clinton Cooper gave a Bridge dinner to eight tables, the evening of Thursday, Nov. 18. Eight tables of four make a large responsibility for hostess, as every woman knows; but Mrs. Cooper's party proved her hospitality easily and graciously equal.

Two Charlevoix mothers gave birthday parties for their children last week —Mrs. Archie Livingston for her daughter, Estella, and Mrs. Forrest Fowler for her daughter, Barbara. Estelle's party was the 19th and Barbara's the 20th. Both were six years old.

The Charlevoix Independents defeated the Petoskey Cement Co., team at basketball in the High School Gym in Petoskey Tuesday night with a score of 20 to 7. Pete Hecht was slightly injured in the game and was replaced at forward by Davenport. The Independents will play other games this season.

Dick Hammet had word from his parents that they ran into such a storm at Kokomo, Ind., while enroute to the home of their daughter, Mrs. R. D. Latady, at Daphine, Ala., that they were compelled to halt in their journey. Wind, cold and swirling snow made driving too hazardous. They arrived at their destination Tuesday.

Mr. and Mrs. Clinton Cooper, with Mrs. H. C. Cooper, Mr. and Mrs. J. H. Cooper Jr., Mr. and Mrs. Clarence Cooper left for Saginaw Wednesday morning by auto. They will return Sunday, after spending Thanksgiving with the Kirchners at Saginaw, who are the parents of Mrs. Clinton Cooper and Mrs. J. H. Niver.

Mrs. Joseph Foster gave a bridge party Tuesday night to celebrate the birthday of Mrs. Robert Wolfe of Petoskey, and the Foster wedding anniversary. The two ladies make it a custom to celebrate these concurrent occasions with a party each year. Besides Mr. and Mrs. Wolfe, Mr. and Mrs. Henry Bain were present from Petoskey. There were five tables and supper.

Mr. and Mrs. T. F. Leonard, of Chicago, motored up last Friday and stayed over until Saturday noon, when they embarked on the Sanford for their cottage at Font Lake, Beaver Island. They spent there a week or ten days. Although they came up here in that blizzard we grumbled about, Mrs. Leonard declared our weather better than Chicago's.

Grover Genelt, Fred Bergman, Lance Neff and Vaughen Orvis were in waiting-room at their camp near Lake Gogebic. They reached Charlevoix Tuesday morning after an all-night drive. At St. Ignace, while they awaited the return of a ferry to bring them home, there dollected enough cars to load two ferries. In their conditions have been chaotic at the Straits. This party got no deer.

The hordes of deer hunters go home now in a stream, with their trophies lashed to the running boards of their cars. Pondering the 50,000 deer license issued, and estimating conservatively that one in four of the 50,000 hunters will get his deer, it will be a miracle of conservation if the deer survive for long in their wild state. And if they do not, their extinction can certainly be attributed largely to the automobile.

The party consisting of A. C. Belding, Oral Lewis, Frank Bird, Clarence Coblentz, and Wm. Fuhrer, superintendent of schools at Boyne City, returned from their hunting grounds near the Turtle Lake Reserve, in Montmorency county. Lewis, Belding and Bird each brought back a buck. In the fronton party composed of Louis Usher-Meggison party were eight hunters first mentioned, they may have some difficulty getting their car out. The Usher-Meggison party were eight hours in driving three miles. In some of the remote sections, where many hunting cars are snowed in, it is reported that farmers are charging from $30 to $50 to pull them out to roads with teams. Under the 18 inches to 2 feet of snow in deep mud, and the wheels cut and churn without traction.

Mr. and Mrs. Walter Smith are in Muskegon for the winter. Mr. Smith has factory employment there.

The Shakespeare and Dickens Club met jointly Monday afternoon at the home of Mrs. Robert Bridge. The subject was Classical Music. There was singing by Mrs. Archie Livingston and Mrs. A. J. Stelter and instrumental music by Mrs. A. A. Swinton and Mrs. Stelter.

Few sugar beets were grown in this section this year. Sugar prices are low, and this with the fact that the Holland factory must pay $1.90 per ton freight between Charlevoix and Holland, kept the beet contract price offered to the farmers so low that it promised them no profit.

Vincent Smith Madison left yesterday for Grayling, where he joined his uncle, Ira A. Adams, at the Norway Club Hunting Lodge on the north branch of the Au Sable river, in quest of the antlered denizen of the woods. He will return with his uncle at the close of the hunting season.

Miss Isabelle Mitchell got a message from her brother, Dr. W. W. Mitchell, telling of their arrival in Orlando, Fla., Monday night. The two ladies it is Mitchell party, which included, beside the family, Miss Marguerite McCann, were well. Dr. Mitchell said that his wife, Billy was picking oranges. Fine for the Mitchells, but, in view of our recent terrible weather this really amounts to a heartless taunt.

Acoustics Expert Tells What Makes Good Hall

Urbana, Ill.—That the ideal concert hall, to assure the greatest comfort to hearers and players, should have soundabsorbing walls and ceiling, not hollow but built here and there of hard material that merchandise, is the opinion of Prof. Max Westenhofer, acoustic expert of the Pathological supervision of the Berlin university. He points out that the ear is a very sensible human being in much more than do their parents. He says that certain inner organs give evidence that man's ancestors lived for a time in water. These peculiar characteristics are missing in apes, which, he declares, "shows that the ape represents the subsequent development and proves that man is the older form of mammal." Professor Westenhofer elucidated this theory before the anthropological congress now in session at Salzburg.

CHURCHES

Methodist Church.

C. E. Pollock, Pastor.

"The Old Time Religion", 10:30 a.m. sermon subject next Sunday. What kind of religion is this? How would it effect this age if practiced? What do you know about it? You are welcome to worship and think next Sunday morning and evening with the First Methodist congregation.

"The House of David and other Superstitions," sermon subject at 7:00 p.m. next Sunday. "King Ben" is much in the limelight these days. An opportunity will be given to hear something definite about this Michigan religion from one who has had some intimate contacts with this Benton Harbor institution. The public is invited to this service.

There will be a Union Thanksgiving service at the Congregational church Thursday evening at 7:30. All members of the churches and congregations are urged to attend this service. There will be no prayer meeting at the Methodist Episcopal church.

Always good music at the public services of the church, and an opportunity for religious expression on the part of every worshipper.

December 10th is the date selected for the next great Vesper Service in this church.

The Monday evening Club, 8 o'clock. Men only—all men of the church and congregation invited. If you don't get a card, that means we take it for granted you will come anyway. Men only—no dues—meet in the Epworth League room. What is it all for? Sh! Don't let the ladies know. We'll talk it over at the Club.

The Ladies Aid meeting Tuesday at the home of Mrs. Chas. Arnold.

The newly appointed Quarterly Conference finance committee will meet Tuesday evening at 7:30 in the office of the church.

December 5th is the Quarterly settlement date. Our aim is to settle all our debts for the first quarter of our year on or before that date. We can at least provide for them, so that our treasurer will know what to expect.

Ape Descended From Man, Says German Savant

Berlin.—The ape is descended from man and not man from the ape, according to Prof. Max Westenhofer, custodian of the pathological museum of the Berlin university. He points out that chimpanzee cubs resemble human beings much more than do their parents. He says that certain inner organs give evidence that man's ancestors lived for a time in water. These peculiar characteristics are missing in apes, which, he declares, "shows that the ape represents the subsequent development and proves that man is the older form of mammal." Professor Westenhofer elucidated this theory before the anthropological congress now in session at Salzburg.

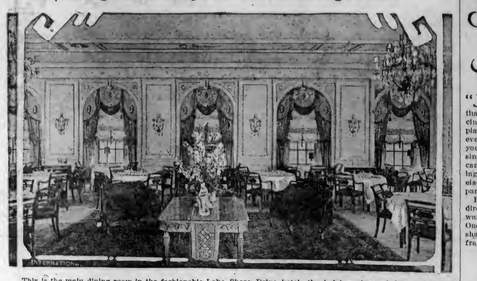
Dining Room in Queen Marie's Chicago Hotel



This is the main dining room in the fashionable Lake Shore Drive hotel, the lodging place of Queen Marie of Rumania in Chicago. The management provided a private dining room for the royal guest, but she preferred to take some of her meals in this beautiful room where a solid gold service was placed at her disposal.

Canadian Liquor Smuggled in Coal Is Nabbed

Prohibition agents at Spokane, Wash., found liquor was being smuggled across the Canadian border hidden in a car of coal, and after a pistol battle they caught three men and a woman and seized whisky valued at $10,000 and four automobiles. Above is shown some of the captured booze with the officers.

"Ears" of the Coast Artillery

Among the chief items of interest in the Electrical exposition in New York was this listening device used by the coast artillery to detect the faint buzzing of a plane, along with the distance and direction from whence it comes.

New Flag for the National Capitol

For the first time in history another flag flew from the same mast with the Stars and Stripes on the United States capitol building on Armistice day. It is a service flag donated by the Gold Star Mothers on which is written the number of American boys who failed to come back from "Over There." This photograph shows Mrs. H. H. McClure (right), national president of the American War Mothers, presenting to David Lynn, architect of the Capitol, this unusual flag.

WOMEN IN THE NEWS

TO WAR HEROES

Among the chief items of interest in the Electrical exposition in New York was this listening device used by the coast artillery to detect the faint buzzing of a plane, along with the distance and direction from whence it comes.

LUCKIEST OF WOMEN

They say "she is the luckiest woman on earth," this Mrs. William Jones of Covington, Ky. She has won over $1,000 in contest money so far this year. She has been winning for three years past some two dozen or more contest prizes, Proverb contests, prize essays, guessing contests, all some easy for her. She is in every nationally advertised contest and spends two evenings each week working over her answers. Her latest annexation was a $500 prize for telling people why they should eat salmon, which was given by the National Salmon Packers' association.

Pretty Things that are Made at Home

"JEWEL" work—it sounds interesting, does it not? It surely is all that and more. In fact, it is so fascinating, once begin it, you will be planning a Christmas present for most everyone you know, bejeweled by your very own handiwork. There is simply no end to the pretty things one can make for the home with just sealing wax and a few colored glass jewels—and the cost is so trifling compared with the looks.

How to do it? Well, here are the directions which follow closely if you want the reward of perfect results. One can pick up such attractively shaped little wooden boxes or picture frames for a few pennies or perhaps you have been treasuring a cunning box or frame wondering "what to do with it." Here's your chance to transform it into a "thing of beauty and a joy forever." In this jewel work you cover your article roughly with melted sealing wax. This is done by melting one end of the stick of wax over a flame until it is very soft. Then dab it on your box or other article until the whole thing is covered roughly. Right here let there be a word of caution. Never under any circumstances attempt this work on a celluloid foundation. The hot wax must be wood or tin, never celluloid, for it is inflammable and even if not in direct contact with the flame, it catches on fire when too near heat. Most everything is familiar with the handling of sealing wax and it therefore may not be necessary to remind that a simple little wax taper in a candlestick will be a good base to catch the melted wax dripping, or a wax alcohol stick as used in pyrography work is sufficient, no large blaze being required. Remember always, "Safety first."

Bejeweled Handiwork.

After the box or other article, a tray, a frame or a jewel case perhaps, of wood or tin, but never celluloid, is covered with sealing wax, one begins on the top design. Dab more wax where you want your jewels. Insert them one at a time, by pressing each in its little pile of soft wax. Take your spatula (thin, pliable knife), heat it over the flame and, carve the wax around the jewel to form a setting. One can trace or stamp a design on the box, say a Chinese dragon as the motif on the box in the picture shown, or a floral patterning, setting jewels in the center of each flower as has been done on the frames in this illustration. Any colors can be used, but the bronze waxes are the prettiest.

A frock which glorifies the material of which it is made, is the designer's joy and pride this season. A simple silhouette accomplished through an intricate handling of the fabric especially distinguishes the popular velvet frock, also those of solid colored georgette. To be sure, when trimming is conspicuous for its absence, there must be details to supply its place, and genius is admirably answering the challenge. Unique necklines is one way the stylist has of adding a note of interest, then there are unusual sleeves, multitudinous tiers on skirts, graceful blousings to the waistline, not to mention profuse shirring which is one of the dressmaker's chief assets this season.

Speaking of interesting necklines, the late idea is for huge cape-like collars. Of course these require supple fabric for their styling. The collar or capelet treatment lends itself accordingly to a georgette frock such as the picture shows. In this dainty afternoon dress the designer depends entirely on fabric for effect.

The idea of many ruffles or tiers on the skirt obtains in endless versions throughout the mode. The latest is the ruffled velvet frock. At first thought this sounds impossible unless one is acquainted with the new velvets, which are as supple and easily manipulated as the sheerest chiffon.

Fabric this season makes an eloquent plea through color. Again velvets triumph in this respect. Queen Marie blue and Rumanian purple pay compliment to the royal visitor we have with us. Beige velvet is also very highly regarded and as for black, the woman who owns not a black velvet gown this season will be the exception, not the rule.

For evening chiffon is a desired fabric. There are any number of black chiffon frocks.

JULIA BOTTOMLEY.

Stylish Afternoon Frock.

Success in Business

Behind every business that keeps up with the times is somebody who keeps ahead of them. Successful business is not a mere happenstance, but the product of brains, enterprise, courage, even risk. It indicates a big man whose success it is.—Grit.

Heavy Coffee Drinkers

In the Scandinavian countries are the greatest coffee drinkers. They drink coffee not only at all meals, but also between meals.

Waistlines Rising

The waistline is coming up, there is no doubt about it, and the molded blouse and full skirt for evening are one of the agents that is raising it.

Skirts Creased Like Trousers

The tailleurs are becoming more masculine even than the Eton bob. The newest of the suits of this character have striped gray skirts with an inverted pleat in front, and a tuxedo jacket in black worn over a plqué vest and a pleated silk blouse. The skirts are creased at either side of the plait like a man's trousers.

Return to Suede

After so much reptile skin and mottled leather for pumps, there is a tendency to return to suede in both black and the brown shades.

Velvet Linings

Some of the fall models in coats have linings of velvet.

Suggestions for Holiday Shoppers

Amusing School Bags

Coarse canvas, in two colors, or some other that is sturdy is required to make this school bag. This particular bag, designed for the small beginner on the road to learning, is decorated with the beloved three bears who once upon a time went out to walk. They are cut from black oilcloth and their features and other details are sketched in with white paint. The figures are stitched to the background along the edge but the top of pups bear's head is left free so that he serves to carry pencils. Baby bear's wagon is a little coin purse.

Found in Santa's Pack

There would be something wrong about Santa Claus' pack if it failed to carry plenty of rag dolls. There are scores of them, like Raggedy Anne and Skeezix and many more that are just plain dollies, dressed in familiar clothes, that may be taken off and put on—the more the merrier.

Those dolls may be bought printed on cloth, ready for making. Except for shoes, the clothes are homemade.

Welcome Phone Screens

There are many ways of making pretty telephone screens, and they are acceptable gifts. The simplest are made with figured crepeline for covering, and plain sateen for lining. The crepeline is stretched over a foundation of very thick cardboard, and the screen over a like foundation of thin cardboard, with stainless pins to fasten the fabric to place. A narrow strip of cretonne forms hinges.

Collar and Cuff Set

Organdie in white, bordered with a color, is used for this up-to-date collar and cuff set. The inside edge of the border is finished with a tiny white cord, couched down, and the outside with dot or tatting. The border is cut to fit the pieces and they are all stitched to a narrow bias fold of the white organdie.

Comfy Bed Jacket

This bright and soft bed jacket does not look as if it were fashioned of little more than two straight lengths of loosely knitted, fine wool yarn, but it is. The outer length is of Argentinian red, the lining in white. They are joined by the crocheted shell stitch and red with finishes all the edges. Little clusters of gay yarn flowers are posted on the sleeves and collar and there is no member of the family who will not enjoy this comfy gift.

Drugs Excite the Kidneys, Drink Water

Take Salts at First Sign of Bladder Irritation or Backache

The American men and women must guard constantly against kidney trouble because we often eat too much rich food. Our blood is filled with acids which the kidneys strive to filter out; they, weaken from overwork, become sluggish, the eliminative tissues clog and the result is kidney trouble, bladder weakness and a general decline in health.

When your kidneys feel like lumps of lead; your back hurts or the urine is cloudy, full of sediment, or you are obliged to seek relief two or three times during the night; if you suffer with sick headache, or dizzy, nervous spells, acid stomach, or if you have rheumatism when the weather is bad, begin drinking lots of good soft water and get from your pharmacist about four ounces of Jad Salts. Take a tablespoonful in a glass of water before breakfast for a few days and your kidneys may then act fine.

This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and has been used for years to help flush and stimulate clogged kidneys, to neutralize the acids in the system so they no longer are a source of irritation, thus often relieving bladder disorders.

Jad Salts is inexpensive, cannot injure, makes a delightful effervescent lithia-water drink and belongs in every home, because nobody can make a mistake by having a good kidney flushing any time.

Thanksgiving, 1621

THERE are many holidays, but of all the holidays observed in this country none is more distinctively American than Thanksgiving. It is a legacy of the Puritans, cherished because of the romance and traditions which surrounded it.

Thanksgiving as we have come to know it is an American institution, but days of thanksgiving in celebration of special events and favors have been common to almost all nations and have been known since the earliest times. We cannot even guess, much less know, what primitive people of a forgotten age first gave thanks in their crude, superstitious way for rain after drought and for food after famine.

It appears that the Israelites were among the earliest people to observe a special day of thanksgiving. They observed, faithfully, with great rejoicing and solemn ceremonies, their Feast of Tabernacles, a day of thanks not only for the bounties of the land, but also for the escape from Egypt.

The feast of tabernacles shall thou hold for thyself seven days, after that thou hast gathered in the produce of thy threshing-floor and of thy wine press—Deuteronomy 16:13.

The ancient Greeks also had a day of thanksgiving, known as the Feast of Demeter. This nine-day feast was in honor of Demeter, goddess of the field and harvests, and was meant, very obviously, as a day of gratitude for the richness and bounties of the harvest. Sacrifices of fruit, wine, honey, and milk were made. The Romans appear to have had a similar festival called Cerelia, a time of rejoicing and thanksgiving.

Gave Thanks in England.

In England, as in other countries, it was customary to hold special days of fasting and prayer in times of danger, of famine, of pestilence. When the danger was past, when there again was plenty of food, plenty of water, no ravaging diseases, feasts and celebrations would be held by the people. These celebrations were fundamentally thanksgiving festivals. A special day of thanksgiving was proclaimed by Oliver Cromwell at the time of the defeat of the Spanish Armada. Another day of thanksgiving was declared on the day that the famous gunpowder plot was discovered.

Among the Siamese there is an old festival known as the "Swing Festival," which is similar to our own Thanksgiving. Its purpose is to show gratitude for the richness of the land, the happiness of the people. In this festival the unmarried sacred white elephant of Siam assumes a prominent part. But although there have been many days of thanksgiving, and although many festivals like our own November holiday exist in many parts of the world, America was the first nation definitely to set apart one day in each twelfth month for the sole purpose of rejoicing in the good things of life and "giving God thanks."

All of us know the appalling hardships that the first settlers of America were forced to endure. A handful of homesick men and women, in a strange, bleak country, Indians ever threatening, food scarce and home across many long miles of ocean. No—home here, for they could not return to the land from whose intolerance they had fled.

In the first year, forty-six of the one hundred and one white people who settled in Plymouth died and were buried on the bluff overlooking the landing. But in the autumn of 1621 the remaining men of Plymouth gathered in a wonderful crop from the twenty acres of corn and six acres of barley and peas that they planted. And the cold weather brought plenty of game into the harbor. Plenty of food—and a great new hope in the hearts of the wanderers.

Friendly Massasoit Attends.

Governor Bradford gave directions that a day of thanksgiving be held on December 13, 1621, to give thanks for the great blessings that had been bestowed upon them. The feast was prepared including "as much fowle as with a little helpe beside, served the company almost a week." Friendly Massasoit, with his ninety Indian braves, was invited to the feast, and they came in all their holiday finery and feathers. Of white men and women there were only fifty-five at this first Thanksgiving.

Although Thanksgiving did not then become a regular yearly festival, our own Thanksgiving, which we observe every November, is a direct legacy of that historic feast with the Indians. Just when Thanksgiving became a fixed annual festival in New England has not been definitely established.

On February 22, 1630, a great public Thanksgiving was held in Boston by the Bay colony. It was in celebration of the safe arrival of the ships bringing food and friends from across the ocean.

As clearly as can be established, there were about twenty Thanksgiving days from 1630 to 1680—one every two or three years. In 1675 when the Indians attacked the settlers and engaged them in widely separated warfares there was no Thanksgiving. In 1742 there were two such festivals.

It was not until after the Revolution, when congress adopted the Constitution in 1789, that Thanksgiving was definitely established as a yearly day of festivity. Just before the congress adjourned one Boudinot moved that a day be recommended for universal thanksgiving. The motion was carried, and Washington appointed Thursday, November 26, as the "National Thanksgiving-day."

For a period the holiday was observed faithfully, but somehow a break occurred, and one by one the stated begin to observe the day of Thanksgiving at different times. Just before the war between the states each state had a different day on which it celebrated Thanksgiving, but all these days were in November.

Lincoln Fixes a Day.

Reaffirming Washington's original intention, Abraham Lincoln in 1860 appointed a national Thanksgiving day to be observed the last Thursday in November. And so it has remained ever since.

The first Thanksgiving was unquestionably held in the winter of 1621, and was a simple expression of gratitude. There are some writers, however, who attribute the establishing of Thanksgiving to a different cause. It seems to be a common notion that "to the mind of the Puritan, Christmas savored of the leaven of idolatry," and that the Puritans abolished Christmas as a hateful relic of paganism, substituting Thanksgiving as a purely Puritan festival to take its place.

Wanting a day to replace Christmas, says one writer, the Puritans "appointed every year some day in autumn, generally in late November, as a day of solemn prayer and thanksgiving for the blessings of the year, and especially the bounties of the harvest."

According to this belief, Thanksgiving was simply a day of rejoicing and family reunion in November instead of December. The Puritans ate turkey, Indian pudding and pumpkin pie instead of the "superstitious meats and plum pudding" of Christmas time. But, we are told, the influx of Roman Catholics and Episcopalians brought Christmas and its customs into vogue again, and both holidays were accepted.

The distaste of the Puritans for Christmas may very possibly have helped to establish Thanksgiving as a national holiday. Years earlier in England the Puritans prevailed upon parliament to prohibit the extremely elaborate Christmas festivities then in vogue. Christmas was declared a day of fast, and festivities were prohibited by law. But we can be absolutely certain that Thanksgiving had its true inception in 1621, when fifty-five grateful men and women, surrounded by ninety painted Indians, gave thanks for the corn and fowl upon which they feasted.

Turkey and Pumpkin Pie.

Pumpkin pie and turkey are associated with Thanksgiving because both of these palate-tickers were headliners on the first Thanksgiving bill-of-fare. Cranberries also appeared, they having been gathered from the nearby marshes.

Thanksgiving is a time of great social activity. The Puritans invited Massasoit and his gang of ninety to the feast. The heroes today invites a houseful. Somehow one feels more strongly at this time of year than at any other that the urge to give, to share, to be hospitable.

Before the war between the states it was a regular custom for families to hold great reunions on Thanksgiving. The children came from school; the married sons and daughters came with their families; aunts, uncles, cousins, friends, everyone came to the great turkey-carving. During the war and for a time afterward this custom died out, but later was revived. Today many families, both in the cities and in the country, still observe this old custom of reunion on Thanksgiving day.

The custom of making up baskets of food for needy families originated early in the Eighteenth century and was started by a group of young women who determined to set aside one day of the year to be devoted to purposes of charity. They selected Thanksgiving as the most opportune time. Today this custom survives in certain sections of the country, but the charity at Christmas time has replaced it in many communities, especially in the cities where newspapers have regular Yuletide campaigns for Christmas charity funds.

Every hostess knows that at Thanksgiving good food is as important as good fun, and that all other considerations hold but second place to what the table has to offer. A fowl of some kind is inevitable, and there is nothing like a great pumpkin pie for Thanksgiving atmosphere.

Hints for the Hostess.

Remembering the background on which this first of our purely American holidays is built, the hostess plans to have as much good cheer as good cooking. She starts off right by having proper setting. The table decorations, for instance, are simple fruits and vegetables, instead of the customary flowers. For the centerpiece a large pumpkin may be used, banked around with polished apples, autumn leaves and nuts. At each place there may be a scooped-out apple filled with shelled nuts, or perhaps just a lighted candle, if the children can be trusted to be careful. Sometimes a great yellow paper pumpkin is used for a centerpiece, and it is filled with favors for the guests. Green and orange ribbons attached to the favors reach out across the table and end under the service plate.

True to the traditions of the day, the hostess brings forth all her finest and most cherished silver and chinaware. For this is a great day indeed to be celebrated as a jolly old-fashioned affair. It is the one time of the year when everyone likes to linger at the table, browsing in mellow lanes on memory, reminiscing fondly until the last candle has flickered and died.

According to one authority, Thanksgiving is not complete without a pie to be lacking. Lillian Richter in her book, "The Customs of Mankind," quotes the following description of mince pie:

The true mince pie should be an inch thick, with a thin, flaky crust tinted by its imprisoned juices which threaten to break through. Around its edges must be a slight crinkle made by the tines of a fork, and in its top a hole must be there from the stroke of a knife to let the steam out. This steam, you know, can never be forgotten.

It typifies the joyous, generous Thanksgiving spirit, that steaming juicy pie!

These Are the Games.

At the first Thanksgiving the Indians entertained with weird dancing, pantomime, feats of skill. The others, according to Edward Winslow, "among other recreations . . . exercised our arms." For three days they feasted and made merry, and somehow that spirit of jollity has hovered about the holiday ever since.

An old Thanksgiving game is called the cranberry contest. A large bowl of cranberries is placed on the floor and around it are seated from four to ten contestants. Each one is supplied with a spool of thread and a needle. At a given signal they thread the needle and begin to string the cranberries into a necklace. At the end of three minutes the one who has made the longest necklace is awarded the prize.

The corn game is very old, but it is always popular. Five ears of corn are hidden in the room, and the guests begin a search for them. The five to find the hidden ears are the contestants in the game; the finder hands on. Then at a given signal the five contestants begin to remove the kernels from the corn and drop them in a bowl which has been placed on the floor for that purpose. The one who removes all the kernels in his shortest time wins.

In the old-fashioned pumpkin race, always a favorite, small pumpkins are rolled over a short distance with a spoon. The smaller the spoons the greater the fun. The pumpkins roll this way and that out of line, and must be coaxed back again, but not with the hands.

Suggestions for Holiday Shoppers

Lovely Homemade Shade

Scissor painted and "crystalline" lamp shades are going to shed radiant joy in the homes and hearts of many happy recipients this Christmas. These homemade shades are as beautiful as any that can be bought. They are made of handkerchief linen stretched over a wire frame and decorated with designs cut from printed crepe paper. Here is one in which the flowers are silhouettes in black. After they are pasted on, the shade is painted over with thin transparent amber sealing-wax paint.

Gay Holiday Aprons

Here is a gift—a gay and quaint pinafore, made of brilliant, flowered cretonne, bordered and finished with black. It is prettiest in cretonnes having a black background with many-colored garden flowers blooming against it.

Useful Silken Ladies

Everywhere in the shops this year there are dainty and fascinating blouse ladies with dignified coiffures and pretty faces, waiting to be dressed in sprightly silk skirts. These doll torsos are made in several sizes and are used as slander over electric lights or posed over telephones, bonbon or work baskets and pincushions. Wide taffeta ribbon clothes the blond beauty pictured and the tiniest ribbon flowers adorn her bodice.

Parchment Torcheres

Among other unique devices for softening electric lights are the fashionable parchment torcheres which may be bought ready for painting. They may be tinted with soft yellows and reds blended together, or decorated with floral or other decorations. One who is not clever at painting can get beautiful effects by cutting out designs from crepe paper, pasting them on the torcheres and then painting over the entire surface with transparent sealing wax.

To Delight the Baby

Mister Chicken is intended to delight the baby and this soft gentleman is cut out of turkish toweling, stuffed with cotton and tinted with watercolor paints. His features are done in black and he wears a collar and gay tie of ribbon.

THE KITCHEN CABINET

(©, 1928, Western Newspaper Union.)

Out of the air a substance,
Out of the mind a thought,
From the dim unknown
A hidden fruit—
And a miracle is wrought.

This is the world of science;
Nothing is left to chance.
But science is born
And bred of dreams,
And her spirit is romance.

SEASONABLE GOOD THINGS

This is the time of the year when we enjoy spicy pickles, the rich puddings and the tasty sauces. A pudding which never loses its popularity, but is made in many ways is:

Nesselrode Pudding—Soak one-half a box of gelatin in one cupful of water until soft. Put a pint of milk to heat in double boiler. Beat the yolks of five eggs with two-thirds of a cupful of sugar and add the hot milk. Put a dozen crushed macaroons, one-half cupful of blanched almonds and two thirds of a cupful of candied raisins to cook in a double boiler until thickened, stirring constantly; add the soaked gelatin, five drops of almond extract, one teaspoonful of vanilla and set in a cold place. When it begins to stiffen, fold in the well beaten whites of the eggs. Mold and serve when firm with flavored sweetened whipped cream.

Nesselrode Pudding.—This is the recipe which is best known and liked: Make a custard of three cupfuls of milk, one and one-half cupfuls of sugar and the yolks of five eggs; cook, strain and add one-half teaspoonful of salt, one pint of thin cream, one-fourth of a cupful of pineapple syrup and one and one-fourth cupfuls of chestnuts that have been shelled and cooked in boiling water until soft, then forced through a strainer. Line a melon mold with part of the mixture, to the remainder add one-half cupful of candied fruit cut into small pieces, one-quarter of a cupful of raisins and eight chestnuts broken into pieces and soaked several hours in syrup. Fill the mold, cover, pack in ice and salt for several hours. Serve with whipped sweetened cream flavored with syrup.

Stuffed Baked Onions.—Parboil until tender large onions, remove the centers and fill with chopped ham, bread, egg yolks and seasoning well blended. Baste while baking, serve with a cream sauce.

Helps for Housewife.

Cut glass should be washed and rinsed in water of the same temperature, not very hot.

If chicken is rubbed inside and out with a slice of lemon before being cooked it will make the meat white, tender and fine flavor.

The best flour is slightly yellow in color and feels grainy when rubbed in the fingers.

When cane-bottomed chairs begin to sag sponge them with hot soap suds, using care not to touch the woodwork. Let dry out of doors, then cover with a cloth and apply a hot iron. This will shrink the cane and make them firm again.

Milk and batter will quickly absorb odors. Ice chests should be thoroughly washed once a week and if anything is spilled should be wiped up at once.

Never put eggs of the egg beater or handles of wooden or ivory knives in hot or cold water. Wash and wipe at once. Knives will keep for years as bright and fresh looking as new if they are never left in water.

To shell chestnuts—Cut a half-inch gash on the flat sides of the nuts and put them into an omelet pan, allowing one-half teaspoonful of fat for each cupful of nuts. Shake over the range until the fat is melted, then put into a hot oven and let stand five minutes. Remove the shells with a sharp knife and the skin will adhere to the shells, saving the process of blanching.

All flavoring extracts should be added to a mixture when cold, if possible.

To prepare meat glaze reduce four cupfuls of stock to one cupful.

To prepare acidulated water use one tablespoonful of lemon juice or vinegar to a quart of water.

To blanch almonds—Cover almonds with boiling water and let stand two minutes, drain, cover with cold water and rub off the skins.

To make caramel—Brown dry sugar in a smooth frying pan until a whitish smoke arises from it, add an equal quantity of boiling water and simmer until of the consistency of thick syrup. Of use in coloring soups and flavoring sauces.

To prevent lumping of any sauce, mix the flour with butter or sugar if used, before adding liquid.

To wash mirrors or windows use a wet chamois skin and wipe with a dry one.

To extract onion juice—Cut a slice from an onion and place the cut side against a grater with a rotary motion; the juice will flow down the grooves of the grater.

When buttered crumbs are desired, soft butter and salt the crumbs, stirring until all are evenly blended. This is much better than putting dabs of butter over a crumbed dish, as the butter is evenly distributed.

INSIST UPON KEMP'S BALSAM for that COUGH

Friendly Crow

While Henry Haskell of Brattleboro, Vt., was giving his little granddaughter, Marilyn King, an airing in her carriage, some one's tame crow hopped aboard and rode. The bird stole a cookie out of the baby's hand, jumped down and ate it, then hopped back, cocking its head from side to side to see if she had any more.

Don't Let That Cold Turn Into "Flu"

That cold may turn into "Flu," Grippe or, even worse, Pneumonia, unless you take care of it at once.

Rub Musterole on the congested parts and see how quickly it brings relief.

As effective as the messy old mustard plaster; does the work without blister.

Musterole, made from pure oil of mustard, camphor, menthol and other simple ingredients, is a counter-irritant which stimulates circulation and helps break up the cold.

You will feel a warm tingle as it enters the pores, then a cooling sensation that brings wonderful relief.

Jars & Tubes

MUSTEROLE WILL NOT BLISTER

Better than a mustard plaster

So Why Worry?

Hodgen—I'm afraid to go home for fear that I'll get myself into hot water.

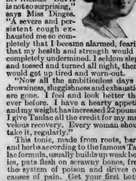
Jewell—Nonsense! This isn't Saturday night.

A huge volcanic crater in the middle of a glacier was found recently in Iceland.

If all the talkers were fighters the world would soon be depopulated.

Girl Regains Buoyant Health

Wracked by a Cough, Worn Out by Sleeplessness With Strength Undermined, Charming Belleville Girl Restored to Good Health by Tanlac. Gains 22 Pounds.



The amazing recovery of Miss Calherine Dugas, 400 South Second St., Belleville, Ill., has excited a great deal of comment among her friends. "For a time," she says, "I was in such a serious condition that I became alarmed, fearing that my health and strength would be completely undermined. I seldom slept, and tossed and turned all night, then I would get up tired and worn-out.

"Now all the ambitionless days of drowsiness, sluggishness and exhaustion are gone. I feel and look better than ever before. I have a hearty appetite and my weight has increased 22 pounds. I give Tanlac all the credit for my marvelous recovery. Everybody should take it, regularly."

Tanlac, made from roots, barks and herbs according to the famous Tanlac formula, usually builds up weak bodies, puts flesh on scrawny bones, frees the system of poison and drives out the cause of pain. Get your first bottle from your druggist—today!

How Doctor Works Self Out of Job

The medical profession is the only one where good and efficient work tends to reduce the prosperity of those in it, says Medical News. The plumber does a good job, but corrosion in his ally and soon he must come back to repair the pipe he installed last year. The lawyer wins the case, gets paid for writing up the agreement and makes sure work for himself by writing it in such a way that, in case of dispute, he stone can interpret what he has done.

But the good and worthy doctor cheats himself every time he does a good job. He improves the sanitary system of a town—and loses a few hundred potential typhoid cases. He discovers, as Pasteur did, the germ theory, and immediately reduces his number of future customers.

All of which is good, right and proper, but is perfect accord with the noble and high aims of the professions. But doctors tell us it is getting tougher and tougher every day to make a living, to say nothing of a competence, in a field where good work cuts down the chances for future livelihood.

The Zither

This instrument is really a compound of the lute and guitar. The harmonies of the harp are produced from it, and it has the delicate tones pertaining to both instruments. The number of strings varies, some zithers having as many as thirty. It is plucked either with the fingers or with a small hook worn on the thumb of the performer.

Clean Before Painting

Surfaces which are to be painted must be clean and dry. Dust must be brushed or washed off and grease whitewash and water paints must be removed.

Every Inch a Real Home
Is This Colonial Type

A LIVING-ROOM forty feet long—that is practically what one has in this exceptionally well planned Colonial house. The living-room extends on one side into the dining-room, set off only by two small china closets, and on the other into the sunroom. The whole effect is one of spaciousness and hospitality.

Another outstanding feature is the downstairs bedroom, which—out be used as sick-room, guest chamber, playroom or sewing room, as occasion arises. The stairways are compactly arranged and well out of sight. There are closets and storage space enough to please the most acquisitive housekeeper.

White, cream or grey paint may be used on the siding with shutters, trim and roof in harmonizing colors. The walls and roof are made to resist heat and cold by insulating with cellotex. The cost of building may be kept down by excavating only half of the house, using cellotex to insulate the unexcavated half with a layer of cellotex in order to heat the house easily in the coldest weather. A further saving may be effected by finishing off the walls of the second floor rooms with cellotex instead of lath and plaster. The cellotex is finished with a dainty stencil such walls are extremely effective and durable.

© Celotex Industries, Chicago, 1926.

WORLD TALENT

(Concluded from Page One)

cerning in literary matters, these titles may sound to you like a waste of time. To venture commendations of the more "important" books is too hazardous a pastime for The Sentinel. But we can enumerate titles. Probably if on our suggestion you discover that a recognized master has turned out a batch of sheer rubbish, you will get as much joy out of rending him to bits as you would in laughing him.

To begin: Among Americans, Theodore Dreiser provides more juicy contention than any author living, no doubt. Some loudly acclaim him the greatest master of all; others shout that he is a low-minded bum. So his books always get much publicity; and his latest one, "The American Tragedy," came after such a long silence that it made a beautiful literary brawl when it did arrive. You can be sure of one thing. Dreiser will give you some vivid pictures of the human mind up to its usual scullduggery, and of the doings of Americans who are not too nice. Don't boast your knowledge of contemporary fiction unless you have an opinion of the "American Tragedy." It has just been dramatized.

Other books, important because of their sources, are Galsworthy's "The Silver Spoon," with these Forsytes who seem to go on forever; Walpoles "Portrait of a Man With Red Hair," sure to be a contrast for "The Silver Spoon;" "Thunder on the Left," by Christopher Morley; "Soresell & Son," by Warwick Deeping; "The Show Boat," by Edna Ferber, which is said to libel Tom Taggert and some other sporting Americans; and last, but as important as the best, "The Professor's House," by Willa Cather, which is bound to be a master's work whether you like it or not. If you like the modern biography —narrative, engaging and telling tales—there is the mysterious E. Barrington and his, or her, "Glorious Apollo" and "Exquisite Perdita."

Whether you find any of these good or not is your winter evening's adventure—a sporting proposition. Take or leave it. But that bulletin board over in the library does look inviting.

BREST-LITOVSK MAY BE RECONSTRUCTED

American Funds Offered to Rebuild Polish City.

Washington.—American funds have been offered for the restoration of another war-ravaged European city—Brest-Litovsk, Poland, according to a news report from Warsaw.

Brest-Litovsk, which is famous for the separate treaty which representatives of Soviet Russia and Germany signed there, today consists of a fine, confused cluster and practically nothing more. Buildings which housed 70,000 people were laid waste and the large refugee population lives principally in caves and huts.

"Before the war Brest-Litovsk was one of Russia's most important trading centers and fortresses on her eastern borders," says a bulletin of the National Geographic society from its headquarters in Washington.

Center of Communication Web

"Complete restoration of Brest-Litovsk would mean recreating a city busy with hauling, selling, carrying and transferring the products of a large agricultural region. Railways from Odessa, Kiev, Moscow, Warsaw, Vilna and East Prussia intersect at the lonesome new railroad station at Brest-Litovsk; it is more than a railway station. It lies upon the inland waterway from the Baltic to the Black sea. A canal east of the city connects the Bialowieze river and the Bug river, which are, respectively, the city's waterway arms reaching from the north and south toward each other. Thus the city is served by a complete system of communication, extending in all directions.

"Brest-Litovsk lies 100 miles due east of Warsaw. Normally built its population is over 70 per cent Jewish, but a long has been a Jewish stronghold. It never developed an industry, but depended instead upon commerce. During the Sixteenth century the synagogue of the city was regarded as the first in Europe.

"Grains, hides, soap, wheat and timber were the staples of its extensive trade. The lumber in which it dealt was floated in great rafts down to Danzig. Flax, some of which went to Ireland and Belgium to make Irish and Flemish linen, was extensively grown in the country surrounding the town and formed another important article of its trade.

"The familiar geographic reason for the existence of a town, namely two rivers meeting, gives Brest-Litovsk its excuse for being. The navigable Bug and Muchlovets rivers join and at the point of confluence once stood the city fortress. Older fortifications were east of the city and covered four square miles. The defenses were the pride of Russia.

"But the World war showed what history had been reporting for years: that Brest-Litovsk was far from invulnerable. It was first mentioned in ancient documents on the occasion of the capture by a Polish monarch in 1020. Next Casmir the Just of Poland built a tight castle. Princes of Galicia, Vidyania, Lithuania, grand masters of the Teutonic Knights, Tatar chieftains and kings of Poland held and stormed the city in turns, and each time it gathered spoil from the countryside.

Climax of Russian Tragedy.

"All of Brest-Litovsk history, however, records no such high moment as it experienced late in 1917. Things looked black for the allies. Russia, which had been holding Germany on the east, had collapsed internally under the pressure of war. Kerensky, who still espoused the allied cause, was soon displaced by the Soviet regime. Germany had driven deep into Russian territory. With this set-ting the last act of the Russian tragedy took place in Brest-Litovsk, which by that time had degenerated into a war camp and nothing more.

"At the headquarters of Prince Leopold of Bavaria, Soviet representatives signed a separate peace with Germany which put the entire burden of carrying on the war on England, France, the United States, Italy and their allies."

Deep Reasoning Seen in Childish Sayings

I know a certain mother who has made a collection of the bright sayings of her small son, a young gentleman now three years old. Little Gerard, impregnated with the salt of Paris, never lets a day pass without some ingenious and astonishing observation on life and the customs, and there runs through all his chronicle and words the evidence of a rather unusual mental functioning.

The other day, for example, Gerard, dogging his father in accompanying him to the Jardin des Plantes (the Paris zoo), remarked with a protecting air: "You must come with me and hold my big bear. You can give me your hand and he won't hurt you, because he knows me."

Materialie, a pedagogical review of child culture, publishes a collection of children's sayings. They are not extraordinary as a whole, yet all reveal the mechanics of reasoning and how the thought is born of the competition of impressions. The most interesting of these child thoughts are the ones which show the background of human psychology. There is one especially which delighted me.

Jack, who plays on the front lawn when someone rang the door bell—a lady visitor. Jack's mother appeared and, observing that the child's frock was astonishingly dirty, exclaimed: "Why Jack! How did you get yourself that dirty dress?"

"What's the use?" inquired Jack. "She's already seen me."

The response, in a sense, is worth its weight in gold. Not to be seen in one's dirty frock—what a fruitful theory it is! How many persons would neglect their appearance if they were not afraid of being seen in that condition! How much value the fear of keeping an eye on each other, for, thanks to this fear of being seen, we conceal our stains, both moral and internal.—Louis Forest in Le Motin (Translated for the Kansas City Star).

Power From Niagara

While cities and towns all over the St. Lawrence river water power proceed at the state capital of New York, the greatest St. Lawrence power development of them all—at Niagara falls—steadily produces vast amounts of energy day that is used all over the Northeast. Whereas forty years ago the total power produced was 2,000 horsepower, today the total rated capacity of machinery generating electricity by the aid of falling water at and near the famous falls is 1,400,000 horsepower. Only about 1,000,000 horsepower of this is at work, because of limitations upon the use of Niagara water power imposed by the power treaty between the United States and Canada, but 1,000,000 horsepower is enough to represent a vast amount of work for the people of this country.

Largest Snake on Record

The longest snake of which there is authentic record, a specimen recently captured in Malaysia and shipped to the Tierpark at Hamburg, Germany. This snake died immediately after reaching port, and was stretched on the floor of the morgue and measured by Dr. Arthur Irwin, then director of the Philadelphia Zoological society. It measured over 30 feet from one end to its length and weighed close to 300 pounds. This species, the reticulated python (Python reticulatus) is the largest species of serpent, it is alleged to attain a length of 40 feet. The South American anaconda is also alleged to attain a similar length, but Raymond Ditmars, curator of reptiles at the New York Zoological park, doubts very much if it ever grows longer than 25 feet.—Pathfinder Magazine.

Pastor's Unique Idea

Two hundred of the 950 couples married by Rev. Stanley B. Roberts during the 10 years he has been pastor in Minneapolis, Minn., were invited to attend a reception given by the pastor and his wife. Couples who are grandparents, down to newly-weds of age to marry, will mingle in the evening's entertainment. Games of the kind that they played in the days of their courtships will be played. Refreshments will be served.

ROAD BUILDING

FIRM FOUNDATION IS BIG ESSENTIAL

A firm foundation and a hard, tough-wearing surface are primary essentials of a good road. Whatever surface is selected, the foundation of the modern highway must be able to stand up under heavy motor-truck traffic. Foundation materials must be so firmly bound together that no amount of pounding will be able to loosen them. The old gravel and macadam foundation stood up well enough under horse-drawn traffic. Heavy motor-truck and automobile traffic, however, simply pounds it to pieces. Unless made of a hard, tough substance the impact of modern traffic will loosen up the entire bed, and drive the loose gravel or stone into the mud beneath.

A hard base, at least six inches thick, is required on all roads subjected to frequent motor traffic. Such a base will successfully withstand the destructive impact of heavy trucks. Its aggregates are so finally bound together by the cement that they cannot be loosened. With a solid base, the wearing surface will have a firm, even foundation, which will insure a "top" that will not be full of holes due to the foundation being broken and pounded into the subgrade.

An inspection of the 1917 report of the state highway department of New York reveals the fact that road maintenance costs depend upon the character of the base. All the bituminous or asphaltic concrete surfaces were laid on a macadam base show very high maintenance costs, while those which are laid on a concrete base show very much lower maintenance.

The modern traffic requires at least a six-inch concrete base is recognized by almost all road builders. The superiority of concrete as a surfacing material as well as a foundation material is reflected by the increasing acreage of hard pavement laid annually. Road builders realize that the additional cost of other surfacing materials is unnecessary. Concrete has stood the test, and its supremacy as a roadbuilding material for both wearing surface and foundation is well established.

Novel Advertisement

Of all the unusual means of advertising we think one of the most unusual methods is that used by a friend of ours, a large button manufacturer. He wears a very large dinmond necktie pin. He has the five-cent diamond stone dangling from the necktie pin in such a way that it seems just about to fall off. People who stand next to him on the sidewalk are quite likely to stop him and say: "I beg your pardon, but you are losing your stone pin." "Well, that is very good of you. I am very grateful. Will you not accept my card?" The card bears his name and an advertisement of his button company. He keeps the diamond hanging by an invisible chain at all times and finds that this is the best method of introducing himself and his product.—The Outlook.

Thames Has Double Ebb

It is a rare thing that an interesting happening entirely escapes the eye of the press, but recently such an event was unrecorded. London river, the river on the empire, enjoyed a double ebb and flow of its tide and no one said a word about it. Such a manifestation is certainly a curious one and not always explainable. But before the Thames was embanked its vagaries in the Seventeenth and Eighteenth centuries were pretty frequent, for in 1808 it ebbed and flowed twice in three hours, and in 1662 three times in four hours—a sergeant major's utterance which has never been surpassed.—Manchester Guardian.

All Good Thoroughfares Well Worth the Money

Middle-aged men, remember when there was a bicycle club in nearly every enterprising city, and road scraps were sent out once a week, to scrape a path along one side of the dirt highways smooth enough for cyclists to ride on in comfort, until it rained again. There were no paved roads. There were few macadam roads.

More than $1,000,000,000 are being spent in building roads through the country this year. More will be spent next year. The automobile club, replacing the bicycle club, keeps plugging for that, with help from motorist and even the pedestrians—if there are really any such persons left.

Everybody who knows anything knows the importance of good roads now. Yet there is always a question how far to go. Many good and intelligent men hesitate, again and again, hard, long and bitter the impact, of a modern traffic will loosen up the entire bed, and drive the loose gravel or stone into the mud beneath.

Convicts Struggle for Lead in Road Building

Prisoners from California's two state institutions have entered a race believed to be unique in the annals of road-building history. Under the direction of the California state highway commission, the convict camp from San Quentin is pitted against the camp from Folsom prison in a competition to be first to complete state roads into Yosemite National park.

San Quentin camp is seeking to finish the last seven miles of new state highway leading into Yosemite in Merced county. The Folsom gang is now completing grading of eight miles of state highway in the Kern river canyon.

The rival camps present the unique spectacle of state prisoners enthusiastically vying with each other to unlock the world famous Yosemite valley to motorists by a water-level highway that, it is believed, can be traversed at all seasons of the year.

Convict labor on highways has been in successful operation in California for some years.

Learn One Word a Week

Our new word this week is "punctation." Very few persons are acquainted with this word, although it is right there in all the good dictionaries. "Punctation" is a fancy word for "delay" or "tardiness." A teacher, rebuking a pupil who is habitually late to school, may properly say to said pupil: "It grieves me to find that you are falling into a habit of punctation." Another way to put it is: "Of late you have grown intolerably punctatious; this must stop."—Exchange.

New One on George

Junior is seven and Dick is six. The former is rather quick-witted and had been escaping his just deserts for many of his mischievous pranks. It was George Washington's birthday, and a visitor was asking him about the great man, particularly about the cherry tree incident.

"Why did little George tell his father he cut down the cherry tree?"

"I suppose it was because he didn't have a little brother to blame it on," was the unexpected reply.

Moon's Center of Gravity

The center of gravity of both the earth and the moon, or the point about which they both actually revolve in their course around the sun, lies within the earth. It is 1,050 miles below the surface. The tides are caused mainly by the moon.

ORDER FOR HEARING

Order for Publication—Final Admistration Account

STATE OF MICHIGAN—The Probate Court for the County of Charlevoix.

At a session of said Court, held at the Probate Office in the City of Charlevoix in said County, on the 12th day of November, A.D. 1926.

Present: Hon. Servetus A. Correll,

Judge of Probate.

In the Matter of the Estate of Harrison Berdan, deceased.

It is Ordered, That the 12th day of November, A. D. 1926, at ten o'clock in the forenoon, at said probate office, be and is hereby appointed for examining and allowing said account and hearing said petition.

It is Further Ordered, That public notice thereof be given by publication of a copy of this order, for three successive weeks previous to said day of hearing in the Charlevoix Sentinel, a newspaper printed and circulated in said county.

SERVETUS A. CORRELL,
Judge of Probate.

29-31

MORTGAGE SALE

Default having been made in the conditions of a certain mortgage made by Guy Pearl and wife, Marion Pearl, of Charlevoix, Michigan, unto Charlevoix State Savings Bank, a Michigan Corporation of Charlevoix, Michigan, dated May 21st, 1924, and recorded in the office of the Register of Deeds for Charlevoix county, Michigan, May 22nd, 1924, in Liber 64 of Mortages, on Page 113, on which mortgage there is claimed to be due at the date of this notice the sum of $594.25, including the principal sum due with interest, together with an attorney fee as provided by statute and no suit or proceedings at law having been instituted to recover the money secured by said mortgage, or any part thereof, and whereas, the taxes required by the statute to be paid on said mortgage were duly paid prior to the recording thereof,

Now Therefore, Notice is given that by virtue of the power of sale contained in said mortgage and of the statutes made and provided, said mortgage will be foreclosed by sale of the premises therein described, or so much thereof as may be necessary to satisfy the amount then due thereon together with the costs and expenses of the foreclosure, including the attorney fee provided by statute, at public auction, to the highest bidder therefor at the front door of the Court House in the City of Charlevoix, Charlevoix county, Michigan (that being the place where the Circuit Court for the County of Charlevoix is held), on Saturday the 12th day of December, A.D. 1926, at eleven o'clock in the forenoon on that date.

The premises described in said mortgage being the land and premises and property situated in the City of Charlevoix, County of Charlevoix and State of Michigan, viz: Lots seven and eight except the north fifty feet of Lot seven of J. Milo Eaton's addition to the Village (now city) of Charlevoix, Michigan, according to the recorded plat thereof.

Dated September 9, 1926.

PORTAGE SALE

Notice is hereby given that a certain mortgage dated May fifth, one thousand nine hundred and twenty five, given by Oliver G. Davenport by K. G. Davenport, attorney in fact, and Rowena G. Davenport, wife of Oliver G. Davenport in her own and dower right, to Alfred E. Hass of Ann Arbor, Michigan. Which said mortgage was duly assigned by Alfred E. Hass to Mrs. Verona J. Vincent, Sept. eighth, 1926, and recorded September 14th, A.D. 1926, in liber fifty three of mortgages, on page 530 in the office of the Register of Deeds for the county of Charlevoix, Michigan. Said mortgage containing a clause, wherein it is expressly agreed that should any default be made in the payment of interest, or any part thereof, on any day whereon the same is made payable, and should the same remain unpaid and in arrears for the space of ten days, that after the lapse of the said ten days, the whole of the principal sum aforesaid, with all arrearages of interest thereon, shall at the option of any party of the second part, or his assigns become and be due and payable immediately thereafter, although the period limited for the payment thereof may not then have expired. And whereas default is made in the note contained to the contrary notwithstanding. Now Therefore, Power also being granted to the second party to declare the whole pay the principal thereof, to pay taxes that are in default, to be added to the principal and accrued interest. Therefore the said assignee of the said mortgage will foreclose said mortgage by sale of the premises described in said mortgage, or so much thereof as may be necessary to pay the amount due on said mortgage, with seven per cent interest, and all legal costs, together with an attorney's fee of Twenty five Dollars, as provided by law and covenanted for therein, the premises being described in said mortgage as follows, to-wit:

Lands and premises situate in the Township of Hayes, County of Charlevoix and State of Michigan, viz: East Half of the Northeast Quarter of Section Two, Township Thirty three North, Range Seven west containing Eighty acres of land according to the return of the Surveyor General.

Dated, September 29th, 1926.

FRED S. MYERS,
Administrator of the Estate of
Sarah Jane Myers, deceased.
A. L. FITCH, Attorney Mortgagee
for the Administrator of the Estate of
Sarah Jane Myers, deceased, Mortgagee
Business Address: Charlevoix, Mich. 25-13

MORTGAGE SALE

Default having been made in the conditions of a certain mortgage made by Lide Shanahan and Lisle Shanahan, husband and wife, of Charlevoix, Michigan, to Charlevoix State Savings Bank, a Michigan Corporation of Charlevoix, Michigan, dated May 21st, 1924, and recorded in the office of the Register of Deeds for Charlevoix county, Michigan, May 22nd, 1924, in Liber 64 of Mortages, on Page 113, on which mortgage there is claimed to be due at the date of this notice the sum of $594.25, including the principal sum due with interest, together with an attorney fee as provided by statute and no suit or proceedings at law having been instituted to recover the money secured by said mortgage, or any part thereof, and whereas, the taxes required by the statute to be paid on said mortgage were duly paid prior to the recording thereof,

Now Therefore, Notice is given that by virtue of the power of sale contained in said mortgage and of the statutes made and provided, said mortgage will be foreclosed by sale of the premises therein described, or so much thereof as may be necessary to satisfy the amount then due thereon together with the costs and expenses of the foreclosure, including the attorney fee provided by statute, at public auction, to the highest bidder therefor at the front door of the Court House in the City of Charlevoix, Charlevoix county, Michigan (that being the place where the Circuit Court for the County of Charlevoix is held), on Saturday the 12th day of December, A.D. 1926, at eleven o'clock in the forenoon on that date.

PORTAGE SALE

Notice is hereby given that a certain mortgage dated May fifth, one thousand nine hundred and twenty five, given by Oliver G. Davenport by K. G. Davenport, attorney in fact, and Rowena G. Davenport, wife of Oliver G. Davenport in her own and dower right, to Alfred E. Hass of Ann Arbor, Michigan. Which said mortgage was duly assigned by Alfred E. Hass to Mrs. Verona J. Vincent, Sept. eighth, 1926, and recorded September 14th, A.D. 1926, in liber fifty three of mortgages, on page 530 in the office of the Register of Deeds for the county of Charlevoix, Michigan. Said mortgage containing a clause, wherein it is expressly agreed that should any default be made in the payment of interest, or any part thereof, on any day whereon the same is made payable, and should the same remain unpaid and in arrears for the space of ten days, that after the lapse of the said ten days, the whole of the principal sum aforesaid, with all arrearages of interest thereon, shall at the option of any party of the second part, or his assigns become and be due and payable immediately thereafter, although the period limited for the payment thereof may not then have expired. And whereas default is made in the note contained to the contrary notwithstanding. Now Therefore, Power also being granted to the second party to declare the whole pay the principal thereof, to pay taxes that are in default, to be added to the principal and accrued interest. Therefore the said assignee of the said mortgage will foreclose said mortgage by sale of the premises described in said mortgage, or so much thereof as may be necessary to pay the amount due on said mortgage, with seven per cent interest, and all legal costs, together with an attorney's fee of Twenty five Dollars, as provided by law and covenanted for therein, the premises being described in said mortgage as follows, to-wit:

Lands and premises situate in the Township of Hayes, County of Charlevoix and State of Michigan, viz: East Half of the Northeast Quarter of Section Two, Township Thirty three North, Range Seven west containing Eighty acres of land according to the return of the Surveyor General.

Dated, September 29th, 1926.

FRED S. MYERS,
Administrator of the Estate of
Sarah Jane Myers, deceased.
A. L. FITCH, Attorney Mortgagee
for the Administrator of the Estate of
Sarah Jane Myers, deceased, Mortgagee
Business Address: Charlevoix, Mich. 25-13

LEGAL NOTICES

Order for Publication—Final Administration Account.

STATE OF MICHIGAN—The Probate Court for the County of Charlevoix.

At a session of said Court, held at the Probate Office in the City of Charlevoix in said County, on the 8th day of Nov. A.D. 1925.

Present: Hon. Servetus A. Correll,

Judge of Probate.

In the Matter of the Estate of Harrison Berdan, deceased.

Elra A. Berdan having filed in said court his final administration account, and his petition praying for the allowance thereof and for the assignment and distribution of the residue of said estate.

It is Ordered, That the 2nd day of Dec. A. D. 1926, at ten o'clock in the forenoon, at said probate office, be and is hereby appointed for examining and allowing said account and hearing said petition.

It is Further Ordered, That public notice thereof be given by publication of a copy of this order, for three successive weeks previous to said day of hearing in the Charlevoix Sentinel, a newspaper printed and circulated in said county.

SERVETUS A. CORRELL,
Judge of Probate.

29-31

MORTGAGE SALE

Default having been made in the conditions of a certain mortgage made by Guy Pearl and wife, Marion Pearl, of Charlevoix, Michigan, unto Charlevoix State Savings Bank, a Michigan Corporation of Charlevoix, Michigan, dated May

Order for Publication—Final Admistration Account

STATE OF MICHIGAN—The Probate Court for the County of Charlevoix.

At a session of said Court, held at the Probate Office in the City of Charlevoix, in said County, on the 12th day of November A.D. 1926.

Present: Hon. Servetus A. Correll, Judge of Probate.

In the Matter of the Estate of Mary Albert F. Bridge having filed in said court his final administration account and his petition praying for the allowance thereof and for the assignment and distribution of the residue of said estate.

It is Ordered, That the 10th day of December A.D. 1926, at ten o'clock in the forenoon, at said Probate office, be and is hereby appointed for hearing said account and hearing said petition.

It is Further Ordered, That public notice thereof be given by publication of a copy of this order, for three successive weeks previous to said day of hearing, in the Charlevoix Sentinel a newspaper printed and circulated in said county.

Knocking Mrs. Newlywed

The most satisfactory household appliance or device ever invented was the old-fashioned wife.—St. Paul Dispatch.

ARE YOU GUILTY?

A FARMER carrying an express package from a big mail-order house was accosted by a local dealer.

"Why didn't you buy that bill of goods from me? I could have saved you the express, and besides you would have been patronizing a home store, which helps pay the taxes and build up this locality."

The farmer looked at the merchant a moment and then said:

"Why don't you patronize your home paper and advertise? I read it and didn't know that you had the stuff I have been."

Volume 57 — Charlevoix, Michigan, Thursday, December 2, 1926 — Number 32

ACCOUNTING TO CONTRIBUTORS

What Will Be Done With the Money from Christmas Seals?

Three hundred thousand or a total of almost ten tons of Christmas seal letters, each envelope and all the thousands weighing but two ounces, and each containing a sheet or sheets of tuberculosis Christmas seals, a letter and a return envelope, were put into the mails on the Wednesday night preceding Thanksgiving and were released through the mails on the Friday following Thanksgiving to every city and town in Michigan. Of the total number, 80,000 were released from the offices of the Michigan Tuberculosis Association at Lansing, while the other 220,000 went out from the offices of local and county tuberculosis associations. The returns going out from local and county branches will be devoted to local tuberculosis work, while the returns from those sent out from the state Lansing headquarters will be used all over the state in counties where there is no local tuberculosis work.

Permanent and itinerant chest clinics will be held all over Michigan with the returns from these letters; through the Modern Health Crusade children all over Michigan will be trained in habits of healthy living and the medium of Michigan-Out-Of-Doors, and innumerable pamphlets, and bulletins, health information will be disseminated; through movie and lecture and story, the health message will be spread; social sanatorium beds for the scientific treatment of those suffering from tuberculosis will result from the sale of tuberculosis Christmas seals; additional county nurses will be sent on their merciful mission through the length of the state where where grey-winded men and women, ungide more fully aware of the menace of the disease, will learn how to learn how it can be cured and prevented.

In Michigan the goal set for the seals distribution campaign, Lloyd C. Maier, who has been connected with the seal sale for eight years, is $210,000. In all of the United States the goal is five million dollars, goals which in the belief of officials of the state and national and local associations will not be too difficult of attainment.

DEATH CUTS SHORT THEIR VISITING TOUR

Word of the death of Mr. Hubel, Mrs. C. H. Munyon's father, cut short a series of visits the former had been making November 20, they had gone to Cadillac where they had visited Mr. Munyon's brother, Jay Munyon Coldwater to visit an aunt; and back to Cadillac for Thanksgiving dinner, when word of Mr. Hubel's death overtook them. Arriving in Charlevoix Friday, they left Saturday with the body for burial at Clare, Michigan, returning Monday.

DEATH OF REUBEN D. HUBEL ON THURSDAY

Reuben Dexter Hubel, born April 16, 1851 at Novage, Canada, came to Michigan with his parents when five years of age. On June 9, 1870 he was married to Caroline Farnum of Lapeer county, who died six years ago. Mr. Hubel came to Charlevoix seven years ago and has lived here since, until the day of his death, Nov. 25, 1926.

He leaves one son, Jasper D. Hubel, and one daughter, Mrs. C. R. Munyon, both of Charlevoix. There are four grandchildren, one sister, Mrs. Byron Monroe of Port Huron, and two brothers, Allie and Harry Hubel both of Clare. The remains were taken to Clare for burial and laid beside his wife in Cherry Grove cemetery

ONE KILLED IN AUTO COLLISION

Traverse-Petoskey Bus Hits Car Near Kewadin Tuesday

Tuesday morning a southbound Traverse City-Petoskey bus struck the car of George Pray, of Traverse City, and killed him instantly. This happened on a hill four miles of Kewadin. Mr. Pray came speeding over the hilltop from the south, and meeting the bus suddenly, jammed on his brakes.

Instead of stopping,his car slewed across the road directly in the path of the oncoming bus. In spite of the bus driver's efforts to avoid the collision, they came together, hurling Pray's body out of his closed car, clear of the roadside. Pray's car was completely demolished, and the bus badly damaged. The one passenger and the driver were said to have been cut by flying glass.

In attempting to avoid the crash the bus swerved into the car from the ditch, where it was only saved from a capsize by a bank which propped the bus. Sheriff Thomas Mooney boarded the bus and send it on its way, it was reported still in the ditch at 5 in the evening.

Those who came to the scene later said that Pray's car resembled nothing so much as a sheet of paper, badly torn, washed flatter than a half and allowed to spring apart again as a crumpled paper will.

Pray is said to be a brother of Dr. C. H. Pray, dentist, East Jordan. And there were no Charlevoix passengers on the bus.

COUNTY TO BE IN FALL POTATO SHOW

Plans for a six-county potato show are to be held in Traverse City next fall are underway. Six counties—Grand Traverse, Antrim, Leelanau, Benzie, Kalkaska and Charlevoix—are embraced in tentative plans. According to chamber of commerce officials, the show is designed to give consumers as well as producers and would point out the necessity of producing quality instead of quantity crops. Certified seed exhibits are planned.—Petoskey Evening News.

THE NORTH FOR HEALTH

Better Here Than South—Climate Healthful; Storm Free

Every week now, The Sentinel records the departure of another contingent of Charlevoix citizens for some warmer climate. We are motorized, it is easy to go, and the temptation is great. We seem to have taken our cue from the migratory birds.

Many Charlevoix people who close their houses and places of business to go south, have good reasons such as business, pleasure, or maybe too thin a skin for our winter cold and bluster. But there is another reason sometimes given that is not always sound. Too many of us are inclined to think we should leave Charlevoix in the winter for the sake of health—especially to avoid pulmonary troubles. If your doctor tells you to do this, you will do well to believe it. But do not jump to conclusions.

There was a time when northern winters were considered nothing short of deadly to tubercular persons. Authorities now know better. It is now being proved daily that tuberculosis can be cured in cold climates, winter as well as summer. A tubercular person who takes proper exercise in the outdoor air and sleeps as nearly as possible under outdoor conditions can build up a resistance here that could never be gained in the south or southwest.

It is strange that people blame the outdoors for so many of their ills, such as colds and pneumonia, when the truth, as authorities can prove, is that the blame belongs indoors. Pneumonia, notably, according to Dr. Buddesen, Chicago's health commissioner; is most epidemic when people shut themselves in most. We overheat and underventilate our houses. Then we go out and invite all the pulmonary ills that flesh is heir to. When we ventilate too little, we need an unnatural heat to keep us warm. We poison ourselves with vitiated air and shiver in houses warmer to comfortable summer temperature.

Charlevoix need not apologize to any one for its winters. They are healthful and we are not afflicted by storms such as that of Thanksgiving Day in Arkansas, when hundreds were killed and injured many more, besides destroying villages and crops.

Another thing being equal, the man who takes the seasons as they change is apt to outlive and outdo the man who does not. Darwin, Wallasson, the explorer, recently said that the most of highest civilization and achievement keeps coming east and further north. He cited history—the decadence of the Egyptians, the Greeks and the Romans. Human supremacy has marched north from the shores of the Mediterranean to the lands of hardier, more alert peoples. To the cave dwellers and the hardy spring from the survivors in a climate like Charlevoix's.

Charlevoix has the best of it when it comes to health. We cede supremacy to the warmer climates in the matter of earthquakes and tornadoes. They have them and they are welcome.

Unsuspected Powers

The sudden young girl is found a blusher; the sudden young man suddenly develops a talent for writing; some of the so-called commonplace people discover a wit which astonishes their neighbors. The great majority of people need only a little sympathy and a sense of responsibility to respond with some unsuspected power.—Montreal Family Herald.

SHAKESPEARE STUDY CLUB ENTERTAIN

Mrs. E. J. Hiller, Mrs. R. B. Armstrong and Mrs. Lawrence Chase, officers of the Shakespeare Study Club, entertained the members of the club at a pumpkin and pollen luncheon at Mrs. Armstrong's home Monday. Between courses members were asked to supply answers to a romance of Shakespeare's plays. After luncheon there was a roll call when each guest was invited to answer with some type of entertainment for the other guests.

In this feature, the honors were voted to Mrs. Albert Bridge and Mrs. Adah Beeman, who gave a highly amusing interpretation of a scene from Romeo and Juliet.

Deciding a Difference

It is better to decide a difference between enemies than friends, for one of your friends will certainly become an enemy and one of our enemies a friend.—Hina.

Modest Virtue

When the town "lightwit" passes away there is an effort to cook his fault by saying, "He was not ostentatious in his charity."—Milwaukee Journal.

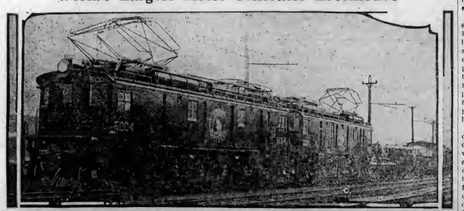
Queen Marie Meets Fellow Countryman at Gary

When Queen Marie visited the steel mills at Gary, Ind., the workers seemed rather indifferent to her presence until she called out: "Are there any Rumanians here?" Robert Arlet, a young craneman, responded, stepped forward and had a pleasant chat with her majesty, and the incident relieved the occasion of all its stiffness. Above the queen is seen talking with Arlet.

World's Largest Motor-Generator Locomotive



The world's largest motor-generator locomotive, a giant capable of hauling 200-car trains, and representing what engineers say is one of the outstanding achievements in electric traction history, has just been taken from the East Pittsburgh works of the Westinghouse Electric and Manufacturing company to the Pacific coast mid delivered to the Great Northern railway for operation in mountain service over the Cascade mountain grade in the state of Washington. It will be used on all trains operating on the electrified division of the road, this involving one of the longest and steepest mountain grades in America. Having transformers and motor-generators included as part of its electric equipment, the locomotive utilizes high-voltage three-phase current on the trolley to drive direct-current traction motors, thus providing the highest efficiency from the standpoint of electric transmission and motor drive.

Ax Has Replaced the Tomahawk

Indians who lived in the wild turkey regions of the United States might have used the tomahawk to chop off the birds' heads, but the Blackfeet tribe of the Glacier National park reservation never feasted on turkey until recent years when they took to farming. They now find the ax a handier weapon for the beheading of the "turk."

Prize Pig Brings Record Price

The highest price ever paid in the world for pork was paid to Henry Roninger, nineteen years old, of Pelican Rapids, Minn., when his prize-winning Duroc Jersey was sold at auction for $1.25 a pound, or a total of $427.50. The porker was awarded the grand championship at the Junior Live Stock show held at South St. Paul.

ALL AROUND THE GLOBE

The largest lake in Europe is Ladog, in Russia.

In the prehistoric Bronze age it was the style for women to wear half a dozen or more bracelets at once.

More than four times as much industrial machinery is exported from this country than before the war.

A Japanese company in Mexico recently cleared $200,000 on a few carloads of ore taken from silver pockets.

The laying of the Pacific cable began in 1902.

Sugar from corn is now commercially possible.

The North pole is far from being the world's coldest spot.

There is not a single community of any size along the River Jordan.

Typewriters are now made with medical keyboards and mathematical keyboards for special use.

THE KITCHEN CABINET

(©, 1928, Western Newspaper Union.)

Are these the choice dishes the doctor has sent us?
Is this the great post whose works so content us?
This Goldsmith's fine feast, who has written fine books?
Heaven sends us good food but the devil sends cooks.
—David Garrick.

SO GOOD

When serving wild duck, garnish with slices of orange unpeeled and garnished with sprigs of parsley. The slightly acid fruit adds to the flavor of the duck. As a salad to serve with duck, oranges are especially good; serve with French dressing.

Orange and Rhubarb Ice.—Combine one cupful of orange juice with three and one-half cupfuls of cooked sifted rhubarb, one tablespoonful of lemon juice, the grated rind of an orange and one and three-quarters cupfuls of sugar. Stir until well dissolved, then freeze as usual.

Apple Fritters.—Mix and sift together one and one-third cupfuls of flour, two teaspoonfuls of baking powder, one-fourth teaspoonful of salt; add one well-beaten egg and two-thirds of a cupful of milk; mix all together. Cut two medium-sized apples into eighths, stir into the batter. Drop by spoonfuls into hot fat and fry until brown. Roll in powdered sugar and serve with meat at dinner.

Swiss Cheese Savory.—Dip round slices of bread in melted butter, sprinkle with salt and pepper and a little lemon juice. Put one-half pound of swiss cheese through the meat grinder, add one tablespoonful of chopped parsley and the same of pimento, two tablespoonfuls of creamed butter, four tablespoonfuls of cream with salt and pepper to taste. Pipe through a pastry tube over the bread, sprinkle with paprika and put into the oven to heat hot.

Jellied Apples.—Pare, core and slice one quart of apples. Butter a baking dish and put a layer of apples, cover with a layer of sugar, repeating until all the apples are used. Add one-half cupful of hot water, cover and bake three hours. Soften one tablespoonful of gelatin in one-half cupful of cold water and dissolve in one-quarter of a cupful of boiling water. Mix carefully through the meat when turning into a mold and when chilled serve with cream.

Egg Sauce.—Beat well two eggs, separating the yolks and whites. To the yolks add one cupful of powdered sugar, one-fourth cupful of hot milk and a teaspoonful of vanilla. Fold in the beaten whites and serve at once.

Apple Ice.—Cut up six large tart apples and boil with four cupfuls of water and the rind of a lemon until soft. Drain, add two cupfuls of sugar and boil for three minutes. Add the juice of two lemons and the juice of an orange, mix all together and freeze.

Ways With Meats.

Some of the following dishes may be prepared from left-over meats; these are but suggestions which may be varied to suit the occasion:

Chili Stew.—Take one and one-half pounds of round steak, one and one-half tablespoonfuls of butter, one and one-half tablespoonfuls of olive oil, six tablespoonfuls of chopped onion, four cloves of garlic, one and one-half tablespoonfuls of worcestershire sauce, three teaspoonfuls of chili powder, two teaspoonfuls of salt, three cupfuls of canned tomatoes, one and one-half tablespoonfuls of flour. Grind the steak or cut in small bits, melt the butter, add the oil in a deep frying pan, add onion, garlic and fry until a light brown. While frying, add the worcestershire sauce and chili powder, stir until well blended. Pour in enough water to just cover the bottom of the pan, add the meat and almost cover with water. Cook slowly for fifteen minutes, then add the tomato and salt. Bread the flour with a little tomato juice and add to the stew, then place in a fireproof dish and bake in the oven for an hour. Serve with rice or noodles.

Veal Pie.—Cook a piece of veal from the neck or any cheap cut, until tender, with small piece of salt pork. Cut into bits and arrange in a baking dish, add cream seasonings, cover with a rich biscuit crust and bake until brown.

Chili Con Carni.—Take a half pound of lean veal or pork (fresh), add one and one-half pounds of round steak; cut the meat through the meat grinder. Brown three good-sized, sliced onions, add the meat, one dried chili pepper, two quarts of tomato, salt, pepper to taste, three tablespoonfuls of chili powder and cook slowly three hours, then add two cans of kidney beans and let the whole stand to cook another half hour. Serve hot.

Ragout of Mutton.—Cut cold roast or boiled mutton into one-inch pieces. Take one tablespoonful of butter, add one of flour, one-half pint of seasoned stock, season with salt and pepper, three drops of tabasco sauce, a tablespoonful of worcestershire sauce and a pinch of sweetbits. Add the mutton, heat until boiling hot, then add one tablespoonful of currant jelly and orange juice. Serve hot.

Nellie Maxwell

Island That Travels

An island with a spirit for adventure is the floating island in Henry's lake, situated in a depression of the Rocky mountains, called Targee's pass. The lake has an area of 40 square miles, and this floating island keeps sailing around it at an average rate of about five miles a day. Adventurers who have landed on the island without knowledge of its roving propensity have awakened in the morning to find themselves marooned and their small boat floating, frequently, miles away. —London Tit-Bits.

Rabbit Wastes as Fertilizer

Feet, Heads and Other Discarded Refuse Have Commercial Value.

(Prepared by the United States Department of Agriculture.)

The left hind foot of a rabbit may or may not bring its possessor good luck. A sufficient number of rabbits' feet, however, together with their heads and the other refuse discarded when they are prepared for market, have a real commercial value. Raising rabbits for both meat and fur is a rapidly growing industry in this country, and the question of the most profitable disposition of the wastes is one of sufficient importance to challenge the attention of scientists.

Discarded Material Recoverable.

As in the case of packing-house wastes, part of the discarded material is recoverable as grease, part as dried blood, and the greater part as tankage or ammoniate, fertilizer. Accordingly the bureau of soils has co-operated with the biological survey of the United States Department of Agriculture in an analysis of rabbit offal with a view to estimating its probable value if converted into these products.

Basis of Comparison.

Taking as a basis of comparison the fact that about 15,000 rabbits a week are slaughtered for meat in the neighborhood of Los Angeles, Calif., it has been found that products having an estimated commercial value of $30 daily should be obtainable from the offal of these rabbits. Incineration of these wastes would yield less than 150 pounds of ashes daily, containing bone phosphate of lime and possibly a little potash, worth less than $1 as fertilizer. While at the present time various practical problems present themselves to those who might consider establishing plants for reducing rabbit wastes, it may be possible for those persons to negotiate with firms already engaged in rendering meat scraps.

Mixing Acid Phosphate With Barnyard Manure

Fertilizer plots established 45 years ago at the Pennsylvania experiment station have yielded some very interesting information. According to Professor Gardner, manure applied at the rate of six tons per acre to these plots made it worth $8.85 per ton, but when used at the rate of ten tons it was worth only $6.72 per ton. The results of his experiment show that the most profitable use of manure is to spread it at the rate of five or six tons per acre rather than ten or twelve tons, which is commonly practiced.

These experiments also show that when manure was supplemented with acid phosphate, the increased crops produced yielded a substantial profit over the cost of the acid phosphate. It is profitable to mix barnyard manure with some form of phosphate fertilizer, especially on soils which have been growing crops for many years as they are likely to be deficient in phosphorus. Even the dairy farmer is finding it to his advantage to supplement manure with various fertilizers. The lowlands are quite likely to be lacking in potash and unless there is an unlimited supply of horse manure, some form of potash fertilizer can be used with profit on such soil.

Save Some of Choicest Leafy Hay for Chickens

In making plans for the poultry flock this winter save some of the choicest green leafy hay for the hens. This leafy material gives them to a certain extent a substitute for green grass at a time when everything is covered with snow. An easy way to feed it is to have a rack along the side of the wall and keep hay in this all the time much in the same manner as when feeding hay to other live stock. If the hay is put on the floor under their feet it becomes matted and holds moisture, and they do not get the maximum benefit from it. Alfalfa or clover leaves are about the finest thing you can have to stimulate egg laying during the winter.

Governor's Defense?

An especially posed photograph of Senator David W. Stewart of Iowa at his desk in the senate office building. He was elected to succeed the late Senator A. B. Cummins of Iowa.

HEADS GERMAN ARMY

Uncrowned Queens

Among other things beauty contests indicate is that a lot of the prettiest girls are too proud to enter.—Glendale Evening News.

Popular Slang Term

"Moniker" is a slang term used both in England and in the United States, its origin is unknown. There are three accepted spellings of the word: "Monikey," "monniker" and "monicker."

Hindoos Well Advanced

Vaccination, anesthesia and antiseptic surgery are supposed to have been practiced by the Hindoos centuries ago, says the Dearborn Independent.

THE WORLD'S GREAT EVENTS

ALBERT PAYSON TERHUNE

(© by Dodd, Mead & Company.)

The Inquisition

I HAVE depopulated happy villages, rich towns and fertile districts of my beloved country in the holy name of religion," wrote Queen Isabella of Spain in the last part of the Fifteenth century.

But the religion of which she spoke was not one based upon the Scriptures, nor upon the creeds of either Catholics or Protestants, nor of any other branch of the Church of Christ. It was a man-made dogma, with torture and intimidation for basis.

In 1480 the Inquisition, or "Holy Office," as it was termed, was organized in Spain. The Spanish nation was almost at the height of its greatness. The marriage of Ferdinand and Isabella had united the mighty provinces of Castile and Aragon. There were thousands of Moors (Mahometans from Africa) and other non-Christians throughout the country. These were, in many cases, rich and powerful. The church feared that Christianity's supremacy was in danger. Hence the great body of Moors were driven out! and those who remained, as well as followers of other religions, were forced, on pain of death, to embrace Christianity. Then the Inquisition turned its attention to so-called heretics, and Spain gained a reputation for heartless cruelty from which it has never wholly recovered.

At Seville, in 1481, the Inquisition began its actual work. During that year, in Seville, alone, 298 victims were burned. Throughout all the nation about 2,000 suffered a like fate. Thomas of Torquemada, a Dominican, was made president of the holy office. He and his successor, Cardinal Ximines, made it a national institution whose name aroused panic and hatred in every district of Spain and aroused even the callous Fifteenth century Englishmen to indignation.

The Inquisition's mode of procedure was unique. A man, woman or child was suspected of heresy, seized and subjected to an irregular preliminary examination. Then all the evidence and suspicious circumstances in the case were submitted to a higher body. The members of this, fearing lest their own holy zeal might otherwise be questioned, usually decided against the prisoner. The latter was then locked up in solitary confinement and a sort of "third degree" was applied to force a confession of guilt and to enroll the victim as a "penitent." If no confession was forthcoming the most horrible tortures were applied.

Most of these tortures were of too atrocious a nature to bear description. A few of the less unspeakable were the "thumb-screw," the "boot," the "rack" and the "virgin." The thumb-screw and boot crushed the fingers and feet, respectively, to a jelly. The rack was an apparatus to which a prisoner was strapped while every joint was stretched and twisted until sinews were torn apart and bones crushed. The "virgin" was a hollow image filled with spikes. The victim was placed within it and the spikes driven slowly into his flesh. In these hideous ways did the Inquisitors of Spain seek to enforce the gentle doctrines of peace, forgiveness and love.

If the suspect still refused to confess he was carried to the highest court of the Inquisition, and there, for the first time, he heard the charges against him and was allowed to reply to them. Heretofore, he had had no clear idea of what particular crime he was accused. The defense was usually a mere mockery. If the victim had wealthy friends he could appeal to Rome. Thus, while the local Inquisition confiscated the captive's property, the papal headquarters also got his friends' money.

In the rare cases of acquittal there was no redress for torture, imprisonment and loss of fortune. If convicted, the condemned heretic was burned alive. The motto of the holy office was "Misericordia et Justitia"—"Mercy and Justice!"

Such horrible crimes people from the country by the hundred thousand. In seventy years the hitherto increasing population of Spain dropped from 10,000,000 to 6,000,000. Trade, agriculture, manufactures and all industries were brought to a standstill. Whole districts were depopulated.

But there is, perhaps, no great evil without some compensating good. While the reign of terror was at its height a golden gateway of escape opened to westward. Americs was discovered. In the new land new might hope to live reasonably free from the demoniacal tortures of the Inquisition. Accordingly the maltreated Spaniards flocked thither in thousands. Towns, villages and rural districts in the New World were speedily filled by the refugees.

In considering the Inquisition it must not, for a moment, be imagined that the holy office had the approval of Christians at large, or that it reflected discredit on the true tenets of the church. There can be no great and holy cause that does not somewhere lead to abuses and misrule. So the medieval Spaniards merely used Christianity as an instrument wherewith to wreak their own cruelty and injustice.

And, after all, were their crimes so much more atrocious than the slaying of crazy old women as witches by the pious Puritans of New England or the wholesale slaughter of innocent Moslem children by Godfrey de Bouillon and the holy Crusaders?

Greenland Known in 1482

An old map made in 1482 was recently placed on exhibition at the Boston public library. It is especially interesting because it shows Greenland, or a large mass of land where that island-continent is located. Since the map was made ten years before Columbus set out on his first voyage, it is advanced as proof that the Vikings knew about the New world before the visits of the Genoese navigator, says a contributor to the Forbidder Magazine.

Drink Water to Help Wash Out Kidney Poison

If Your Back Hurts or Bladder Bothers You, Be Taking Salts

When your kidneys hurt and your back feels sore don't get scared and proceed to load your stomach with a lot of drugs that excite the kidneys and irritate the entire urinary tract. Keep your kidneys clean like you keep your bowels clean, by flushing them with a mild, harmless salts which helps to remove the body's urinous waste and stimulates them to their normal activity. The function of the kidneys is to filter the blood. In 24 hours they strain from it 500 grains of acid and waste, so we can readily understand the vital importance of keeping the kidneys active.

Drink lots of good water—you can't drink too much; also get from any pharmacist about four ounces of Jad Salts; take a tablespoonful in a glass of water before breakfast each morning for a few days and your kidneys may then act fine. This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and has been used for years to help clean and stimulate clogged kidneys; also to neutralize the acids in the system so they are no longer a source of irritation, thus often relieving bladder weakness.

Jad Salts is inexpensive, cannot injure; makes a delightful effervescent lithia-water drink, which everyone should take now and then to help keep their kidneys clean and active. Try this; also keep up the water drinking, and no doubt you will wonder what became of your kidney trouble and backache.

Ancients Still Hold Record for Stadiums

When 140,000 persons entered the stadium at the Sesquicentennial in Philadelphia to see the Dempsey-Tunney boxing match, a record was made for modern amphitheaters. The next largest stadium is the one at Grant park, Chicago, with a capacity of 100,000, says the Detroit News.

However, the ancients have not been surpassed in this respect. The largest structure in history for accommodating assemblies of spectators doubtless was the familiar Circus Maximus at Rome. The original structure was built as early as 329 B. C. It was made of wood and was burned in the fire that destroyed Rome. It was rebuilt with more durable material. According to the historian Pliny it had a seating capacity of 250,000 and often was crowded to capacity. Some writers of ancient Rome place the capacity of the circus as high as 485,000.

Grandmother Knew

there was nothing so good for congestion and colds as mustard. But the old-fashioned mustard plaster burned and blistered.

Musterole gives the relief and help that mustard plasters give, without the plaster and without the blister.

It is a clean, white ointment, made with oil of mustard. Gently rub it in. See how quickly the pain disappears.

Try Musterole for sore throat, bronchitis, tonsilitis, croup, stiff neck, asthma, neuralgia, headache, congestion, pleurisy, rheumatism, lumbago, pains and aches of the back or joints, sprains, sore muscles, bruises, chilblains, frosted feet, colds of the chest (it may prevent pneumonia).

FARM FACTS

Alfalfa is the oldest plant to have been cultivated for forage alone.

* * *

The road through the land of poor soils leads to uncomfortable homes.

* * *

More farmers must come to know that the soil they till is not just dirt.

* * *

If your sulky rake is 12 years old it has reached the average span of sulky rake life.

* * *

Get the doors and windows tightened up for cold weather. The house will be more comfortable.

* * *

In past years, without sanitary precautions, many pigs have died from worms and necrotic infection.

* * *

A good cat or two about the barns get the mice and rats, but too many cats about the premises are hard on the birds.

* * *

The farmer who sneers at science in farming generally has to get a scientific neighbor to endorse his note at the bank.

* * *

There is less risk in a crop rotation system than in a one-crop system; it seldom happens that a season is unfavorable to all crops.

* * *

Dry barnyards are always a blessing. If water is allowed to stand on the ground or collect in pockets it breeds foul odors and it may cause sickness or sore feet.

* * *

Creosoting soft wood fence posts makes ash, box elder or red oak last 20 years. Write the Department of Agriculture, Washington, D. C., for a bulletin.

Some Greens

Mistress—Have you any children, Mrs. Green?

New Char.—Yes'm, three. One by the third wife of my second husband and two by the second wife of my first.—Everybody's Weekly.

The Musician

"I don't know why it is, but I'm always breaking into song."

"If you ever get the key, you wouldn't have to break in."—Washington Star.

WHAT IT COST HIM

"Know what this cigar cost me?"

"No; but I know what it's costing me." "Costing you? What?" "Five separate and distinct scents."

Natural

"I always find that hen roosting on the mail box."

"Sure. It was hatched from a parcel post egg."

"Well, Yahbsley made that same old banquet speech again last night?"

"Yep. That's his permanent address."

Cold Cruelty

"You are no heiress and I am only a poor young man," sighed the devoted admirer.

"What is this to be?" inquired Miss Cuyenne, "a sentimental interview or a compilation of statistics for Bradstreet?"

And Paid Her Dentist

"Alice is up to her neck in debt."

"Well, it might be worse. If she is only up to her neck in it, that means she's settled for her hats, anyway."

HOME WORK'S THE THING

Prof.—There isn't the slightest use in your continuing to take Home Science, Miss Smith, unless—" Student—"Yes, professor, unless—" Prof.—"Unless you take science home."

Pretending a Knowledge

Brown—Call him a musician? Why, he doesn't even know the difference between a nocturne and a symphony.

Smith—You don't mean it?

(Then the two men hasten to get away from one another, each being afraid the other will ask: "By the way, what is the difference?")—Cincinnati Enquirer.

Watch Elimination!

Good Health Depends Upon Good Elimination.

RETENTION of bodily waste in the blood is called a "toxic condition." This often gives rise to a dull, languid feeling and, sometimes, toxic backaches and headaches. That the kidneys are not functioning properly is often shown by burning or scanty passage of secretions. Thousands have learned to assist their kidneys by drinking plenty of pure water and the occasional use of a stimulant diuretic. 50,000 users give Doan's signed endorsement. Ask your neighbor!

OUR INTERNATIONAL MIND

With the commonly accepted view that the United States will not now enter the world court, and that we are farther away than ever from the influence of the League of Nations, a great many people are rejoicing over the fact that the danger of our interfering with the domestic troubles of Europe has entirely passed. Nothing could be further from the truth. It is true that we are not going into the court nor into the League, nor into the court, unless the European nations reverse themselves on our reservations.

But this does not mean that the danger is over. For so long as the United States remains the creditor nation and continues to pour billions of gold into Europe there will always be a demand that Uncle Sam interfere in European affairs, whenever the holders of European securities in this country feel that their interests are in danger.

If the holders of European securities were only a few international bankers on the eastern seaboard, it might be difficult, though not impossible to move public sentiment, at Kansas City on our attitude toward the world court and international relations, has been received by the people of the United States with almost universal satisfaction, and approbation. There has been little adverse criticism, and that has come from certain visionary quarters where the League of Nations is still regarded as the panacea for all human ills.

The press dispatches tell us that the reception of the speech in Europe has been with something resembling disappointment or "pained surprise." There need have been no disappointment and little pain. The President has simply reasserted the American attitude. When the Senate attached the now famous reservations to the resolution ratifying our adherence to the World Court, the senators—Republicans and Democrats alike—meant exactly what they said.

Evidently the European diplomats doubted this and thought that the resolutions were put forward for trading purposes. To try this out they promulgated at their Geneva conference, a qualified acceptance, which if asquiesced in by the United States, would have nullified certain important provisions in the Senate reservations. This qualified acceptance was so sugar coated that if the United States government had really been in a horse-trading mood, it could have swallowed the pill very agreeably. But fortunately Uncle Sam does not swap horses, diplomatically speaking. As the President has not asserted, our reservations meant just what they said. If the European nations do not desire to accept them at their face value, all they have to do, is to so indicate and the United States will remain outside the court. If this causes any pained surprise among European diplomats, the fault must lie with these diplomats in failing, in the first place, to accept these Senate reservations at their face value.

Certainly the American people approve of the construction which has been put on these reservations by the government. It is now up to the people to see whether it was in earnest in desiring the United States to take part in the world court. If the answer is in the negative, and our reservations are not accepted, there will be a great deal more relief than disappointment in the United States.

Many Firmly Believe in Influence of Moon

A supposed influence of the moon on plants and animals is found mixed with the religious ideas of nearly all primitive peoples. The moon, too, is blamed for interfering in the affairs of men, and such beliefs persist today in folklore and superstitions.

If we get into touch with primitive peoples, or even nearer home, if we take country folk aside and ask them in confidence what they think of the personality of the moon and of its influence, many will give this sort of answer. They will tell us that the moon, wife or sister of the sun, shares with the latter the duty of lighting the world. Perhaps we shall hear further that for misconduct it has been banished to the night. One is said to see in the full moon the face of a man in penitence or others say, the image of a hare. And we shall be told that the moon affects innumerable activities of man from the most important, such as agriculture, to the most trifling, as cutting the nails or hair.—H. Munro Fox in the Forum.

Relics of "Good Old Times"

An oaken gibbet, from which men were hanged in public for sheep-stealing up to the year 1500, is preserved over the main entrance of a bank at Ruthin, Wales, on the ruins of the old courthouse. Men, highly skilled in the delicate work, labored to weave this centuries-old relic into the masonry of the new building. The gibbet bears grim traces of frequent use. A deep hole is worn in the wood where the rope was fastened. A sinister-looking dungeon where the prisoners awaited their doom is the strong room of the bank.

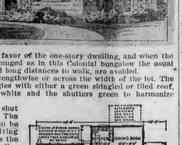
English Water Courses

"The Broads" is the name given to the series of picturesque fresh-water lakes mainly in the English county of Norfolk, but extending into Suffolk. "The Broads" were great estuaries, now largely silted up. Some are in the course of rivers; others are connected with rivers by artificial channels. There are about a dozen large Broads, the largest being Hickling, with an area of 400 acres. There are 200 miles of navigable water in this district, famous for yachting, fishing and fowling.

Mice and Matches

There is a popular belief that fires are often started by mice gnawing on matches. Engineers connected with the Underwriters' laboratories in New York decided to make a test. They put several mice in a cage and gave them nothing to eat but matches. Not one of the mice would touch the matches. After a few days they had to be taken from the cage and released to prevent their starving to death.

This Six-Room Bungalow Adapts Self to Any Lot



THERE is much to be said in favor of the one-story dwelling, and when the floor plan is as expertly arranged as in this Colonial bungalow the usual objections of lack of privacy and long distances to walk, are avoided.

This house may run either lengthwise or across the width of the lot. The exterior is of shingled grey shingles with either a green shingled or tiled roof, The trimmings should be white and the shutters green to harmonize with the roof.

The three bedrooms are well shut off from the rest of the house. The large open porch or sunroom can be made to open off either the living or dining room. The kitchen has the desired built-in features, including the useful breakfast nook.

The cost of this house can be materially reduced by omitting the basement and allowing space on the main floor for a small boiler room. The walls and roof also are sheathed with celotex to keep the temperature at comfort point the year round.

© Celotechnic Institute, Chicago, 1926.

NATIONAL AFFAIRS.

An interesting bit of news came over the wire from Moscow the other day. It informed us that military training for all university students, men and women, had been ordered by the Commissariat of War. Under the order all Russian students must take a four hours instruction in the science during the college or university course, it is said, and the boys two months field practice during the summer. In addition, when the young men graduate each of them must serve nine months in the army or one year in the navy. The press dispatch states that the new regulations apply to all universities and academies in Russia and that tens of thousands of students will thus become potential soldiers.

This news is of timely interest in America especially because there is now on in this country a converted drive by pacifist organizations against military training in American schools. The pacifists oppose this because they claim that if our boys get a little cadet training they will immediately become imbued with the spirit of militarism, so creating the danger that America be plunged into war.

A great many of these pacifists are ardent admirers of Soviet Russia and its influence on world thought. It will be interesting to note their reaction toward this new military regulation in Soviet Russia. For the reds have gone us one better. They require compulsory military training, and require it not only for the boys, but the girls too.

Every schoolboy who has read American history knows that the United States is not a military nation. With one possible exception, our struggle against Mexico, we have only resorted to war as a last resort, and after every other means of settlement had been found inadequate. And everyone knows that there is no military spirit in the United States today—perhaps the less desire for war than there has ever been in the history of the country. But there is some difference in dislike war, and lying down cowardly, with an defense of any kind, as a sort of general invitation for any country which might seek to molest us for one reason or another.

The military training which our boys take during their school life does not make militarists out of them. It strengthens their minds by strengthening their bodies and gives them a better chance of becoming able to take care of themselves if the country is ever again forced into conflict. But it is doubtful if the same can be said of the Russian military idea. Uncle Sam has no desire to force his civilization or culture on the rest of the world. We find it about all we can do to attend to our own business. With Red Russia the situation is different.

The communists are fanatics, evangelists of what they call the new program They want to convert the world to communism, and they are already busy in China, in India, in Europe, in Mexico and South America. Enforced college military training in Russia, at this time, may therefore have some significance.

It would be interesting to know what the pacifists of the United States, especially those who are apologists for Red Russia, really think about this new compulsory regulation in the land of soviet. They may doubtless believe that the soviets have a right to arm to enforce the new thought but that any military training to defend a capitalistic civilization is unthinkable.

GAINSVILLE, - FLORIDA

COMMENT

—It is said that the European press was "painfully surprised" at the tone of President Coolidge's Armistice Day address. All you have to do to painfully surprise them is to talk as if we expected them to pay something on the debt.

—Over in England they have organized the frankfurter industry calling it "Hot Dog" limited. But our experience with 'em is that they can't be limited to anything.

—It is said that seventy-five Americans have an income of a million dollars a year. Evidently the number of big bootleggers isn't as large as we thought it was

—Harvard and Princeton have broken off athletic relations but up to the time of going to press no serious foreign or domestic complications have resulted.

—A New York man says that his honeymoon only lasted one block, still that might not be long when we had it he was caught in the 5 o'clock traffic jam.

—Hot dogs and pie have been stricken from the menu in the New York schools. That isn't any way to start an Americanization program.

—The election of the congressmen is now over but the big congressional rodeo will come, when they try to retain their seats.

—Queen Marie has been getting a real taste of everything in American public life, including factional troubles.

—The coming real benefactor of the human race in the fellow who can invent a self-filling automobile tire.

Women Do Inside Painting

Women are proving themselves capable of holding down another man's job—interior house painting. In New York many women are now engaged in this occupation. One woman has gone into the business on a comparatively large scale, but she employs women only. Many of them are ambitious artists and some climbed girls who for the present have no footlights. It is claimed that these girl painters are much in demand because some people think that the feminine touch is more careful and artistic than the masculine. Then, too, many people dislike to have strange men about the house.—Exchange.

Brick Industry Important

That the brick industry is one of the basic industries of the nation is a fact that is not quite appreciated by many well-informed members of the building public. In 1925 the approximately ten billion brick produced in the United States required for manufacture 30,000,000 cubic yards of clay and shale, which was exhavated or mined. This is equal to a column of clay covering an acre and just a little short of 34 miles high.

WANT COLUMN

FOR SALE CHEAP—Ten acres of land inside city limits. Charlevoix State Savings Bank. 30-tf.

FOR SALE—Cottage very desirably located on Petoskey avenue. Parties interested in a modern cottage should investigate this offer as an attractive price will be made on this property. Address F. A., care Sentinel, Charlevoix.

BARNY-MEECH CO.
Charlevoix, Mich.

FOR SALE—3800 foot frontage on Walloon Lake. About 100 acres of land—will sell as a whole or subdivide. E. J. GLAZA, 440 Pearl St., Boyne City. Phone 226. 11-tf

CALIFORNIA—Get an income of $500 to $1,500 annually, safe and sure, without leaving your regular employment unless you desire. $200 to $500 cash will handle. Twice that will double your income. This is bona fide. Write me for particulars. 508 Guaranty Bldg., Hollywood, Calif. 32-2t

THE THEATRE

"The Reckless Lady"—Lois Moran, the "wonder actress," is conceded by all critics to be on the high road of film success although she has just completed her third picture and hardly completed her sixteenth year. Miss Moran's latest screen vehicle is "The Reckless Lady," from the novel by Sir Philip Gibbs, which comes out Wednesday and Thursday to the Palace theatre. In the feature cast are Ben Lyon, Belle Bennett, James Kirkwood, Lowell Sherman and Charles Murray.

The little actress was discovered by an American film producer in Paris, although she is an American. Her first two pictures were such instantaneous successes that she is now approaching the threshold of stardom. She has appeared in "Stella Dallas," Richard Barthelmess' "Just Suppose," and now in "The Reckless Lady," a Robert Kane production for First National.

Miss Moran is the distinct opposite of the flapper type. Her hair is unbobbed. She is reserved in manner, but her beautiful face is a remarkable study. The ease and clarity of her expressions are almost breath-taking. And she has a sweetness and wistful fragrance about her that is utterly captivating.

WHAT THEY SAY

—The church bells were rung in some places to get the voters out, but not even a steam calliope would have been able to arouse some of them from their sleep However, a large number of the voters who could not become sufficiently excited to vote and help their country, would have turned out into the street all night if some one had reported a dog fight.—Salem News.

—At Williams and Mary college down in Virginia a co-ed student may go with a young man unless she stands at least 80 in her class work. Scholastic industry is humming. Discipline is perfect. If other colleges go and do likewise their troubles will be minimized. —Brooklyn Daily Eagle.

—Another thing that makes life on this planet a little bit difficult and depressing is that the man always comes to give the furnace a good, thorough overhauling on the coldest day yet.—Ohio State Journal.

—Europe is still trying to place the blame for the World War instead of trying to avoid another one.—Jacksonville Times-Union.

—Better money has been made with a new engraving method, but it won't buy any more.—Indianapolis Star.

"Sol" Name of New Month

"Sol" is the name proposed for the new month that would be created if the projected Cosworth calendar was put into use. This calendar would have 13 standard months of 28 days each, the 28th falling on Saturday. The new month would be inserted between June and July. The 365th day of the year would be December 29 but it would have no week-day name. It would be known as "Year day" and would be a holiday, and in leap year the extra day would be placed between June 28 and the first day of "Sol." It would be known as "Leap day."

Danger in Bobs

Philadelphia. — Women are likely to be held because of locks, in the opinion of one hairdresser at a convention. He says locks have led to the fad of tight hats, which cause the hair to fall out.

Convention to Mark Cooperation Between Business and Government

THE annual convention of the American Petroleum Institute at Tulsa, December 7, 8 and 9, will bring together the largest and most representative gathering of leaders in the petroleum industry that has ever been held. From 1,500 to 2,000 chiefs of corporations, technical experts, scientific authorities, state and national officers, economists and, engineers, will consider in the broadest way the questions that relate to permanently supplying fuel to America's 20,000,000 motor cars, and meeting the multitude of other demands on petroleum. Officers of The institute are shown in the illustration. All rank among the leaders of its industry.

President Coolidge recognized these problems when he created the Federal Oil Conservation Board, nearly two years ago, and committed it to the study them. The board's report recognized the desirability of a close cooperation between the industry and the government in planning constructive, practical measures. It declared that these must rest chiefly on the initiative of the industry itself.

Since that report was issued, Secretary of Commerce Hoover, a member of the Oil Conservation Board, has declared emphatically in favor of such modification of the anti-trust laws as will open the way to desirable co-operations within the industry, prevent wastes and encourage economies.

The aspects of demand, supply, future sources of oil, possible substitutes for it, etc., are at the top of all thought concerning the industry. They will give direction and definite purpose to the considerations at the Tulsa convention, which promises to mark a significant advance toward understanding and mutually helpful cooperations between business and government. Secretary Hoover, speaking on this point, said the other day:

"The way to do business in America today is to do it with glass pockets, and show the public what you really have, and what you really are doing. You may take the case of several industries, which have adopted this policy, and observe the very satisfactory results which have been obtained.

"I believe that the oil industry is clean and has nothing to fear from a program such as these other industries have adopted. When one considers the widespread distribution of gasoline and the very limited amount of profit in a gallon of gasoline, surely not over 2 cents a gallon considering everything, it is surprising. It is a wonderfully distributed product.

"You have the annual meeting of the American Petroleum Institute coming to Tulsa in December, and if members of the body can get together and formulate some plan regarding modification of the Sherman anti-trust act, as applied to drilling flush fields, and properly present this plan, I see no reason why it should not receive favorable action at the hands of Congress."

ATTRACTIONS FOR THE WEEK
Saturday-Sunday, Dec. 4-5
Thomas Meighan in "Tin Gods." The best Thomas Meighan picture released for some time. Renee Adoree does some mighty fine work in this picture. Also an educational comedy, "A Dippy Tar."
Wednesday Thursday—
"The Reckless Lady" with Belle Bennett, Ben Lyon, Lois Moran, James Kirkwood, Lowell Sherman, and Charles Murray. She'd made her first gamble and lost. Then fifteen years of life and adventure—fifteen years guarding a secret that makes this one of the strongest mother-love dramas ever screened. Also "Felix the Cat" and Fox News.
COMING—Rex Beach's "Padlocked." A special.
COMING—Billie Daniels in "The Camper's Flirt."

—) PERSONALS (—

Orders taken at Holley Gift Shop for engraved cards. 32-2t

Dr. Leahy, the optometrist, will be here again Monday, Dec. 6.

R. F. Sloan left for Muskegon by automobile early Sunday morning.

Mr. Alex Cameron, of the East Jordan enameled plant, was here Monday.

Born, to Mr. and Mrs. Frank Coates Jr., on Nov. 25, a 9-pound son, Richard Dean.

Monday, Dec. 6th, is the date when Dr. Leahy, the optometrist, will be at the Hotel Charlevoix.

Miss Minnie Peyton, who has been ill, returned last week to part time at her work in the library.

E. W. Coulter and Mr. and Mrs. Ralph Coulter came to visit Mr. and Mrs. Emmet Coulter at Thanksgiving.

Now is the time to make your selection of toys for Christmas. Let us lay them away for you. Holley Gift Shop.

Wm. Finucan left Monday morning to return to Grand Rapids after spending Thanksgiving here with his sisters.

The Mitchell family has taken an apartment at Miami Beach, Fla., where Dr. W. W. Mitchell is practicing this winter.

Mrs. Archie Livingston and Mrs. Clarence Bridge entertained the Mary Brewster Society at the Bridge home Monday night.

Miss Dorothy Dean spent Thanksgiving with her parents, Mr. and Mrs. H. D. Dean. She returned Sunday to Cadillac where she is teaching school.

Clare Cartier, who drove up from Grand Rapids Wednesday to spend Thanksgiving with his parents, Mr. and Mrs. Fred Cartier, returned Sunday.

Benjamin Brown intends to vacate the Emrey building next Monday or Tuesday, and George Lusk will move his business there as soon as possible.

There is scarlet fever in the family of James Earl, according to a sign at the door of his White Star restaurant, which has been closed for several days.

Fred Nackerman, of Saint James, arrived in Charlevoix Saturday, enroute for home where he will remain for the winter. He has been working in Kalamazoo.

Mrs. R. L. Lewis gave a party to twelve ladies Saturday night. Bridge was the diversion, and Mrs. Earl Young won the first prize, while Mrs. Franklin Sears Sr., took the second.

Capt. James H. Gallagher, owner of the steamer Griffin, was in Charlevoix Monday. He has had a good season with the boat—although he was late in getting started on his season, he transported 23 cargoes in the Griffin. She is now laid up in Boyne City.

Mountain Potatoes

W. R. Yates, the Irish poet, told an Irish story at the home of his American visits.

"There was a village in the county of Waterford," he said, "where a shopkeeper once exhibited a number of concoctions for the first time. Of course they attracted a good deal of attention.

"A crowd of schoolboys gathered round the window, discussing the coconuts and giving their views as to what the curious things might be, and finally a lightfoot lad named O'Rourke waited into the shop and said:

"'Please, sir, and what's the price o' them thunderin' big stumps o' mountain potatoes with whiskers on 'em in the window?'"

Iowa Wants Better Roads

Business men of Omaha have decided to organize in an effort to cooperate with Iowa civic organizations in a campaign to gravel or pave the Lincoln highway in Western Iowa. The public highways committee of the Omaha Chamber of Commerce has appointed a committee to work with a similar committee from Council Bluffs. The worst section on the Lincoln highway at present is said to be the last stretch of dirt road in Harrison and Pottawattamie counties, Iowa.

Will Put Tags on Whales

England is trying to enlist a special sea army, for service in putting tags on whales, so the travels of these big fellows may be better known. No definite plan for putting the tags on has been devised, England assuming some wise man of the sea will come in with a practical plan and want the job.

The breeding places of the whales never have been known to man. British authorities, claim, and they are anxious to learn that and many other facts.—Washington Star.

The ladies of the Episcopal Guild entertained their husbands at a potluck supper at the home of Mrs. Lawrence Chase, Wednesday night.

Married, Wednesday, Nov. 24th, by Rev. E. M Mumbey, at the home of the bride's sister, Mrs. Clayton Shellman, at Baillie, Mr. Matthew Routley and Mrs. Rachael Gravlin, both of Charlevoix.

According to the Nov. 26 issue of the Michigan Farm Bureau News, Antrim county leads the world in the production of radish seed, and grows 50 per cent of the entire radish seed output of the United States.

Dr. and Mrs. R. W. Morse, of Lansing, parents of Mrs. Robert Bridge and Mrs. Laura M. Kimball, sister of Mrs. Bridge, and Masters Wm. and Robert Kimball spent Thanksgiving at the Bridge home.

Recent letters from the J. J. Halletts tell of their leaving French Lick where they had visited their son Irving, for Rincon, New Mexico, where Mrs. Hallett's sister lives. Later they will go to California, stopping to see their son John en route.

The steel freighter J. B. John came to this port Tuesday noon to lay up for the winter. Only a few minutes behind her was the Sumac with more boys she had picked up preparatory to the close of navigation. The John closes her season earlier this year than last.

Mr. and Mrs. Albert Holmes left Sunday for Port Orange, Fla., accompanied by Miss Lizzie Aldrich. Mrs. Holmes tells us that her son Ivan, who was married in Ann Arbor, Nov. 2, is living in Port Orange for the winter. Both families expect to return in the spring.

Mrs. Albon Smith entertained seven tables at bridge at her home Tuesday night. The guests were all women, and first prize went to Mrs. Joseph Foster who had a score of 2691, while Mrs. Clinton Cooper took second prize with a score of 2554. There was a supper served.

E. W. Coulter came from Montana; Mr. and Mrs. Ralph Coulter from Elmira and Miss Coulter from Michigan State College at East Lansing to spend Thanksgiving with Mr. and Mrs. Emmet Coulter. The Ralph Coulters and Earl left Friday, while E. W. Coulter left Monday for Detroit.

The Grand Rapids Press of Nov. 26th reported the death of Frank Culman at the home of his daughter, Mrs. Lillian Welch, of Beverly Hills, California. Charlevoix people will recall that Mr. Culman lived here for many years, at one time operating a restaurant in the building next north of the Sentinel.

John Dahlmer, who operated a fishing tug from Charlevoix many years ago, returned last Friday by motor for his first visit since he left to locate in Gloucester, Mass. Mrs. Dahlmer is with him, and they visited old friends and relatives here until Monday, when they embarked for Saint James where they will visit Mrs. Dahlmer's parents, Mr. and Mrs. James Gordon.

Thanksgiving Day at noon the Rev. Herman Burns married Robert Howe and Miss Ruth Sherman at the home of the bride's father, Peter McFarland. All close relatives of the bride and groom were present. Miss Mildred Howe was maid of honor and Charles McFarland stood up the groom. Mr. and Mrs. Howe are making their home at the McFarlands for the time being.

Thanksgiving at the home of Mr. and Mrs. Alan Campbell was an occasion of a lifetime. Twenty persons, all related to the Campbells, were there. Harry and Mrs. Olmsted came from Lansing; Harold and Mrs. Bedford were present from Grand Rapids; Mr. and Mrs. Will Supernaw and family and Mr. and Mrs. Miles Olmsted and family represented Charlevoix. The dinner was a bounteous affair. Harry and Miles Olmsted are brothers of Mrs. Campbell, and Mrs. Bedford and Mrs. Supernaw are her sisters.

Ira A. Adams, editor of the Sentinel, had planned to return to Charlevoix from his hunting trip last night, but bad roads delayed him so that he missed the train at Gaylord. He will return tonight and resume management of the Sentinel. Mr. Adams is bringing his buck with him, so his hunt was a success. His nephew, Vincent Smith Madison, who joined him at camp near Grayling just before the season closed, did not get a buck, however—he had four opportunities for shots, but all were does.

Not So Good!

A man who plays golf in the neighborhood of par was going around the course one Sunday morning when he overtook a foursome of women who allowed him game immediately. After playing back of them for two or three holes, much to his utter disgust, he commented on the situation to four men who had caught up with him.

"I certainly feel sorry for you if you want to get around before noon," he said. "If you ever get back of those women you have to stay back."

"Well, you see," explained one of the players apologetically, "the wives haven't played very much. Any time they hold you back just tell us. They are just learning, you know."

Liberty's Safeguard

Education is a better safeguard of liberty than a standing army. If we retrench the wages of the schoolmaster, we must raise those of the recruiting sergeant.—Edward Everett.

Christmas Cards at Holley Gift Shop, make your selection early. 32-2t

Insects Provide Food for Imprisoned Frogs

A "Methuselah" frog has come to light. Two workmen died to repair drilling into the rock 200 feet down the face of a cliff at Hendlof slate quarries, came across Him. They had to shift a massive boulder to get at his tiny house in the solid stone.

Frogs—or toads—have been found in all manner of unlikely places—even in coal mines. How do they get there? On what do they live? Prof. Sir William Boyd Dawkins answered the question when eight frogs were found to hard gridstone on Werneth Low.

No frogs were in the world, he said, when the stone itself was being formed. Their ancestors then had not even dropped their tails.

The real explanation was simple. Frogs crept into the stone through some face fissure when they were very small. Flies and insects also obtained an entry in the same way, and on these the frogs lived. They grew fat, and could not get out again.

No other explanation is possible. Frogs have been sealed up in plaster pots, but they have always died. It has been proved that they cannot live without food for a longer period than twelve months.—London Titbits.

Bad Table Etiquette No Cause for Divorce

A man in Paterson, N. J., suing for divorce, mentioned that one of the reasons for wanting to sever his matrimonial bonds was that his wife ate with a knife and that her table etiquette was very bad.

The judge promptly informed him that because his wife ate with her knife it was no cause for divorce.

And the judge was right. If such a thing was cause for divorce there would be thousands of unhappy houses in this fair land.

Of course it is not proper to eat with a knife, especially green peas, as they roll off so easily, and again it is distressing to see a man shovel food up food with a knife and giving an imitation of a sand dredge at work at Rockaway, making a meal thereof.

However, because a man marries an amateur parcel swallower or vice versa, that is not cause enough to break up their home. They should buy books on etiquette and learn not to shovel in mashed potatoes with a knife or stab a radish with a keen blade.—Brooklyn Standard Union.

Knew Virtues of Salad

British food experts who have been making a special study of the history of salads say the tomato is the single new ingredient modern times have contributed to salad making.

The pharmacy-wise Babylonian Cleopatra—ate onions in large quantities in their salads and used garlic and other high-scented ingredients.

Confucius ate cucumbers and the ancient Chinese used mustard, watercress and nasturtium leaves and flowers in mixing their elaborate salads, which often contained hard-boiled eggs.

Ancient Persia was also very fond of salad making. Sour wine, not unlike modern vinegar, was used on lettuce by the Persians 4,000 years ago.

Little Thrift Lesson

By spending $1 which you could have saved before you are twenty you spend $10. By spending $1 before you are thirty you spend $5. By spending $1 before you are forty you spend at least $2. How so? One dollar or $100 or any other number of dollars, carefully invested, will double in about a dozen years, explains Forbes Magazine. Therefore, $1 saved and invested before twenty will amount to $10 in forty years, or by the time most people think they would like to take life easy. The dollar saved before the age of thirty would amount to $8 when the saver reached sixty.

The Bug for Business

They were at work gathering potato beetles from the backyard garden spot of their dad—big boy and little boy. They received ten cents a hundred for the striped-backed rascals—it was a hard work for the boys and a premature investment of funds for the dad, but the potato crop had to be saved.

"These yellow eggs have to be smashed too," cried the little boy, exhibiting the patch underneath a leaf.

"Oh, no, don't do that," yelled the big boy; "they'll hatch out an' make bugs, an' then we c'n pick 'em and git paid for 'em."

Newspaper Interviews

The interview feature of journalism dates back to 1859, the year of the John Brown raid on Harpers Ferry. Among those stated to be implicated in the raid was Gerrit Smith, a noted antislavery advocate of Peterboro, N. Y. The New York Herald sent a reporter to see him and published the interview in conversation style. Being the first example of newspaper enterprise in that line, it created a sensation.

By Comparison

An American died, and met an old friend in the realms of the departed. "How are you getting on?" asked the old friend kindly. "Fine!" was the enthusiastic reply. "Say, I thought Uncle Noo Yahk had the universe skinned to death, but this here's heaven of yours—"

"Heaven?" repeated the older hand pityingly. "Heaven! Say, get wise, bo; get wise!"

Coffin 3,000 Years Old

An Egyptian wooden coffin 3,000 years old is one of the articles on display in the Boston Museum of Fine Arts. The drawing and painting on it are in a remarkable state of preservation.

Rise Above the Rock

All men are born equal, but some have ambition enough to get over it.—Boston Transcript.

TO CLOSE OUT
The balance of our LADIES' WINTER COATS, a Most radical reduction will be made.
Step in and see what we will do. If you are in need of a coat you cannot afford to miss this opportunity before the Coats are all gone.
M. A. LEVINSON & CO.

Methodist Church.
C. E. Pollock, Pastor.

Sunday's special announcements:

"Good Manners Before God"—sermon at 10:30. "Brute Fingers," dramatic story sermon at 7:30.

This evening service will be another feature hour of worship and resolution. Dr. Newell Dwight Hillis says that "Great Books" are "Life Teachers." The dramatic story that forms the illustrative basis of the sermon next Sunday evening will clearly demonstrate this. Which will the world of today choose, "Brute Fingers" or the Divine touch? Shall we quietly submit to Satanism, or "Thanksgiving Proclamation?" A great modern book speaks for the best of society. The public is invited to thoughtfully consider relative values in the pleasant evening service next Sunday. The opening hymns will be sung from the screen, showing artistic representations of the hymn themes.

The Epworth League will observe Epworth Herald Day next Sunday evening. The young people are planning a playlet, followed by light refreshments at five o'clock. The devotional hour is six—all young people are invited.

Next Sunday is church membership day. In the morning service an opportunity will be given for those desiring church reception to be cared for. Hymns may also be cared for at this service. Arrangements for these privileges should be carefully made with the pastor before Sunday morning.

The Junior Church is doing excellent work this year. The pastor expects a Junior pin before Christmas Sunday. Each Junior should wear one.

Church of God
Rev. Paul L. June, Pastor

Regular services held at the Chapel of the Church of God:

Sunday morning service at 10:30.
Sunday School at 11:45 a.m.
Sunday evening service of the young people 6:30 p.m.
Evening service at 7:30.
Prayer meeting Wednesday 7:30 p.m.
The revival meetings have been a blessing to both young and old. A number of conversions and consecrations took place, for which we thank and praise the Lord. May we all say, that we're on the firing line for the Great Commander of our souls. It is a blessing and grand privilege to serve and worship the Lord in spirit and in truth. We expect the services to get better all along the line now and to continue to the end.

The Church of God ladies will hold a baked goods and sewing sale at Wood Bros' hardware store, Saturday, Dec. 4th. Come and get some good things—they will have them.

Next Sunday morning the subject will be "The Great Call" and in the evening "The Value and Excellency of Salvation." The topics are of untold value to all christians when you hear them intelligently discussed. We extend a cordial welcome to all.

Congregational Church
Rev. B.G. Mattson, D.D., Minister

Morning worship at 10:30 and evening service at 7 o'clock. The pastor will preach at both services.

Sunday School at 12 noon.

The Young Peoples' meetings 6 p.m.

Services at Ironton at 2:30.

A general interest is shown in the weekly issues of the church calendar, with bright illustrated, brief articles, well printed and drawn from a wide range of religious and missionary interest. The calendar is filled each week with local church items by the use of the church snoutyle duplicating machine.

Christian Science Society

Sunday service, 10:45 a.m., Subject, "God, the Only Cause and Creator."

Sunday School 12 o'clock.

Wednesday evening service 7:45.

Reading room, Tuesdays and Saturays, 3 to 5 p. m.

The public is cordially invited to attend our services and use our reading room.

St. Mary's Catholic Church

Sundays 8:00 a.m., and 10:00 a. m.
Mondays and Tuesdays 8:00 a. m.
Saturday 7:00 a. m.

PRECEDING CHAPTERS

Harry Ormerod, long proscribed traitor to King George as a Stuart partisan, returning from France to London rescues Alden Bunn Jeffers from a band of assassins. Juggins proves to be the grandson of a former steward of Ormerod's father, to whom Juggins feels himself indebted for kindness shown. Juggins to be his staunch friend in the cause. Juggins informs Ormerod of a Jacobite plot in the Ancoats, each colonies to weaken England by forwarding French interests. At its head is Andrew Murray, a Scotsman, and a Frenchman, De Veulle, deadly enemy of Ormerod. The two are in London furthering their schemes. Anticipating the plotters' early return to America, Juggins arranges for Ormerod to sail there with letters to Governor Burnet, friend of Juggins, and work to foil Murray.

CHAPTER II—Continued

—5—

"'Tis Juggins," interposed my master. "The lad is a cousin once removed. He goes to seek employment in the New world. To tell the truth, though strong and willing, he is not overburdened with wits. But he can bring an ax as well as anyone, and his muscles should bring him good hire on some wilderness farm."

"Aye," agreed Master Jenkins tenderly.

In the street Juggins turned upon me indignantly.

"Have you ruin us, Master Harry?" he demanded. "Zooks, you were like to plunge yourself into trouble by your forward manner! I'll wager Jenkins is wondering now whether you are a criminal or only a half-wit. Why did you flare up over the De Veulle?"

"Because I know him and I hate him," I answered doggedly.

"Why? What hath he done?"

"He is one of the gallants of the court in Paris. He came out of Canada some three years ago, and made a reputation for gambling, fickleness and daredevilry of all kinds, but once in the Toison d'Or I heard him slur the poor young man I then served."

"Jasus?"

"I called him King James in those days," I answered. "Yes, De Veulle was mocking the petty motley of our exiled court. What is this King but a puppet figure for us to dandle in England's face?" he said. "And what are his courtiers but other puppets to dress the show?"

His foolish ears laughed.

"And the most comical thing of all," ended De Veulle, "is to think of this puppet king, with a puppet court, ruling over a puppet England while France pulls the strings—as will surely happen some day!

"I was then I knocked him out of his chair."

Master Juggins gripped me by the arm with a warmth that surprised me.

"Good lad!" he exclaimed. "I would have done it myself!"

"What? You are no Jacobite?"

"I am no Jacobite," he replied in some confusion, "but no more were you a Jacobite when you struck him. 'Twas for England, Master Harry, and a man's country means more than any king that ever ruled. But what happened after?"

"We fought in the upper room of the Toison d'Or—De Veulle and I and a friend of his and my friend. My friend was badly wounded."

"And you?"

"I disarmed my opponent. I disarmed him several times. When we began to fence I found he knew little of the small sword—remember, he had been brought up in Canada—and 'twould not have been pretty to slay a man so at my mercy. Also, to treat him as I did was more humiliating to his pride than death."

"You did well, Master Harry. But yours will be awaiting us. We must hasten."

He walked in silence until we had reached the house in Holborn.

"How comes De Veulle in London?" he asked suddenly as we climbed the stairs.

"He was in some trouble in Paris—what, I know not. The rumor was that he was ordered into exile. But if he sails for Canada, as Master Jenkins says—"

"And on the same ship with Murray," interposed Juggins excitedly, "after appearing in Murray's behalf this afternoon—"

"—then there may be more to his enterprise than the mere punishment of exile from the court," I concluded.

"'Tis so!" exclaimed Juggins. "Beyond doubt 'tis so. And mayhap De Veulle will recognize you."

"Do you think my father's son will draw back on such excuse at this hour?" I said.

He laughed ruefully, and raised his hail for granny.

"Ho, Goody! Here are two hungry forest-runners will eat your kitchen bare."

Granny tripped into the hall, a nun or bitter ale in either hand.

"I heard what you said, and Master Harry's answer," she rebuked him. "Think shame on yourself, Robert, to hint that he would hesitate before peril—and you sending him into it, too," she added somewhat illogically, I thought. "Now, do both of you drink these. 'Twill wash the taste of the streets and taverns from your mouths."

We obeyed her.

"And what luck did you have?" she demanded next.

"He leaves us Saturday," said Juggins simply.

She cried out.

"So soon! Must it be, Robert? Sure, the lad should have some respite from toil and fear!"

"If he is to go, he must go then," rejoined Juggins. "'Twas because I feel as you did that I said what you heard, granny."

"And 'twas because he had a sound heart in him that he answered as he did," she snapped. "If he is to go, he should go. I dare say; and the greater the peril, the greater the reward. Have you done aught toward securing Master Harry's equipment?"

He went to the cupboard, from which he produced a bundle of rolled cloths. Layer after layer was unwound, and finally he drew from the wrappings a gun such as I had never seen before. It was long in the barrel, well-stocked, yet very light and handy.

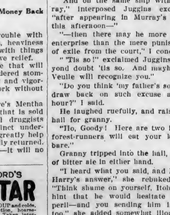
"You may exclaim over it, Master Harry," remarked Juggins as he surrendered it into my admiring hands) "but you can have no idea of its value until you have seen it tested in the great forests, where a man's life depends upon the swiftness and accuracy with which he can shoot. I learned that in my own youth, and so when I returned to London I had this gun made for me by the king's own gunsmith, after plans I drew for him. There is none other like it."

"And it is for me?" I asked, delighted as a child with a new toy.

"What better use could it have?" he replied. "Oh, you; and these go with it."

He brought from the same cupboard a shot-pouch of beaded deerskin and a powder-horn, ornamented with dull silver that would not catch the light. Also a belt of hide from which there hung in sheaths a delicately balanced hatchet and a long, broad-bladed knife.

"These you will discover no less useful than the gun," he explained, drawing the weapons from their coverings. "This which you call a hatchet is the



tomahawk of the Indians, used for fighting at close quarters and for throwing. This other is the scalping knife, and a deadly blade it is, too. You will feel them strange at first, but among my friends in New York there is a Dutchman named Corliear—who will instruct you in the ways of the wilderness."

"You shall have letters to Governor Burnet himself, whom I met before he went overseas, and to Master Caldwalader Colden, the governor's surveyor general and a member of his council, a fine, loyal gentleman with whom I have had some correspondence.

CHAPTER III

The Fifth Passenger

Granny Juggins drew up face down to a level with her puckered old lips.

"God preserve you, Master Harry. No, I am not weeping. 'Tis— No matter. Remember always that so long as my heart beats there is room in it for you—and forget not that your mother would be hungry for pride in you if you knew but with us."

She kissed me tenderly.

"I am an old woman, Master Harry," she said, "and I may not live to see it; but the day will come when you will be no longer a fugitive from justice. So be not disheartened."

"And how could I be disheartened," I demanded, as I set her down, "with two friends such as I may boast of?"

There was a mist before my eyes, and I was not sorry when Juggins broke in upon our farewells.

"Arr, John Waterman will be waiting us at the Temple stairs, and we have little time to spare if we are to get aboard before the other passengers. This De Veulle would recognize you, I fear, even in this disguise."

I could not forbear a grimace at the reference to my getup, a linsey-woolsey shirt, with homespun jacket and breeches and a hooded scratch-wig, the whole designed to give me a rustic appearance, which there can be no doubt that it did.

"Never mind, Master Harry," admonished Juggins as he clapped an ugly bowler of ancient style upon my head. "In New York you will rig yourself in forest-runner's garb, and forget that you ever played the humpkin. Give granny a last kiss, and—"

She flew at me, light as a bird; her arms clasped momentarily about my neck; I felt her kiss on my cheek; and then she was gone from the room. I may as well say here that I never saw her again, although a night as I idly under the stars I was to remember her quaint ways, her sweet, shrill voice and loving smile.

But I had no opportunity for such thoughts as Juggins and I hurried through the streets toward the river, where a wherry was awaiting us. All the way he kept up a running fire of last-minute advice and instructions.

"Guard well the letters I have given you, the one to Corliear no less than those to Governor Burnet and Master Colden: Corliear, though he be only a rude, unlettered woodsman, is none the less capable, lively chattering and bulging, but not throwing out the hard dry earth. This makes easy work of shoveling out the soil.

"Dynamite should not be used in a moist clay subsoil in spring, for the blasting will leave cavernous openings around which the clay subsoil will dry hard. These will cause the soil about the tree roots to settle unevenly, throwing the tree out of position."

Wire Screen Is Best to Stop Girdling of Trees

Another problem, that of protecting trees against rabbits, will be added to the orchardist's list with the coming of cold weather. It is during the cold winter months that rabbits search more diligently for food such as succulent bark, leaves, grass and different herbage available. When winter shows cover the ground young trees are usually attacked and may be completely girdled if found to the rabbits' liking. Of the various tests found the most practical and efficient means of protecting young rabbits and its use in the orchard may be a means of saving many trees, it is pointed out by authorities at the college of agriculture, University of Illinois.

Repellants, such as coal tar, limesulphur and other materials have not proven satisfactory. One-quarter-inch mesh wire is preferable to the half or one-inch mesh for the reason that when it is set down a half-inch below the ground surface, it will also be a protection against girdling by the meadow mouse. If the orchard is clean cultivated, and without an infestation of field mice, the one-inch mesh of No. 20 galvanized wire will be satisfactory. The wire should be set in not less than one-foot lengths and should be large enough to allow for the growth of the tree for several years.

Increased Fire Blight Attributed to Insects

Fire blight in apple and pear orchards this season is the worst in recent years, causing pomologists at the Graham Horticultural Experiment station at Grand Rapids to feel that there is some definite relationship between the percentage of bloom in the spring and the prevalence of the blight in midsummer.

The worst infectious are in orchards which bloomed heavily last spring. Blocks that did not bloom have little or no tip blight.

Spread of the disease is attributed to insects which carry germs from infected blossoms to other trees as they gather honey.

Horticultural Facts

The locust tree is a legume.

• • •

One can weaken a tree by pruning it too much.

• • •

Dry, unleached wood ashes furnish potash to the soil and benefit it in other ways.

• • •

New York planted 12,000,000 trees last spring. The object is to supply timber and recreation grounds for the future.

• • •

Lending farm machinery is bad business. It generally comes back in poor shape and just at the time that you want to use it.

• • •

Cockleburs are annual plants, which means that they must grow each year from the seed.

• • •

Gathering vegetables, flowers, fruit and so on as soon as they are ready for use encourages longer bearing.

• • •

For a new strawberry patch to be planted next spring the best location is a piece of well-drained clover sod, plowed this fall. Don't use it—strawberries like a somewhat acid soil. But manure the land pretty heavily before plowing, for the best results.

• • •

Forest plantations with a minimum care yield large profits on soil too poor for other crops.

• • •

It is always a good plan to shelter the farm machinery, as its life may be doubled by proper care and housing.

The greatest variation in pruning practice with regardless to its heading in. With the rods it usually takes place in the spring and may consist in cutting off only the portion of the cane injured during the winter to cutting back the canes to about five feet.

Fate has arranged a meeting for Ormerod which, though he does not at once recognize it, is to be of momentous importance in his life.

(TO BE CONTINUED.)

Built Fortune From Picture Post Cards

Sir Adolph Tuck was the picture post card pioneer, says the Boston Herald. His father, Raphael Tuck, founded a firm making cheap pictures for London only. The son rapidly extended the business to the British Isles as a whole and then settled upon the coming of the otecograph as his opportunity for an entrance expansion of his newly developing industry. He started with six sets of designs the first year there were twenty, the third year fifty. He obtained the aid of professional artists and his competitive exhibitions of the paintings to be reproduced on his cards were attended by such crowds as nowadays throng the movies.

He went one year to every one of the royal academicians with requests for new designs and not a few found a nonchalance with their dignity to accept his offers. Famous poets wrote verses for his cards. But Tennyson had the fortitude to refuse an offer of 1,000 guineas ($5,255) for 1,000 words of verse. This indomitable and enterprising promoter of an industry which he had himself created spent many years in the courts defending his rights in most alarming manner. Sometimes they had black button eyes; frequently their prim faces were painted with beet and fruit juices; occasionally eyes, nose and mouth were embroidered. For hair they wore toupees of yarn or hemp or wisps of real hair. Their garments were full-skirted gowns of sprigged muslins or prints and very often were sunbonnets of the same materials as their dresses. In one New Hampshire family still lives an old rag doll 60in for over 80 years has pleased its daughters. True, she has become somewhat the worse for wear, but her blemished features have been renewed by the simple expedient of recovering her face with a piece of fresh cloth.—Antiquarian Magazine.

Optimist

In the southern California colleges the two B's are much more popular than the three R's—that is, bridge and basketball. Thus it happened that Elizabeth Munpin and Gladys Loe has become somewhat the worse for wear, but her blemished features have been renewed by the simple expedient of recovering her face with a piece of fresh cloth.—Antiquarian Magazine.

Old Reckoning of Time

Fortnight is a contraction of 14 nights. Time was once reckoned by nights and winters.

ORCHARD GLEANINGS

DYNAMITE USEFUL TO LOOSEN SOIL

"The use of dynamite in digging the hole for tree planting may be helpful where the soil is dry and hard, and where the top soil is thin and rests upon shale or subsoil that is mixed with stones and gravel; it is not necessary, however, when soil conditions are favorable to digging," says F. H. Ballou, associate horticulturist, Ohio experiment station.

"Where the top soil is fully a shovel blade in depth, is underlaid with a clay subsoil, is moist and in condition to be readily handled with a shovel, there is no advantage in using dynamite. Under these conditions trees come into fruiting as soon and do as well in every respect as those set in excavations made by blasting. As the roots spread rapidly in every direction, they soon outgrow the small space loosened for them by blasting.

"However, dynamite may prove helpful in digging holes when the soil is dry and hard and difficult to loosen and remove with pick and shovel, or even when the soil is moist but lies shallow over hard or stony subsoil.

"To dynamite for tree planting, one-fourth or third of a stick of dynamite is placed at the bottom of a hole drilled 18 or 20 inches deep where the tree is to stand. The soil is firmly tamped above the charge, which is then exploded, finely shattering and bulging, but not throwing out the hard dry earth. This makes easy work of shoveling out the soil.

"Dynamite should not be used in a moist clay subsoil in spring, for the blasting will leave cavernous openings around which the clay subsoil will dry hard. These will cause the soil about the tree roots to settle unevenly, throwing the tree out of position."

HOW TO KEEP WELL
DR. FREDERICK R. GREEN
Editor of "HEALTH"
© 1926, Western Newspaper Union.
OCCUPATION AND VISION
WHAT is the relation between a man's work and his vision? The United States public health service has just completed a ten years' study on this point with some interesting results.
The workmen studied were taken from ten various occupations. They are pottery, post-office, glass, gun, foundry, steel, chemical, cement, cigar, and garment workers. In these ten lines thirty thousand workers were examined as to their eyes, ten thousand men and twenty thousand women.
This number naturally included men and women of all races and nationalities, yet no essential differences were found in the different races. They run about the same proportion of normal and defective eyes.
But when the different occupations were compared there were striking differences. The two groups which showed the highest percentage of defective vision were the garment workers and the post-office employees.
Not only did the figures show a surprisingly close relationship to the individual work but also to the length of service in that particular line. Normal vision in both eyes in the group of workers of less than five years' service varied from 24 per cent in garment workers to 73 per cent among founders. But in persons who had worked ten years and over, normal vision in the garment industry was only 22 per cent, or 2 per cent less than after five years, and in the foundries only 65 per cent after ten years' service instead of 73 after five years' work.
Age naturally had a marked influence. Taking all the thirty thousand workers in all industries, it was found that 77.2 per cent of all under twenty years old had normal vision. That is about the percentage one would expect from any large group of young people. In persons from thirty to forty years old, 60 per cent had normal vision. In those from forty to sixty-four, only 46.5 per cent had normal eyes. From fifty to fifty-four, the percentage had gone down to 22 per cent, while of those over sixty years of age there were only 5.5 per cent who had normal vision in both eyes.
This tabulation shows as graphically as any figures that have ever been compiled the wear and tear of present day industry on vision.
A curious point which developed was that in most industries, one good eye was nearly as good for practical purposes as two. Many workers with normal vision in only one eye were entirely unaware that only eye was of any use to them.
LONG RANGE WEATHER FORECASTING
CIVILIZED man has learned to do much to control his surroundings. He seems almost independent of outside conditions. But one thing he as yet can neither foresee nor control—the weather. As Mark Twain said, in one of his after-dinner speeches, "Everybody talks about it but nobody does anything."
Yet the weather is what determines our crops and our food. Apparently, it is the one thing man cannot foresee or control. Our weather bureau can now forecast the weather with fair accuracy for a day or two in advance, but cannot utter it in any way, that, at least, in some advance. A cousin of mine in Alabama, near Mobile wrote me a graphic letter after the recent Florida hurricane, telling how she and her husband sat for hours by the radio, listening to the broadcaster in Pensacola telling of the progress of that great storm as it swept across Florida straight toward them, yet powerless to check it. At least, they had sufficient warning to get into another house in a more sheltered location from which they saw their own roof blown out to sea. But giving a few hours' warning is at present the limit of our knowledge of the weather.
At a convention of the National League of Commission Merchants of America at New York recently, Mr. Herbert J. Browne of Washington delivered an address on "Long-Range Weather Forecasting," in which he claimed that, by careful study, it might soon be possible to forecast weather conditions, not only days but years ahead.
This new field is only about five years old. Up to that time, 30 hours was the weather bureau's limit. Mr. Browne bases his whole system, on the fact that weather conditions, as a whole ever, are controlled by the heat absorbed by the ocean. In a desert, the sand is very hot by day but rapidly cools off when the sun sets, so that one needs a blanket to sleep at night. But water absorbs heat slowly and gives it off just as slowly. The result is the tropics absorb heat from the tropical sun and the heated water causes the great ocean streams like the Gulf stream, to flow to warm our climate and weather.
What determines the amount of heat which the Gulf stream absorbs? Sun heat. What controls the amount of the sun's heat? Sun spots. And these, says Mr. Browne, run in cycles. So the observer can accurately predict weather months and years in advance.

Could Not Escape Fate

Peres Molina, a commercial traveler, occupied death in the city of Mendoza, Argentina, when a large galvanized iron sheet fell from a roof and landed within a few inches of him. A few minutes later, he entered a restaurant, seated himself at a table, and died from heart failure.

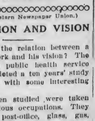
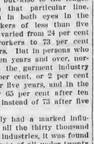
EXPERIENCE OF WESTERN GIRL

Found Cannery Work Too Tiring

The fertile valleys of Oregon help to supply the tables of America.



This is possible through the magic of the humble tin can.
In one of the canning establishments, Julia Schmidt was employed. It was complicated work because she did seal-ing and other parts of the work. It was strenuous work and she was not a strong girl. Often she forced herself to work when she was hardly able to sit at her machine. At times she would have to stay at home for she was so weak she could hardly walk. For five years she was in this weakened condition.
She tried various medicines. At last, a friend of hers spoke of Lydia E. Pinkham's Vegetable Compound and she gave it a trial.
"Everyone says I am a healthier and stronger girl," she writes. "I am recommending the Vegetable Compound to all my friends who tell me how they suffer and I am willing to answer letters from women asking about it."—Julia Schmidt's address is 652 North Front St., Salem, Oregon.
Girls who work in factories know just how Miss Schmidt felt. Perhaps they, too, will find better health by taking the Vegetable Compound.



Claims Stomach Souring Causes Bad Breath

New York City, Mr. Ben Loheide writes:—"I was formerly a victim of constant upset stomach, bad taste in mouth and very disagreeable breath. My bowels were constantly constipated and nothing helped except temporarily. Then I tried Chen-o's Little Liver Pills I have overcome all troubles and I am especially happy because of a sweet clean healthy breath."
Chen-o's Little Liver Pills are small, sugar coated, easy to take by every member of the family. Their action on the liver, stomach, intestines, is gentle. 25 & 75c red pkgs. Druggists.

A Delightful Evening Frock.

rived from across seas showed not only ostrich about the hemline in deep points and at the shoulder, but a third touch was added in the way of a mounture of ostrich at the girdle.

The exquisite mauve panne velvet evening gown in this picture, which is a Doucet creation, artistically accents a unique hemline with drooping ostrich flues. There is an introduction of silver embroidery on the bodice front, with a knotted detail of velvet at the waistline, which are effective.

It is apparent throughout the evening mode that ostrich plays a very important role. Not only is the formal gown and wrap of velvet lavishly embellished with ostrich, but nilady is again carrying a huge ostrich fan. Indeed so prone are the vogue for ostrich, even fantastic hand bags are made of ostrich which covers a fabric foundation.

Young girls wear with simplest of tinted chiffon or velvet frocks, a lustrous tonnere of ostrich inset with colorful flowers.

The latest ostrich novelty is that which is gilded or silvered. On brocades of rare and colorful weave, ostrich thus treated appears in regal splendor.

An outcome of this vogue for ostrich is the boa, long reaching to the very hemline of the frock, or short, assuming the form of a fanciful neck ruff.

As a substitute for the nightie

Knitted Frock Smart; Sagging Is Overcome

It was a red-letter day in fashion history when knitted frocks were created. Nothing smarter and at the same time more serviceable has ever been designed, and now that the first fault of sagging and pulling out of shape have been overcome, they are almost an essential of any carefully planned wardrobe.

And yet there is no sign that two-piece frocks have had their day. Ther are quite as conspicuous in the new fashions as they were in those of the past season. Slight differences in detail and interesting combinations of fabrics give a new aspect to costumes whose general silhouette varies very little from that of the last two seasons. . .

Lingerie

Checked and striped voile are very practical for lingerie. Voile launders beautifully and is much softer and more sheer than most cotton products.

CHRISTMAS TRIFLES THAT ARE SUITABLE
Will Please the Men

A troop of mussing and efficient Christmas men due to arrive at Christmas time. They are destined to hang about the rooms of unnerved-for bachelors, or any other men who may need needles, pins, buttons, thread and such. Bits of colored linsuel, or other smooth cloth, account for the costume of the jolly Chink pictured here, and black wool yarn or during cotton will serve to outline his features, finish his garments with Chinese stitch and provide the queue which serves to hang him in a handy place.
Cardboard will serve in addition for the small oriental pictured.

New Parchment Shades

Christmas time always brings many kinds of pretty candle shades. Just now parchment shades, bought plain and decorated to suit oneself, are popular and they may be painted or adorned with cut-out figures pasted on. Pretty effects are made by painting silhouettes in black on the underside.

Odd Laundry Bag

The head of this stant-eyed gentleman, who will carry laundry for his lucky owner, is cut from unbleached domestic, stuffed with cotton and sewed over the back of a coat hanger. The coarse face is sketched on with black paint, bits of black ribbon contribute the eye and collar and wool yarn provides the hair. A long shirt of cretonne is open near the top and sewed together at the bottom.

In Black and Purple

A black lace bandeau, with light purple ribbons attached to it, and knotted at the back, tucked this simple breakfast cap. It is adorned with a band of ribbon ending in bows at the side and a tiny ribbon-covered elastic across the back adjusts it to the head.

Dainty Morning Jacket

This dainty morning jacket is made of light blue georgette crepe, lined with the same material in light pink. The neck, sleeves and front opening are finished in points and the jacket is fastened with ties of narrow ribbon in pink and blue.

FEEDING MINERALS TO DAIRY CATTLE

By B. C. MELLENCAMP,
Charlevoix County Agricultural Agent

This question is of vital importance to the successful dairyman, who wants to make the most money out of his cows this winter. More and more dairy experts are realizing that minerals are of greater importance than we have previously supposed, and day by day we are learning more about them and how to use them.

Briefly the following minerals are discussed:

SALT—Salt furnishes sodium, which is needed in the blood, and chlorine, which is used in making hydrochloric acid for the stomach. Livestock may be allowed free access to salt, or where grain is fed liberally, the salt may be mixed with the grain at the rate of one pound of salt to one hundred pounds of grain mixture. If feeding grain lightly, mix one pound and a half of salt to one hundred pounds of grain. By all means don't be saving on salt.

IODINE—A deficiency of iodine in the ration results in goitre or big neck in calves. Water from certain wells has sufficient iodine, while in others it does not, which accounts for some farms having this difficulty and others not. Where goitre occurs the thorough mixing of 1-10th pound of finely pulverized sodium iodine or potassium iodine with one hundred pounds of salt and that fed to meet the salt requirements is sufficient.

PHOSPHORUS—The mineral element most likely to be deficient in the ration of dairy cattle is phosphorus. It is essential for growth, reproduction, and milk production. As a rule roughages are low in phosphorus and high protein concentrates are high. Among the feeds high in phosphorus are bone flour, cottonseed meal, wheat bran, oil meal, and middlings. Feeds low in phosphorus are all the hays and straws and common cereals. So therefore if you are feeding grain that is high in phosphorus as the ones listed above, probably enough will be available without any additional amount, but if grains low in this element are used, steam bonemeal should be added.

Depraved Appetite—Depraved or perverted appetite is prevalent in certain sections of Michigan. It is manifested by the eating of materials not classed as food, such as bone, wood, hair, sticks bark of trees, dirt and manure. Growing animals and milking cows are more subject to this condition than others. Cows thus afflicted decrease in milk flow noticeable. This indicates a deficiency in the ration. It may be due to lack of quality in the roughage or lack of phosphorus, the latter more apt to be true. Depraved appetite in an extreme form occurs where either cottonseed meal, wheat bran, or oil meal are fed liberally, but usually occurs where alfalfa hay silage and corn and oats are fed. This perverted appetite occurs more frequently in spring and early summer. Where this disorder is prevalent a mixture of one part of salt and two parts of odorless steamed bone meal should be kept before the animals at all times.

CALCIUM—Calcium is one of the principal mineral elements in the skeleton, fetus and milk. It is usually regarded as the element most likely to be deficient in the ration. This is also a symptom of depraved appetite. The following feeds are high in calcium: Bone flour, cow-pea hay, soy-bean hay, clover hay and alfalfa hay, while other hays, cereal grains, and protein concentrates are low in calcium. You will note that the feeds high in calcium are exactly the reverse in the case of phosphorus. Skimmed and whole milk are especially good sources of calcium for young calves. Cows producing less than 100,000 pounds of milk a year and receiving a good quality hay in abundance, do not need a mineral supplement supplying calcium, but it is advisable to add calcium to the ration of high producing cows.

Mineral Supplements Furnishing Calcium and Phosphorus

Raw Rock Phosphate—High grade raw rock phosphate contains as much calcium and phosphorus as bone meal, and in a much cheaper form. However, results at the N. C. Experimental Station, show that steamed bone meal is much more superior to raw rock phosphate. In fact the raw rock phosphate had a detrimental effect on the health of the animals. Cows receiving a 1.5 per cent raw rock phosphate ration were inferior in every way to those who received none, therefore this mineral should not be fed to dairy cattle.

Acid Phosphate—Its use cannot be recommended to dairy cattle, until more experimental work is conducted on it.

Raw Bone Meal—Should not be fed to dairy cattle, since it is only heated sufficiently to remove loose flesh and not enough to destroy disease germs, since the odor is objectionable.

Steamed Bone Meal—This is not a standard product, but varies greatly in composition, odor and palatability. Bone meal having an objectionable odor is not as good for dairy cattle even though it has been properly steamed, as the odorless steamed bone meal. Odorless meal is a superior product made by thoroughly extracting and cooking the bones, then drying. This is a light colored product, palatable, and free from disease germs. However, steamed bone meal ranks next to the odorless meal, so if using the steamed bone meal do not discard it,,but continue using it until you are able to get the odorless.

Minerals Supplying Calcium Only

Marl—Marl usually carries too many impurities to be used as a source of lime. However, a very high grade marl is probably just as good a source of calcium as ground limestone rock.

Wood Ashes—Wood ashes may be used as a feed, but they do not contain as much calcium as limestone.

Oyster and Clam Shells—Are usually more expensive than ground limestone and there is no evidence that they are superior for dairy cattle.

Finely Ground Limestone—Finely ground limestone rock is the cheapest form of calcium to feed as a supplement. Poor grades, however, should not be fed since they usually contain many impurities.

Complex Mineral Mixtures—Many expensive complex mineral mixtures are being fed to dairy cattle. These mixtures usually consist of various combinations of bone meal, calcium carbonate, common salt, copperas, sulphur, glauber salts, potassium iodine, hard wood ashes and charcoal, the theory behind such a mixture of this sort is that if the mineral does not do the work, another will. In the past the belief has been if the mixture did not help, it at least did no harm. However, results with heifers fed a mineral mixture in addition to a basal ration, show that it is very harmful when fed over a long period. The mixture retarded body development and produced an unhealthy appearance. Reproduction was also affected. In fact the cows fed the complex mineral mixture have not yet produced a normal calf. The calves have been born dead or in a weakened condition. Other heifers in same group fed individually the mineral mixture have produced normal calves, in every case. At the present time two of the five heifers in the experiment have died. Therefore never feed a mineral mixture to dairy cattle as a part of the daily ration.

Simple Mineral Mixtures to Feed

1 For growing or milking cattle, receiving hay or silage or pasture and little or no grain: 200 lbs odorless steamed bone meal, 100 lbs finely ground limestone rock, 200 lbs total mix. Allow free access to this mixture at all times.

2 For heavy producing cows, receiving a liberal grain ration, silage and legume hay: 100 lbs odorless steamed bone meal, 100 lbs finely ground limestone rock, 100 lbs salt. Add three lbs of this mixture to 100 lbs of grain. On farms where goitre is prevalent, one-tenth pound of finely pulverized potassium iodine or sodium iodine should be thoroughly mixed with the salt.

Feeding Minerals on Pasture

The pastures of Michigan are usually low in phosphorus. Where pasture is the only feed, heavily producing cows will usually drop in milk production and become more depraved appetite. Where pasture is supplemented with grain high in phosphorus, no mineral supplement is necessary, but where no grain is fed, bone meal should be mixed with salt at the rate of two parts bone meal to one part salt and the cattle allowed free access.

Well Cured Hay—Properly cured hay or green grass are needed not only for good health but also for reproduction. The hay should be cured so as to preserve the high green color. The feeding of good quality hay will do more to keep up the health of the dairy herd than any other factor. Yellow corn is superior to white corn.

Condition—It is a profitable plan to feed one or two pounds of either steamed bone meal or the odorless meal to every 100 lbs of grain ration, no matter what your feed is, . If feeding no grain (which is a losing practice) mix 200 lbs meal in 100 lbs of salt and allow free access. For heavy producing animals, feed quantities of steamed bone meal and limestone up to three or four lbs as recommended above.

Bird Reserve Abandoned

Abandonment of a native bird reserve in the state of Arkansas was authorized in an executive order issued on the recommendation of the secretary of agriculture and the secretary of the interior.

The reserve comprises 14 acres located in Mississippi county. When originally established in 1913, the area was a resort and breeding ground for native birds. Since then, owing to drainage operations in this section of Arkansas, the tract has become dry and contains no water.

With the disappearance of the water the native birds departed and the reserve lost its value for the purpose for which it was created. The land included in the area will be returned as a part of the public domain of the United States.

Chicks Grow Faster by Ultra-Violet Rays

Newport, Eng.—Young chicks have been made to grow twice as fast by use of electricity, says Prof. Boriaues Matthews, a poultry, expert. The young birds were treated for nine weeks with ultra-violet rays.

Professor Matthews advises poultry farmers either to give chickens electrically made ozone as provided in London underground railways or to bathe them with electricity radiated from electric wires over their pastures at night. He contends the 2000 in eggs would be increased nearly 50 per cent.

PLAN ALTERATIONS IN SENATE CHAMBER

Modern Ventilation and Light to Be Provided.

Washington.—The historic senate chamber, occupied continuously since 1859, will give way to modern alterations to provide outside air and light under a plan being worked out by Republican and Democratic leaders.

Informal agreement has been reached to prosecute the plan at the next session at the urgent request of health crusaders, who claim the mechanical ventilation does not provide proper living conditions in the present inside quarters because of the absence of sunlight and direct air currents.

The plan conforms with the original model of Thomas U. Walter, the architect who designed the senate and house wings of the capitol. The cost is estimated at $450,000, exclusive of a ventilating system, which consulting architects claim still would be necessary.

Third Change in Room.

This would mark the third change in the senate assembly room since the capitol building was constructed. The senate at first occupied the small chamber now used by the Supreme court.

Under the plan, the senate chamber would be moved forward to the north wall of the senate wing, and the architects report that no material structural changes would be needed to carry out the design. The work would be confined to the tearing out of partitions and the relocation of galleries and offices.

The same dimensions of the chamber, 113 feet by 80 feet, would be retained, but a half circle or amphitheater form, with a coved ceiling, would be substituted for the present oblong shape to improve acoustics and vision.

The new assembly room would occupy the space now devoted to the President's and vice presidents's offices and the marble room. Quarters for the Chief Executive and the vice president would be located side by side on the east side of the senate wing, with entrances through a large anteroom. The marble room, now used as a lounging and conference retreat for senators, would be replaced by a wide marble promenade around the entire half circle in the rear of the senate, with connections to the clerk rooms.

More Offices to Be Built.

Public corridors would be built behind the senate chamber to provide a direct line between the two staircases and additional offices would be constructed between the corridors and the north side of the building.

Gallery space would be confined to the half circle, with the north side left free. The press gallery, now occupying all of the north side, would be moved over to the northeast corner, where three rooms would be fitted up. New committee rooms would be constructed also on the gallery floor between the corridors and the south wall.

Drive First German Automobile 270 Miles

Berlin.—The fortieth anniversary of the invention of the German automobile was fittingly celebrated by students of Hanover Tech.

They hauled out the original machine from the school museum, fitted the tank with gas and drove 270 miles from Hanover to the house of Dr. Karl Benz, the inventor, in Landsburg. Doctor Benz is now eighty-three years old.

The trip was made without a single mishap. The car at times attained a speed of 21 miles an hour, with two passengers. Instead of the skeletal levers which greeted Doctor Benz on his first ride in the same car, the student drivers received an ovation along the route. Tears were in the aged inventor's eyes and thousands of his townspeople cheered as the machine chugged up and stopped in front of his house.

Brighter Garb for Men Is Decreed in London

London.—Should men wear brighter clothes? James Wendell, president of the National Federation of Merchant Tailors, which is holding its annual meeting in London and whose members design what is vital to men's clothes, declares they should. Citing the Elizabethan times, when heroes such as the adventurous Sir Francis Drake and gentlemanly Sir Walter Raleigh wore ribbons and velvet, Mr. Wendell declared the idea that color in men's clothes is a sign of effeminacy is all wrong. The conference decided that coats will be longer, the materials will be of bright hues, and a slim effect will characterize the cuts.

Handful of Grain Dust Turns Over Auto Engine

Washington. — Grain dust taken from a grain elevator has been found to have sufficient explosive power to run an automobile engine.

Department of Agriculture chemists who conducted tests announced that, while the engine did not smoothly, nor develop continuous run, enough power was developed with the dust to turn it over many times. A hand system of feeding the dust through a tube to the intake valve was used.

The experimenters said the study gave "encouraging results which indicated the possibilities of designing an engine to use grain dust as the source of fuel."

Valueless Criticism

A critic is a man who on all occasions is more attentive to what is wanting than what is present.—Addison.

Order for Publication—Final Administration Account

STATE OF MICHIGAN—The Probate Court for the County of Charlevoix.

At a session of said Court, held at the Probate Office in the City of Charlevoix, in said County, on the 12th day of November A.D. 1926.

Present: Hon. Servetus A. Correll, Judge of Probate.

In the Matter of the Estate of Mary Thomas, deceased.

Albert F. Bridge having filed in said court his final administration account and his petition praying for the allowance thereof and for the assignment and distribution of the residue of said estate.

It is Ordered, That the 6th day of December A.D. 1926 at ten o'clock in the forenoon, at said Probate office, be and is hereby appointed for examining said account and hearing said petition.

It is Further Ordered, That public notice thereof be given by publication of a copy of this order, for three successive weeks previous to said day of hearing, in the Charlevoix Sentinel a newspaper printed and circulated in said county.

SERVETUS A. CORRELL,
Judge of Probate.

PUTS WHEEL FIRST IN MAN'S CREATION

Hilaire Belloc Traces Role Played in Civilization.

Washington.—What is the most notable thing that man has created?

The wheel is accorded first place by Hilaire Belloc, who, in an essay with which he prefaces his pictorial history of the vehicle, glorifies this instrument of man. The volume, which has frequently been published under the title, "The Highway and Its Vehicles," contains more than a hundred reproductions of old manuscript illustrations, paintings, lithographs and woodcuts, picturing the development of the vehicle from the hammock-wagon of the Twelfth century to some early automobiles, which are being raced by horses and even dogs.

Wheel Man's Own Creature.

The highway, which has so largely conditioned human history, was made by the vehicle, but the vehicle became possible only through the invention of the wheel. In comparing this discovery with others of fundamental importance, the author points out that fire was an existing thing which was only encouraged and made to burn, whereas music, plastic art, and building were unmicked from nature, but the wheel is a conception—a fact on which to nourish pride.

Aside from its original purpose of providing easy communication the wheel has lent aid to many a multitudinous of functions: In grinding his corn; in turning the spinning wheel and furniture of his house; in drilling holes for him; in molding his clay; in tellings him the direction of the wind upon his mustheads; in lifting weights out of wells, and in acting as a pulley for the development of the principle of sailing craft.

Potent in Modern Science.

From these simplest uses the wheel has branched out in one direction after another, supplementing and extending man's power. Of its recent marvelous extension the author writes:

"It gives us electrical energy to use; it transmits power; it keeps time for us; it measures all things from a map to the speed of light; it permits our cinema has given us its moving pictures. It endows us with the special use of the gyroscope; it drives our turbines by steam and water, and, soon, perhaps, by air. It even aids us in our vices, and the gambler's roulette or exactitude it makes our gambling reasonably impersonal."

New Gold Treatment for T. B. Found at Berlin

London, England.—Preliminary announcements of a new gold treatment for tuberculosis have reached this country from Berlin.

Prof. Erich Leschke of the medical faculty of the University of Berlin has been working with a new gold compound called "triphal," according to the German correspondent of the medical journal, Lancet. Injections of one-quarter of a gram of the new compound are administered every four days to patients in various stages of the disease, and it has also been used before performing the operation known as pneumothorax, when there is a cavity in one lung and disease in the other. Pneumothorax is a process whereby one lung is collapsed to give the tubercular lesions a chance to heal.

The results so far are encouraging, according to Professor Leschke, but he is unwilling to give more definite information or make further statements until the remedy has been more completely tested.

Satisfied

Elaborate Wife—I would rather have my husband as he is than as he would be if he was not.—London Mail.

CHICAGO MALE QUARTET AT PALACE THEATRE

Robert Herrick, head of the well-known Chicago Male Quartet, which comes here Tuesday evening on the local Lyceum Course, believes that his mission in life is to make people laugh. With that idea in mind he has constructed as irresistibly funny a program as is to be found on the platform. Mr. Herrick has an excellent baritone voice and is a finished dramatic reader. He could, if he chose, give a program composed entirely of classical numbers, but he thinks it just as important and more to his liking to make his audience chuckle and laugh as a result of his cheerful, cheery side of life. Mr. Herrick's inclusive numerous phonologues are unique. His character impersonations are not only provocative of hilarious laughter, but show a keen insight into human nature. This is a splendid musical entertainment company.

Three other excellent singers and entertainers make up the company. John Sloan is first tenor, Kirk Emmons second tenor and Frank Calman second base. The combination of the college glee club preaks a part of the entertainment.

The gay, happy-go-lucky spirit of college days is embodied in these four young men, all of whom are former college students. They learned the songs they sing on the campus, and they bring to audiences a vivid picture of college life. The male quartet is an outstanding company with a lively program that is sure to please.

SANDLESS GLASS IS DISCOVERED

Evolved From Rare Element by Scientist.

Ithaca, N. Y.—Sandless glass is being made in the chemistry laboratory at Cornell university.

The substitute for sand in the process of manufacture is the dioxide of germanium, a rare, mysterious and costly element which Prof. L. M. Dennis, head of the department of chemistry, is now able to produce in quantity after years of experimenting.

Whether the new glass has properties that will make it of great value for optical instruments is still undetermined, but the results thus far obtained indicate that it has unusual refractive qualities.

Chemists still are puzzled by germanium. They freely admit that they do not yet know exactly how making glass they had not known what to do with it. Even now they are confident it has other and more important uses in the arts and sciences. They will apply it. At present Professor Dennis is studying its compounds with a view to determining whether the element has medicinal properties that will make it of inestimable value to mankind.

Germanium is extracted from crude zinc oxide. In crystalline form it is a glossy, flaky substance resembling zinc, hard and extremely brittle.

It is worth several dollars a gram, and Cornell exhibits the largest mass of the element ever assembled—a round piece, beautifully crystalline, about the size of a silver dollar and weighing half a gram.

It has been learned that crude zinc oxide can be heated with strong acid under such conditions that a volatile compound of germanium of high purity distills over. This is decomposed by water so as to produce pure germanium oxide, white powder. Professor Dennis further discovered that ingots of the pure metal could be obtained by fusion of the powder under ordinary salt.

Laboratory tests disclosed that a great deal of germanium could be extracted from a pound of zinc, and the production has been proceeded on this basis.

ANNUAL BIRTHDAY MISSIONARY SOCIETY

The missionary societies of the M. E church held their annual birthday meeting with Mrs. and Mrs. Orie Nordrum, last Friday evening. In place of the regular inquest a social evening was planned, at which the men were guests of honor as usual.

An informal banquet was carried out consisting of music, charades, readings, and a talk by the pastor. Delicious refreshments were served and as this was the real birthday of Mrs. A. E.-Edwards, vice president of the society, a surprise was given her when a large cake was brought in and was enjoyed by all.

An old fashioned singing of old time songs closed a very happy evening.

BOND ISSUE AGAIN LOSES

Bonding Proposition for a New School Building is Lost

Tax payers, a large number of them met at the court house last Monday night, for the purpose of discussing the new high school building program and to as great extent as possible become enlightened as to plans either in land or prospective relative to building activities, funds on hand and the amount to be raised by bonding to carry out the proposed project.

As the meeting progressed it developed that plans for the proposed project were an unknown quantity as such had not been prepared for consideration, study or acceptance, thereby giving the entire proposition up in the air for the time being—excepting the bonding proposition which was made by the school district.

There was probably very few if any taxpayers in the city or school district that seriously object to having a modern building for educational purposes erected—replacement of the present now used and pronounced by some as unsafe and far from sanitary. There are many, however, that take this viewpoint object to a new heavy bond issue which in order to adequately finance the new building project, particularly so when they learn from those in authority that the present high school building can be used and spend 122 days on pasture and yet she paid for every dollar of it and made $162.36 as a profit. She just happened to be what she is, but rather it can be credited to Mr. Meggison who for the last fifteen years has always used a high class pure bred sire and therefore improved his herd to this high point as the following record of his herd testifies: After glancing through his contest books for the last three years, they have averaged 7,280 lbs of milk, 393 lbs of butterfat with an average test of 5.39 per cent per cow per year, which is more than double what the average cow produces in this state.

Another interesting thing about his herd is that each year the test is improving. In 1924 it was 5.2; in 1925 it increased to 5.3, and in 1926 it advanced to 5.55. Probably the best sire Mr. Meggison has ever owned was "Heir of Charlevoix" who was the king of the domain for over two years and is still being used in the county. Such sires are worth hundreds of dollars to any man, and thanks to the Cow-test Ass'n his worth was discovered before he was sold to the buyer and will continue to advance the dairy industry.

During the last year Mr. Meggison's best pure bred and grade Jersey were the second in the county, with an average butterfat production of 435 lbs, and have proven from their performance that they do not have to take a back seat for any Jersey herd in Northern Michigan. This fine herd, pregnancy farmer belongs to the Cow-test Ass'n, always uses pure bred sires, feeds a balanced ration the year around, and as we say Shorthorn's performance was not an accident, but the result of good dairy management.

ANGELINE McCLINTOCK WHEELER

Passes—Charlevoix Resident Since 1886—Aged 84 Years

Mrs. Angeline McClintock Wheeler passed away at the family home, on State street, last Sunday as 9:45 p.m.—age 84 years.

Her maiden name was Angeline McClintock and place of birth Pickson, Canada in the year 1843. She came to Sardilac Co., Mich., when nine years of age with her parents. Three years later they moved to Leelanau county where they remained twelve years and then transferred her place of residence to Traverse City where she continued for a ten year period. Since 1886 she has been a permanent Charlevoix resident.

She was united in marriage with Lemon Wheeler in 1884 by whom she lived until her death. Charles E. Wheeler, grandson Harrison A. Wheeler and two sisters both residents of the state of Iowa, Mrs. Rila Prentiss of Oakland and Mrs. Sarah Jones of Council Bluffs.

Funeral services was held Wednesday afternoon at the First M.E. church of which she has been a member for upwards of thirty-five years. Prior to that she was affiliated with the M. E. society in Traverse City.

Mr. C. E. Pollock, pastor of the local society officiated at the ceremony Wednesday.

CHARLEVOIX COUNTY COW

Highest Grade Jersey in the State, George Meggison Owner

Shorthorns, a grade Jersey cow, as a result of a record in the Charlevoix County Co-Testing Ass'n, holds the honor of being the highest grade Jersey in the state. However, at least half the honor goes to George Meggison, farmer and stockman, who has owned her owner and the big man behind the gun, for his care, feed and attention was responsible for the noteworthy accomplishment.

This cow eight years of age had a production of 12,290 lbs of milk, and 729 lbs of butterfat with a test of 5.87 per cent. Exactly 361 days, or two pounds of fat every day. She was only milked twice a day but her cow test record shows a net profit of $162.36. Many farmers say they can't afford to feed cows and grow alsalfa, silage or grain, but just take a look at what this cow consumed:

9928 lbs silage, 925 alfalfa, 3452 sweet clover hay, 2496 ground oats 52 barley, 242 gluten, 299 cottonseed meal, 408 oil meal, 251 corn meal, and spent 122 days on pasture and yet she paid for every dollar of it and made $162.36 as a profit. She just happened to be what she is, but rather it can be credited to Mr. Meggison who for the last fifteen years has always used a high class pure bred sire and therefore improved his herd to this high point as the following record of his herd testifies: After glancing through his contest books for the last three years, they have averaged 7,280 lbs of milk, 393 lbs of butterfat with an average test of 5.39 per cent per cow per year, which is more than double what the average cow produces in this state.

Another interesting thing about his herd is that each year the test is improving. In 1924 it was 5.2; in 1925 it increased to 5.3, and in 1926 it advanced to 5.55. Probably the best sire Mr. Meggison has ever owned was "Heir of Charlevoix" who was the king of the domain for over two years and is still being used in the county. Such sires are worth hundreds of dollars to any man, and thanks to the Cow-test Ass'n his worth was discovered before he was sold to the buyer and will continue to advance the dairy industry.

During the last year Mr. Meggison's best pure bred and grade Jersey were the second in the county, with an average butterfat production of 435 lbs, and have proven from their performance that they do not have to take a back seat for any Jersey herd in Northern Michigan. This fine herd, pregnancy farmer belongs to the Cow-test Ass'n, always uses pure bred sires, feeds a balanced ration the year around, and as we say Shorthorn's performance was not an accident, but the result of good dairy management.

1926 BUY CHRISTMAS SEALS MERRY CHRISTMAS

Buying them is more than an obligation — it's an opportunity

TREE-LINED ROADS ARE OF MUCH VALUE

Trees along highways are yearly becoming better appreciated by the public and better protected by the state highway officials. Motorists have discovered that good roads are not complete unless bordered by stately trees. Stretches of the dixie highway from Daytona Beach to Jacksonville are banked with lovely palms and stately oaks. Other portions of the highway are barren, dreary, uninviting. The trees make all the difference. Too often in this and other states fine old trees have been cut down by the ruthless axe of roadbuilders who have destroyed splendid specimens in order to eliminate a curve. However, state highway officials are becoming to a new viewpoint and a new appreciation of trees. They realize that trees must have legal protection, that where there are no trees along the road trees should be planted.

Much of Florida's charm for visitors from the north is found in the lovely roadside foliage and over-spreading trees. In some states legislation has been passed making it a misdemeanor to remove or injure roadside trees, shrubs or flowers, whether on public or private property. Some states also forbid the use of trees as supports for boards or other advertising.

Forestry of this sort may have little economic worth but it has an aesthetic value that should not be underestimated. Fortunately for Florida it has both an advertising and an aesthetic value.—Daytona Journal.

SEAGULL IS COPIED IN NEW AIRPLANE

Novel Design Inspired by Study of Birds.

Garden City, L. I.—The flight of birds furnished the first inspiration that led one to fly. He then apparently from the principles he learned from birds and flew in ships of his own. The Board has now handed over to the within its own wing spread and must in again looking to the birds.

Leonard W. Bonney of Flushing, L. I., has gone back to the original principles and by study of the flight of birds has developed and constructed an airplane that is revolutionary in design.

Bonney began his research almost three years ago. He studied various types and finally decided that the seagull was the most perfect flying machine. He must could make use of than any other bird. He caught many gulls and testing their wing characteristics, their "lift" strength and measured their wing spread. He was finally able to the exact proportions of a seagull.

Finally he came into his hands that measured up to the standards he had set. That bird was sacrificed on the altar of science. The wings were then removed from the gull's body. Careful measurements and tests were made from the casts.

The new plane is now almost ready to fly. In a few days the designer will wheel his inventor from the hangar. Just before a crowd of skeptical engineers and designers from nearby fields he will take his plane into the air.

The lines of the new plane bear close resemblance to those of the gull's formuse gull. By the pressure of a lever in the cockpit the wings may be folded back along the sides of the fuselage, enabling the inventor to guide his ship into an ordinary garage. The folding is done by hydraulic means and the wings are locked, either in flying position or folded with gun locks.

African Golf

Rhodesian golfers are sold frequently to encounter lions, elephants and rhinoceros on their courses. It is easy to see why African golfers are slow.—Detroit News.

CONGREGATIONAL FOREIGN MISSIONS

Great Undertaking for the Advancement of Christianity

"Governments around the world are now recognizing the good will between nations and the advancement of human welfare are furthered by foreign missions." This approval where formerly often bitter opposition existed, is cited by Rev. Frederick L. Fagley of New York, secretary of the national Congregational Commission on Missions, in an appeal for support of the American Board of Commissioners for Foreign Missions during 1927. The American Board is the foreign missionary agency of the Congregational churches and its work is included in the missionary and benevolent budget of the First Congregational church at Charlevoix.

The annual "every member canvass" for funds will be taken by the Congregational church beginning Sunday afternoon, Dec. 12th. Each member and adherent will be asked to make an individual subscription toward the churches united budget of $4,000.00, which includes $500.00 for missionary work, foreign and home, and $3,500.00 for local pastoral expenses.

"Greece which for a hundred years rigidly prohibited mission work," according to Dr. Fagley, "is now beseeching the American Board for schools. The Board has recently opened a training Anatolia College from Asia Minor to Salonica, and by establishing at Athens a school for girls and a professional training school for workers in religious education.

The Japanese government has expressed strong interest and sympathy in the work of the American missionaries. The Empress recently visited Doshisha university, the American Board institution at Kyoto. The Emperor sent a personal gift of 600 yen to Miss Jessie E. Hoppin, an American missionary on the Hawaiian Islands, now under the Japanese flag.

In South Africa the British government has granted a subsidy to the work of the American Board throughout Natal, while business interests of Johannesburg have given $50,000 a year toward the social service work conducted for native Africans by Rev. Ray E. Phillips, a missionary of the Board.

The American Board is working under fifteen flags and among people of more than thirty languages. As the oldest, foreign mission board in the United States, it was the first to send missionaries to India, Ceylon, China, Turkey, Syria, Palestine, Greece, Bulgaria, Albania, South Africa, West Africa, Hawaii and other Pacific Is.

Knew Son's Weakness

An example of humor, conscious or unconscious, is afforded by the wife of an old Scotsman whose son was a doctor. "I frequently," he wrote, "my two worst watches in my son, for I know that he will dissect them."

Dennis Isn't So Dumb

Dumb Dennis says that ever since an intelligence expert visited the ship, where he works and regulates things there has been nothing but trouble.—Liberty Press.

Sydney Sends Fine Painting to the President

This large oil painting, showing the United States navy at anchor in Sydney harbor, Australia, July-August, 1925, was presented to President Coolidge by Sir Hugh Denison, K. B. E., the commissioner for Australia in the United States. The presentation is made by the citizens of Sydney to commemorate the event. The artist is Charles Bryant, R. O. I., a native of New South Wales, Australia. The painting will be placed in the national art gallery at Washington. At the left of the picture (left to right): J. J. Hosse, representing the Sydney citizens' committee; President Coolidge and Sir Hugh Denison, Secretary of the Navy Wilbur and Secretary of State Kellogg are shown at the right of the picture.

Virginia's Czechoslovaks in Celebration

The first minister of the Czechoslovakian republic was honored at Petersburg, Va., when Minister Zdenek Fierlinger of Czechoslovakia bestowed on behalf of his government the order of the White Lion. The Czechoslovakian colony of Virginia, in native costumes, turned out to dance in honor of the occasion, while (just to the right of the man in uniform) Governor Byrd, Richard Crane and Mr. Fierlinger looked on.

Seventeen Killed in Explosion

Seventeen men were killed and many injured by an explosion on the Norwegian oil tanker Mantilla in Rry dock near Baltimore. This picture was made a few minutes after the explosion, while the vessel was burning.

Minister to Hungary on Vacation

Theodore Brentano, American minister to Hungary, and Mrs. Brentano, photographed on their arrival in Chicago, where the minister is spending a vacation visiting his daughter, Mrs. H. McMeyer, Mr. Brentano intends to take a rest for two months.

Miss Elizabeth Chen

Miss Elizabeth Chen, daughter of Maj. Gen. John L. Chen, retired, will make her debut into Washington society this winter. General Chen, prominent in Grand Army of the Republic circles, is famous as "the drummer boy of Chickamauga."

The KITCHEN CABINET

(tm) 1926, Western Newspaper Union.)

The buoyancy of health is real enjoyment. Strength, mental vigor, vivacity, and good nature spring from good digestion. good digestion is secured only from eating and drinking proper quantities of food and liquid. It is possible to enjoy buoyancy of spirit and good appetite every day.

EVERYDAY GOOD THINGS

When you don't know what to have for luncheon or supper, try:

Spanish Toast.—Cut up two green peppers, add a slice of onion, two sprigs of parsley minced, and a cupful of thick tomato sauce. Simmer the mixture until smooth. Toast rounds of bread, butter and put a spoonful of the tomato mixture on each round of toast with a poached egg on top.

Fish Balls.—Make a white sauce using one tablespoonful of butter, one of flour, with salt and pepper to taste, one-half cupful of milk, and two well-beaten eggs. Cook until smooth, then stir in the flaked fish. Drop this batter by spoonfuls into hot fat. Drain on brown paper and serve at once.

Ham and Herring.—When there is a bit of ham left from dinner mince it and add it to cooked herring which has been fried in ham fat, adding minced onion or parsley to the mixture; serve hot.

Haricot of Mutton.—Fry two tablespoonfuls of drippings, add one and one-half pounds of mutton cut into two-inch pieces, salt and pepper well and cover with boiling water. Cook slowly until the meat is tender. Serve with buttered lima beans.

Apple and Marshmallow Dessert.—Peel, quarter and slice six juicy apples. Have ready one-third cupful of seedless raisins, one cupful of sugar. Arrange the apples and raisins with the sugar in layers in a buttered baking dish, add one-fourth of a cupful of water, cover and bake in a moderate oven until the apples are tender. Brush with butter and arrange marshmallows an inch apart over the apples. Place in the oven long enough to puff and brown the mallows. Serve with cream.

Cocoa Angel Food.—Sift one cupful of sugar with one-fourth cupful of cocoa. Beat the whites of a cupful of eggs until stiff, add one-fourth of a teaspoonful of cream of tartar to the eggs and another fourth to three-fourths of a cupful of flour. Fold in the sugar and cocoa, then the flour, adding a bit of salt and a teaspoonful of flavoring of vanilla.

A lemon, custard or cream pie is made more attractive and tasty with a few marshmallows dotted over the top of the pie or set into the meringue and browned with it.

Club Luncheon.

This is the time of the year when much entertaining is being done. While

the budget for these affairs is frequently limited, yet it is possible with careful planning to serve delicious luncheons for a very small outlay.

In cold weather there should always be a hot course, either soup or a hot entree with cold meat, potato chips, pickles, rolls, jelly and a dessert. One may serve a fruit cup, sliced smoked tongue, scalloped potatoes, rolls, jelly, olives and dessert. For hot dishes, baked beans, macaroni and cheese, celery cooked and served with cheese sauced, candied sweet potatoes—any one goes nicely with sliced cold meat, tongue or meat loaf or with hot frankfurters. If the meal starts with a cupful of good broth a heavy nourishing salad will take the place of meat, then follow with dessert. The following are a few quantity recipes which will assist in preparing a menu for several:

California Salad Dressing.—Take three-fourths of a cupful of orange juice, one-fourth cupful of lemon juice, one-half teaspoonful of salt, one cupful of sugar, three eggs and two cupfuls of cream. Heat the fruit juices, add salt and sugar and eggs lightly beaten, stirring and cooking in a double boiler. When thick, cool, and just before serving add the cream whipped until stiff. This recipe makes one quart of dressing.

Sunflower Salad.—Peel eighteen oranges and separate into sections. Stone fifty dates and chop with one-half cupful of nut meats. Arrange the orange sections pinwheel on lettuce, using three leaves ordinary size; place a ball of the date mixture in the center of each flower. Use the mayonnaise or any desired salad dressing. This amount serves twenty-five.

Fruit Salad.—Take eight oranges, six bananas, three apples and one can of pineapple. Cut and mix as usual with the above dressing. Serves twenty-five.

Cottage cheese and pear, pear and tomato, stuffed dates with cottage cheese, canned pineapple and pear, all make delicious salads.

A molded vegetable or meat salad is always welcome and when served already looks well and serves easily and in uniform portions. It may be molded in one large receptacle or mold and cut into uniform sizes.

Nellie Maxwell

The World's Best

The American honey bee is the world's champion heavyweight honey maker. Many honey producers remove the sweet stuff from the combs by centrifugal or gravity extractors, a process which yields a cleaner product than that which comes through the crude methods employed abroad.

Delicious Draughts

"Love is like a well," sings a poet. Can be unsure it is a dangerous thing to fall into?—Boston Transcript.

Depleted Soils Being Rebuilt

Worn-Out Land in Pennsylvania Brought to High State of Fertility.

That it is possible and profitable to rebuild worn-out farm land without the use of live-stock manure has been indicated in a number of field tests, but it remained for the Pennsylvania State college to fully demonstrate the plan on a practical-sized farm. The net result of this work to date is that a badly depleted tract of land has very quickly been brought into a high state of fertility, as shown by wheat yields of 25 to 43 bushels and clover hay yields of 2¼ tons per acre.

The plan followed on this farm is based on the results obtained on the old fertilizer plots, the oldest in America, which are now in their forty-fifth year. It consists, briefly, in a corn, wheat, clover and timothy rotation; second crop of clover and timothy plowed under; commercial fertilizers applied for corn and wheat; lime used as needed to secure stands of clover.

Origin of Question.

The demonstration was started 14 years ago in order to give definite answer to the question, Can worn-out soil be built up without manure? The first wheat crop after the inauguration of the plan made 17 bushels, or just the state average for Pennsylvania at that time. The clover and timothy crop seeded in the wheat made a 2¼-ton crop, which was plowed under. The second crop of wheat made 43 bushels and the 1925 crop 41 bushels per acre. No wheat crop, since the first one after starting the fertilization, has yielded less than 25 bushels, clover and timothy regularly making 2 to 2¼-ton yields.

The farm superintendent, Mr. C. L. Goodling, who has charge of this farm, believes that it demonstrates the only way in which thousands of depleted fields can ever be made profitably productive in localities where live-stock manure is scarce and its cost prohibitive for general farm crops.

Farming for Yields.

"The root systems of the clover and timothy furnish a lot of decaying organic matter," he says in answering the question how he keeps up the humus of the soil, "and, anyhow, I'm not farming for humus—it's yields I want."

This experience does not lessen in any way the importance of live-stock manure where available, but it does show conclusively that run-down or worn-out farm land need not be left so because of scarcity or entire lack of live-stock manure. Lime and fertilizer enough to start clover for a green manure crop and additional plant food as needed for the grain crops will work wonders in rebuilding the worn-out soils which may be found in almost every community, Professor Goodling points out to the hundreds of people who inspect this unusual demonstration farm each year.

Confined Fowls Usually Heaviest Winter Layers

Pullets that are allowed the run on the farm during the fall and winter do not usually lay as heavily as those that are confined. If the birds are allowed to run it is impossible to control their feeding and often they are out roaming when they should be eating mash or other feed. In addition, they are exposed to changes in weather conditions, and wet, cold weather is apt to result in colds that may cause loss from death, as well as loss on account of poor laying.

Early-hatched pullets that lose in weight often go into a molt. The prevention of such a condition requires close watch of the birds. If they lose flesh they must be given more feed.

Farm Hints

Plan to paint the farm buildings during the slack season.

* * *

Farm machinery catalogues have a place in the farmer's library.

* * *

The best way to economize in man and horse labor is to keep them busy.

* * *

Farmers need more of the clustering instinct, which begs have, for mutual benefit.

* * *

Keeping the fences strong helps also to keep the friendship of neighbors strong.

* * *

The European corn borer "must be recognized as a permanent addition to our list of farm pests."

* * *

There are more than 12,000 active farmers' business organizations in the United States, according to the United States Department of Agriculture.

* * *

No product which has to be shipped any distance can be better than its container. This applies equally to eggs and eggplants, apples and applesauce.

* * *

If properly planned a crop rotation will aid materially in distributing the farm labor and will greatly reduce the amount of outside help required for the efficient operation of the farm.

* * *

Buildings necessary in the production of live stock, storage of crops, and to the health and protection of the family represent more than one-eighth of all farm property.

* * *

Careful attention to the destruction of all weeds and their seeds for a couple of years will make a surprising difference in the ease with which they can be controlled thereafter.

* * *

The farm flock ranks high as a source of income on many farms, particularly on the diversified dairy farms, and contributes the greater share of the poultry and egg production of the Union.

Tennis Almost Cost Michigan Grid Star

Tennis almost caused Michigan to lose one of the star members of the Wolverine's brilliant back field.

During his prep school days Half-back Gilbert had starred on the courts as well as the gridiron. He had a state interscholastic tennis title to his credit when he entered Michigan.

At first he expressed a preference for tennis over football. Hearing of his prowess as a football player, Coach Yost persuaded him he could do more for Michigan by continuing his grid activities.

Against Illinois his general all-around play, featuring some mighty consistent punting, was a big factor in Michigan's victory.

NURMI AND RIVALS TO TOUR AMERICA

Three Foreign Stars to Stir Up Competition.

Negotiations have been completed to bring to the United States this winter Paavo Nurmi, the famous Finnish runner, and his two foremost rivals, Dr. Otto Peltzer of Germany and Edwin Wide, the Swedish schoolmaster, for a series of indoor meets.

The three foreign stars, according to reliable information, will appear in a country-wide tour that promises to stir up the most spectacular indoor track competition America has ever seen.

It will be a return invasion for Nurmi, who swept nearly all before him on a conquering tour of America in the winter of 1924-25, but this time

Paavo Nurmi.

he will have as opponents two men who not only have given him his closest races but also have beaten him recently.

The runners will appear under amateur colors and under the auspices of a group of prominent athletic clubs, understood to be led by the New York Athletic club and including organizations in Chicago, St. Louis, San Francisco and other big cities.

All three have rejected big offers to turn professional, Doctor Peltzer, the German sensation who broke Ted Meredith's half-mile record several months ago and later defeated Nurmi at the Finn's favorite distance, 1,500 meters, in world's record time, is understood to have refused an offer of $25,000 to turn professional. Nurmi and Wide likewise rejected flattering proposals to forsake the amateur intent, at least one of which was said to have been made by Charles C. Pyle, manager of Suzanne Lenglen and Red Grange.

Nurmi, Wide and Peltzer met a month ago in Berlin in two special races in each of which the Finn was victrix. Besides losing to Peltzer and Wide at 1,500 meters, Nurmi also dipped his colors to Wide over a two-mile route which the Swede covered in record-breaking time.

All three runners are expected to arrive in the United States in November to train for indoor competition which probably will start early in January at Madison Square garden.

Jones Will Not Defend His British Open Title

Bobby Jones, first American amateur to win the British open golf championship, says that he will be too busy next year to defend that title. He added that he will defend his title as American open golf champion, and that he probably will enter the American amateur tournament.

Jones said that his business interests and the study of law which he started this fall will prevent him from playing in any winter tournaments this season. Then referring to big tournaments, in which he is a veteran with an outstanding record, he added, with a smile:

"I hope to play in the United States open, but that doesn't mean I have much chance. I've played in nearly a dozen open championships over here and was lucky to win as many as two. The United States open and the United States amateur are all I can see for 1927, and darn little chance to win them. They seem to be getting tougher and tougher."

Renew Robinson's Contract

Directors of the Brooklyn National league baseball club announce that the contract of Wilbert Robinson, manager, had been renewed. The officials refused to state either the terms of the agreement or the number of years it will run. Robinson, who is also president of the club, had been stated to relinquish one of his offices in the reorganization program being undertaken at Brooklyn. The directors will hold another meeting some time next spring.

Horticultural News

SAVE APPLE TREES CANKER-INFECTED

Apple trees infected with hold-over fire blight cankers, one of the serious problems of apple growers in some sections, can be saved until a large percentage of future infections prevented if a procedure worked out by investigators in the experiment station of the college of agriculture, University of Illinois, is followed carefully and systematically, it is announced by Dr. H. W. Anderson, associate chief of pomological pathology, who had charge of the investigations. The object of the procedure, which was worked out as the result of observations and experiments, is to save trees, not to control blossom and twig blight in the entire orchard.

In Calhoun, Illinois' most important apple producing county, and adjoining counties hold-over blight cankers are killing thousands of Willow Twig trees, and this variety, one of the most profitable to western Illinois growers, is doomed unless satisfactory methods of control are put to use, Doctor Anderson said.

The procedure which the experiment station workers have developed to save infected trees is as follows:

1. Plot the orchard, indicating on a diagram the exact location of all diseased trees and the number of cankers on each tree.

2. During the winter months cut out all cankers. Cankered limbs which do not contain enough live wood to warrant saving the entire limb should be cut off well below the canker. Cankers on the body of the tree or on large scaffold limbs should be cleaned out and treated. The orchardist should have special instructions for this work.

3. The cleaned canker and all tools used should be disinfected by using a solution of mercuric chloride, mercuric cyanide and glycerin. A convenient formula for this is:

(A) Three-tenths ounce of mercuric chloride in one pint of warm water.

(B) Three-tenths ounce of mercuric cyanide in one pint of water.

Add three pints of glycerin to each of (A) and (B) after they are in solution, then mix them together. Make up in wooden or granite ware containers.

4. Paint the wounded surfaces first with shellac and then, after they are dry, with gas tar or white lead paint.

5. Give special attention to follow-up work.

During the growing season watch for any advance at the edge of the cankers. If any advance is seen, immediately clean out to perfectly healthy bark, disinfect very carefully and drop all diseased bark into a pail, remove from orchard and burn.

Best Strawberry Mulch Is Strawy Horse Manure

A coarse or strawy horse manure is best. Cow manure is too compact. It will mat down over the plants or form large chunks which do not protect the plants. The object of mulching is to keep the frost in the soil, thus preventing the lift of the frost and the settle of the thaw over and over through the winter and spring. The frost lifts the plants a little and the settling of the thaw pulls the soil away from the roots and leaves them exposed. The plants should not be completely covered, for they must have air through the winter. Therefore a coarse mulch which will not pack down is best, says a writer in the Rural New Yorker. Some people make the mistake of using forest leaves, sawdust or very fine manure, thinking the plants must be fully covered. These pack too closely and smother a good many plants. We have found coarse millet or sudan grass cut before they seed very good for mulching.

Sprouts Are Worthless to Grow Cherry Trees

Cherry trees grown from sprouts which came up around old cherry trees would be practically the same as seedlings, and would not be likely to produce much fruit, and what fruit they might bear would be likely to be of inferior quality.

Probably, the old trees from which the sprouts were taken, were budded or grafted on seedling roots which are likely to send up sprouts which will bear seedling fruit of poor quality. The seedlings frequently used for budding good kinds of cherries on are morello cherries, and some of these seedlings may bear fruit of very good quality, but as a rule the fruit is rather poor. The seedling trees are not likely to bear much until they become very old, and even then they are usually shy bearers.

Protection From Rabbits

The trees should be protected from rabbits by means of tree guards of various types, either wood veneer, paper of various sorts, or even cornstalks, or galvanized or other screen wire, or the heavy galvanized hardware cloth of about one-fourth-inch mesh.

The hardware cloth and screen guards should be about eighteen inches high, and pushed down a couple of inches into the soil. They may be left in place as long as protection is needed.

Care for Spray Outfit

The spray outfit should never be put away for the winter without a thorough cleaning and overhauling. The engine should be gone over carefully and any worn parts noted so repairs can be ordered before the spring program starts. The pump should be taken to pieces and examined, as was the engine, and all deposits of spray and grit washed or scraped out.

It is also good practice to remove and clean the pressure regulator valve and the pressure chamber valve.
